The proposed Echo Park Dam, which is part of the proposed upper Colorado River project, would destroy the best of Dinosaur. All over the country conservation organizations have vigorously protested this plan because national parks and monuments were set aside to be left unimpaired for the enjoyment and use of present and future generations. In the course of compiling their protests, they have discovered from the Bureau of Reclamation's own figures that alternate dam sites can do the job that needs to be done.

The conservationists oppose it for one reason: It violates both Dinosaur and the whole national-park idea. If a place is set aside for use as a dam site, the building of a dam will change it for all time. It is only fair, then, that if a place is set aside as a park or monument, it should be left as it is for just as long a time—forever unavailable for conflicting types of use.

I am a life member of the Sierra Club, which is an organization dedicated to the purpose of preserving our national parks and monuments. Last summer I spent 6 days in a rubber boat traveling 80 miles of the Yampa River Gorge

through Dinosaur National Monument and past the proposed site of Echo Park Dam. The Yampa River Gorge is truly one of the most spectacular and unusual river canyons in the United States. It would be changed materially and adversely by the proposed Echo Park Dam. The destruction of the beauty of Dinosaur National Monument for the construction of such a dam would violate every principle upon which our great system of national parks and national monuments was built.

I am strongly opposed to the Echo Park Dam and therefore must be and am opposed to the upper Colorado River project, unless this project is modified to eliminate the Echo Park Dam and to use some alternate site which will not destroy Dinosaur National Monument.

The Sierra Club, in its bulletin for February 1955, has published the following analysis of the weaknesses of the upper Colorado River project as now proposed:

WHAT'S WRONG WITH THE COLORADO PROJECT? A BRIEF STATEMENT OF DISPUTED QUESTIONS CONCERNING PROPOSED ECHO PARK DAM

1. Advocates insist, even after demonstration that their figures were wrong, that this dam would save loss by evaporation that would supply water for "a city the size of Denver." This is incorrect. Alternate plans would result in less loss by evaporation.

2. Advocates imply that land nearby in Utah and Colorado would derive irrigation benefits. This is misleading. No water will be available for irrigation or domestic use from this dam.

3. Secretary McKay has stated that the dam would alter but not destroy the scenic beauty of Dinosaur National Monument. This is an error in judgment. The National Park Service was correct when it said the effect would be deplorable. The reservoir would periodically retreat nearly 40 miles, exposing 30,000 acres of silted landscape.

4. Some advocates claim that a reclamation withdrawal in the 1938 proclamation enlarging Dinosaur justifies constructing Echo Park Dam. It does not. This withdrawal is specific to Brown's Park, where a dam would flood a mile of canyon. The Dinosaur dams would flood 100 miles.

5. Advocates promise recreation for millions. Such choice is unnecessary and would be tragic. We need not flood an irreplaceable scenic sanctuary to provide reservoir recreation which can be had in abundance outside the national park system.

6. Advocates deny the damaging precedent, but precedent means "that which goes before"; and there now exist plans to build dams in nine national parks and monuments. The future will need more parks, not fewer.

CONCERNING THE ENTIRE DEVELOPMENT

1. The administration's local-State-Federal partnership plan for conserving small watersheds will alter the flow of the Colorado River. The effect on big-dam requirements is not yet known and needs to be considered.

2. The present storage project encompasses only part of a river basin and tends to duplicate rather than to complement existing costly development.

3. Premature authorization of so questionable a project would prejudice the emerging national water policy.

4. The project is likely to require major redesigning to accord with the pending Supreme Court interpretation of the 1922 Seven State Compact.

5. Financing, based on estimating procedures now proved unreliable, places undue faith on assumed hydroelectric-power rev-

enues for repayment decades hence in an atomic-power age.

6. Excessive water is committed to more agricultural production—and at high altitudes—at the cost of upper basin industrial development and national decentralization.

7. Proponents have not given a frank estimate of the ultimate cost—probably to exceed \$13 billion exclusive of interest subsidy.

Alaska and Hawaii Statehood

EXTENSION OF REMARKS

OF

HON. E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mr. BARTLETT. Mr. Speaker, I desire to call attention to the following editorial which appeared in Collier's magazine in the issue of March 18, 1955, endorsing statehood for Alaska and Hawaii:

LET'S MAKE IT 50 IN 1955

Oklahoma's Senator MIKE MONRONEY, writing in the March 4 Collier's, opposed statehood for Hawaii and Alaska and proposed commonwealth status, instead. He made an earnest and vigorous argument which brought the issues out into broad daylight where the American people can sort them out and debate them intelligently.

With full respect for Senator MONRONEY, Collier's finds the weight of logic on the opposite side of the balance, and believes the time is long past when a satisfactory solution can be found by tossing Hawaii and Alaska a bone called commonwealth status. The two Territories have served out their apprenticeships—Hawaii for 57 years, Alaska for 88. Hawaiians and Alaskans want statehood, not a watered-down compromise. They want to be full-fledged Americans and wear the honored badge of that status—the right to a voting voice in Federal affairs. Commonwealth status would deny them that right. The issue remains, therefore, statehood or not.

The kernel of Senator MONRONEY's argument is that the addition of these two new States would diminish the physical strength and symbolism in our land mass, and would dilute the common American heritage of ideals and democratic traditions with new voters of differing heritages.

The first of these arguments was blown out of the water by a series of explosions beginning at Pearl Harbor December 7, 1941, and culminating with the first hydrogen blast beyond the Urals. The second mistakes the very nature of the American heritage.

The events of the past 13 years have thoroughly gutted the concept of the 48 States as a snug fortress with oceans for walls. A nation's strength, in this age, is an amalgam of many elements—scientific and military wherewithal, the speed and mobility of its striking power; its economic know-how and stability, its access to far-flung vital raw materials; and perhaps most important of all, the faith it inspires in its people.

Hawaii and Alaska, in the atomic age, are part and parcel of this pattern of American strength. They are military outposts of incalculable value. They are reservoirs of vast and varied natural resources. And they are communities of people—citadels of great potential spiritual strength. What we make of them is up to us. What we have made of them up to now, compared with their potentials, is very little.

We have denied these people a voice in the control of their own destinies, and in our own conduct of their affairs we have been shortsighted, whimsical, discriminatory and indifferent. We have stunted their industrial development with arbitrary restrictions. We have shortchanged them in various forms of Federal development aid. We have imposed restrictions which have stifled the development of their natural resources. And by denying them both the privileges and responsibilities of full citizenship we have inhibited their progress toward political maturity.

It is no satisfactory answer to point out that in spite of these handicaps the Hawaiians and Alaskans have moved steadily forward, building their cities and roads and industries, rendering loyal service in every crisis. They have labored in patient expectation that their country would one day recognize their deserving and take them into full partnership. To grant them such partnership will not only open the way to accelerated development of their resources and strength, it will spread before the world a practical example of the kind of democracy we preach.

Senator MONRONEY fears dilution of the American heritage; these people have been sharing and defending that heritage for generations. Within the narrow limits allowed them, their performance has been superb. Our own performance, as custodians of that heritage, has left a good deal to be desired.

Our 48 States are a renowned melting pot of races and creeds, brought together in respect for a doctrine that says a man shall be judged by his character, not his ancestry; much of the rugged strength of America derives from this very diversity of peoples. Equality and individual justice are the essence of the American heritage, and we have tried to respect that principle in our policy toward Territories and possessions. Rejecting the way of colonialism, we have brought the Territories along to a level of political and economic maturity and then given them either independence or full partnership. That is how it was with the Philippines; that is how it was with Oklahoma, New Mexico, Arizona, and Oregon. That's how it should be with Hawaii and Alaska.

Senator MONRONEY fears for the future of a 50-State Union. He fears that conflicts of interest would arise between the new States and some of the older ones. There have been such conflicts ever since an industrial Massachusetts and an agrarian Virginia aired their mutual suspicions and fought out their differences in the original Constitutional Convention, and the Union has grown steadily stronger. He points out that the populations of Hawaii and Alaska would have more per capita representation in the Senate than would some of the more densely populated present States. So do New Mexico, Arizona, Idaho, and Rhode Island; Nevada has almost twice as many Senators per capita as the new territories would if they came into the Union at this moment. After all, one reason we have a Senate is to afford an arena where the sovereign States can meet on equal terms. He fears that the admission of Alaska and Hawaii might bring a parade of other Territories pounding on the door for statehood. Probably so—but the American people can be trusted to bar the undeserving, and admit those whose entry would strengthen the Union.

This is an age when a businessman can fly to Honolulu in the time it took his grandfather to drive a wagon from Chicago to Gary, Ind., and a bomber can fly from Bering Strait to Detroit in the time it took a frigate to sail the length of Long Island Sound. In such an age it is neither sound nor safe to regard Hawaii and Alaska as remote, picturesque possessions, nor their loyal people as

outlanders. Hawaii and Alaska are essential, integral parts of the United States of America.

To make sure that their development proceeds with maximum speed and effectiveness requires that those most directly concerned—the people of Hawaii and Alaska—gain a positive voice in the basic decisions governing that development, and that freedom be given the same meaning for the people of Alaska and Hawaii that it has for the people of the present 48 States.

Hawaiians and Alaskans are ready for full citizenship—ready and anxious to pull their full weight on the American team. In justice and commonsense they ought to have statehood, now.

A Congressman's Pay—The Increase in Salary Should Bear Good Fruit

EXTENSION OF REMARKS

OF

HON. RALPH HARVEY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New Castle (Ind.) Courier-Times of March 2, 1955:

A CONGRESSMAN'S PAY—THE INCREASE IN SALARY SHOULD BEAR GOOD FRUIT

The action of the Congress in raising the pay of its own Members is not likely to find current listing on the legislative hit parade. It is the sort of thing that always is suspect, and of course it lends itself beautifully to political capital if there are those disposed to make that of it.

But we're for it.

We approve of the \$22,500 salary for Congressmen for several reasons.

First of all, it's more democratic. It removes the necessity that a person be well fixed financially in order to afford to be a candidate for Congress.

Adequate pay for our Congressmen will tend to remove the mink-coat deep-freeze threat. Few Congressmen are dishonest enough to accept bribes, but this eliminates also the need to receive gifts from anybody with an ax to grind.

There are many expenses that a Congressman has that he can't charge up to office expense. He has to do some entertaining, and he has to dress pretty well. Who wants a shabby-looking Congressman?

He has to live away from home, paying hotel and restaurant prices, and Washington is not a cheap place. The whims of the electorate being what they are, he probably still keeps the old home place, too; so he maintains 2 homes.

Most important of all, it should help get good men to run for office for when a man runs for Congress he likely must prepare to give up his occupation.

Many of our Congressmen are lawyers, and their familiarity with the law does tend to make them better fitted to be lawmakers. Take the case of a lawyer who has a good practice, a happy home and a hometown he loves. He is pretty well satisfied with life, and any idea that he close his law office, uproot his family, move away from his friends, and as Justice Sherman Minton used to say, "leave the hometown, where business is done on the square, for Washington, where everybody goes in circles," must be accepted in the sense of personal sacrifice for the public good.

The new Congressman's salary is some recompense to such a man for the sacrifice that he must make to become a servant of the people.

There may be those who will see evil portents in the new salary increase, but we believe that it is money well and properly spent, and that its fruits will be good.

A Common Intellectual Tradition Needed

EXTENSION OF REMARKS

OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mr. THOMPSON of New Jersey. Mr. Speaker, there is a weakness in our colleges and universities. It lies in the failure to keep intact as a unifying reference point for the students a common intellectual tradition, a sense of an intellectual community leading to a sense of the continuity of human experience. One used to find all this in the old prescribed courses of the humanities before a rampant, free-for-all, excessively individualist elective system ripped everything apart. But now we live with a situation where doctors only know how to make their meaning plain to other doctors; or engineers to other engineers; or lawyers to other lawyers, or businessmen to other businessmen, and so on. Each of these talks, and talks well within the range of a profession. But they do not talk up and down and across their professions. They do not talk up and down and across the whole range of human experience, stimulating and stimulated by that experience, to perfect the spirit of their age in the light of the spirit of all ages. They do not and they cannot do this, because they do not have in common a vocabulary they all understand—a vocabulary that was once drawn from the common fund of knowledge embraced by the humanities.

This point was well and brilliantly made in a recent speech at the National Conference on Higher Education by Senator J. WILLIAM FULBRIGHT, Democrat, Arkansas. I include this speech here. I do this in connection with a bill I am introducing today which I trust will help to correct a situation which is growing progressively worse.

The speech follows:

After the many taxing hours you've spent in discussion groups, I think I can best thank you for the invitation to speak here in this final hour, by speaking briefly. I shall try to do just that. In fact, the heart of what I have to say is expressed in but one story.

Some time ago, so this story goes, a warden at the Joliet penitentiary played host to a conference of criminologists, called to consider ways and means of reducing the crime rate. One speaker seemed to carry the day with his thesis that the way to do this was by requiring all young people to study mathematics intensively. For the discipline gained in this way, so the speaker claimed, would lead the young to think logically, and so make them virtuous when they came of age.

There was great applause when he reached the end and sat down. The warden alone

seemed unimpressed. He asked an aide to fetch a certain prisoner, introduced him to the meeting, and then at once sent the prisoner back to his cell. "That man you just saw," the warden explained to the criminologists, "is the most brilliant mathematician in the whole prison. So brilliant, in fact, that it took bank examiners 10 years before they found that he was embezzling funds by juggling bank ledgers. That man was not deficient in mathematics. What he lacked was a sense of grammar and rhetoric. He simply didn't know the difference between the words 'mine' and 'yours'."

You will agree, I think, that the criminologist who saw in the science of mathematics the means to create a nation of moral men and good citizens, is not alone in his approach. He is joined by a chorus of voices, each with a special educational emphasis leading to the magic formula. To one person, it is training in physics, or medicine, or plant life. To another, it is training in business, or homemaking, or athletics. Let this or that be the cornerstone for higher education—so they say—and the arrangement of its own force will meet every danger, solve every problem, remove every evil, and gain every good.

As for myself, I am inclined to favor the Warden's theory of education, if I may call it that. I am inclined to favor it, subject to three qualifications.

First, no system of higher education, however arranged, can bear the whole load of cultivating what lies in the human spirit. For that spirit, as the ancients taught us long ago, is a mixed thing. It is formed and ruled not alone by reason. It is also formed, and it is all too often ruled, by the will and by the passions. And if there are those who may deny this ancient fact, the rule of Adolph Hitler in Germany, and Mussolini in Italy, and the careers of a variety of imitators in the United States—each in a land preeminent for its literacy and enlightenment—are case studies of how reason can be set on its head by wilful men who know how to play on passions, and so make the worse cause appear to be the better one.

The second qualification follows from the first. It is that if the education of the individual is viewed in its entirety, then disciplined hearts must dwell in the same body as disciplined minds. And in this light, not the schools alone can carry the burden of the work that needs to be done. Nor can they be charged—as they now often are—with full responsibility for any defective products. Our homes, our churches, our political institutions, our economic enterprises—all our media of communication—are, and must be considered, a part of what educates the individual. None can absolve itself from the end result. All are jointly responsible for what it is like.

The third qualification is addressed to those who would have the schools and colleges emphasize this or that specialized science and art. Let me say here that I have the utmost respect for the specialist. It is plain, for example, that we urgently need scientists and technicians who can lend their expertness to the defense of America and the free world. So, too, as a further example, do we need men, skilled in the art of economic management, who can perfect the way we organize production and distribution. This work is of supreme importance; for though it is true enough that man does not live by bread alone, at least he lives by bread. And we need places specifically set aside for the purpose of cultivating the science and art of making bread, and defending it.

Yet divorced from all else, this specialization in art and science—and here I come to my point—is not an education for a democracy. There is nothing to distinguish it from an educational system in a totalitarian

state. Men like Hitler, Mussolini, and Stalin may have boasted of a Nazi, or a Fascist, or a Communist science and technology. Yet these bits of knowledge are not political or moral by nature. The same textbooks dealing with them can be used by students in both democracies and tyrannies. For the subjects themselves are equally useful to freemen and slaves alike; and indeed, in ancient times, they were cultivated chiefly by slaves.

I repeat that this specialization does not form an education for a democracy. It does not create an atmosphere in which the mind can be opened to every intimate impulse and voice, meshed with other minds of a like sort. Specialization, by definition, focuses on only a small part of the human battleline. It orients no one toward a view and a place in the battleline as a whole. It orients no one toward the whole intellectual life and tradition of a country. It orients no one toward an understanding of man as he appears in a particular moment of current history, and in the history of the ages.

And it is precisely at this point—as I shall try to make plain in a moment—that the comment of the warden at Joliet seems to apply on all fours. Here, let me digress to say that from what I have seen of our colleges and universities, their key weakness is not that they breed Communists. It is arant nonsense to say that they do. Not one of our enlisted men who went over to the Communist side during the Korean war and refused repatriation, cited as his reason any Marxist indoctrination while in college. Many of them never went to more than the primary grades, and in fact, were illiterate. As for the officers who were court-martialed for aiding the enemy, not one of these pointed an accusing finger at some university professor under whom they had studied at West Point or elsewhere.

Yet there is weakness in our colleges and universities. And now, in this hour of grace, we ought to turn our thoughts inward, and seek where this weakness lies. In my view, at least, it lies in our failure to teach grammar and rhetoric—to teach the difference between "mine" and "yours." In the largest sense for which this difference in words is but a symbol, it lies in our failure to keep intact as a unifying reference point for the undergraduate body, a common intellectual tradition, a sense of an intellectual community leading to a sense of the continuity of human experience.

One used to find all this in the old prescribed courses of the humanities before a rampant, free-for-all, excessively individualist elective system ripped everything apart. But now we live with a situation where doctors only know how to make their meaning plain to other doctors; or engineers to other engineers; or lawyers to other lawyers; or businessmen to other businessmen, and so on. Each of these talks, and talks well within the range of a profession. But they do not talk up and down and across their professions. They do not talk up and down and across the whole range of human experience, stimulating and stimulated by that experience, to perfect the spirit of their age in the light of the spirit of all ages. They do not and they cannot do this, because they do not have in common a vocabulary they all understand—a vocabulary that was once drawn from the common fund of knowledge embraced by the humanities.

All of this lends an air of paradox to our commitment to democracy. On the one hand, we assert our devotion to a system of government that is based on free and intelligible communication between citizen and citizen, and between the leaders and the led. On the other hand, we weaken the effectiveness of that system by a prevailing educational process that tends to narrow down communication by limiting it to an "Information Please" program and a Read-

ers Digest, or by rendering meaning altogether meaningless. This paradox, let me add, is made to order for exploitation by the demagogues. For I noticed that when our higher institutions of learning came under attack from that quarter, all too many of them were bewildered by what they were called on to defend. They seemed at times to flounder in an inner darkness of their own making, equal in density to the darkness the demagogues meant to impose on them from without. The best that many of them could do was to raise the rallying cry of academic freedom. Yet academic freedom, while of supreme importance in the educational process, is not the end aim of the process. It is but a means to an end. And under conditions where so many of our institutions of higher learning lacked any coherent, general, and organized body of knowledge they meant to impart to their students, they were at a loss how to define the end they meant to preserve through academic freedom.

In saying this, I am not implying that our colleges and universities ought now to sit down in a solemn convention and agree on a body of doctrine which they will then impose as a new orthodoxy on their student bodies. In common with all of you, I see in any such proposal the death of all education; of an education, at least, whose aim ought to be the infusion of the spirit of learning among students, and whose method ought to be not indoctrination, but the constant exercise of the mind in meaningful arguments. In common with all of you, also, I see in any such proposal for orthodoxy, something of the ludicrous outlook of a university trustee who strongly objected to the text of a university president's commencement address. And when the president said to the trustee, "Well, don't you want your students to hear the truth?" the trustee answered, "Of course. But can't you print the truth on the back of the convocation program, and hand it to the graduates as they file out of the chapel?"

The tradition of the humanities, for whose restoration I am pleading as the heart of any educational system that can best serve democracy, is not a tradition of orthodoxy. It is a tradition of continuous disagreement between parties in a great dialogue extending back over the ages. All that these parties agreed upon was the topics they felt were worth talking about. And beyond this, the sense of unity that is present in their great dialogue was hinged to the fact that when they disagreed, they knew what they were disagreeing about. Today, by contrast, we are inclined to rush ahead pell-mell with our solutions, without first asking what the question is we want to solve. Today, also, it happens all too often that people disagree violently without recognizing that they are talking about different things in the first place.

In the long retrospect, I think it is fair to say that the strength of our political institutions, is a strength drawn originally from men who shared the common heritage of education in the humanities. Indeed, in this respect, there probably was no institution of higher learning in history equal to the community of men who formed the Constitutional Convention. All were pre-eminent in practical affairs. Yet they were also men who knew how to speculate, who brought a broad range of human experience to bear first on their thoughts and then on their practical work. This is not to say that they agreed with each other. They disagreed sharply. But when they did, they shared a common vocabulary which made the eventual agreement possible. So, also, in later years, a Thomas Jefferson and an Alexander Hamilton, whose thoughts form the basic fabric of our national life, disagreed sharply. Yet they were children of the same tradition. And because they were,

each in the act of disagreeing, brilliantly served the Nation so that we can now turn to Jefferson for guidance under one set of circumstances, and to Hamilton under a different set. And in this way, we profit from both.

I am saying here that tradition does not mean uniformity. It means diversity within an embracing unity. And it is to this end, I feel, that we must reconceive and reorganize the life that is lived in our schools of higher learning. We must make of those schools the home for a new spirit of learning. We must make them, as Woodrow Wilson pleaded in 1909, "a community of scholars and pupils—a free community but a very real one, in which democracy make its reasonable triumphs of accommodation, its vital process of unity. I am not suggesting," Wilson continued, "that young men be dragged into becoming scholars or tempted to become pedants, or have any artificial compulsion whatever put upon them, but only that they be introduced into the high society of university ideals, be exposed to the hazards of stimulating friendships, be introduced into the easy comradeship of the republic of letters. By this means the classroom itself might some day come to seem a part of life."

A final remark. I have no illusion that even if all this is done, all will be well with us in a present and future hour. For we face the fact that what we are educating, is, after all, the son of old Adam. And like his ancestor who rebelled against a teaching from the highest possible quarter, so can the son of old Adam rebel against what he is taught, and reach for forbidden fruit. Yet this much, at least, can be hoped for: That a familiarity with what the many generations of man have talked about and experienced in their career on earth, can, by pointing up the consequences, reduce the danger of such a rebellion, though it may not eliminate it altogether. Indeed, without this heroic hope that education can inch humanity forward toward the vision of human perfectibility, life itself would have no purpose.

In all that touches existence, free men everywhere look to America for leadership. When we wobble, they feel unsteady. When we creak, they groan. When we slip, they fall. But when we act with the clarity of a great purpose, they feel braced and uplifted. Our schools of higher learning must view themselves as the heart within the heart of what it is that can enable America to give free men the leadership they want. Yet America cannot exercise that leadership if, within the borders of our own land, we are in danger of losing the ability to talk to one another. It is to the restoration of that lost art, in all its admitted difficulties, that I hope our schools of higher learning will bend their chief energies.

Pay Raise

EXTENSION OF REMARKS OF

HON. RALPH HARVEY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the *Connersville (Ind.) News-Examiner* of March 3, 1955:

PAY RAISE

Our lawmakers always seem to feel a little embarrassment at voting themselves a raise.

Rarely if ever can they bring the question up in election years.

It is well deserved, and long overdue. Most lawmakers today, whatever the range of their mental talents, are hard-working. They endure heavy strains and are subject to much harassment from constituents, lobbyists, and others.

Furthermore, in the nature of things each is compelled to maintain 2 homes, 1 in his State and another in Washington. Considering today's housing prices, this is in many instances an almost unbearable burden.

If we are ever to improve the caliber of our lawmakers, clearly we must offer recompense that will attract men of ability, and not require them to work as public servants at an undue sacrifice.

Twin Spotlights on Naval Aviation

EXTENSION OF REMARKS OF

HON. PETER F. MACK, JR.

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mr. MACK of Illinois. Mr. Speaker, I would like to call to the attention of my colleagues a very interesting editorial which appeared in the February 14 issue of *Aviation Week*.

This editorial very vividly expresses the need for adequate funds so that the Navy can continue its program of research, development, and procurement. Most of us are familiar with the aircraft prototypes developed by the Navy and utilized by both the Navy and the Air Force during the recent Korean conflict. I am greatly impressed with the progress the Navy Bureau of Aeronautics has made since that time in an attempt to maintain our air superiority.

We have underestimated the importance of naval aviation in the development of a well-balanced air arm. It is apparent that we have neglected naval aviation, as we had not anticipated that they would be called upon to play such a vital role in the Straits of Formosa and this Far East area.

Mr. Speaker, under leave to extend my remarks, I wish to include this editorial:

TWIN SPOTLIGHTS ON NAVAL AVIATION

(By Robert Hotz)

Twin spotlights of public attention are now focused on naval aviation—off Formosa where the four big attack carriers of the 7th Fleet are holding the line against Chinese communism and on Capitol Hill in Washington where a congressional subcommittee is investigating the reasons for the Navy's lagging procurement of modern combat aircraft.

The fact that development and production of modern transonic jet-powered aircraft for the Navy has been slow is apparent in the equipment of air groups aboard the 7th Fleet carriers. Once again the amount of time it takes to translate congressional appropriations into combat-ready airpower is heavily underscored in an hour of crisis.

The billions appropriated for the production of naval aircraft after the outbreak of the Korean war in 1950 have not yet reached the firing line in the form of enough modern jet aircraft to be of military significance.

NONE IN BATTLELINE

Public prints have been full of the record-breaking capabilities of the latest crop of Navy's transonic fighters—the Douglas F4D Skyray, the Grumman F9F-9 Tiger, and the North American FJ-3 and FJ-4 Fury. All of these aircraft are flying and some of them have been in the air for as long as 2 years. Yet none of them is with the 7th Fleet on the battleline off Formosa. Fighter squadrons aboard the carriers *Kearsarge*, *Essex*, *Wasp*, and the giant *Midway* are equipped with straight-winged Grumman F9F-5 Panthers and McDonnell F2H Banshees, both with speed limitations well below the current standard for modern air-to-air combat. Some fighter squadrons with the 7th Fleet also have Grumman F9F-6 sweptwing Cougars, a more modern fighter edging into the transonic range but still with performance well below the F9F-8 now in production at Grumman's Bethpage, Long Island, plant and the F9F-9, still in experimental flight test stage.

In the bomber category the Navy has two fine Douglas designs, the sweptwing A3D Skywarrior and the A4D lightweight delta, already in production. But again these planes are not on the firing line in Formosa. First A3D carrier squadron has been organized, but the A4D still is in experimental testing. The bombers with the 7th Fleet are the old veterans of the Korean war—the piston-powered Douglas Skyraider. In its atomic bomber units stationed in Japan, but available for operations off 7th Fleet carriers are the North American AJ-2's, powered by a pair of piston engines with a jet for extra boost.

Although equipment is only one part of the air combat equation that includes pilot proficiency, tactics, and leadership, it would take an extreme optimist to be happy about the quality of the aircraft the 7th Fleet has to fight against the sweptwing MIG-15 fighters and the twin-jet IL-28 bombers that are operational in sizable quantities with the Chinese Communist air force.

There is little doubt that in these other items—pilot proficiency, tactics, and combat leadership—the 7th Fleet has quality far superior to its potential foe. Aircraft industry leaders, who remember Vice Adm. Alfred M. "Mel" Pride for his technical pioneering with early carrier aircraft and his tenure as Chief of the Bureau of Aeronautics, will agree that the Navy could find no better commander for what is now its most important battle force afloat. In addition to his wartime record as an aircraft-carrier commander in the Pacific he knows so well, Admiral Pride made important contributions to the development of carrier arresting gear, and on the autogyros from which developed Navy's present use of helicopters. For years he has fought almost singlehandedly to keep turboprop development alive in this country.

BUREAU'S PERSISTENCE

The fact that the Air Force will be able to build a fleet of turboprop-powered transports to equip its aerial logistics system of the future is due in large measure to the Navy Bureau of Aeronautics' persistence, led by Admiral Pride, in pushing development of this type engine, despite what looked to many as insurmountable obstacles only a few years ago.

We do not think the subcommittee of the House Armed Services Committee will accomplish much by raking up the details of the technical troubles of the Navy's aircraft development during the past 5 years. The details are well known in the aircraft industry and in the Navy, and investigations will not resurrect the once-promising projects that might have filled the interim gap in the Navy's aerial battle force.

Fundamental to this problem was the starvation diet of naval aircraft research and development funds in the pre-Korean area

that prevented a more vigorous attack on the technical problems of the jet age.

RESEARCH IS KEY

There are many promising new technical avenues along which naval aviation is moving toward its future—the vertical takeoff and landing fighters; the waterborne aircraft, ranging from the giant jet seaplane teamed with submarine tankers to the supersonic delta fighters equipped with hydroskis for landing on water, snow, ice, or tundra, and the lightweight-design philosophy that can pay a double dividend in increased combat strength for less money.

We recommend to the House Armed Services Committee and their colleagues in the Senate that instead of poking around in the ashes of the past they bend their efforts to making certain that naval aviation gets the research, development, and procurement funds necessary to push its promising new developments as hard and fast as possible in a concerted effort to avoid the qualitative inferiority that will threaten its aerial battleline if the new ideas are again allowed to drag and wither for lack of sufficient support.

Paying for Schools

EXTENSION OF REMARKS

OF

HON. HAROLD C. OSTERTAG

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mr. OSTERTAG. Mr. Speaker, under leave to extend my remarks, I include in the RECORD two editorials from the Democrat and Chronicle of Rochester, N. Y., bearing on the issue of Federal aid to education.

This issue, now coming to focus, is a crossroads issue in the history of our country. Our decision on it will determine irrevocably whether we are going down the road to statism, or shall hold fast to the precepts and tenets of the Founding Fathers. In no area of government is the concept of local responsibility and local control so vital. It is impossible to detach responsibility from control in this matter. The President knows this, and has recommended a program of self-help geared to this principle. The people know it, and have responded to today's unquestionably acute school needs with a high sense of responsibility. Never in our history has there been such a spectacular advance in school construction and support as in the past few years. But it has been well said that responsibility is a sense that deteriorates very quickly. Under the humid promise of massive Federal aid, this noteworthy and vitally important grassroots effort would melt down like butter under a hot sun. We are tampering with the very foundations of our Government when we suggest such a possibility.

The following editorials ably and effectively set forth the grassroots views on this important issue:

[From the Rochester Democrat and Chronicle of February 26, 1955]

PAYING FOR SCHOOLS

Some of the best news in many a day on the subject of schools has just come from a Presidential commission on the subject.

"We have been unable," says the commission, "to find a State which cannot afford to make more money available for schools."

Rochester area school districts have demonstrated repeatedly their willingness to care for their children's school needs. There has been no tendency locally to look to Washington for the solution to this problem, regarded historically in this country as a purely local one. Delays in approving purchase of school sites or school construction have been nearly all due to disagreement as to details, not disagreement on the principle of paying for schools out of district taxes.

So this area is on its way to solving its own school problems. Programs may be slower than they should be, but a quickening of pace is apparent. School crowding is far from ended in the area as a whole, but there is assurance that it will be. There is an air of solid responsibility about the way school district residents have attended educational meetings on school-construction problems, debated the issues thoroughly, even heatedly, but in the end voted for more schools.

These local taxpayers have a right to call for the same kind of responsible action elsewhere in the State and Nation. No one has a right to ask us to shoulder our own school burdens and theirs, too, if they can afford the money. The Presidential commission, after careful study, says all States can afford to build their own schools. The size of the school shortage makes no difference in the principle. There is a tremendous need for new homes in the Nation, too, but how long would we have to wait for them if Washington was asked to supply the money?

Many politicians are fond of screaming about State's rights when it suits their purpose. There are such things as State's duties, too.

[From the Rochester Democrat and Chronicle of March 3, 1955]

LISTEN HERE, PROFESSOR

Some of the folks dignified by higher education took an undignified slide from the heights last weekend. They are unhappy about the Presidential subcommittee's report that Federal school construction aid won't be needed.

Their first tack was to shout "shocking," "astounding," "incredible," and "amazing." The screaming implies the judgment could have come only from a madman or a fool. One gentleman of many attending the convention of the American Association of Colleges for Teacher Education became downright sarcastic. We thought it was beneath the dignity of one tagged as "head of higher education" in a big university * * * but, from his words, decide for yourself:

"The only conclusion to be reached is that the practice of having babies is an intolerable, expensive hobby which must be abolished. * * * This can be done by persuading people to substitute dolls for babies."

Well, professor, Rochester area people go right on having babies and building schools, the best.

Not the easy way—the grassroots way.

Our school people—from school board members, superintendents, on down to janitors—and parents and taxpayers sell good schools. When a school is needed, they go to work, first selling each other. They talk to the man on the street, in the butcher shop, the drugstore, in factories, in offices, on trucks, on the farms * * * everywhere a school patron or taxpayer can be found. They don't always make it—the first time. We know of one area school now being built that took five school elections.

Scarcely ever do our people oppose schools as such. They often argue on method or detail, and they don't cater to waste or frills. But they don't talk about handouts from Washington. They're solid folks who accept

responsibility. The harder the job, the harder they work.

That's the hard way, professor * * * and it works, too, here in western New York.

Farmers Like Their Life

EXTENSION OF REMARKS

OF

HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mr. JOHNSON of Wisconsin. Mr. Speaker, there is a theory prevailing in some quarters that we have too many farmers in the United States. At times I have the feeling that this theory is held by people responsible for the administration's agricultural policies.

I do not subscribe to this theory. For many reasons—both social and economic—I believe in the preservation and expansion of family-type farmers in the United States.

Family farming—even when the incomes of those who follow this occupation are low—is a way of life. Editor William Ender, of the Durand (Wis.) Courier-Wedge, summarizes reasons why farmers like their life, even when they make less than \$2,000 a year. His editorial follows:

FARMERS LIKE THEIR LIFE

What keeps Wisconsin farmers on the land? What kind of a fellow has the stamina to wrest a living from the land?

Those two questions interested a team of University of Wisconsin economists who began a farm survey in 1950. Their figures suggested these answers:

Strong family ties bind the farmer to the home place. Ninety-five percent of all farm labor is supplied by the family itself. The hired man accounts for only 5 percent of Wisconsin workmanship.

Only one-tenth of the farmers would quit the land for better opportunities elsewhere. And only 2 percent would allow themselves to be driven from their acreage by serious financial troubles.

Many farmers choose agriculture as an occupation because they inherited a farm, because they were brought up on a farm, or because farming is the only type of work they know. Fewer than one-fourth of our farmers even considered any other kind of work.

Yet, life on the farm is not easy. One-tenth of all Wisconsin farmers make less than \$2,000 a year. In northern Wisconsin, 3 percent of all places are in this low-income bracket. Farm wives, in addition to household chores, supply 15 percent of the general labor it takes to keep a farm running. Sons and daughters, too, are kept hustling. That accounts for some departures for the cities, where workdays are shorter and vacations are expected.

Despite the gloomy outlook one might have after reading research figures, those who stay on the farm do so by choice. They are not required to stay there for lack of money. Most farmers find advantages in their mode of living, even though they do not get rich. Only about 5 percent of the rural people of Wisconsin consider farming as a dollars-and-cents proposition.

The University of Wisconsin survey received answers from 1,700 farms. There were 17 sheets of questions. H. W. Halvorson, A. M. Weisblat, D. M. Day, and K. H.

Parsons worked together to compile information.

Their work is a creditable performance. Replies tend to show that farmers, the smallest but most independent industrialists in the world, are willing to face their lot in life with cheerful vigor. When challenges come, they are met and conquered with determination. A lot more of us need dispositions like that.

Are Claims of Defense Essentiality Swamping the President's Tariff Reform Program?

EXTENSION OF REMARKS

OF

HON. FRANK E. SMITH

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Friday, February 25, 1955

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent, I include the following statement by the Committee on Foreign Trade Education, Inc., published in the New York Times of March 4, 1955:

ARE CLAIMS OF DEFENSE ESSENTIALITY SWAMPING THE PRESIDENT'S TARIFF REFORM PROGRAM?

DEFENSE ESSENTIALITY

That is what the high tariff lobbies are putting their money on.

And because every American wants our country to be prepared to meet any emergency it all sounds like a pretty good argument.

But Secretary of State Dulles and Secretary of Defense Wilson, our two top Government officials responsible for defense, have gone down the line for H. R. 1, the bill to extend and reform our Reciprocal Trade Agreements program. So now, as the Senate begins to consider the President's tariff bill, we should all take a good hard look at this "defense essentiality" line and see how much substance there is to it.

WATCH INDUSTRY STARTED IT ALL

The four domestic producers of jeweled watches began all of this. And again, just recently, one of their major executives took an ad to tell how the industry is being driven into "extinction" by imports from Switzerland. Let us look at a few of the very strange contentions he made.

A. Only 4,000 precision watchmakers are left in America

The fact is that the United States timing industry employs 21,519 precision workers. The four jeweled watch companies are only a small part of the United States horological industry, and yet even they employ 9,754. (From U. S. Tariff Commission's report to President, of May 21, 1954. The figures given are based on 1954 averages of employment in the 4 jeweled lever watch factories and in 14 factories producing pin lever watches and clocks.)

What about that 4,000 figure?

The four jeweled watch companies employ 4,246 workers in making civilian watches, while 5,508, 50 percent of their labor force, are now in military production. All Government authorities agree that about the same "precision" skills are used in both civilian and military production.

Is any part of the United States time industry more "essential for defense" than another?

Not according to Thomas P. Pike, Assistant Secretary of Defense in Charge of Supply and Logistics, who told the Senate:

"It is * * * from a Defense Department standpoint nearly impossible to arrive at a determination that any one part of the horological industry is more essential for defense than any other part."

Do they make defense materials that no other companies can make?

Not according to the Department of Defense which told the Office of Defense Mobilization the following:

"There is no item or product which is not being made or procured in some quantity outside of the jeweled watch industry."

"There does not seem to be any part of the manufacture or assembly of mechanical time fuzes that is peculiar to the jeweled watch industry."

Another important contention is this—
B. The Swiss already have 85 percent of the United States market

But the fact is that United States watch manufacturers are not confined to 15 percent of the market as they would have you believe, but have 41 percent of the United States watch market, according to the latest official figures. (From U. S. Tariff Commission's report to the President, May, 1954, giving latest official figures on ratio of U. S. production to imports. This shows that United States factories produced 8.3 million jeweled-lever and pin lever watches, in competition with 12.2 million imports in both categories in 1953.)

Here are the facts that disprove basic contentions on the defense-essentiality argument used by the four domestic jeweled-watch companies. This rich industry (the figures for 1953—the last year available—show that three of the four enjoyed the greatest profit margin after taxes in their histories) has certainly started something. Right now, every high-tariff interest has devised some sort of theory by which they are essential. Defense essentiality is the anvil on which President Eisenhower's proposals for expanding trade are to be beaten out of shape.

WHERE WILL IT ALL END?

Riding right in on the second wave of defense essentiality is the chemical industry, particularly those who manufacture synthetic organic chemicals. They are not only against the President's very modest reform of the reciprocal trade agreements program, but, according to one of their spokesmen, also "call for the removal of (past) tariff concessions on items which have resulted in a volume of imports which threaten industrial capacity vital for defense."

What's being threatened? Why only a puny little industry made up of du Ponts, Monsanto, Dows, etc., that has grown 10 percent per year for the last 25 years. Producing \$20 billion of goods annually, they exported \$894 million during the first 9 months of 1954, while imports totaled only \$242 million.

About the vital synthetic organic chemicals for which they ask high tariffs: The domestic industry produces \$4 billion worth each year. The amount imported in 1953 was \$50 million. According to the United States Tariff Commission only \$5.8 million of these imports, or less than one-half of 1 percent, were competitive.

And now, because the getting is good, all the high-tariff lobbies are riding the tide of the defense-essentiality argument. Here are the arguments some industries cited in their demand for more protection:

The lace manufacturers say they make military mosquito nets, and are essential for defense.

The wool glove manufacturers say they make soldiers' gloves, and are essential for defense.

The cutlery manufacturers say they manufacture military machetes, and are essential for defense.

The tuna fish producers contend that their tuna fleet is needed in time of war, and they are essential for defense.

The Lead Pencil Manufacturers Association says that pencil manufacturers are indispensable to national defense only conceding that their product is not directly utilized for combat purposes."

Who's next?

IT SOUNDS SILLY—BUT IT'S DANGEROUS

While it may seem awfully silly, this is a very serious business. No American can, of course, afford to have a closed mind on any matter that pertains to national security. But, in viewing the problem with the objectivity that it deserves, we must be careful not to be just swept along with a "defense" slogan.

Britain did that—and learned the hard way. They decided to "protect" their optical industry so that they would not be dependent on overseas suppliers during time of war. "The result," Fortune magazine reports, is that "Britain has lagged seriously behind the United States and Germany in optical development," so that, walled off by high tariffs from the stimulation of competition, the British optical industry became obsolescent and inadequate for national defense needs.

And in taking an objective look at the defense essentiality argument we should ask ourselves to what we should gear our national preparedness—World War II or a war of the future? Obviously, another world war would be tragically different. This time the war would inevitably come right to our own country. The area of the H-bomb makes an arsenal of defense, 4,000 miles away from the battlefield, an impossible dream.

Just one H-bomb, the AEC tells us, would cause death throughout an area the size of New Jersey. In a third world war tremendous areas of our country and of our defense industry would be devastated. In a third world war the test of our defense industry will be its flexibility; its ability to adapt itself quickly to every circumstance. The idea of copying the British and building a defense industry that becomes complacent and fat behind high tariff walls is not the answer to the Nation's needs.

WORLD TRADE AND A STRONGER AMERICA

Why all the concern about tariffs and trade? The President has stated:

"For our own economic growth we must have continually expanding world markets; for our security we require that our allies become economically strong. Expanding trade is the only adequate solution. If we fall in our trade policy, we may fall in all."

Committee on Foreign Trade Education, Inc., a bipartisan, 100-percent volunteer organization, declared before the Ways and Means Committee of the House of Representatives that the President's trade program is "the touchstone for success in our foreign policy, stimulation of our national economy, and aid to the consumer."

The President's plan for liberalizing and expanding trade, H. R. 1, was passed a short time ago in the House of Representatives. Against the onslaught of the high-tariff bloc the bill only won out by seven votes. Now before the Senate, this attempt to give America a modern trade program faces very rough sledding.

All those who believe in the need for a tariff policy in the national interest—a tariff policy that will build up—not tear down—our anti-Communist foreign policy—should write at once to the Senate Finance Committee or to their own Senator and protest exaggerated "defense essentiality" arguments and endorse the President's program, H. R. 1, as written.

And every Member of Congress should be urged to support all moves that will undo

the harm where we have fallen for "essentiality" sloganeering in the past.

Byron Kantack; Eric Keble; David C. Lane, Treasurer; Gwelda McPhee, Secretary; Winthrop R. Munyan; B. A. Rittersporn, Jr., Executive Director; Daniel F. Ruge; Board of Directors.

Junior Conservation Essay Contest

EXTENSION OF REMARKS

OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mr. SIKES. Mr. Speaker, the Florida Game and Fresh Water Fish Commission has sponsored a junior conservation essay contest as part of its program of acquainting boys and girls of Florida with the essentials of wildlife conservation. This very fine program has produced a great deal of interest on the part of young Floridians. I think it worthwhile to reproduce in the CONGRESSIONAL RECORD the winning essays of the junior conservation essay contest. The first division winner is Paul M. Bruun, age 10, Miami Beach. The first prize winner in the second division is Frank K. Jordan, age 17, Pensacola.

The essay follows:

WHAT CONSERVATION MEANS TO ME

(Winning essay by Paul M. Bruun, North Beach Elementary School, Miami Beach)

I am writing this paper from a sportsman's point of view.

When Columbus came to this country he found Indians who had tried to keep most of the game animals alive. The white men had to build homes and thus had to cut down trees. Food was also needed, therefore lots of game was killed. This was their natural way of providing food and shelter for their families, but like most white men, they were very wasteful.

Likewise the Indians had to kill game, such as bear, fox, deer, panther, and other animals. But they used almost every bit of the animals they killed. They caught fish from the many streams and lakes.

When the Indians hunted buffalo, they killed only what they needed and left enough for future food. They also roamed over large territories and didn't kill off all the game in any section.

On the other hand, the white man used just the choice meat of the game he killed. He used just the middle of the trees he cut down.

The buffalo, the passenger pigeon, whooping cranes, giant panda, trumpeter swan, heat hen, and the Carolina parakeet have become extinct because of man's great greed. The last passenger pigeon on record died in 1914 in the Cincinnati Zoo.

I love to see beautiful woods and beautiful lakes with big-mouth bass jumping and clean rivers and streams. I love wild flowers and growing trees and if the law doesn't protect this beauty, nobody will.

When a farmer plows his hill fields up and down, a heavy rain washes the soil away. But when there is a smart farmer, he will plow crosswise and when the big rains come, the soil isn't destroyed.

Without minerals we would be pretty sad

but with erosion, many precious minerals are lost from the earth. When the forests are destroyed, it leaves the land wide open to big, destructive floods.

I am a fisherman at heart and while I don't really enjoy killing animals, I do go game hunting with my dad. I do enjoy shooting guns for the sport of it, such as target practice.

There is something so attractive in a mountain stream, lake, or in a wilderness that could keep me there for hours on end. But if that lake or stream isn't clean, its beauty is lost, and with it, its attraction for me. A littered body of water isn't going to draw my best attention, as a beautiful lake is a clean lake without chemicals from factories.

A beautiful lake is one where old camping equipment hasn't been thrown in. It does not contain poison for the killing of insects.

A trout will eat anything he can sink his fool mouth into, so it would be a better plan to let the trout and bass kill the insects instead of manmade poisons.

On a visit to Lake George in New York this past summer I learned that New York's forest program has as its slogan, "Don't be a litterbug." This would be a good slogan for Florida.

My main question of the conservation commission is, Why are sailfish allowed to be killed uselessly?

One day I went fishing in the Gulf Stream on a charter boat. I caught a tuna, my father caught a bonita, and a little boy caught a very small sailfish. I have heard there is some sort of a law that says you should not keep a sailfish unless you are going to eat it or mount it. If this isn't a written law it should be. This small sailfish had been injured near the tail.

There was reason to keep the bonita for bait, and the tuna was kept for food. The little boy who caught the sailfish wasn't allowed to take it home. Was it sold illegally. Was it eaten by the captain, or did it just go to waste? Why doesn't somebody put real conservation measures on the big, beautiful fish of the deep?

Ever since I can remember, I have been interested in conservation. To prove my strong feeling on the subject, I am including a little story I wrote when I was 8 years old and in the fourth grade, which was printed in our school paper. It was entitled "The Forest."

"The forests of our country are very, very beautiful. There are beautiful trees and there are many animals and pretty birds that live in the forests. If the forests are burned, the birds and animals wouldn't have any home and our country wouldn't be beautiful any more.

"When you drive out in the country, be careful that you don't throw any lighted matches out of the car windows.

"If you are camping, pour water or sand on your campfire before you leave. The slogan on the 1950-51 license plates is 'Keep Florida Green! Let's do it.'

The population of game is very great in the Everglades. I like to take airboat rides through the swamps but the constant draining of the glades kills a lot of the natural dwellers there and wrecks their homes. Now drilling for oil is permissible but clearing the middle of the swamp for crops is idiotic.

I love the Ocala National Forest where my father and I hunt deer, turkey, bear, and panther. When I think of Florida, I think of good hunting and fishing and if there's hunting, there has to be game.

There is great wealth in wildlife. Conserve it.

THE VALUE OF WILDLIFE IN FLORIDA'S ECONOMY

(Winning essay by Frank K. Jordan, B. T. Washington High, Pensacola)

To consider the true values of wildlife in Florida's economy, I believe that we must

first understand what is meant by wildlife and how we might classify it. Wildlife is, according to noted authorities, all wild animals, trees, and plants collectively and especially as objects of Government conservation. From this definition, I am able to gather three things: First, wildlife has reference to all nondomesticated animals. Second, all plants and trees, within the State, that are not home grown, are classified as wildlife. Third, wildlife, itself is essential to the livelihood of our entire country.

We are especially interested in the effect that these various forms of wildlife have on the economy of our great and wondrous State of Florida. Florida is top-ranked as a resort State and winter wonderland. Its wildlife plays an important, yes, an essential role, in its having so many tourists. More than 4,500,000, of all nationalities, come to Florida annually to enjoy its many natural resources and Florida's wildlife is a principal part of its vast natural resources. Since more than 90 percent of the population of the United States can reach Florida within 48 hours, many people come to Florida solely to enjoy its many varieties of crops, fishes, trees, flowers, herbs, and birds.

Florida's wildlife resources are so plentiful and immense that I shall consider them in sequence. The first is Florida's wild game. Wild game, of all types, are more or less abundant in all sections of this State. In the vast forests and undeveloped sections of Florida may be found deer, bears, coons, wildcats, possums, wild turkeys, squirrels, and foxes. In the vastness of the Everglades, panther and other wild game can still be found. In the more open sections and in the fields, quails and dove offer the hunter ample opportunity to display his sportsmanship. Ducks and geese are found all over Florida's many rivers and lakes.

Fish, too, are wild game and all along the 3,700 miles of the gulf and Atlantic coasts, they provide anglers with unlimited opportunities to display their prowess. For example, the sailfin, and the tarpon are two of the most prized sport fish in the world. They are found abundantly in the waters of Florida. This fact alone, causes literally thousands of sportsmen to visit Florida annually, which when added up in dollars and cents, comes to a considerable amount of money, which is used wisely on improvements on our schools, better highways, and higher living standards in our communities.

Birdlife is another form of Florida's wildlife. Florida is hostess to millions of birds a year. Birdlife, as part of Florida's economy, is so important that the late President Roosevelt established the first bird sanctuary in the United States on Pelican Island, near the lovely city of Sebastian, Fla., on March 14, 1903. The world famous and awe-inspiring sanctuary at Bok Tower, near Lake Wales, Fla., is said to be one of the most beautiful spots in the United States. According to John J. Audubon, world famous for his realistic study of birdlife, our State bird, the mocking bird, is the most beautiful singer in all birddom. It not only imitates but composes, and has been known to change its song 87 times within 7 minutes, and that is a record unequalled. In the extreme southern part of Florida, the rare birds have their home. The crane, who stalks majestically through the shallow Everglade waters; the colorful flamingo, who resembles an immensely beautiful, red and pink rose from a distance; and the white Ibis, who from a distance makes the trees resemble a beautiful snowball; are outstanding examples of why any tourist should visit Florida. The rare beauty, magnificent coloring, and stately grace of these birds gives one a lesson of God-given beauty. Because of the fragile loveliness and rapturous beauty of these birds, they are a natural drawing card, therefore indispensable to Florida's economy.

Another equally valuable part of Florida's wildlife is its plants and flowers. There are more than 3,000 varieties of flowering plants, in this land of many flowers. From the gorgeous royal poinciana, to the hibiscus, to the tiniest wild flower that hides its head on the thick grass of the Everglades, Florida offers a panorama of floral beauty that is unexcelled. To our winter visitors there are many surprises, such as rare air plants, that attach themselves to stately trees and unfold their beautiful blossoms in artistic beauty.

Last, but not least, Florida's forestry plays an excellent role in its economy. Florida has 328 species of native trees. Vast forests of pine, oak, cypress, and other trees, dot the entire State, affording restful contemplation for the visitor. Our forests occupy 22 million acres and yield an annual production of lumber, pulpwood, and naval stores valued at \$175 million. Our tung tree crop annually exceeds \$1 million, and the Spanish moss income amounts to \$1 million a year.

It is, therefore, self-evident that Florida's various forms of wildlife—fish, ducks, birds, plants, flowers, and forests—rank high as being among its most valuable resources, worth more to every true Floridian than his weight in gold. Florida's heart is found in its valuable wildlife resources.

Holy Rosary Academy Nuns' Society Emerges Out of Cholera Plague That Swept Rome 118 Years Ago

EXTENSION OF REMARKS OF

HON. T. JAMES TUMULTY

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mr. TUMULTY. Mr. Speaker, under leave to extend my remarks, I would like to have printed an article on the Holy Rosary Academy nuns which appeared on March 2, in the Hudson Dispatch, Union City, one of the great dailies in my district. I believe the Nation will delight in reading the heroic account of the noble work of these holy women.

The article follows:

HOLY ROSARY ACADEMY NUNS' SOCIETY
EMERGED OUT OF CHOLERA PLAGUE THAT
SWEEPED ROME 118 YEARS AGO—SISTERS
CARRY OUT EDICT TO "SPREAD CATHOLIC
ACTION" IN WEST HOBOKEN SECTION

Out of a dread cholera plague which swept Rome 118 years ago emerged the religious order which now maintains Holy Rosary Academy in Union City, and contributes to community life in West Hoboken section of the city.

With completion of their new school at 15th Street and Bergenline Avenue only a short time away, Sisters of the Catholic apostolate which run the school are carrying on the edict of their founder, Blessed Vincent Pallotti, to spread Catholic action.

For more than 50 years in West Hoboken, the Sisters have carried on their work, which can be summed up merely as "doing what is best for the life of the community in which they are." Unlike most Catholic orders, the Pallottine Sisters are not bound to any particular field of work, but instead bend their efforts to "what is most needed."

THE NEW WORLD

Half a century ago, when the Sisters first came to Union City, the need was to care for the children of the flood of immigrants who came to this country deluded with dreams of "the New World" only to find it one that

demanded long hours of toil in factories and on construction jobs.

With the schedule of work from sunrise to sunset, many of the immigrants found it impossible to provide properly for their children. To fill this void, Sisters of Catholic Apostolate were established in Newark shortly after the turn of the 20th century, to supervise a boarding school for girls.

In 1903, property was purchased on Spring St., West Hoboken (now Bergenline Av.), which was formerly owned by B. P. O. of Elks, and still stands as Holy Rosary Villa at 15th Street. As it stood, the building was not large enough to accommodate the 60 boarders transferred here from Newark, and work was immediately begun on an adjoining edifice.

FIRST SUPERIOR NAMED

First superior was Mother Catherine, accompanied by two sisters. One of them, Sister Rufina, is still at Holy Rosary Academy although more than 90 years old. The other, Sister Anita, died last year during celebration of Holy Rosary's golden jubilee in Union City.

Through the heroic efforts of the three pioneer sisters, the edifice was completed in 1904, following months of hardship and anguish during which the sisters were forced to solicit alms to pay the workmen. One sister was actually threatened with arrest for illegal solicitation during this period.

As the order became established in West Hoboken, the new edifice became too small to house the students. A new wing was added in 1911.

During World War I, a new problem confronted the community and decided the course of action for the Sisters. With fathers in service and many mothers compelled to take defense jobs, children were being neglected.

SISTERS AID CHILDREN

State and Catholic welfare bureaus called on the Sisters to come to the aid of these children, whose lives had been so violently disrupted. Despite a lack of accommodations, Mother Agnes, then superior, took up the responsibility. An old mansion, opposite the academy, was purchased. Housing was provided for 56 children, many of them of preschool age.

During the postwar period, and through the depression years, the Sisters continued to care for orphans because of public need. Welfare funds were insufficient to provide for needs of the children, and once again the Sisters were compelled to solicit funds from the neighborhood, permitted under rules of the order only in cases of dire necessity.

The foster-home movement of the 1930's deemphasized institutional care, and Holy Rosary reverted to its former status of private school. With parochial schools in the area becoming overcrowded, day students were accepted for the first time.

PLAN FOR HIGH SCHOOL

Within a few years, a new need became apparent. Pupils requested again and again "why do we have to leave after finishing grammar school?" In 1937, plans were initiated for a high school, which was completed under supervision of Mother Faustina, present superior of Holy Rosary.

First principal of the high school was Sister Mary Martha, now Mother General of Sisters of Catholic Apostolate. When she became the first American elected to head the worldwide order in 1948, she was replaced by Sister Cecelia, who has carried on the excellent scholastic rating of the school.

With 1954 designated by Pope Pius XII as The Marian Year, the Sisters chose as their project the building of the new half-million-dollar school which shortly will add to educational facilities of the city. Built despite constant technical difficulties, the school would be in use today except for interruptions.

Under supervision of Sister Xavier, the new school will provide accommodations for approximately 300 students. Cornerstone was laid December 6, 1954, by Most Reverend Thomas A. Boland, archbishop of Newark.

Flexible Failure

EXTENSION OF REMARKS

OF

HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mr. JOHNSON of Wisconsin. Mr. Speaker, a year ago in March I introduced a stop-gap bill to prevent Secretary of Agriculture Ezra Benson from lowering dairy support prices from 90 to 75 percent of parity. In numerous speeches I drew my colleagues' attention to the inequitable features of this order by the Secretary of Agriculture.

The Secretary of Agriculture had the blessing of the administration and the cut in dairy supports became effective on April 1, 1954. Later, in the general farm bill, we were able to revise the figure up a trifle.

It was with interest, then, that I read an editorial in the Spring Valley (Wis.) Sun which comments on the failure of this program. Before I recommend the editorial to my colleagues' attention, I wish to point out that the editor of the Spring Valley Sun—Mr. Alden Munson—is not a Democrat. As a matter of fact—if my memory serves me correctly—I believe Mr. Munson supported my opponent in the last election.

Editor Munson is a sincere and objective individual, and that is why his editorial—Flexible Failure—is an interesting commentary on the dairy support price program. The editorial reads as follows:

FLEXIBLE FAILURE

As the anniversary of flexible price supports for dairy products draws nearer with no change in the program in sight the editor is placed in the very uncomfortable position of having to admit that he was wrong.

In supporting editorially the flexible price support idea because we thought that it was an answer to the surplus problem that was dangerously threatening the dairy industry, we ignored one significant fact—that lowered flexible supports lose their soundness when applied to only one of many farm products.

If the lowered flexible supports were such a good idea for dairy products, then they should have been applied to all farm products or never put into effect on a small segment of the farming industry, because the result has been a lower return for the dairy farmer while he is paying the old rigid support price for his feed.

In effect this has doubly penalized the dairy farmer without providing a solution to the surplus problem or lowering prices to any marked extent for the consumer.

As a consequence, the flexible price-support program has been a costly and worthless experiment with the dairy farmer paying the bill for the Government's poor management and bad guessing.

Why the dairy farmer has been made the goat for such stupidity we haven't any idea, but it is bad enough to make such a mistake

without adding insult to injury by letting the condition continue.

When narrowed to only one part of the farming industry that is dependent to a large extent on the rest of the industry for feed and other products, the 75-percent flexible program is a form of discrimination that the dairy farmer has every right to question and protest as vigorously as possible, especially when the program has not succeeded in any of its proposed goals.

If the objective of the program was the elimination of the medium and small dairy producer, the reduced return for their efforts the past months has gone a long way toward reaching that objective.

Before the Government takes steps to deliberately lower the income of any segment of our population it would do well to take steps to bring the prices of the thousands of other commodities this segment must buy to live down with their income.

Failing this, the least they can do is to attempt to rectify their mistake and put the dairy farmer back on a level with the rest of the industry and their urban neighbors whose income is going up with the cost of living.

It is certain that Congressmen are going to have a hard time justifying nearly doubling their own income while telling the dairy farmer that he is going to have to continue to take a lower return for his product.

Perhaps the Members of Congress should spend a couple of weeks in a dairy barn milking the cows before voting on their sad plight with only a \$15,000-a-year income and while shoveling out some of the residue a cow leaves they just might realize that members of the dairy industry work as hard as they do while resting their bottoms in the halls of Congress.

Distributive Education

EXTENSION OF REMARKS

OF

HON. FRANK IKARD

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mr. IKARD. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial from the Denton Record-Chronicle of Sunday, February 27, 1955, entitled "Distributive Education":

DISTRIBUTIVE EDUCATION

The distributive education program at Denton High School is a two-way project: It helps the participating students and also aids the employers in Denton.

This learn-while-you-earn proposition is a sound venture. Right now there are 25 junior and senior students engaged in the program and they not only are paid a salary, they receive academic credit at high school and also learn the techniques of their business while on the job.

There is no better way to learn a job than do it. One can study forever but if he doesn't apply his knowledge he might as well have never been exposed.

After their tenure in the distributive education project, Denton High School graduates are equipped to go right on the job. They have a working know-how as well as academic knowledge.

Credit must go to the businessmen in Denton who cooperate with the program. Without their full cooperation the program could not succeed. But they are wholeheartedly behind it and are continually working to improve their part in the venture.

The distributive education program here is continually growing because it is a good thing. We hope it is around for a long time and that each student who has the opportunity to participate, realizes the full advantages of the program.

Antarctic Claims

EXTENSION OF REMARKS

OF

HON. THOR C. TOLLEFSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mr. TOLLEFSON. Mr. Speaker, in view of the current activities of several nations in connection with the sending of expeditions to the Antarctic the following article, which appeared in the July 1954 issue of the Foreign Affairs Quarterly, would seem to be timely:

ANTARCTIC CLAIMS

(By David Winston Heron)

I

Meteorological observation in the Antarctic is of great importance to long-range weather prediction throughout the Southern Hemisphere. The wild and frigid storms originating over the great glacial plateaus in the interior make themselves felt as far north as the Tropic of Capricorn: It has been estimated that the immense Antarctic icecap results in a difference of 10° Fahrenheit between the mean temperatures of the Northern and Southern Hemispheres. For this reason it is not surprising that in spite of the hardship and danger of wintering in the Antarctic, there are some 18 weather stations maintained there throughout the year. The interesting fact is that 15 of these establishments are concentrated within a radius of 500 miles of Hope Bay, at the northeastern tip of Palmer Land, which reaches up from the Antarctic Continent into the southern Atlantic.

This compact arrangement is not primarily in the interest of science, although the Palmer Peninsula and its archipelagoes offer particularly interesting topography, weather, and ocean currents, and are more accessible than any other Antarctic land areas. The primary reason for their concentration is a unique and anachronous contest of increasing intensity devoted, in effect, to the colonization of the last frontier continent. The principal competitors are Britain, Argentina, and Chile, whose efforts have more than quadrupled the Antarctic population since the end of the Second World War. All three have claimed sovereignty over sectors in the American quadrant, with the peninsula and its islands as the main objects of contention.

The competition took a new turn on January 30, 1952, when, with a darkening storm moving in over the icy crags of the Trinity Peninsula, a British ship, the *John Biscoe*, anchored in the comparative shelter of Hope Bay. The *John Biscoe*, commanded by Capt. William Johnson, is one of the ships assigned to the British Falkland Islands Dependencies Survey, and its mission to Hope Bay was to reestablish a meteorological station first built in 1944 and destroyed by fire during the Antarctic summer of 1948-49. The British party discovered, without too much surprise, that there was a new Argentine establishment ashore a few hundred yards from the ruins of their base. After riding out the storm which lasted through the next day, they began to land their supplies and equipment. The naval officer in charge of the Argentine base, according to an account

appearing in the London Times the following Monday, indicated that he would resist any attempt to land; and as the first load of supplies was deposited on the beach, a burst of machine gun fire crackled over the heads of the landing party. The unarmed Englishmen were shortly surrounded by Argentine riflemen who forced them to retire from the beach. The Argentine detachment returned their supplies to the ship.

The next day, Sunday, February 3, after consultations in Buenos Aires between the British Ambassador and the Ministry of Foreign Affairs, the zealous Argentine lieutenant was apparently instructed to hold his fire. The *John Biscoe* party resumed its landing operations, and eventually the British base was reconstructed. There was a report of a ceremonial visit later by the Governor of the Falkland Islands aboard a small warship.

The shots fired on February 2, 1952, were the first incidence of violence in the course of the competition, and although the affair was not allowed to become a *casus belli*, it clearly reflected the increasing determination of the Latin Americans to challenge the southernmost outpost of the British Empire. The affair has been treated as an unfortunate misunderstanding by both Britain and Argentina, but the use of firearms by the Argentine naval detachment may well mark the end of the era in which national differences were forgotten in the struggle against the violence of nature.

The seven specific claims to Antarctic sectors have all been made since 1908. On July 21 of that year Britain claimed the Falklands sector, the shape of which was altered by letters patent of March 28, 1917. On July 30, 1923, the Ross Dependency was claimed by Britain; France, on March 27, 1924, claimed Adélie Land, sector boundaries of which were more precisely defined in a decree of April 1, 1938. Australia's claim went into effect August 24, 1936; Norway's claim on January 14, 1939. Argentina's claim was made first in a letter to Britain on November 30, 1925. Chile's was in a decree of November 6, 1940. However, because of the inaccessibility of the interior of the continent—four-fifths of which is still unexplored even by air—and because even those strips of coast which have been charted are scarcely habitable, it has been necessary to define and justify these claims by the use of unique and legally questionable devices.

II

The geographical delimitation of claims to Arctic and Antarctic territory has been facilitated by the invention of the Polar Sector, attributed to a Canadian senator named Pascal Poirier. Poirier proposed it in 1907 as a device for proclaiming sovereignty over the Canadian Arctic, and it was adopted by the Canadian Parliament. It has since been used by England, France, Australia, Norway, Chile, and Argentina in the Antarctic, and by the Soviet Union in the Arctic.

The sector is an arbitrary device, reminiscent of Alexander VI's Papal Bull of 1493 dividing the globe between Spain and Portugal. It has been traced to the doctrine of continuity, invoked in past centuries to justify the extension of colonies into the hinterland where effective territorial control was neither possible nor necessary. Because of the need to control islands in or near territorial waters, the continuity principle has been projected into the principle of contiguity, used to justify claims to land separated by water from the territory of the claimant state. In the Antarctic, separated from the nearest inhabited continent by over 700 miles of high seas, even the doctrine of contiguity cannot be applied without reservation.

The substantive justification for the claims themselves can in most cases be documented with legal precedent. This has been done,

in general, by analogy with the European colonization of the Americas and Africa, where national sovereignty over *terra nullius* was established by satisfaction of three general conditions: discovery, publication, and effective occupation.

The requirement of publication is satisfied by the issuance to a foreign government of any pertinent official document with the force of national law. It has little significance in the 20th century, and has not caused any serious differences relating to Antarctic claims.

Satisfaction of the requirements of discovery and effective occupation, however, has been the subject of controversy ever since the British laid claim to the Falkland Islands Dependencies sector in 1908. This claim, made in letters patent July 21, 1908, illustrates the abstract quality of the sector. It blithely included some hundred thousand square miles of Patagonia and Tierra del Fuego, restored in an amending decree 9 years later, which removed the northwest corner of the Falklands sector. Since the Second World War this controversy has been considerably intensified, particularly in the conflicting claims of Britain, Argentina, and Chile in the American quadrant, and their efforts to outdo one another in demonstrating their rights to territorial sovereignty.

One of the most interesting aspects of this contest has been the Latin American challenge not only to the British claims themselves, but to the first principle advanced in their justification: the legal validity of discovery rights. Discovery, particularly in the 16th, 17th, and 18th centuries, was, needless to say, a primary requirement for the claim of a European nation to colonial territory in the Americas, Africa, and the islands of the Pacific. As such it was generally accepted in the 19th century codification of international law.

It has been given consideration in 20th century writing on questions of territorial sovereignty in spite of the fact that only the Arctic and Antarctic coasts have not been accurately charted. When the Island of Miangas was awarded to the Netherlands in 1928, Max Huber, in his opinion as arbiter for the Permanent Court of International Justice, acknowledged that discovery carried inchoate rights to sovereignty, but stated that they must be "completed eventually by actual and durable taking of possession within a reasonable time."¹

Discovery, however, is explicitly advanced as justification for British claims to the Falkland Islands dependencies in the Antarctic, and is at least implicit in the Norwegian, French, and Australian claims to sectors of the continent in which their respective nationals have made significant discoveries. The United States, while not specifically denying the validity of discovery rights in the Antarctic, has maintained the official position first laid down by Secretary of State Charles Evans Hughes in 1924, that no nation can claim sovereignty over an area where effective occupation is not possible.²

In an exchange of notes with Britain in the summer of 1951, Argentina denied the validity of British discovery rights in the Antarctic, stating that effective occupation must be the test. Argentine claims to effective occupation, with reference to a weather station operated on Laurie Island since 1904, are in themselves a denial of effective British occupation.

Chile, during the same summer, denied the validity of British discovery rights even more categorically, charging that, "In fact discovery and scientific expeditions carried

out in the Antarctic do not and cannot constitute any title over this region."³ Chile makes no claim to discovery rights, but claims effective occupation since the establishment of a Chilean whaling station on Deception Island in 1908.

Both Argentina and Chile have refused the British offer to submit the dispute to the International Court of Justice. In making this offer, Britain expresses confidence in the validity of her Antarctic claims, and Chile and Argentina seen to exhibit a lack of confidence that they would be rejected. The reasons given for refusing arbitration are various. In addition to their reluctance to weaken their positions by submitting to arbitration, they are aware that an international tribunal might support discovery rights to a certain extent. There is some question as to the effectiveness of the Chilean whaling station on Deception Island as a colonial outpost. The Falkland Islands, included in the Argentine claim, are manifestly an exception to the Argentine assertions of their own continuous and effective occupation of the whole sector. There are, in fact, a number of circumstances which weaken the Argentine and Chilean claims to continuous and effective occupation. Nevertheless Britain has found it necessary to defend her position in the colonization contest.

III

British discovery rights in the Falkland Dependencies sector have been subject for some years to a different type of challenge from still further north. Although the importance of discovery rights in international law seems to have diminished, the heroic stories of exploration still dominate the literature about the Antarctic, and the question as to who first laid eyes on the Antarctic mainland has received a considerable amount of attention. Whoever it was almost certainly gazed at the mountains of the peninsula known variously as Palmer Land, Graham Land or Terra O'Higgins. This peninsula extends to within a day's sailing time of waters frequented by seal hunters as early as the first decade of the 19th century. It was partly the search for sealing grounds which took Captain Edward Bransfield of the British Navy south to the coast which he named Trinity Land in 1820. Captain Nathaniel Brown Palmer, of Stonington, Conn., who was with the American sealing fleet moored at Deception Island later in the same year, sailed south to investigate the line of mountains which he had sighted from Deception.

The British base their discovery claims on Bransfield's expedition. Palmer's expedition is the basis of American claims which have been made officially that "Palmer Land" was adopted by the United States Board of Geographical Names as the official name of the peninsula; a few articles asserting Palmer's discovery have appeared in Government publications. Bransfield sighted Antarctic land almost a year before Palmer; however, Palmer's defenders base their claim on the assumption that what Bransfield saw was actually an island, and that Palmer was first to sight the actual mainland. The records of both expeditions are inconclusive, and for several years before the Second World War there was a heated argument between British and American geographers, led by Prof. R. N. Rudmose-Brown of Sheffield University and the late Arthur R. Hinks, Secretary of the Royal Geographical Society, and by the late Prof. William H. Hobbs, of the University of Michigan. It was carried on in the pages of such publications as *Science*, *The Geographical Review* and *Transactions of the American Philosophical Society*. The articles aroused considerable public interest

¹ United Nations. Reports at International Arbitral Awards, vol. 2, 1949, p. 845.

² U. S. Department of State. Foreign Relations of the United States, 1924, vol. 2, pp. 519-520.

³ The British notes and translations of the Chilean and Argentine notes appear in *Polar Record*, vol. 6, No. 43, January 1952, pp. 413-418.

in what had previously been an obscure issue.

Another effect of the Bransfield-Palmer controversy, however, was to call forth new contenders for the honor. No dissenting voice has been raised in England against Bransfield's title, but a New England historian has discovered the log of a Nantucket whaling captain named Christopher Burdick who sighted land from a point close to the controversial peninsula, and identified it as the southern continent, which neither Palmer nor Bransfield had done.⁴ This newly discovered log must certainly be treated as seriously as the secondary accounts upon which the titles of Palmer and Bransfield rest. Another contender has appeared since 1949, when Soviet Russian geographers devoted considerable time and effort to the examination of records of the voyage of Adm. Fabian von Bellingshausen, on which during the Antarctic summer of 1820-21 he discovered 2 large islands off the coast of the continent and sailed very close to the northern coasts of the Palmer Peninsula. As a result of these researches, the All-Soviet Geographical Congress concluded in 1949 that Bellingshausen, sailing in the service of Czar Alexander I, was the discoverer of the Antarctic Continent.

It is unlikely that there can be any satisfactory answer to the question of who first discovered the southern continent. All existing claims have been based on controvertible evidence. Moreover, there is always a chance that an earlier account will be brought to light. The claims to Antarctic discoveries no longer seem able to satisfy the demands based on them. As a result, even those sector claimants whose assertions of sovereignty are associated with discovery are following the leads of Chile and Argentina. France, Australia and Norway (the last in conjunction with Britain and Sweden) have established winter stations within their sector claims during the last 5 years, and plan to continue maintaining them.

Admiral Byrd has announced that he is planning a new American expedition as soon as possible. If he is able to muster an organization comparable to "Operation High-Jump" in 1946-47, there is no doubt that he will cause the governments of Britain, Chile, and Argentina some little concern. There are indications that "High-Jump," with its 13 ships and 4,000 men, served to remind the Chileans and Argentines that unfriendly control of the Palmer Peninsula would be a real threat to their security. Their recent official geographical publications show that they are taking their Antarctic claims quite seriously.

Beginning in 1948, the British have negotiated annual trilateral agreements with Chile and Argentina which have provided that none of the signatories will indulge in a provocative show of naval strength in the Antarctic seas. A bilateral agreement was concluded between Chile and Argentina in 1947, and an exchange of official observers has been conducted between Chilean and Argentine expeditions—indicative of united opposition to British claims. The Inter-American Treaty of Reciprocal Assistance signed at Rio de Janeiro in 1947 included the American Quadrant of the Antarctic in its mutual defense area. This treaty, in effect, applied the Monroe Doctrine to the Antarctic for the first time.

Meanwhile, there has been an increasing awareness of the potentialities of the southern polar area as a strategic land mass, as a potential source of mineral wealth and as a possible valuable colony. It lends point to the Hope Bay incident as a reminder that European claims to Antarctic sovereignty which have stood unloved but

unmolested for a good many years are being challenged.

In the eventual solution of the Antarctic question the assertion of discovery rights will clearly play much less of a role than the establishment of effective control. Effective occupation, by a definition which goes back to the 16th century, and is found in such instruments as the General Act of Berlin (1885) and the Treaty of Saint Germain-en-Laye (1679), is exclusively unilateral. No more than one national authority can operate effectively and independently in the same area even though the number of persons and the amount of property involved be negligible.

The importance of effective occupation, the fact that to be effective it must be exclusive, and the fact that the joint tenancy of Hope Bay, for example, cannot be so regarded, combine to stimulate activity in the American Quadrant. It is perhaps significant that the machine gun has been introduced as an instrument of exclusion.

Speech by Mayor Bernard J. Berry, on the Occasion of Welcome to the Deans of Seton Hall College of Medicine and Dentistry, Monday Evening, February 21, 1955, Hotel Plaza, Jersey City

**EXTENSION OF REMARKS
OF**

HON. T. JAMES TUMULTY

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mr. TUMULTY. Mr. Speaker, under leave to extend my remarks, I would like to include a speech delivered on the occasion of welcome to the deans of Seton Hall College of Medicine and Dentistry, on Monday evening, February 21, 1955, at the Hotel Plaza, Jersey City, N. J., by our illustrious and indefatigable mayor, Hon. Bernard J. Berry.

The speech follows:

It's very gratifying to see so many leaders of our city's industries and businesses here tonight.

With your indulgence, I would very much like to consider this attendance tacit approval of a program which the city administration has introduced, developed and—yes, fought for—in the best interests of our community over the past year.

You know, it hardly seems like a year has gone by since the idea of a College of Medicine and Dentistry right here in Jersey City was germinated and encouraged. Yet, in the sands of that time we have seen history written.

From the day our city factfinders returned from Rochester with their report on the feasibility of a private university operating a medical and dental school with the facilities of the Jersey City medical center, we can mark the steps which led to its fruition.

Last March, Seton Hall University showed its first public interest in establishing a college of medicine and dentistry at our city hospital and sent Dean Hirschboeck, of Marquette University School of Medicine, to survey the medical center facilities.

Suffice to say, Dr. Hirschboeck was impressed by what he saw.

In May, the city commission advertised in the Nation's press for interested universities to consider and bid for the facilities of the medical center for a medical school.

On June 22, 1954, Seton Hall University submitted a formal bid and a detailed plan for such a school and the city commission authorized negotiations with that renowned institution.

Negotiations began and on August 11, 1954, the establishment of the Seton Hall College of Medicine and Dentistry was formally observed in televised ceremonies at Murdoch Hall.

In November, my colleagues on the city commission, Commissioners Whipple, Soriero, Spence, and Ringle, and I approved the lease of the clinical building of the medical center to Seton Hall and in that same month the new college received its State charter.

On December 10, 1954, Archbishop Thomas A. Boland signed the lease with the city for the use of the clinical building.

The new year 1955 was still in its dawning when the Right Reverend Monsignor John L. McNulty, president of Seton Hall University, remained true to his promise that only the best educators in the land would be on the staff of the new College of Medicine and Dentistry.

Just a few weeks ago, Monsignor McNulty announced the appointment of the exceptionally qualified man we greet and honor here tonight—Dr. Charles Leonard Brown, the first dean of the Seton Hall College of Medicine, and Dr. Merritte M. J. Maxwell, the first dean of the Seton Hall College of Dentistry.

Those have been some of the stepping-stones, and as I tick them off so briefly, I cannot halt the flood of thankfulness that engulfs me, the gratitude to the many who worked in the spirit of cooperation and untiring devotion to an ideal—from the wisdom and counsel of his excellency, Archbishop Boland, and the inspired zeal of Monsignor McNulty to the unflagging support of my fellow city commissioners.

And what have we all worked for? What has been the ideal, the true goal?

Not merely an edifice, a bronze nameplate to be added to the white bricks on a tall building at Baldwin Avenue.

I don't believe Seton Hall University wanted a medical school just for the sake of adding another college to its already imposing list and, when you come right down to it, even though the unused floors throughout the high medical center buildings offend economic sensibilities, this administration's interest wasn't simply the sheer filling of that space.

No, in the final analysis, the motivating force was service to you, to every man, woman, and child in this city, this county; yes, this State of New Jersey.

The true goal is alleviation of suffering and pain, the curing of ills, giving better health to this generation and succeeding ones.

We have been dedicated, committed—if you will—to the fulfillment of a need New Jersey has long expressed—a medical and dental school to train those who will lead us to better health.

You hear this question raised: "Aren't there enough doctors?"

Well, there are about 220,000 medical doctors in the United States, but three years ago the President's Commission on Health Needs of the Nation estimated there would be a shortage of 22,000 to 45,000 doctors by 1960. And recently, Dr. Howard A. Rusk, chairman of the Health Resources Advisory Committee of the National Security Resources Board, estimated a shortage of 20,000 physicians before 1960.

I can tell you from personal experience, as director of the Department of Public Affairs of Jersey City with jurisdiction over the medical center, that we don't have enough American internes and resident physicians.

⁴Edouard A. Stackpole, "A First Recognition of Antarctica," Boston Public Library Quarterly, vol. 4, No. 1, 1951, pp. 3-19.

The country needs more doctors and the State needs more doctors to meet medical and surgical care, research and medical education programs.

One way to fill this need—and it's not an easy way because of the tremendous costs involved—is to establish more medical schools.

It's heartening to note that 10 new 4-year medical schools are now in various stages of planning or development in the States of California, Mississippi, Missouri, Florida, Kentucky, West Virginia, North Dakota, New York and—thanks to Seton Hall University—New Jersey.

The record of our State to date in attempting to develop medical and dental education has been a sorry one.

As far back as 1776, when the only form of instruction was the doctor-apprentice system, medical men recognized the importance of formal training. A group of 17 doctors met in New Brunswick to form the Medical Society of the Colony of New Jersey and improve standards but it wasn't until 1792 that Queen's College (now Rutgers) started a medical department which was short-lived.

In 1830, Princeton University opened a medical school which lasted only a few years and other attempts followed in various parts of the State but all were of very short duration.

Thus it can be seen that those who worked to help the Seton Hall College of Medicine and Dentistry come into being hold no patent for originality.

The idea for a medical and dental college in New Jersey is not new.

Neither is the idea of attempting to utilize the vast unused areas in the gigantic medical center plant. A score of years ago, the city administration tried desperately to get the Federal Government to help lighten the tremendous financial burdens of the hospital—to no avail.

A few years ago, my predecessor in office, former Mayor Kenny, offered a very constructive plan to the State of New Jersey for use of the medical center facilities for a State-operated school—in vain.

So it remained for Seton Hall University to offer a solution to the problem of meeting the State's medical and dental education needs. I think they have the answer to this problem and I do not foresee a repeat of past State medical education history because the Seton Hall history is one of continued successes.

The very foundation of Seton Hall is its deep faith in humanity and that faith has been repaid in kind.

Every citizen who has any feeling for his community, who wants to see it prosper, should be proud that Seton Hall University selected the medical center as the site for this State's first successful medical and dental college.

This seat of culture and learning, staffed by such leaders in the world of science and education as Dr. Brown and Dr. Maxwell, heralds the dawn of a new era for Jersey City.

Strange View of Alaska

EXTENSION OF REMARKS OF

HON. E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mr. BARTLETT. Mr. Speaker, an editorial entitled "Strange View of Alaska," which appeared in the St. Louis Post-Dispatch for February 26, clearly

suggests that the Defense Department's position in opposition to Alaska statehood is a "puzzler." I take pleasure in presenting the editorial here:

The Defense Department's contention that national security will be best served by keeping Alaska Territory for the present is indeed a puzzler. It is contradictory of the position of the State Department. It runs counter to the views authorities have hitherto expressed. Neither Defense Secretary Wilson nor Air Force Undersecretary Douglas, who stated the position, offered any reason in support of it.

The chairman of the Senate Territories Subcommittee, Senator Jackson of Washington, is therefore quite right in asking the Defense Department what reasoning has led it to so surprising a conclusion. There are many reasons to support the view that admission of Alaska to statehood would strengthen national security.

More people could be expected to cast their lot with a new State than with a neglected Territory—and underpopulation is one of Alaska's greatest weaknesses. Two Senators and voting representation in the House could do far more for Alaska than the present single non-voting Delegate, perhaps striking off the shipping monopoly and extending the inadequate railroad system. A larger population, with better transportation, producing more on farms and in factories, could better feed, transport, and maintain Armed Forces for Alaska's—and the Union's—defense.

What possible considerations of national security could argue stronger against Alaskan statehood than these reasons argue for it?

Propaganda

EXTENSION OF REMARKS OF

HON. THOR C. TOLLEFSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mr. TOLLEFSON. Mr. Speaker, several foreign nations have been seeking to have our Cargo Preference Act of 1954 undermined. The following article appearing in the New York Journal-American on February 4, 1955, labels their efforts for what they are—propaganda. I trust that Members of Congress will read the article:

PROPAGANDA

Since 1936 this country has paid subsidies to American shipping interests in order to have an American merchant marine to carry a fair portion of our maritime commerce and to serve as an auxiliary to the Armed Forces in time of war.

In World War I we had to spend billions of dollars to build ships. Then the costly process had to be repeated in World War II because of our own negligence. Experience has plainly demonstrated that the ship-subsidy plan is both cheaper and safer.

Now, it appears, Great Britain has a scheme to divert American subsidies to the support of the British merchant marine, which competes with ours.

Under the foreign-aid program, Congress requires that part of the goods we give away be carried overseas in American vessels. Our Government, of course, pays the cargo charges as well as the cost of the goods. And lately the Government has been giving away \$700 million worth of farm products as a means of reducing \$7 billion worth of sur-

pluses accumulated through the agricultural price-subsidy plan.

We read, however, in the London Sunday Despatch, that the British Government is refusing large quantities of these free goods because the United States has laid it down that half the goods must be moved in United States ships.

"The United States Government has been told," the report continues, "that unless the rule is altered, the United States economic aid plan is in danger of breaking down."

Perhaps, in the circumstances indicated, the sensible course would be to let the aid plan break down, and save our money. We certainly cannot afford to let our merchant marine be broken down by subsidized foreign competition—much less, ourselves pay part of the foreign subsidy.

Northwestern Timberlands Threatened

EXTENSION OF REMARKS OF

HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1955

Mr. METCALF. Mr. Speaker, in House Document No. 88, President Eisenhower asks a supplemental appropriation for control of forest pests.

Last fall I attended a meeting in Missoula devoted to a discussion of the spruce budworm. I came away convinced that unless vigorous control measures were started this year the forests of Montana, Idaho, Oregon, and New Mexico would suffer tremendous damage, the economy of the region would be upset, and Montana's thriving Christmas-tree industry destroyed.

An investment of \$2½ million here will save \$38 million worth of timber and thousands of dollars worth of other property and prevent incalculable damage to recreation areas and the watersheds of several of our greatest river systems.

Recently the following appeared in *Outdoors Unlimited*, publication of the Outdoor Writers Association of America:

NORTHWESTERN TIMBERLANDS THREATENED

The great gray shadow that has spread over 1,750,000 acres of Montana forests is cast by a tiny, soft, gray moth, and more than \$2,250,000 will be needed to clip his wings.

The spruce budworm, who is a moth at one phase of his short but destructive life, has been silently and effectively at work almost everywhere Douglas-fir grows in Montana's mountains for nearly 5 years, and that is why his deadly mission has suddenly become so apparent.

Because the budworm nibbles only the new, tender needles, the tree stays green for about 5 years, the time needed for the older, untouched needles to drop to the ground in an evergreen's natural shedding process. When these are gone, there are, thanks to the budworm, none to take their place, and the tree dies.

The more obvious results of such mass death are the graying hillsides so startlingly gaunt where yesterday there was nothing but green, the money loss of sawtimber soaring up to more than \$30 million, and the gradual strangulation of Montana's \$1 million Christmas-tree industry. Not so obvious is the staggering loss of watershed protection,

the rising hazard of fire among the dead and dying, the stripped shade for fishing waters, and the loss of food and cover for wildlife.

Ever since the 1920's the budworm, a native of the forested Northwest, has been nibbling at Montana's forests, first in Yellowstone Park and the Deep Creek Canyon country near Townsend, but not until the forties and fifties did it spread like a crown fire on a hot summer's day, sweeping across the forests of Montana and northern Idaho until it now extends from the Snake to the Musselshell and from Yellowstone to Glacier Park.

As of now, the picture is this: Out of the 2 million infested acres in all this area, Montana has all but a quarter million. Douglas-fir in both Montana and Idaho has taken, and is taking, the brunt of the attack. Last year the blight spread to new forests in the Crazy Mountains, along the Madison Range, in the Beaverhead, and in the Ruby Mountains of southwestern Montana.

Areas sprayed by plane in 1953 around Helena and in the Deer Lodge National Forest are nearly back where they were. Moths moved in practically as soon as the planes left the sky, and foresters are convinced they must act now on a wider scope until there are no moths left to move back.

At a meeting last fall in Missoula there was general agreement that the tiny moth was too huge a problem for private forest owners or even the States to meet. It was a national problem, the meeting decided, and to do the job the way it should be done, in the few summer days when spraying is really effective, it would take more than \$2 million and a fleet of spray planes. This much money to meet a national obligation would have to come from Congress.

Colorado learned the hard way only a few years ago that the bud worm won't wait and that he can wipe out timber. Between Colorado Springs and Denver, a scant few years back, there was a beautiful woods known to Coloradans as the Black Forest. Today there are bare trunks where there was shade, and naked limbs where needles grew green. The big summer homes of Coloradans stand curiously alone in a forest of snags.

Serious as the situation is in Montana right now, there is plenty of time to save a good share of this timber if there is money and if the money is used properly. "Hot-spotting" or treatment of small areas has been shown that spraying will work, properly applied at just the right time, but it has to be done in big blocks to keep the worms from taking over again. This is 1955's problem, and there is no time to lose.

Immigration Legislation

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mr. CELLER. Mr. Speaker, under leave to extend my remarks, I insert herewith the statement on immigration adopted at the annual meeting of the American Jewish Committee, on January 30, 1955, at the Hotel Roosevelt in New York City:

STATEMENT ON IMMIGRATION

In his message on the state of the Union on January 6, 1955, President Eisenhower declared that despite sincere efforts to administer the McCarran-Walter Immigration Act of 1952 humanely, certain of its provisions "have the effect of compelling actions in respect to aliens which are inequitable in some

instances and discriminatory in others. These provisions should be corrected in this session of Congress."

This statement applies with equal force to the Refugee Relief Act of 1953.

While supporting the President's views, the American Jewish Committee nonetheless believes that only fundamental revision will overcome the discriminatory features of the McCarran-Walter Act and the cumbersome, unworkable provisions of the Refugee Relief Act.

We commend those Members of Congress of each political party who, during the last session, joined in sponsoring bills to improve these laws. We approve the reintroduction of these bills and the early adoption of legislation based on American democratic principles.

Adopted January 30, 1955, Hotel Roosevelt, New York, N. Y.

Eighty-three Years on One Job

EXTENSION OF REMARKS

OF

HON. JOHN J. RILEY

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mr. RILEY. Mr. Speaker, under leave, I insert in the RECORD an article by Mr. George Robinson, Washington Post and Times Herald, Sunday, March 6, 1955, giving an account of what is probably the longest continuous industrial employment record in the world.

The subject of this article, Mr. James Wesley Rearden, is a distinguished resident of my district and an employee of the oldest cotton mill in the South operating under its original charter.

The article follows:

GRANITEVILLE, S. C.—This will be quite a year for James Wesley Rearden, a leading citizen of this little mill community nestled in the rolling hills of upper Horse Creek Valley near Aiken. On June 6 he'll celebrate his 94th birthday. On May 10 he'll round out 83 years of work with the Graniteville Co., a group of modern cotton mills.

And that makes Mr. Rearden the holder of the longest continuous industrial work record in the world. In the office of the president of the Graniteville Co. hang five portraits. Four are those of presidents of the firm. The fifth is that of the shipping clerk to whom the firm long has paid tribute for "always doing a little more than is expected of him."

The remarkable Mr. Rearden has a standing offer from the Graniteville Co. to retire any time he wants to or report for work any hour of the day he chooses. But he's regularly among the first on the job, walking the short distance from his white frame home (not far from the plant gates) to his office. He treats himself to a short rest period after lunch every day, but otherwise puts in full time.

A retirement system was adopted by Graniteville in 1949 for employees reaching 65, but Mr. Rearden—then 83—had been told long before that he could work as long as he cared to. So he's doing just that. "As long as they'll let me," he says, "I'm going to show up for work each morning. I like the people I work for and I'd feel lost without something to do."

That "something to do" for the past 35 years has included teaching the Young Men's Bible Class at St. John's Methodist Church in Graniteville, where he has been a member 70 years and has sung in the choir almost that long.

Mr. Rearden won his longest-work-record title fair and square. In 1950 the Thomas De La Rue Co., Ltd., printers and engravers, of London, challenged the United States to produce a man with a longer continuous work record than their Harry Adkins, a 75-year man. The Rearden record, supplied through the National Association of Manufacturers, showed that he topped Adkins by 3 years.

HE STARTED AT 10

He began work for Graniteville on May 10, 1872. He was nearly 11 then, but, as he recalls, "big for his age." That was the only reason he was able to get a job in the plant; every child under 13 was supposed to be in school. Mr. Rearden's first job was "tack boy," his only tools a needle and thread plus a shoe knife for cutting thread to tack cloth.

Mr. Rearden still remembers the company's founder, William Gregg, who started the mill in 1845. It is the oldest cotton mill in the South operating under its original charter. As for Mr. Rearden, he feels the same about his job today as in 1947, when the company honored him on his 75th consecutive work year.

Said he then: "If I had to make the choice again, it would be the same as it was in 1872."

Formosa

EXTENSION OF REMARKS

OF

HON. RICHARD B. WIGGLESWORTH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, February 25, 1955

Mr. WIGGLESWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by William Henry Chamberlin appearing in the New Leader of March 1955 entitled "Where the News Ends":

WHERE THE NEWS ENDS

(By William Henry Chamberlin)

LET'S NOT YIELD TO RED BLACKMAIL—FORMOSA IS VITAL TO ASIAN DEFENSE

Totalitarian tyrannies are expert in the art of bluster and blackmail, of making crime pay. For years before the outbreak of the Second World War Hitler and Mussolini carried out one land grab after another by exploiting fear of war. But retreats and surrenders did not avert war; they only brought it on under less favorable conditions.

One might have thought that one such lesson would be enough, that the world would have recognized the futility of dealing with totalitarian aggressors without equal or superior force and the willingness to use this force if necessary. Unfortunately this has not been the case. The Soviet Union and Red China have been as successful as Hitler and Mussolini in making crime pay.

One striking example of this technique was the Soviet reaction to the discovery in the Katyn Forest of the bodies of some 15,000 Polish officer POW's. The Soviet Government, in the face of overwhelming circumstantial evidence to the contrary, asserted that the massacre had been committed by the Germans and used the request of the Polish Government-in-exile for an impartial Red Cross investigation as an excuse for breaking off diplomatic relations. This was the first step toward creating a Polish puppet regime.

The Chinese Communists have been apt pupils in this game of terror and blackmail. By intervening in Korea they tried to shoot their way into the United Nations. After winning a still more decisive victory in Indo-

China, they decided that, if they couldn't shoot their way in, perhaps they could kidnap their way in. Hence the outrageous "trial" and sentencing of 11 American fliers who should have been repatriated with other war prisoners in 1953.

As these fliers were fighting a war under the authorization of the United Nations, the challenge to that organization was clear. The U. N. took it lying down. Instead of threatening a complete trade boycott if the prisoners were not released, U. N. Secretary General Dag Hammarskjöld went to Peking on a pleading mission which has not brought release of the fliers but has considerably increased Chinese Red prestige.

Now the squeeze has started on Formosa, as Peking emits bellicose threats almost daily with responsive echoes from Moscow—the old familiar Hitler-Mussolini smash-and-grab technique. It seems both surprising and unfortunate that public opinion in Great Britain seems to be softened up for new experiments in appeasement and retreat. Britain shares many American ideals and interests, and is our strongest and most dependable ally. But some of the Bevanite outbursts are hard to take, notably the reported suggestion of Harold Wilson that Chiang Kai-shek and his government and the American 7th Fleet should all be banished to St. Helena. (Where would Mr. Wilson expect help to come from when the Chinese Communists fall on Hong Kong and Malaya, as they certainly will if they succeed in driving the United States from the Orient?)

As an antidote to Mr. Wilson, the clear-headed, sensible viewpoint of the Economist is worth quoting:

"Those, like Mr. Attlee, who imply that it is all the United States' fault are simply playing the Communists' game by dividing the public opinion of the western countries. . . . To egg the Communists on, as Mr. Attlee has been doing, is to work for war."

What is at stake in Formosa is something more important than an island of strategic value which is also the last outpost of Chinese freedom. What is at stake is the possibility of making any stand against a complete Communist sweep in East Asia. Mr. Dulles seemed to see this clearly when he said recently:

"It should not be carelessly assumed that peace and security will be promoted merely by the non-Communist nations indefinitely granting one-sided concessions to the Communist nations. A great danger in Asia is the fear of many non-Communist peoples that the United States has no real intention of standing firmly behind them. . . . If the non-Communist Asians ever come to feel that their western allies are disposed to retreat whenever communism threatens peace, then the entire area could quickly become indefensible."

These are brave and sensible words. Does anyone in his right mind suppose that the Communist designs on Formosa would be abandoned if the offshore islands were surrendered, or that Formosa would be anything but a stepping stone to Japan, the Philippines, southeast Asia? Let's hope Mr. Dulles stands firmly behind these words.

Thomas G. Masaryk

EXTENSION OF REMARKS OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mr. KLEIN. Mr. Speaker, today, March 7, marks the anniversary of the

birth of one of the great men of our times, Thomas G. Masaryk, founder and first President of Czechoslovakia. Much has happened since the establishment of that country, and much that has happened has been tragic. But history has a way of redeeming its tragedies and of restoring to its great and noble figures the status that is their due.

I was invited recently by the publishers of a Czechoslovakian newspaper in the United States to express my sentiments about Dr. Masaryk; and I was glad to do so in a message as follows:

MR. ANDREW J. VALUCHEK,

New Yorksky Dennik-New Yorkse Listy,
C. S. Publishing Co., Inc., New York,
N. Y.

MY DEAR SIR: I am deeply moved to be able to participate in the observance of the anniversary of the birth of Thomas G. Masaryk, one of the noble spirits of our times, a great leader of his country, and a distinguished citizen of the world family.

No matter how intensive the efforts of those, to whom his democratic ideals are repugnant, to besmirch his reputation and to seek to eradicate the memory of his great achievements, the name of Masaryk will survive. His enemies may demolish the stone memorials commemorating his name. They can never reach the shrine in which he is steadily revered, the hearts of his countrymen and indeed of the people of all the world.

Sincerely yours,

ARTHUR G. KLEIN,
Member of Congress.

Eisenhower-Nixon Teamwork Elevates Vice Presidency to Proper Importance

EXTENSION OF REMARKS OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 28, 1955

Mr. HOSMER. Mr. Speaker, the new status of the office of Vice President as in fact the Nation's No. 2 spot in dignity, tone, and importance has been noted by Columnist Walter T. Ridder. He gives credit to President Eisenhower and Vice President Nixon for this New Look in the Nation's table of organization in the following article:

NIXON GIVES DIGNITY TO VICE SPOT
(By Walter T. Ridder)

WASHINGTON.—One thing you've got to give President Eisenhower and Vice President Nixon. Working together, they have lifted the Vice Presidency out of the Alexander Throttlebottom class. They have given the Nation's No. 2 spot a dignity, tone, and importance which it rarely had in the past.

A good deal of this is due to Eisenhower's firm intent not to leave the Vice President in utter darkness as to what's going on in the White House. He is very conscious of the fact that something might happen to him and he wants NIXON to know what has been going on and why. He does not want a repetition of Harry S. Truman's uneasy entrance into the White House.

In later years, Truman told friends that he spent his first few months in the President's office merely trying to find out what policy and plans President Roosevelt had been following. Vice President Truman had been pretty much relegated to his job of presiding over the Senate, which gave him a

picture of domestic affairs, but he was utterly in the dark as to what was happening on the international front.

This is precisely what Eisenhower is seeking to avoid. NIXON, when in Washington, acts as the President's representative at many official affairs; he sits with the National Security Council, he attends Cabinet meetings. He takes on special jobs for the President, such as his good-will tour to the Far East and his present journey through Central America. He is, in every sense of the word, a working Vice President.

Much of the credit for the expansion of the Vice President's job must go to Nixon himself, who has thrown himself into his work with a marked energy and a tirelessness which is remarkable to see. He takes on back room political tasks on Capitol Hill, tries to keep himself abreast of international development, and shoulders as much of the social routine as he can in order to free the President for other work.

Time was when the Vice Presidency was a treadmill to political obscurity. The holder of the job sat up in his office in the Senate, swapped jokes, drinks and card games with the boys, and sauntered every now and then to the Senate floor where he cast votes only to break a tie.

All that has now been changed.

If Nixon and Eisenhower between them can change the character of the Vice Presidency, it may result in high-caliber men seeking the job and more care at national conventions in the choosing of vice presidential candidates.

United States Court of Appeals, Ninth Circuit, Now in Good Condition

EXTENSION OF REMARKS OF

HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1955

Mr. METCALF. Mr. Speaker, some consideration has been given to increasing the number of judges on the United States Court of Appeals, Ninth Circuit, which now has nine judges.

My own view is that a court of 11 or 12 judges would be administratively awkward and cumbersome. These judges sit in panels of three. Already, I understand, there are often instances where two different panels considering similar cases are almost simultaneously rendering opposite decisions. Increasing the size of the court would increase this possibility.

Another suggestion has been to divide the circuit, putting Washington, Oregon, Idaho, Montana, and Alaska in a new circuit. Most of the bar associations in these States have passed resolutions against such a division. The Montana Bar Association was unanimous in its opposition the last time this suggestion was voted on.

The following article from the February 28, 1955, San Francisco News indicates that the Ninth Circuit Court is in excellent condition, with litigants able to go to trial within a month or two after their case is ready. It also is anticipated that with a drop in new cases, and faster handling of decisions by increased use of the service of district judges, the court will have cleaned up its backlog by next January and then can stay current with

its nine judges, probably making additional judges unnecessary.

MORE JUDGES NEEDED IN COURTS?

(By Tom Hall)

Are the requests to Congress for more Federal judges justifiable?

Those asking for additional judges point to heavy workloads and quote figures showing how, at least in this ninth circuit of seven western States, that population increases are going to make the situation worse.

Actually, as previous articles have pointed out, the district court is in excellent condition with litigants able to go to trial within a month or two after their case is ready.

And statistics in the office of clerk Carl Calbreath show there is a decrease in the amount of civil cases being filed.

In the fiscal year 1952-53 a total of 1,875 civil cases were filed. That included approximately 700 Chinese citizenship cases, filed in large volume to beat a deadline set by McCarran-Walter Act provisions.

FEWER FILINGS

The fiscal year 1953-54 saw 1,591 civil cases filed. But so far this year only 627 docketings have been recorded. Projecting that figure for the rest of the year, an estimated 940 cases would be filed by July 1.

Many cases filed in past years, however, were the type which took a short time to try, such as OPA violations. Many now being filed, advocates of more judges say, are more substantial and take longer to try.

This decreasing amount of filings in the district court, naturally, is reflected in the circuit court's appellate calendar, which also shows a decrease in docketings.

JUDGES DISAGREE

Circuit clerk Paul O'Brien's statistics show 515 cases docketed for the fiscal year 1953-1954, while projected figures show an estimated 400 will be filed this fiscal year.

All concerned caution that filings could suddenly soar, but that's the way the statistics stand now.

All judges of the appellate bench do not see eye-to-eye on the need for additional help.

Last year, even, at their annual judicial council here, 1 group thought that with the help of the district judges, as well as the additional judgeships created last year, they could get their calendar current.

To some degree the prediction has come true, but they are hearing 400 to 450 cases a year now to prior years' average of the 225 in order to accomplish it.

Last year one looked ahead nearly 2 years to secure a date to argue an appeal. Now it takes about a year.

FIVE COULD RETIRE

One solution is not publicly discussed, but expected to be offered by some Congressmen when the additional judgeship bill comes up for debate. That is, why don't retriable judges of this circuit retire?

There is no mandatory retirement rule, but Federal judges may retire at age 70 after 10 years service, or at age 65 after 15 years service, all on full pay.

And though retired, they may still sit actively on as many cases as they physically can handle.

Clifton Mathews, who retired 2 years ago, is still a very familiar figure on the bench here.

Age average of the 9-judge circuit court here is 70.

Five are more than 70 years old and could retire while at least 1 other could retire under the 65-year-old provision.

Those opposing more judges note that retirement of the eligibles would leave vacancies to be filled by younger men, but not mean the loss of experience and legal knowledge of the older judges.

They also point out that if Congress refused to give more judges, it would be one way the circuit could take the matter into its own hands to get additional help.

Democracy's Answer to the Marxian Dialectic

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mr. JUDD. Mr. Speaker, last November 8-10, there was held in Washington a unique convention—the first national conference on the Spiritual Foundations of American Democracy.

The conference was sponsored by the Foundation for Religious Action in the Social and Civil Order, a nonsectarian educational organization headed by Dr. Charles W. Lowry, a well-known Episcopal clergyman, and Dr. Edward L. R. Elson, pastor of the National Presbyterian Church in Washington. The foundation has offices in the Dupont Circle Building, Washington. Its national advisory council is made up of distinguished American clergymen and laymen, representing all faiths and including a former President of the United States, Catholic, Episcopal, and Methodist bishops, and several university and college presidents.

The conference speakers included eminent Protestant, Catholic, and Jewish leaders of thought. President Eisenhower spoke briefly at noon on the second day, commending the aims of the movement and emphasizing the religious basis in his view of our democratic form of government. At this same session Senator STUART SYMINGTON and Judge Matthew F. McGuire spoke on God and Government.

The final session was addressed by the chairman of the foundation, Dr. Charles W. Lowry. Dr. Lowry is a graduate of Washington and Lee, Harvard, and Oxford Universities and has pioneered in helping Americans understand the philosophy and psychology of communism. His address is more than a brilliant logical refutation of Marxism-Leninism. It is a profound, passionate affirmation of the truth and meaning of democracy for the 20th century.

Under leave to extend my remarks, I include Dr. Lowry's address:

DEMOCRACY'S ANSWER TO THE MARXIAN DIALECTIC

(By Charles W. Lowry)

I approved but did not originate this impressive subject. I assented to but did not initiate my assignment to discuss it. The responsibility for both actions falls primarily upon Dr. Elson and Dr. Trueblood, and secondarily upon Father Cronin and Rabbi Gerstenfeld.

I am, however, stirred in a deep way by the challenge of a theme that goes so surely to the very heart of the issue which, like a powerful spear, transfixes the body of this time and demands a clear resolution as the price of cauterizing a mortal wound. We

are living at this moment not in an ordinary period with events continuing in a normal succession, but in what can only be called an interruption of history. This lucid and original expression I owe to my friend, Dr. Carlos Davila, the secretary general of the Pan American Union. What we all desire to see, and what our world groans to feel, is a return of history and the rescue of a future.

This happy consummation is not just going to take place; it is not an inevitable which we can take for granted. It rather represents a deed which must in some sense be performed by us, albeit with the aid of divine grace. It consists of an act of collective will which presupposes hard thinking, bold imagining, sympathetic identification, and dedicated passion. It must come by a deep, creative thrust of vision, of courage, of faith, and of love propagated by the energy of many hearts.

To assist however humbly such a nissus or drive of the spirit is the purpose of our meeting and deliberating here. It is the meaning of this national conference. It is the test, and so far as I am concerned the sole test, of the validity of the movement expressing itself in the Foundation for Religious Action in the Social and Civil Order.

"Son of Man, can these bones live? And I answered, O Lord God, Thou knowest. Again He said to me, 'Prophecy to these bones, and say to them, O dry bones, hear the word of the Lord.' Thus says the Lord God to these bones: 'Behold, I will cause breath to enter you, and you shall live. And I will lay sinews upon you, and will cause flesh to come upon you, and cover you with skin, and put breath in you, and you shall live; and you shall know that I am the Lord.'" (Ezekiel 37: 3-6.)

That is a parable of modern man and his worldly wisdom and his secular civilization, so imposing in grandeur and so sterile in things of the spirit. It is an allegory of democracy in the 20th century. How dry and impotent must democracy have become when men and women reach out hungrily to the words of the Marxian dialectic and receive its heavy sophisms as a gospel of life. Yet assuredly it is in a rekindled and resurrected democracy, child of a Jewish father and a Christian mother, and not in a totalitarian materialism, stripped of soul and mind, of mercy and pity, of freedom and love, that man's hope lies.

To speak so almost mystically of democracy and its answer in terms of resurrection may seem obscure and it will certainly seem to some wayward and obstinate. Yet it is just this dimension of the American dream, a dream which for a century the world adopted for its own, that we have all but lost. This near loss explains our curious impotence in the area of ideological struggle and psychological warfare. It explains also the appeal of the Marxian dialectic—communism's cumbersome substitute for the providence and power of God, its secular replacement for mysticism as a factor in politics and society.

THE MARXIAN DIALECTIC

Thus we come forcefully up against our theme and it looms up before us as truly gigantic in scope and magnitude. Yet clasp it and wrestle with it we must, for in such encounter lies the task and the destiny of our age.

What is the Marxian dialectic? To this question many brilliant men have addressed themselves, and quite a few not so brilliant have had their day in the court of attempted explanation. In the second category I may place myself and an ambitious effort at simple exposition of a complex subject in the first chapter of my book, *Communism and Christ*. Here I am going to say very briefly and I hope intelligibly that dialectic was Karl Marx' way of rationalizing the com-

plexity of history and society, including his own doctrine of violence, revolution, and transitional dictatorship. It was his formula for making all these contradictions compatible with his faith that history was moving toward a final goal of good and that this ultimate stage was a universal classless society.

Of course the word "dialectic" is related to "dialog" and for centuries meant the same thing as logic. It denotes the fact that truth like reality is not a simple thing, but is a matter of opposites which somehow produce together a larger actuality. This idea and observation is older than Plato. It was elaborated in its most systematic form by the German philosopher Hegel with his division of the dialectical process into the three stages of thesis, antithesis, and synthesis.

This analysis and terminology was appropriated lock, stock, and barrel by Marx and his friend Engels, the founders of modern systematic communism. In spite of their brutal rejection of mysticism and God, they applied to raw, unsupported, uncreated, and uncoordinated matter in motion these dialectical attributes. Otherwise they would have had no message and no tools with which to move the minds of men but would have been saddled with the cold frigidity of classical, deterministic materialism. This was the last thing Marx wanted. In his *Theses on Feuerbach*, worked out in 1845 but unpublished till the appearance in 1888 of a new edition of Engels' book *Ludwig Feuerbach*, he exclaimed: "The philosophers have only interpreted the world in various ways; the point, however, is to change it."

I could not help recalling this sentence of Marx when in 1953 at the annual meeting of the British Labor Party at Hargate Aneurin Bevan shouted: "We are the people who want to change the world." The problem of course is not the desirability of change and improvement. The problem is, in what direction, at what pace, and to what end shall we move?

But to return to the subject of dialectic, it was this concept derived from Hegel and the long history of spiritual philosophy that enabled Marxism to become international communism and to generate the ideological drive and appeal which has been the cutting edge of the most powerful tyranny in the twentieth century. Without its dialectic Marxism could not have become a plan of secular salvation; it could not have carried concealed within its materialistic armor a faith capable of turning the world upside down; it could not have found an intellectual framework on which to hang its dogmas and buttress its prophecy both of revolution and of a new world.

KEY TO UNDERSTANDING COMMUNISM

Even now it is impossible to understand communism and its claims without constant reference to the key of dialectic. It is only from a dialectical standpoint that one can comprehend the possibility of capitalism (a new thesis) undermining itself and turning by inexorable historic processes into its opposite (or antithesis) of socialistic dictatorship. Beyond this contradiction, embracing even the most savage and arbitrary tyranny, there lies from the standpoint of dialectical insight the certainty that a great, final, climactic synthesis will arise, a social utopia in which all things will be held in common by all people, and in which there will be no more classes, no more competition, no more want, and no more war.

People often ask, what makes educated men, university men, even wealthy men, susceptible to the lure of communism? What is the mysterious attraction of this new system which obviously has in it so much of ancient tyranny and primitive brutality?

The answer is to be found in the accomplishments for communism of the concept of dialectic. By this theft from Hegelian idealism—for materialism logically can gain

no benefit from logic—the Marxist can claim an understanding of reality and history which appeals to the intellectual; he can parade a scientific approach to economics and sociology which makes contact with the immense prestige of science in western and now also in eastern education; and he can point to the advent of an ideal social order with the certainty of a heartwarming reaction among the generality of optimistic liberals, garden variety socialists, and modernistic religionists in the world of the west.

At least this was true for a generation after 1917 and has not yet ceased to be a factor with which Europe and America, North and South, must reckon. In Asia and Africa we can discern a similar pattern, adapted to differing conditions and slower and more promising from the Communist standpoint in its tempo of evolution.

SIX WITNESSES FOR COMMUNISM

Let me set down for illustrative and comparative purposes several excerpts from basic Communist writings, covering a sweep of approximately 75 years. I believe that a scrutiny of these texts will be illuminating to the ordinary American, and they will bring home the lesson that we must, first of all, take the time and effort necessary to understand what communism is in structure and psychology. The texts I choose are all nontechnical and are pointed in some way to the social goal of communism. But bear in mind, please, that every one could be matched with a quotation from the same source asserting the rightfulness of violence and the necessity of immediate, absolute military dictatorship as the way to bring in, first, socialism and, ultimately, pure communism. And do not forget that the reconciling key to these apparent contradictions is supplied by our friendly ever so helpful formula, dialectic—dialectic joined to an ultimate and unqualified materialism.

Our first witness is Karl Marx himself, the Moses of communism as the German Engels was its Aaron. He wrote in *Capital*:

"We can then foresee the advent of social conditions under which everyone will be relieved of the burden of material difficulty and distress. . . . In this society of the future, personal freedom and the well-being of all without exception will, for the first time in history, become realities, and the individual will, at the same time, be able to develop fully his personal aptitudes and capacities." (Marx: *Capital*.)

Our second witness is Engels. In his work, *Origin of the Family, Private Property, and the State*, he made a prophecy that might well prove an inconvenient reminder of many things to Communists and fellow travelers of today. Said Engels:

"The society that organizes production on the basis of the free and equal association of the producers will put the whole state machine where it will then belong: in the museum of antiquities, side by side with the spinning wheel and the bronze ax."

The third witness we now call to the box is Lenin, the Russian conspirator and Marxian zealot, who became the most successful revolutionary of all time. He wrote in his authoritative book, *The State and Revolution*:

"There is no trace of an attempt on Marx's part to conjure up a utopia. . . . Marx treats the question of communism in the same way as a naturalist would treat the question of the development, say, of a new biologic species, if he knew that such and such was its origin, and such and such was the direction in which it was changing."

The fourth witness is an American, William Z. Foster, and my quotation is from his suppressed and rare volume, *Toward Soviet America*, published in 1932:

"Communism will inaugurate a new era for the human race. . . . (It) will bring about the immediate or eventual solution of many great social problems. . . . war, re-

ligious superstition, prostitution, famine, pestilence, crime, poverty, alcoholism, unemployment, illiteracy, race and national chauvinism, the suppression of woman, and every form of slavery and exploitation of one class by another. . . . the revolution, in its upward course, will carry humanity to heights of happiness and achievement far beyond the dreams of even the most hopeful utopians."

The fifth witness is the *Short History of the Communist Party of the Soviet Union*, dated 1939 and published over the unwritten imprimatur of Joseph Stalin, if not indeed written by him. This sentence is compact and summary in character; it partakes, in fact, of the catechetical character and purpose of the *Short History*. I quote:

"Marx and Engels taught that it was impossible to get rid of the power of capital and convert capitalist property into public property by peaceful means, and that the working class could achieve this only by revolutionary violence against the bourgeoisie, by a proletarian revolution, by establishing its own political rule—the dictatorship of the proletariat—which must crush the resistance of the exploiters and create a new, classless, Communist society."

Our sixth and final witness is an Asiatic—another man of steel who holds sway, we are told, over nearly one-fourth of the human race. I refer to Mao Tse-tung, who in his book, *China's New Democracy* (1940), wrote:

"Communism is the proletarian system of thought, and is also a new kind of social system. It is different from any other ideological system or social system in that it is the most complete, the most progressive, the most revolutionary, and the most rational system in human history. . . . It is only the Communist ideology and social system that grow and spread in the world, with a mighty, thundering force that can level mountains and overturn seas, and maintain their flowering youth. . . . The world now depends upon communism as its star of salvation, and so does China."

DEMOCRACY'S ANSWER A DIALOG

In these quotations we see the Marxian dialectic in its practical operation. And we are warned—that the answer must be concrete and positive, not merely an academic refutation.

Such refutation is as simple as it is fruitless. Any philosopher with even an elementary training in logic can see that the Hegelian theory of dialectic and materialism are incompatible. They mix about as well as oil and water. The validity of dialectic as a tool for understanding natural and historical development is dependent entirely on the analogy of the human to the divine mind. The Marxian expropriation of the fruit of this analogy without regard to its root and origin represents one of the really monstrous hoaxes, one of the palpable, immense fudges, in the history of thought.

Man, unfortunately for the rationalist, does not live by logic. He lives by something deeper, something that offers or seems to offer food for his spirit. This may include food and other necessities for his body, for the spirit of man justly craves enough transcendence of physical needs to have the freedom to live at a higher level. It is here that Marxian communism has made contact first with Western and then with Eastern man. It has moved into a spiritual and moral vacuum with the power of an elemental force. It will be answered and expelled only by a comparable force that can add to truth subjective depth, social passion, and immediate relevance to man's actual situation of need.

Democracy, honestly conceived and spiritually apprehended, has such an answer. Of this we have no slightest doubt. Yet it must be confessed that there is a problem here which is very searching and very profound. This problem involves the mystery of faith and of the relation of faith to ideology. It

involves the paradox that man must believe in order to live and yet is powerless to create in himself or in others a lively faith. This is always something done in man. It is always finally a mystery.

The problem, therefore, which democracy faces today is one that cannot be solved without taking into account the outreach of the multitudes in every continent for meaning and new life. The same point applies also to intellectuals, for their quest and crisis and aberrations involve the question of man's existence and destiny in an age of science, technology, war, depression, and planetary unification. It has often been remarked from Dostoevski to Whittaker Chambers that the problem of communism is ultimately not one of economics but is the problem of faith.

The answer of democracy, accordingly, must be humble and profound. It must be dialectical in the true meaning of this ancient and oft-abused phrase. It must take the form of a dialog and must eschew easy dogmatism and false simplicity. It must look at all sides of the complex prism of truth and at the same time must believe in Truth and accept her majestic compulsion upon the human conscience. It must not be afraid of the role of the dogmatic and the mythological in human experience. Plato as well as Christianity and all religions of power, whether classified as higher or lower, are our teachers from this standpoint. Finally, this answer must proceed out of self-examination by democracy and must be manifested in a new will to repentance and amendment of life.

In this spirit it is right that freemen should take the false ideology of communism apart and expose it for what it is. They should point out the massive contradiction, approaching social and moral schizophrenia, between the doctrine of Communists and their works whenever and wherever they are in power. Such a contradiction is inexplicable and untenable, even on the basis of the Marxian dialectic pilfered from Hegelian idealism. Communism is not really for man and against the state, but is against man and for the omniscient, absolute state as the abiding organ of a tyranny both unable and unwilling to yield any part of its unlimited power. In this sense communism is Red fascism, and it does not have the excuse of Hitler's national socialism that at least it stated openly and candidly its nihilistic doctrine and program. The Soviet revolution is not in reality revolution, and is in no sense continuous, as both Marx and Lenin assumed, with the classic democratic tradition of the overthrow of tyranny and the increase of self-government. Instead, beginning with January 19, 1918 when Lenin dissolved by armed force the constituent assembly gathered at St. Petersburg to give Russia a democratic constitution, communism has represented counterrevolution and reaction and has extended its way not to liberate but to enslave human beings.

THE GOD THAT FAILED

The choicest spirits who accepted the Communist system in terms of its own ideological valuation as a liberating force have revolted and have had the courage to bear witness before mankind of their error. I think of the six intellectuals who make their respective confessions and bear a common testimony in a remarkable volume *The God That Failed* (1949). A rollcall of these witnesses is suggestive and invigorating: Arthur Koestler, a Hungarian; Ignazio Silone, an Italian; Richard Wright, an American Negro; André Gide, a Frenchman; Louis Fischer, an American (son of David Kantapolsky); and Stephen Spender, an Englishman.

To these names should be added that of a man who was more deeply mired in the sticky amalgam that is communism than most of them but who came to himself and who was ready with a willing sacrifice when

his country called. I refer to Whittaker Chambers, and I beg permission to share with you a passage which records a milestone of spiritual progress in a century that without doubt will be known for its atheism and barbarity as well as for its inventive genius and colossal strides in the mastery of nature.

What modern man has to a large degree lost and what he must rediscover is the knowledge of the reality of good and evil. This is the starting point of the Bible and the foundation of health both for the individual and for civil society. Marx, like Nietzsche, set out from the terrible twin convictions that "God is dead" and that man in his freedom is "beyond good and evil." Communism, like national socialism, may be defined as a particular course of action designed to carry out logically the consequences of these two premises.

In the following passage Chambers records in a moving way a Communist's rediscovery of the reality of evil:

"It will be impossible for a non-Communist to conceive the fever with which I decided to read my first anti-Communist book. I mean fever quite literally; and furtiveness as if I were committing an unpardonable sin, as I was. For the fact that I voluntarily opened such a book could mean only one thing: I had begun to doubt. By chance, and I will let that evasive word stand for something which I do not hold to be chance at all, the first book I read was the book best calculated to shake me to the depths. It was called *I Speak for the Silent*. Its author was Prof. Vladimir Tchernavin.

"Professor Tchernavin was not a Communist. He was a Russian technician of some kind. He was a little man in the Communist world, gentle, humane, good. He went about his routine chores, finding what happiness he could in his love for his wife and small son. Suddenly, for no reason at all, he was arrested and carried away by the secret police. He began that long transit of the Soviet prisons, like a gummed fly slipping from strand to strand in the web of a spider that was always waiting to pounce. At last he was sent to a sub-Arctic prison camp (from which together with his wife and son he later made a sensational escape to Finland). In freedom, he wrote of the horrors of that slave-labor camp, simply, factually; it was their monstrousness, not his pathos, that sickened the soul. Some years before, a British trade-union delegation had toured Russia and reported that there were no slave-labor camps, and that had been good enough for me. I wrote off the recurring rumors as propaganda. Now, for the first time, I believed that slave-labor camps existed.

"A year before, that would not have mattered much to me. I would have put down Tchernavin's book and would not have reopened it. I would have known that, even if some of it were true, it was the price of social progress. I would have known, as what Communist does not know, that terror is an instrument of policy, right if the Communist is right, justified by history, enjoined by the balance of forces in the social wars of this century. Now, too, I put down *I Speak for the Silent*. But for a different reason; because I could not go on, because I could not endure the question that it raised. I was that Communist whom I have described in the foreword to this book. About me had closed a separating silence—the deathly silence of those for whom Tchernavin spoke—and in that silence I heard their screams. 'He hears them for the first time. For they do not merely reach his mind. They pierce beyond. They pierce to his soul. He hears them for the first time because a soul in extremity has communicated with that which alone can hear it—another human soul.'

"I did not know what had happened to me. I denied the very existence of a soul.

But I said: 'This is evil, absolute evil. Of this evil I am a part.'

WHAT IS DEMOCRACY?

So far what we have said implies an identity of some kind between a religious view of the world and democracy as a particular form of society and civil government. This implication is a correct one if we agree that by democracy we mean not a political abstraction but a movement in modern history expressive of a certain faith, a certain spirit, and a certain body of ideas.

People often use the word "democracy" very loosely. Indeed this assembly should not even for a moment lose sight of the fact that communism, abandoning the usage of Lenin and Stalin in his more imitative phase, has brazenly appropriated this word for the standard dictatorship which it sets up whenever it seizes power in any given society. I have acquaintances who say, "Let them have it after all 'republic' and 'Republican' were good enough for our Founding Fathers." I cannot agree with this counsel; and I hardly need add that I indicate no political preference in a current or party sense in affirming such a conclusion.

Words are as tricky as they are fascinating. Their evolution is often as deep a mystery as the development and inner springs of personality. In the case of democracy two things impress me. One is the extraordinary, across-the-board appreciation of this verbal coin during the last 150 years. The other is the growing zeal of the Communists to exploit the prestige of this term despite definite statements of Lenin to the effect that the word "democracy" cannot be scientifically applied to the Communist Party and is a shackle or a blind hindering a revolutionary nation from building up a truly Soviet form of power. Here are two strong reasons for our holding on to the term "democracy" and to what it naturally and logically denotes as the fundamental focus of the ideology which we have and which we seek to pass on to other peoples and nations in our day.

Only, we must be willing to do some thinking and analyzing and defining. We must mean something more than a vague platitude, a least common denominator of governmental mechanism, when we speak of democracy.

When I first went to New England as a graduate student at Harvard, I made friends with a native son of Massachusetts who was born and bred a Unitarian. He used to say that "a Unitarian was a person with a very lively and sustaining faith in he knows not what." That is our problem in talking about democracy and democracy's answer. We are sure that democracy is real and that it is a good thing. We are certain that it represents a tremendous and perhaps an all-conquering force of history. The world, however, of the 20th century is unconvinced. It is a world in transition, peopled with a humanity which in General Smuts' phrase "has struck its tents and is on the march." It is a postcolonial world with immense masses in commotion mutely prophesying the advent of vast alterations in the affairs of men. This contemporary world, which is our world, wants to know what we in the United States really believe. It wants to know what we have to offer. It is ready to listen and eager to follow, but only if it can detect in the voice and words of those who hail democracy the accent of sincerity and an authentic intimation of sympathy and understanding.

A DEMOCRATIC IDEOLOGY

Accordingly, with great boldness and in full realization that my effort may be only as a child's halting step along a road that winds far and is strewn with boulders, I propose to outline a democratic credo or ideology. An ideology, it should be noted, is not just any set of ideas—political, social, moral, or religious—but is a particular body of concepts and propositions through which actual

men think and by which they live. The most acute commentary I know on the real import of the ideological in the struggle and confusion of our age goes back to World War I and was penned by a brilliant Englishman who, with so many of his most promising young fellow countrymen, fell in that tragic struggle. I refer to T. E. Hulme and this acute commentary:

"There are certain doctrines which for a particular period seem not doctrines, but inevitable categories of the human mind. Men do not look on them merely as correct opinion, for they have become so much a part of the mind, and lie so far back that they are never really conscious of them at all. They do not see them but other things through them. It is these abstract ideas at the center, the things which they take for granted, that characterize a period. . . . It is these abstract things at the center, these doctrines felt as facts, which are the source of all the other more material characteristics of a period."

What Hulme is talking about is what we mean today when we speak of ideology. An ideology always has in it a religious element, or that which is an equivalent of religion psychologically and in motivating force. It is generally wider than religion and always involves politics and social arrangements and relationships. Democracy is an ideology and is wider than religion but it has its starting point in religion. Indeed, in its modern development, which is what we mean when we use the word with an upper case "D," Democracy is the deposit and the impact of the Judaeo-Christian religious tradition in the field of politics and civil society.

First, then, democracy is a faith. Second, it is a political principle. Third, it is an economic doctrine. Fourth, it is a vision of a good society.

1. Faith

Democracy in its modern form, in the living stream of which we are a part, began as a faith. It affirmed faith in man because of faith in God. To the Christian men who wrote and signed in the year 1620 the Mayflower Compact it came as naturally to conclude, "In the name of God. Amen," as it does for you and me to breathe.

The same is true of the more highly educated and the somewhat more rationalistic men who in 1776 accepted and signed the composition of Thomas Jefferson, of Virginia, known to history as the Declaration of Independence. This manifesto, which is less than 75 years older than A Communist Manifesto, appeals as a matter of course to a Creator God and to the conscience and reason of mankind. The last thing of which the American signers would have dreamed was an appeal to inevitable economic law and absolute social processes. Between America in 1776 and Europe in 1848 there was a difference not of 75 years but of the antipodes of the spirit and hope of man. How prophetically did this infinite qualitative difference forecast the planetary conflict of the 20th century with its cosmic overtones?

Liberalism

The accent of the American Declaration, in line with the ideas of the political mentor of this classical revolutionary struggle, John Locke, was on the natural freedom of equal men. There was asserted, in other words, not a counsel of perfection or even of desirability but a dogmatic expression of what is. As we have seen, there is a dogmatic core to every ideology. The ideology that was expressing itself in Locke and in the American Revolution as well as in Adam Smith's *The Wealth of Nations* (1776) is what should be known technically as liberalism. It is very remarkable that Karl Marx regarded himself as primarily an economist and set out in *Capital* to outdo his British predecessors, Smith and Ricardo, in analyzing

immutable economic law and drawing correct conclusions as to the direction in which society was inevitably moving.

A clue to the really astonishing outcome of history in the first half of the 20th century, with America unconsciously making herself the principal instrument of promoting the world advance of international communism, is to be found in the retention by some New Deal braintrusts as well as by the political leaders under their influence of the term liberalism for an ideology actually much closer to Marxian socialism. It is tempting to say that these extraordinary and ironical developments are the witness of facts (which can be misread but cannot lie) to a dialectical relationship between liberalism and Marxism. Such a conclusion would contain an element of truth. It would, however, concede too much to the exaggerated view of dialectic held by Hegel and all his followers. It would obscure the commanding role of man's freedom and will both in the founding of the Marxian system and in the deed by which Lenin a generation later harnessed to this system the Russian Revolution of 1917.

These events constitute one of the best refutations of economic determinism or any other doctrine supporting the concept of a block universe. They reveal a future that is not a cast-iron affair but an adventure filled with the free deeds of courageous men. They show that there is nothing inevitable about a Communist world and inspire us to dream with equal daring of a truly democratic world, in which peace and social concord shall be restored and freedom and brotherhood shall march hand in hand.

Words we have said are fascinating things. This fascination is inseparable from the drama of meanings conveyed by them. We must seek always to penetrate to the meanings, using key words as our provisional guides but taking care not to become victims of terms.

Liberty, Equality, Fraternity

So we return now to democracy, which we view as a spacious and growing reality destined to dominate the next age of history. The first wave of democracy as a definite ideology was liberalism, accenting freedom but affirming also as a natural fact equality. In the French phase of the new revolutionary drive for liberation and freedom, there was a clear accent upon equality and to the two watchwords "liberty" and "equality," a third was added, "fraternity."

There was in this instinctive Gallic phraseology something very logical. From the angle of the ideal meaning of democracy, it represented a kind of final achievement, a magna carta, one might say, of a new phase of human development. For ever after, to the very end of time, to progress could only mean to move nearer the realization in actual society of the triune motto of the French Revolution.

Unfortunately the third aspect of the Gallic trilogy fell speedily into neglect. Equality, and the problem of its relation to liberty, riveted the attention, first, of French, and, then, of other European intellectuals. Out of this preoccupation arose the Socialist complex, including the bold ideological demarche of communism, the supreme example of raids in the history of ideas.

The heart of this ideology, as we have seen, is the notion of an inevitable dialectic process in which liberalism (capitalism) produces dictatorial socialism and socialism will turn into pure communism. Against this entirely unfounded but undeniably seductive system of illusion democracy's answer is simple but far-reaching. It is that liberty and equality are fulfilled in love and that love is the supreme instance of the truth of dialectic.

Dialectic of Love

Man, we commonly say, is a being related vertically to God his Creator and horizontally to his fellow man or neighbor. These spatial metaphors, while not without point or limited usefulness, are misleading and have often operated to blunt the thrust of religious truth as a unitive factor in the social and civil spheres of life. In reality the two relations of man are different aspects of one whole, for God is not related to man spatially or in a limited way but in His Divine presence and meaning comprehends and enfolds all human beings and all finite relationships.

This means, as both Holy Scripture and the Judaeo-Christian tradition at their deepest levels have plainly glimpsed and taught, that love is not many but one. The love of God is not one reality and the love of neighbor a secondary real added on, but the second love "is like unto" the first and is its inseparable expression and partial definition. Divine love undergirds, sanctions, and hallows human affection and will to the good of another but it is in the knowledge of the power of human love alone that we understand and enter into the mystery of the love of God. This seems to be the clear teaching of the Parables of the Prodigal Son and the Good Samaritan, and receives vital reinforcement in 1 Corinthians 13 and the First Epistle of St. John.

"Beloved, let us love one another: for love is of God; and every one that loveth is born of God, and knoweth God. He that loveth not knoweth not God; for God is love."

These words carry in them a force so elemental and yet so elevating that argument about them seems out of place. Yet they are true or false. Their significance admits of no gradations and allows of no evasions. We in this conference know and feel that they are real and true. What we perhaps have not realized is that in this Johannine dialectic of love, Divine and human, human and Divine, there lies the power of a new outlook and a new age.

This truth has been understood sometimes partially, sometimes blindingly, by many saints throughout the Christian era. I do not detract from numerous examples that could be given when I say that for me there is a modern artist and poet who has been my teacher in the dialectic of love. I refer to William Blake and I think it is very important to remember that he watched without losing his vision of spiritual reality both the rise and the fall of the French Revolution. Equally important he saw into the human meaning of the new industrial revolution.

"And was Jerusalem builded here among these dark Satanic mills?"

But unlike Marx and Engels a generation later Blake did not embrace vengeance and the spirit of violence. Instead in his prophetic poem *Jerusalem* (which mystically understood meant England), he wrote:

"Jesus said, Would'st thou love one who had never died

For thee, or ever die for one who had not died for thee?

And if God dieth not for man, and giveth not Himself

Eternally for man, man could not exist, for man is love.

As God is love. Every kindness to another is a little Death

In the Divine Image, nor can man exist but by brotherhood."

Such is the dialectic of brotherhood in which alone liberty and equality are saved from self-destruction and are perpetually renewed in their meaning for the life of man.

2. A political principle

Democracy sets out from religion at the point of its absolute intersection with ethics. But it is, after all, a form of social polity.

It denotes a system of government. It stands for a theory and plan of politics. It cannot meet the demand of our world unless it is demonstrably relevant to the political nature of man and the special political ferment of the present generation.

Democracy is to be distinguished, as Plato and Aristotle taught their contemporaries and all subsequent generations, from tyranny, monarchy, aristocracy, and oligarchy. It denotes, in contradistinction to all these alternative politics, the rule of the people. When the great Greeks wrote, it was against the decline of Athenian power and they were pessimistic about the prospects of democracy. This fact explains the unpopularity of the term and the idea at the time of the American Revolution and with the generality of the Founding Fathers. It was a conditioning factor in the origin of our Federal Constitution, with its mixed character from the standpoint of clear politics and its distributed emphasis upon both a strong central government and a proper system of checks and balances.

Nevertheless, the new stream of democracy was flowing with ever increasing power and gathering into itself the fruits of sound constitutional experience and theory. When fourscore and seven years after the beginning of American Independence Abraham Lincoln undertook to describe our political system, the words that came to him were inspired. They were: "government of the people, by the people, and for the people."

Add this phrase to the French motto of "Liberty, equality, and fraternity," and add both to the assertion of the American Declaration that all men "are endowed by their Creator with certain unalienable rights, that among these are life, liberty, and the pursuit of happiness"; and you have a pretty comprehensive and a pretty satisfactory summary of democracy as a social and political principle.

People and Individual

Democracy in its maturity means two things with respect to man and man, and man and the state. It means that sovereignty inheres in the people and that government rests by right upon the consent of the governed, not upon the arbitrary will of a monarch or a dictator or a committee of tyrants. It means, secondly, that man's dignity as an individual is a sacred principle which qualifies even the will of a majority at a particular time and which operates as a perpetual check upon the abuse of power even by elected officials of the people. Thus a constitution to be truly democratic must have a bill of rights or its equivalent.

Here, I suggest, is the political essence of democracy as distinct from constitutional devices, details, and methods. There are many possible constitutions which will embody the principle of democracy; the principle is one which is true and right and therefore cannot change. This principle is one whole in two related parts: the sovereignty of the people in government and the value and rights of the individual as an end in himself.

What is the future of democracy? Is it the answer for which the new as well as the old peoples of our seething world are in search? I am persuaded that it is the answer in a very definite way to the aspirations of the awakening nations of the post-colonial era and that there is no other answer. It is the high mission of the United States to be at once a witness to the truth of democracy and to remain the patient friend of peoples who are inexperienced in self-government and are determined to find out for themselves the way that is good. If we are faithful to our mission, we will stand guard without rest at the gates of an open future until all the peoples shall pass through them and enter into the light of an ampler and a happier age.

3. An economic doctrine

Democracy is not only a religious faith. It is not only a political principle. It is also an economic doctrine of teaching. It has something clear and definite and constructive to say about the wealth of nations.

If this were not the case, it would not be necessary for the opponent of democracy to find any other condemnation of this system. It would be a fruitless and sterile plan for human life. One does not have to be a Marxist to realize that economics is very basic and deeply penetrative in its effect upon society, politics, morals, and religion. It is valuable for us to reflect on the fact that Adam Smith was first professor of logic and then professor of moral philosophy at the University of Glasgow. Before he wrote his *Wealth of Nations*, he had published a book entitled "Theory of Moral Sentiments."

Democracy makes three fundamental assertions with respect to economics. These propositions are not concerned with the detailed complexities and relative applications of principle that pertain to any science involving the behavior of human beings. Democracy repudiates without compromise the claim of Lenin that Marx treated the problem of communism (from the angle of course of economic determinism) in the same way as a naturalist would treat the question of the development of a new biological species. Such a claim is fraudulent outside the sphere of the physical and biological sciences. In the sphere of the human sciences the data which constitute the subject matter have a necessary role in determining method.

First Principles

It is another matter with first principles. All sciences assume certain dogmas and would be without the ability to function or achieve if they were devoid of unproven assumptions. These first principles are less obvious and more concealed in the case of the natural sciences than they are when we come to the operations of the human sciences. In the latter case the presence and potency of given assumptions is a fact that cannot be hidden. This is true of ethics, of psychology, and of sociology. It is true of economics.

Our three propositions, therefore, are in the nature of first economics principles. We state them dogmatically not because they are self-evident or with any thought that they are not debatable. We set them forth rather as the meaning and impact of democracy as a total ideology upon the wealth, or material welfare, of individuals and nations.

First, freedom is the fundamental form of economic life, as it is of political order and personal existence. Second, private property is a right inseparable from the dignity of the individual, the integrity of the family, and the wise limitation of the state. Third, it is the function of moderate government, in accordance with justice and the responsibility of the general welfare, to act as regulator and balancer in relation to the impersonal character of economic forces.

Each of these propositions could be discussed at length. Here I prefer instead to present as a background for such discussion a short resumé of broad trends in the relationship of the state and economic practice.

Historical Summary

In classic thought politics is thought of as prior to economics. Man is thought of as a political animal. His dependence upon the community of which he is a part is accented, and the reality and power of the state are seen as the direct reflex of this social, economic, and psychological dependence. Economics without doubt assumes various degrees of partial distinctness and autonomy but always regulation and subordination to state policy are taken for granted. This holds down through the mercantilism of the 17th century.

Meanwhile, however, the development of the individual, first in consciousness, then in philosophy, politics, and economics, was taking place and was becoming more and more emphatic. Finally, in the 18th century the age-old cocoon of state supremacy burst, and we witness not only a new birth of political democracy but a new concept of society known as political economy. According to the new idea, politics is to take a back seat and economics is to be endowed with complete autonomy. A corollary is the dictum that the least government is the best government.

Now we see spread out for our instruction one of the real ironies of history. Adam Smith brought out his *Wealth of Nations* in 1776—the very year of the American Declaration of Independence and of the birth of a new English-speaking nation. His work was essentially an extension of the French doctrine of physiocracy or the rule of nature. In Paris in the 1750's Smith met Vincent de Gournay, author of the phrase *laissez faire, laissez aller*, and he met also another physiocrat, a friend of de Gournay named DuPont de Nemours. The great idea was to let economic forces alone, to release them from artificial control and make them as free as the atoms of physics.

We know the sequel. Immense power was released. The new industrial age came in with a bang. But there were some unexpected results. One of them was what we called the socialist complex. Another was Karl Marx, who, we repeat, set out with the picture of himself standing on the shoulders of *laissez faire* economics and in his book *Capital* expounding, with the fullness of science informed by dialectics, the thesis of classic political economy that economics determines or should determine politics.

Marx, of course, was self-deluded. The condition of our world at this moment shows the extent of his error. He brought in not communism, as he visualized it, a condition of perfected universal anarchy based upon an economic sufficiency automatically passed out to all men, but the most powerful example in modern history of the revived and enlarged omniscient, totalitarian state. To find any real analogy for the actual communism that has come about, we have to go behind the Christian era and even the Graeco-Roman period to the age of the Pharaohs and of the despots of Babylon.

Lessons

Thus the wheel swings full circle, and hard lessons are forced upon us. The Marxian error was only partly economic; it was moral, philosophical, and political as well. But it points a fundamental lesson, namely, that man is not and must never be viewed as simply or mainly an economic being. When this happens, no matter how liberal or benevolent the intent, the door is opened for disastrous error. Man's personal dignity is lost. His moral and spiritual nature are forfeit. He ceases to be an end in himself. He, and not merely his labor, becomes the commodity and value of abstract economic theory.

Yet *laissez faire* doctrine was right in its judgment that political freedom presupposes economic freedom. This is perhaps the supreme lesson of the modern flirtation with socialism including its extreme of communism. There is a second and corollary lesson—and "the second is like unto the first"—namely, that the freedom and integrity of religion presuppose both political and economic freedom. Freedom is, in fact, one and it is indivisible.

The error of *laissez faire* political economy was in having too negative a view of freedom and too rationalistic a view of economic law in relation to the general welfare. Again we see illustrated the deep and abiding truth of the dialectical principle rightly understood. Truth is not a simple affair but is always a complex involving the synthesis or

union in tension of opposites. Applied to Democracy as an economic doctrine, this means that freedom is an absolute but that the State under God has the duty of seeing to it that this principle does not result in concrete tyranny and in heartlessness from the standpoint of plain human beings.

Mrs. Humphrey Ward, in the last century, once had occasion to write a member of the Parliament of Great Britain on behalf of one of his constituents who needed his help. The distinguished leader in politics replied that he was sorry but that he was so busy planning for the good of the race that he had no time for the individual. "Ah," said Mrs. Ward on receiving this reply, "our blessed Lord, when last heard from, had not achieved this sublime altitude."

The meaning of democracy is that the government has time for the smallest individual. Parliaments and congresses, presidents and judiciaries, are not ends in themselves, but are dedicated to the service of "the least of these" our brethren. Man is not made for the state, but the state for man. In the words of our own President, Dwight David Eisenhower, "Government must have a heart as well as a head."

4. A vision of a good society

Every ideology is three things. It is a body of ideas. It is a faith. And it is a concrete vision—a picture of a good society toward which man strives.

Examples leap to mind. Plato is an evident instance. The medieval idea is another. The humanism of St. Thomas More is a third, with a Utopia sketched out to make the main points clear. Communism is the outstanding modern example, with its hard-core dogmas, its dynamic psychology expressive of something that can only be called a secular mysticism, and its social dream posited as the inevitable, scientifically certain outcome of the dialectical processes of history.

What of democracy? Is it an ideology in search of a vision? Or does it know where it is going?

The answer to both questions is, "Yes." Democracy was born when modern man, conscious of his origin and nature as a child of God and convinced that his life should embody both reason and freedom, posited a social contract as the basis of society and government. This theory we now realize was an artificial construct from the standpoint of actual origins. But it tells us a great deal about the ideas, values, and expectations of the first democratic believers. The real meaning of the social contract lies in transposing it from past to future. It was the first installment of democracy's vision of a good society, and it remains, seen in this light, essentially valid.

Developing and Dogmatic

Yet there is truth also in saying that democracy is by its very nature a thing incomplete and is today as in the past an idea and a faith searching for an adequate vision of its goal. Some will condemn this, and point out the obvious superficial superiority of communism in this respect. Others—representing the mentality which absolutizes open-mindedness and the non-dogmatic and which is sometimes called today liberalism of the American type, as distinct from the European—will seize on this aspect as the very essence and justification of democracy.

We reject both attitudes and emphasize with all possible force that the tentative and undogmatic side of democracy concerns its relationship to the growth of man in history and his liability to error because of finitude and sin. With the first principles of democracy—religious, moral, philosophical, political, and economic—the case is otherwise. The foundation must be a dogmatic one. Here communism is partially correct, and we can learn from it.

I refer, of course, to the dogmatic character or form of Communist first principles, not to their erroneous content. When the architects and continuators of this system then go on, as they do, to ascribe an equally dogmatic certainty to social goals, the main processes of history, and the plasticity and infinite malleableness of human nature, error is piled grievously upon error and the grand result is a totalitarian monstrosity without parallel.

This colossal idol has three faces. One is political. One is social. The third is religious—religious in the sense of unlimited claims to truth and value and in the sense also of the arrogation to man of the power, meaning, and loyalty normally ascribed to God alone. But behind each of these faces is a single dynamic idea. This idea, as we have emphasized earlier, is given status in the Communist system by the device of dialectic. It is the idea of a perfect social order—a Utopia in time where all men shall be happy and free, and where there shall be no more evil.

This is the concrete vision which since 1848 has been the mainspring of Communist ideology. It is by this social dream that it has swayed the minds of men.

Democracy did not begin as a starry utopian plan, and it cannot and must not attempt to outbid communism at this point. But from its first beginnings in modern history democracy has spelled man and his dignity, man and his hope of ceaseless growth and improvement. Since man is a social being, and therefore a political animal, as the Greeks taught, it follows that democracy is inseparable from the concept of the general welfare and the will to its promotion and advance.

A New Social Goal

In our century a step is indicated which was impossible in the 18th century and which was really inept and unfeasible in the 19th, as contemporary history proves to the hilt. This step is the projection of a clear social goal, a vision of a world society in which is posited a progressive solution of the basic material problems of mankind hitherto regarded by wise and good men as objectively beyond the capacity of the human race.

The meaning of modern technology, symbolized in dramatic terms by the artificial fission and fusion of the atom, is that within man's grasp for the first time in history is abundance for all. An age of plenty has dawned. A solution is in sight of the basic, age-long problem of material existence for the masses of all continents.

The atom is the Creator's first handiwork. It is the building block of all creation. As unveiled in its surprising and marvelous inner texture, it is a symbol both of the power and the restraint of God. Are we not as believing men compelled to see God at work in our time and to hail the good news of atomic energy?

To ask such a question is to answer it. It is for democracy in the strength of the vision which is opened up by this answer, the answer of the presence and purpose of God, to resume its arrested progress and to meet with boldness the dreams of newly awakened peoples. It must affirm the end of mass poverty and wretchedness as it proclaims with a new vibrancy the ideals of liberty, equality, and brotherhood. It must speak in tones of confidence and clarity, for all men to hear, the words of Isaiah the Hebrew prophet, taken by Jesus of Nazareth as His own at the beginning of His ministry in the synagogue of His home city:

"The Spirit of the Lord God is upon me, because the Lord has anointed me to bring good tidings to the poor; He has sent me to bind up the brokenhearted, to proclaim liberty to the captives, and the opening of the prison to those who are bound; to proclaim

the year of the Lord's favor. (Isaiah 61: 1, 2 cf. St. Luke 4: 18, 19.)

A Servant of the Nations

There is one qualification. To use words like these imposes a costing commitment. Democracy can clothe itself in such liberating words only if its adherents know that sacrifice is required of them. We dare not speak of deliverance, concern, brotherhood, human solidarity, the solution of ancient, chronic, deep-seated problems of the general welfare, unless we are moved by the spirit of love and are prepared to count the cost of proclaiming a new age.

All of us know in our hearts that in a special way at this mighty hour of history our great country is called to be, in the spirit of the Old and New Testament Scriptures, the servant of the nations. The problems and difficulties are vast, but who will say that we lack the power and ability to make a decisive contribution, if we can find the vision and the will?

Economics and Spirituality

But, it may be asked, are you not saying that the solution is economic? Are you not saying in effect, set in motion a larger point 4 program, perhaps under some other name, and we will extend democracy, defeat communism, and save the present uncertain day? Is not this Marxist doctrine in concealed and honeyed phrases?

The answer is emphatically in the negative. Economics by itself or even as a first installment of good will is not enough. Man does not live by bread alone. We insult him if we think he can be won by rice or wheat or technological crumbs from the rich American Nation's table.

We must begin with what we believe in our deepest soul and have the humble daring to share the truth that is from God with men and women who are hungry above all for the bread of life. We know that a part of this truth is the affirmation of human dignity expressed in respect, readiness to learn, simple self-giving, and brotherly love. We know that we cannot truly love God and show a right faith in Him unless there is lodged in our heart and conscience the Commandment: "Thou shalt love thy neighbor as thyself."

Having said this with all possible emphasis, let me remind us all that one of the supreme assets of the Hebrew-Christian tradition is its understanding of the relationship of spirit and matter. In this tradition there is no illusion of pure spirituality; there is no hollow separation of soul and body. St. Thomas Aquinas represents a mountain peak of this outlook and of humanism for all time when he says that though the soul is nobler than the body, the human person constituted by the union of soul and body is nobler than the soul. Beside this I may place a pregnant sentence from a modern Anglican theologian, Archbishop William Temple: "Christianity is the most avowedly materialist of all the great religions."

Such a tradition is uniquely fitted to deal with the age of the atom—new symbol of technological mastery and harbinger of coming material abundance. It is prepared to interpret the exciting advances of science as encompassed in a divine plan and at the same time to affirm the utter necessity of transcending the plane of the material and sensate. For the miracle of man is that, though formed of atoms, molecules, and chemical elements, he is created in his totality in the image and likeness of God, with the gift of reason and "with power on his own act and on the world."

CONCLUSION

This means, to sum up, that economics and ethics, politics and religion, are not diverse and unrelated areas of human concern; rather, they belong together and constitute not a hierarchy but a rich, interrelated com-

plex of life interwoven throughout with the two complementary patterns of individual salvation and the common good. The will of God for His human children is abundant life, both in this order of His creation and in the larger, veiled life of the world to come. Therefore, the needs and pain and material aspirations of the masses of our world must be met. A new and more humane and kindly order of society must be projected as a goal for our time. Labor for the fulfillment of this vision must be undertaken by good men everywhere as a sacred religious task.

But we must be warned and our matter-conscious, engineering-centered world must be warned of one thing. This warning was voiced nearly three decades ago by a modern Plato — a mathematician-philosopher with the style of a poet named Alfred North Whitehead. In the intervening period neither Marxian materialism nor scientific humanism in any form has brought forth fruits that justify changing in the slightest degree the tone or substance of this prophetic word:

"The fact of religious vision and its history of persistent expansion is our one ground for optimism. Apart from it, human life is a flash of occasional enjoyments lighting up a mass of pain and misery; a bagatelle of transient experience."

Labor Unity: A Vast Power Potential

EXTENSION OF REMARKS

OF

HON. JOHN BELL WILLIAMS

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mr. WILLIAMS of Mississippi. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the March 4, 1955, issue of the new Jackson (Miss.) State Times:

LABOR UNITY: A VAST POWER POTENTIAL

Merger of the American Federation of Labor and the Congress of Industrial Organizations now seems certain. Approval of the unity plan proposed after long study and negotiation by a joint committee is up to the executive bodies of the two groups. There is little likelihood that they will turn down what George Meany and Walter Reuther have agreed on.

Labor unity has been talked of so long and argued so vehemently that we tend to forget the Nation has had a single great organization before, although not in the sense of the potential of this merger. Until 20 years ago, the AFL counted within its affiliated memberships virtually every laboring man who belonged to a union.

The AFL's tardiness in recognizing the changes inherent in the development and vast growth of the mass industries brought about the creation of the CIO in which workers were organized horizontally by industry rather than vertically by crafts. But the AFL was never the force, either politically or economically, that is promised by the merger at hand now.

For one thing, the real growth of organized labor did not begin until the early 1930s, and the major expansion in numbers has been in the industrial unions of the CIO. For another, organized labor rarely attempted to exert itself politically until it was plunged by power-seeking leaders into the political battles accompanying the creation and maintenance of the New Deal. Consciousness of labor's influence at the ballot box and in the halls of legislatures has been a major development of these same years.

Nearly 16 million Americans are listed as members of unions now affiliated with one or the other of the two organizations. Virtually all are of voting age and are being constantly exhorted by their leaders to qualify themselves as voters. Numerically, they represent fully a quarter of the voters in a modern presidential election—a proportion which theoretically should hand them control of the situation on a silver platter.

But does it? Not necessarily, by any means. Regardless of the talk of the labor vote, the truth is that it does not exist as a solid bloc, subject to the dictates of any small group of bosses. American workers mark their ballots—when they mark them, for as a group they are as negligent about the fulfillment of this vital responsibility of citizenship as are the rest of us—as Americans first and labor-union members second. Some are Republicans, some are Democrats, a few are radicals but each is an individual scarcely more subject to outside pressures than their fellows.

The recent decision in the DuPont monopoly case said that industrial bigness of itself is not evil. It recognized that size brings power, but held that as long as that power was wielded with responsibility and without damage to others, it was not legally wrong.

The same reasoning can be applied to the labor merger. The Nation will look to the labor leaders to handle the potential force of their merged organizations in the best interests of the Nation and not for narrow purposes.

The best checkmate against its use otherwise is still the free American worker who as an individual has the fortitude to speak his mind and vote his convictions, inside the labor union and out.

"Just the Facts, Ma'am"

EXTENSION OF REMARKS

OF

HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mr. HÉBERT. Mr. Speaker, there is hardly among us anyone who has not at one time or another heard over the radio or the television, the expression which has become almost a household phrase, "Just the facts, ma'am."

Of course you recognize the phrase as that of Sergeant Joe Friday in the radio-television series "Dragnet."

Facts have always been a fetish with me.

For long years I dealt with the facts as a newspaper reporter. In those days I always attempted to portray the facts in the pieces which I wrote, as reliably and accurately as I knew them.

But facts, like statistics, are a rather tricky medium in the hands of individuals.

It has been said that statistics can prove anything.

I have always made the assertion that the same set of facts in the hands of an adroit and able reporter can be used for any purpose.

Give any reporter a set of facts and he can write a piece in any one of three ways: up, down, and in the middle. Facts can be slanted with adjectives and phrases to convey an idea or a conclusion

which the reporter desires instead of what the cold facts actually are.

Give me a page 1 story and you can have 50 editorials on the editorial page of a newspaper and I will direct your conclusions.

An individual approaches an editorial page in one of three different attitudes.

If he is in agreement with the policy of the newspaper which he reads he approaches the editorial with a kindly and sympathetic feeling.

If he disagrees with the policy of the newspaper then he approaches the editorial with an antagonistic attitude and in a resentful mood.

If he has no feelings on the policy of the newspaper then he approaches the editorial with an open, but certainly argumentative frame of mind.

With the news story it is entirely different.

The average American newspaper reader accepts a news story at its face value as he does the remarks of the radio commentator, who in turn has gotten his information from the newspaper story.

Without suspicion the clever and adroit reporter can make his reader believe anything he wants him to believe. He can mold him like clay in the hands of a sculptor. And the very first to indignantly deny that he is being led by the average news article is the very individual himself who was affected.

Now what does all this lead to?

Having worked the other side of the street and with cause, believing that I know most of the tricks of the trade, it has annoyed me considerably to read some of the so-called objective and unbiased news articles which have appeared in the Nation's press on the recent congressional and judicial salary boosts.

Objectivity—or the lack of it—in news reporting has always intrigued me and I am sure it would intrigue all of you if you ever stopped long enough to analyze some of these objective reports.

Seldom has there been such clever misrepresentation of the facts as during the consideration of the congressional and judiciary pay raise bills. In fairness to the press it must be stated that they were given very able assistance by some of our own Members.

I had hoped that these misrepresentations would cease with the final action on the measure. It was indeed a forlorn hope.

The most annoying thing about the whole business is that these misleading articles do deal in factual statements and in the facts but they are presented in such a manner and fashion that a completely erroneous conclusion is drawn from such articles.

I have a case in point.

Under the Associated Press credit line an article appeared in the Washington Post of Friday March 4 under the heading "Congressmen To Get Big Pension Hike."

Now that is true. Under the recent pay boost Members of Congress will get a big pension hike. But there is still more truth to such a statement—that part of the truth and the facts which have not been printed and which are necessary to complete the picture.

Any individual reading the article would immediately come to the conclusion that Members of Congress boosted their retirement pay by \$5,625 to \$16,875.

The article did not say that in order to receive such a retirement payment a Member would have to serve 30 years beginning March 1, 1955, through March 1, 1985, that he would have to pay a total of \$40,500 from his paycheck and that he would have to have reached the age of 62 years.

In order to demonstrate what I have been talking about I have used this article and headline as an example of how a certain set of facts can be used to distort conclusions.

I am reproducing the article as it appeared in the Washington Post under the Associated Press credit line. I then have taken the same story and written another story around the same set of facts but painting an entirely different and favorable picture. In order to be most accurate and to clearly and vividly demonstrate my point I have taken the exact words of the Associated Press story and incorporated them into my rewritten story and see what you have.

Here is the original story by the Associated Press:

CONGRESSMEN TO GET BIG PENSION HIKE

The \$7,500 annual pay rise Congress voted its Members this year adds \$5,625 a year to maximum congressional pension benefits.

The maximum payment goes only to those who complete 30 years or more of congressional service. To qualify for the new top pension of \$16,875 a year, a Member would have to serve 30 years under the new pay scale.

Pension payments to Congressmen are based on average annual salary during a Member's tenure in office, with a limit of 75 percent of full pay.

President Eisenhower signed into law Wednesday a bill raising Congress Members' salaries from \$15,000 to \$22,500 a year as of March 1.

The top pension any Member could draw under the salary scale in effect when the present Congress convened was \$11,250.

Pension payments are at the rate of 2½ percent of average pay multiplied by the number of years of service.

Contributions to the pension fund also will increase as a result of the pay rise, since Members pay 6 percent of their salary into the fund. Participation is voluntary.

Now here is the same story around which has been written all the facts in the case.

For the purpose of emphasis I have quoted those portions of the following story which appeared in the original Associated Press story. I have also written a new headline which is also as factual as the original headline but which carries a different suggestion and most certainly has a different flavor.

Here is the story which will never be printed except in these columns.

CONGRESSMEN MUST PAY HEAVY ADDITIONAL TAX

(Disassociated Press)

As a result of the recent \$7,500 congressional pay rise, Members of Congress will be compelled to pay out of their checks an additional \$3,300 annually, reducing the "take-home pay" of the new amount by approximately 40 percent.

Part of the deductions from the monthly paycheck of Members of Con-

gress are compulsory, part of it voluntary.

The compulsory withholding sum for income-tax purposes will amount to \$2,850 more annually assuming that the new pay rise, exclusive of other income, places a Member of Congress in the 38-percent bracket. In at least one instance the new pay rise will result in only \$75 a year additional "take-home pay." The Member affected is already in the 90-percent bracket and voted against the pay raise.

The voluntary deduction, which qualifies a Member for participation in a retirement fund only after he has reached the age of 60, at a lesser rate, or the age of 62, at full rate, after he has served at least 5 years, will amount to \$450 additional annually. Those Members of Congress who have elected to participate in the retirement fund are now paying annually \$900 per year. The new pay raise will bring this contribution up to \$1,350 annually, the highest it has ever been in congressional history.

"The annual pay rise Congress voted its Members this year adds \$5,625 a year to maximum congressional benefits."

"The maximum payment goes only to those who complete 30 years or more of congressional service. To qualify for the new top pension of \$16,875 a year a Member must serve 30 years under the new pay scale." No present Member of the House could, therefore, qualify for the maximum figure unless he is reelected to the next Congress and serves 30 years after that. Because the pay raise did not become effective until March 1, 2 months short of a complete year for service in the 83d Congress, no Member of the House would be eligible until 1984 for the maximum.

"Pension payment to Congressmen are based on average annual salary during a Member's tenure in office with a limit of 75 percent of full pay."

Pension payments are also made to members of the judiciary who were given pay rises in excess of the amount given Members of Congress. Unlike Members of Congress who elect to participate in the retirement plan, judges do not contribute anything to their retirement payments which are automatic at retirement age regardless of years of service.

While the retirement amount for Members of Congress is based on the average salary during tenure of office the retirement pay of other Government workers coming under retirement plans is based on the 5 years' highest salary during Government service.

Members of the armed services, who also do not contribute to their retirement fund, receive an amount based on the pay of rank at their retirement regardless of age.

"President Eisenhower signed into law Wednesday a bill raising Congress Members' salary from \$15,000 to \$22,500 a year as of March 1."

"The top pension any Member could draw under the salary scale in effect when the present Congress convened was \$11,250." Only a relatively few Members of the present Congress could qualify for this amount, however, since it is based on 30 years' service at a salary of \$15,000. For retirement purposes the \$15,000 sal-

ary figure became applicable during the 82d Congress, thus only those elected to the last Congress and who serve for 30 years, to the year 1983, would have become eligible for this amount. "Pension payments are at the rate of 2½ percent of average pay multiplied by the number of years of service." Any Member to qualify for the maximum retirement pay under the recent pay rise must voluntarily contribute from his salary the sum of \$40,500, serve 30 years, and reach the age of 62 years.

"Contributions to the pension fund also will increase as a result of the pay rise bill, since Members pay 6 percent of their salary into the fund. Participation is voluntary."

To further illustrate exactly how misleading the Associated Press story is, there are men serving in the present Congress for 30 years and over who never, never could or will qualify for the maximum retirement pay. These men, if they are in the retirement plan, will have their retirement computed on the basis of a salary ranging from \$7,500 to \$22,500 per year. A provision which would have enabled Members of Congress to enjoy the same privilege as all other Government civil service workers in the retirement plan by basing the retirement pay on the 5 highest consecutive years was knocked out of the proposed legislation.

To be specific take my own individual case. I could remain here 30 years and never receive either the new maximum of \$16,875 or the most prior maximum of \$11,250. When I first came to Congress the salary was \$10,000, then it became \$12,500 and then \$15,000 for retirement purposes and now \$22,500. I am in my 15th year. I will qualify when I become 62 years of age which is 8 years away. Then I would have had 22 years service and my retirement would be computed on the average ranging between \$10,000 and \$22,500. And incidentally I had to pay \$3,000 cash in order to qualify for retirement when the system was opened to Members of Congress. There are many other cases similar to mine. I only cite it for example.

Anybody, however, reading this Associated Press article would come away with the conclusion that every Member of Congress just had to wait until he retired to collect this handsome sum of money.

Oh yes; "Just the facts, m'am" are rather confusing when presented by some people who really do not want you to have all the facts about the facts.

What good will all this do?

None.

At least I have gotten it off my chest.

The Bank Holding Company Bill

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mr. MULTER. Mr. Speaker, during the course of the hearings before the

House Committee on Banking and Currency on H. R. 2674, to regulate bank holding companies, we were privileged to hear W. J. Bryan, president of the Independent Bankers Association of America.

The background material that he presented, in my opinion, is of extreme importance.

Every Member should be acquainted therewith in order to act intelligently on this proposed legislation. I, therefore, commend it to their attention, as follows:

Mr. Chairman and members of the committee, my name is W. J. Bryan, and I appear here as president of the Independent Bankers Association of America. This association has a membership of more than 5,200 banks from States other than those in the 12th Federal Reserve District. Those States have their separate association, which is represented here by its president, Mr. Harry J. Harding. Our members are predominantly small and medium-size banks, which are unable, individually, to send representatives here to plead their cause. We do not maintain a Washington office or have any paid lobbyists. None of us who will testify to you in behalf of H. R. 2674 receives any pay from either association.

We heartily endorse H. R. 2674 as urgently needed to stop the evasion of Federal and State laws that were designed to prevent concentrated control over money and credit. We should like to emphasize the fact that this is the only country left where most communities are served by home-owned and home-managed banks which are aware of and responsive to the needs of the people of their areas. We believe that this has been the most important single factor in the development of the United States. Like yeast cells in a loaf of bread, each working in its immediate area, our banks scattered throughout the country have cooperated to produce the greatest and most general economic development the world has known.

Other countries must depend on 3, 4, or 5 banks having up to thousands of branches. Policies and important credit decisions are made hundreds or thousands of miles from many of the branches. The interest of an enterprising local customer may run counter to that of a large main office account, in which event the former might suffer. This inevitably tends toward concentration in all lines, cartels, the stifling of new enterprises, and stagnation—what has been termed the "mature economy." When forced to choose between such monopoly and some ism, countries invariably have chosen the latter.

Recognition that political freedom and economic freedom are interdependent is prominent in American history. I should like therefore to review some of this history for the purpose of bringing up to date this old and recurring struggle for and against centralized power, and to present the present problem in its proper focus.

The Bank of the United States, chartered by Congress in 1791, was authorized to have branches. It proved unsatisfactory, and its charter expired in 1811. A second Bank of the United States was chartered by Congress in 1816. It had as many as 27 branches in various cities. One of these was in Cincinnati. Illustrative of the tendency to abuse power, the bank in 1818 ordered the Cincinnati branch to collect its loans at the rate of 20 percent each month. The effect was disastrous to people and businesses in that city, as the bank foreclosed a great amount of real estate upon which it later realized much profit. This action precipitated the panic of 1818-19. The bank became so powerful, politically as well as financially, that it attempted to force President Jackson to renew its charter 4 years before it expired.

Jackson's veto of a renewal bill passed by a Congress friendly to the bank was a paramount issue in the election of 1832, and his election doomed the bank. Thus ended our first and only nationwide branch banking system.

In the same year, 1836, Rhode Island adopted legislation against branch banking. The Free Banking Act of New York in 1838 prohibited branches. Massachusetts passed similar legislation, and the bank commissioners of Connecticut charged that branches had not been recognized by law and should be prohibited. Whether recognized by law or not—and mostly not—banks operated branches in most of the States on a broad scale, but practically all ended in failure. This caused Congress to insert in the original National Bank Act of 1863 a prohibition against branches of national banks, but it was amended in 1865 to permit State banks with branches to come into the system and retain their branches. Notwithstanding this concession, the branches which came in did so as independent units. As a result, there appears to have been only one branch (of a State bank) left in the country in 1865.

From then until 1910 there were relatively few banks with branches outside their home cities. In 1910 29 States apparently had no laws on branches, pro or con. Nine prohibited them, and five restricted them to cities or parish.

After 1910 the spectacular and rapid expansion of the Bank of Italy in California begot imitators around the country. Banks in many States started branches, which led to the adoption of State laws which prohibited or restricted branches within limited areas, but the existing branches were left. By 1929, 22 States had prohibited branches, 10 permitted them within narrow limitations such as cities, counties, etc., 9 permitted them statewide, and 7 had no laws on the subject.

It will be recalled that the late 1920's was a period of expansion, mergers, and speculation. In almost every field there was great rivalry to be the biggest. Banking was no exception. When the possibilities of growth by absorbing competitors were exploited, other means were sought. Stopped by Federal and State laws from branching out into other areas, ambitious bank promoters turned to the holding company device, which was working so successfully in other fields, notably public utilities. So bank-holding companies began to spring up in States that prohibited branch banking. Most of these were intrastate operations, but some were interstate. The organization of one holding company under the sponsorship of a bank usually led to the formation of another by its principal competitor, which felt it must do so to maintain its competitive position. Other rivals sometimes followed suit. In my State, three such holding companies were organized between the adoption of our anti-branch-bank law (in 1925) and 1930. The Federal Reserve Bulletin of February 1938 reveals that on December 31, 1931, there were 97 bank-holding companies in existence, an average of more than 2 for each State.

I should like to emphasize that as branch banking started without any lawful basis for existence, being neither specifically permitted nor prohibited, which omission was corrected in most States by prohibitory laws, bank holding companies likewise were organized not only without any lawful recognition, but for the purpose of evading the laws on branch banking. The very circumstances of their origin is proof of this. The Federal Reserve Bulletin of April, 1930, noted that, "the area within which these developments have been relatively more considerable in extent is composed largely of States which have prohibited the establishment of branch banking offices." Business Week of September 21, 1929, declared bluntly, "Chains are evasions of law." Dr. Gaines T. Cart-

inhour, in his book, *Branch, Group and Chain Banking* published in 1931, listed "The desire to circumvent Federal and State laws prohibiting or limiting branch banking in anticipation of legislation removing the restriction" as the primary motive for establishing them. The principal exponent of the branch and holding company movement, Mr. A. P. Gianini, stated to this committee at hearings in 1930: "I believe branch banking should be extended on a nationwide and worldwide basis, for if you do not have direct branch banking you are going to have it indirectly through holding companies." The then chairman of the board of governors of the Federal Reserve System, Mr. Marriner S. Eccles, stated to the Senate Committee on Banking and Currency of the 80th Congress: "Under existing law . . . there is nothing to prevent it (a holding company) from acquiring stock of an existing bank and operating it as a branch of the entire holding company system." Mr. Eccles' successor as chairman of the board, Mr. Thomas B. McCabe, stated to the same Committee of the 81st Congress: "Through the acquisition by the holding company of the stock of an existing bank which thereafter may be operated for all practical purposes, as a branch of the holding company system the denial of a branch application of a (holding company) controlled bank may become almost meaningless." The present chairman of the board of governors, Mr. William McChesney Martin, has stated in a letter to the chairman of your committee that a holding company can evade laws as to branches of banks and as to engaging in nonbanking businesses. That they can and do evade these laws is a self-evident fact.

Although there were no laws regarding bank-holding companies, an opinion issued by the Solicitor General of the United States on November 6, 1911 held that a bank-holding company (perhaps the first of the modern type) "in its holding of national bank stocks is in usurpation of Federal authority and in violation of Federal law." As a result, this holding company disposed of its bank stocks. We may well ask why this opinion was not evoked in connection with later holding companies? Or why it is not applicable now? The facts and laws cited therein appear relevant. In fact, they are so pertinent to the consideration of H. R. 2674 that I should like to review the opinion and quote portions of it.

The Solicitor General, Hon. Frederick W. Lehmann, considered "the purposes which the framers of the national banking act had in view. The first, the paramount, purpose was to secure a uniform national system of currency, and to do this without the creation of a great central institution like the old United States Bank. The opposit to such an institution was deep-seated and widespread. . . . It was affirmed that frequently great inconvenience and sometimes terrible disaster resulted to the trade and commerce of different localities by the mother bank of the United States arbitrarily interfering with the management of the branches by reducing suddenly their loans and sometimes withdrawing large amounts of their specie for political effect. . . . It (the National Bank system) will be as if the bank of the United States had been divided into many parts, and each part . . . revolving on its own orbit, managed by its own board of directors, attending to the business interest of its own locality."

The first Comptroller of the Currency, Mr. Hugh McCulloch, was quoted: "It is not to be a mammoth corporation, with power to increase and diminish its discounts and circulation, at the will of its managers, thus enabling a board of directors to control the business and politics of the country. It can have no concentrated political power. . . . It will concentrate in the hands of no privileged persons a monopoly of bank-

ing. . . . The banks created by the National Banking Act were, and were designed to be, local institutions and independent of each other," said General Lehmann.

He quotes section 5133 of the National Bank Act: "Associations for carrying on the business of banking under this title may be formed by any number of natural persons, not less in any case than five." He emphasizes: "It should be noticed in passing that only natural persons may engage in the formation of a bank." He quotes section 5146: "Every director must, during his whole term of service, be a citizen of the United States and at least three-fourths of the directors must have resided in the State, Territory, or district in which the association is located for at least 1 year, immediately preceding their election, and must be residents therein during their continuance of office. Every director must own, in his own right, at least 10 shares of the capital stock of the association of which he is a director. Any director who ceases to be the owner of 10 shares . . . shall thereby vacate his office." Again he emphasizes: "Here the local character of the bank is secured. The directors must all be shareholders, they must all be citizens of the United States and three-fourths of them must be residents of the State." It should be noted here that the law regarding directors of national banks and their ownership of bank stock remains in effect identically the same as quoted above. Mr. Ben DuBois, secretary of the Independent Bankers Association, in testifying before the Senate Committee on Banking and Currency at hearings June 23, 1954, pointed out that some holding companies retain a hold on the directors' qualifying shares through a repurchase agreement or option to buy them back when they cease being directors. Since the holding companies can remove them at will by not reelecting them, they serve as directors and even hold their qualifying shares at the pleasure of the holding companies. Thus a feature of the National Bank Act upon which its founders laid great stress has been practically nullified.

Furthermore, every application for a new bank, national or State, receives a very thorough investigation by the Comptroller of the Currency or appropriate State bank supervisor. They investigate the need for the bank, its prospects, and particularly the qualifications of the proposed officers and directors. Yet on the very day it opens for business a holding company, an intangible corporation located anywhere in this country and controlled by people of whatsoever character, can acquire control of the bank, and the supervisory authority has no power whatsoever to prevent it. H. R. 2674 gives the supervisor who assumed the responsibility for chartering the bank the rightful power to veto such acquisition.

Returning to the opinion of General Lehmann, he quotes from a court decision regarding ownership of national bank stock by another national bank: "Another evil that might result, if large and wealthy banks were permitted to buy and hold the capital stock of other banks, would be that in that way the banking capital of a community might be concentrated in one concern. . . . Such accumulation of capital would be in disregard of the policy of the national banking law. . . . The smaller banks, in such a case, would be in fact, though not in form, branches of the larger ones."

His conclusion was: "Certainly there can be no holding of such shares by any corporation when the result is to defeat the policy of the National Banking Act; that is, to destroy the local character of the bank, break down its independence, vest its control in another corporation, and link it in substantial proprietary interest with some other business than national banking. . . . We are dealing with corporations of a public

character, with national banks, which have public duties to perform, and of these it is a peculiar obligation 'to maintain independent corporate existence and not surrender control of their affairs or the exercise of their powers to another corporation.' No authority is given by the Federal statutes to the National Banking Association for assigning their powers and delegating their duties to a corporation created by a State, and which, under its charter from the State, may engage in a business and exercise powers denied to the banking association by the law of its creation.

"Here again it is to be observed that if the power in question exists, it exists without limit. The company may extend its power to the full control of all the banks into which it has made entrance. Nor need it stop with these. As it grows by what it feeds upon it may expand into a great central bank, with branches in every section of the country. It is in incipient stage, a holding company of banks, with added power to hold whatever else it may find to be to its advantage.

"Where public law and public policy are involved, forms and fictions are disregarded and the facts are dealt with as facts.

" . . . Indirection, if it accomplishes the same purpose, stands upon the same footing with direction."

Our courts, Federal and State, have consistently supported the conclusion reached in the above opinion:

"The spirit as well as the letter of a statute must be respected." (Chief Justice of the United States Supreme Court Marshall, *Durossseau v. United States* (307, 314, 6 Cranch 307, 3 L. ed. 232).)

"It is a well-known maxim of the law that one cannot do indirectly what the law prohibits being done directly." (Justice Campbell of the Supreme Court of Oregon, *Friedenthal v. Thompson* (146 Oreg. 640, 31 P. 2d 643, 645).)

"It is a rule of law that a party is forbidden to do indirectly what it cannot do directly." (Justice Griffin of the California Supreme Court of Appeals, *Shenson v. Fresno Meat Packing Co.* (96 C. A. 2d 725, 216 P. 2d 156, 160).)

"The corporation cannot do indirectly what it is prohibited by law from doing directly." (Hon. PRICE DANIEL, now a Member of the U. S. Senate while attorney general for the State of Texas, in opinion rendered Texas Banking Department in 1952, which led to the dissolution of bank holding companies in Texas.)

As stated above, the finding that the holding company was "in usurpation of Federal authority and in violation of Federal law" caused it to divest itself of its bank stocks, and itself was later liquidated. Why was this opinion not used to prevent the later information of bank holding companies? Senator Carter Glass charged that it had been "suppressed" when he found it in the Comptroller's office. The Comptroller at that time was an outspoken and active advocate of interstate branch banking, which may have kept him from proceeding against these effective fifth columns for branch banking. This illustrates one reason the advocates of H. R. 2674 want definite laws to regulate holding companies, rather than leaving it to discretionary authority.

We have mentioned that there were 97 bank holding companies on December 31, 1931. While those remaining in existence now claim much credit for "stabilizing" banking during the 1930's, these claims are open to serious question. Their public statements when they were organized were to the effect that they were buying only "the strongest and best banks." They could hardly have sold stock for the purpose playing the Good Samaritan to failing banks. One would be naive indeed to believe they did so except where it was to their advantage, one way or another. Independent banks

throughout the country helped in various ways to save their weaker brothers, not necessarily from the goodness of heart, but to restore confidence in banks. Actually, the areas which were hardest hit by failure were those where holding companies most nearly monopolized banking. Much has been made of a statement that a governor asked an out-of-State holding company to organize a bank in his State. He would not have had to do this except for the failure of a large chain which paralyzed his State.

The holding companies and their banks were leaders of the agitation during the early 1930's for Federal and State legislation to permit branch banking. They claimed they wanted this so they could save small independent banks from failing by taking them over as branches, and in fact had support from some such banks on this premise. A probably stronger reason, however, was that by converting their affiliates into branches, most of the capital funds of the affiliates would be recovered, as the parent bank would not be required to have capital equal to the aggregate capital of itself and its affiliates. Evidence that this was a desperation move for some of the holding companies is furnished by a statement of Senator Carter Glass during hearings conducted by him as chairman of a subcommittee of the Senate Committee on Banking and Currency:

"Mr. GLASS. It is the view of the committee, upon information presented, that if we do not adopt statewide branch banking, the holding companies and the banks which they hold are going to be pretty soon wrecked. I do not know that it ought to be stated here, but we want to consider this whole problem in frankness. If the existing requirements of the law were put into effect by the Comptroller of the Currency, there are thousands of banks which have not yet closed their doors, whose capital and surplus have been impaired, which would have to be closed up today, and unless we do something of this nature, that part of the country where these holding companies exist—and they are not confined to any one section, though perhaps they are more numerous in the northwestern section of the country than in any other section—are going to find themselves in inextricable difficulties."

You will note that Senator Glass put the blame squarely on the holding companies: The worst banking troubles were in the areas where holding companies existed; the reason for passing the bill to permit national banks to have statewide branches, regardless of State laws to the contrary, was to save the holding companies and the banks which they hold from being wrecked, and that part of the country where these holding companies exist from finding themselves in inextricable difficulties.

However, in States where there were no leaders to organize opposition and present the facts, the anti-branch-bank laws were repealed or altered. Where such leadership was found, the laws usually remained unchanged. The Independent Bankers Association started with a small group that waged a successful fight in Minnesota. Much of its early financial support came from banks that were so afraid of the big holding companies that they would not join openly. Intimidation was tried in other States, where holding company representatives muscled in on meetings of independents.

The net result was that between 1929 and 1939 the number of States that prohibited branch banking declined from 22 to 9; the number permitting it increased from 19 to 35; the number without legislation on the subject was reduced from 7 to 4.

On the other hand, between the ends of 1931 and 1936 the number of bank holding companies dropped from 97 to 52; 24 (almost 25 percent) had failed, 17 had converted

their banks to branches, 7 had sold their banks—usually to people in the respective communities. Only 42 groups were in operation on both the above dates.

These figures show that bank holding companies have been very effective Trojan horses for opening breaches in our laws after circumventing them. By breaking down State laws they have brought about changes in the National Bank Act, in order that national banks could compete on an equal basis with State banks. But the Congress has steadfastly respected the rights of the States to specify the extent to which branch banking shall be practiced within their respective borders. Practically all the States have done so, but they have no way to protect themselves against an outside corporation's coming in and buying stock in their banks and gaining control. H. R. 2674 affords them that protection. Discretionary control would not do so.

The fundamental strength of H. R. 2674 is that it is founded solidly and firmly on existing law, Federal and State. It states in clear language what has long been a basic rule of law, that one cannot do indirectly what is forbidden to be done directly. Federal law forbids banks having branches across State lines. H. R. 2674 forbids holding companies from buying banks across State lines. State laws limit branches within their borders in varying degrees. H. R. 2674 accordingly limits the acquisition of banks by holding companies. National and State laws prohibit banks from owning other types of businesses. H. R. 2674 provides that a company that controls two or more banks shall not own such businesses.

The opponents of this bill have contended that to base holding company legislation on branch banking law is wrong, because there is a difference between branches and affiliated, or subsidiary, banks. Great stress is placed on their difference in form, which everyone of course recognizes. But they are differences without a distinction. For, as was shown by authoritative quotations above, subsidiary banks are to all purposes and effect branch banks. Other than in form, what is a practical difference between a branch and a bank the stock of which is owned by a holding company that selects the bank's directors and changes them at its pleasure, even holding repurchase rights to the directors' qualifying shares; that hires and fires the bank's personnel and otherwise supervises its operations; that makes its investments, handles its insurance, buys its supplies, originates and places its advertising; passes on its loans to local firms and individuals, usually receiving a fee for all these services? "Where public law and public policy are involved, forms and fiction are disregarded and the facts are dealt with as facts. Indirection, if it accomplishes the same purpose, stands upon the same footing with direction," to quote Solicitor General Lehmann. H. R. 2674 treats facts as facts.

Thus far I have dwelt on the moral side of this issue: Whether laws and their clear intent are to be respected or whether by clever utilization of what courts have called the corporate veil an illegal act is legalized? Whether precedents established by failure to enforce a law shall become the basis for changing that law? I should like now to point out some compelling reasons why H. R. 2674 is urgently needed.

According to information furnished by the Board of Governors of the Federal Reserve System to the Senate Committee on Banking and Currency on June 10, 1953, there were 34 bank holding company groups as of December 31, 1952. Four of these are now in process of being liquidated as a result of a ruling by the attorney general of Texas in

1952 that they were in violation of Texas' anti-branch-bank law. Two others have converted their controlled banks into branches after a change in State law. That leaves 28. In addition, there are several chains not classed as holding companies, but operating in the same manner. Some of both types are small—in some instances family holding companies. But 12 of the holding companies had banks in from 2 to 7 States, as of December 31, 1952. One of these controlled banks having 44.88 percent of the deposits of one State, 76.75 percent of another, and 45.59 percent of a third; in addition to controlling a large number of nonbanking companies—manufacturing and processing, insurance, mortgage and financing, etc. In another State one holding company controlled 36.65 percent of that State's deposits, with another holding company having 11.13 percent—or 47.78 percent between them. Another holding company controlled 30.12 percent and 24.40 percent respectively in two additional States. Two other holding companies competing in still other States controlled 57 percent, 44 percent, 29 percent, and 32 percent respectively in four States. These last two holding companies control almost half of the deposits of an entire Federal Reserve district.

Further acquisitions and mergers since December 31, 1952, reveal increased and startling concentration of bank deposits. Nine of the 26 largest banks in the country, as of December 31, 1954, absorbed 46 banks that year. Thirty-two of these were taken over by 2 banks in different States, both controlled by the same holding company. Such acquisitions brought the deposits of one of these banks to 44.6 percent of its State's total. But a competitor bank also acquired 2 banks with 10 branches to attain 42.6 percent, giving 2 banks 87.2 percent of that State's deposits. The same holding company has a bank in another State which has two-thirds of that State's deposits; yet this bank apparently felt constrained to take over one of its 7 competitors last year. This same holding company has another bank which has 20 percent of still another State's deposits. But another bank in this State, with over 49 percent of the deposits on June 30, 1954, formed a holding company to acquire control of a competitor having 8 percent. Thus, one holding company now controls 58 percent of another 20 percent—over 78 percent for the 2.

This amazing and alarming concentration has been possible only because of the holding-company device. H. 2674 would have prevented it, had it been enacted in time. It can still prevent the same from happening to the rest of the country. But immediate action is urgently needed. Ambition is insatiable. Having acquired the banks in the areas where they now operate, the holding companies will look for new fields to conquer. New companies will be organized as a protective measure. Then the larger holding companies will absorb the smaller ones. Within a generation most of our banks will have disappeared, and we shall have a very few very large systems. Do we want this? Do we dare risk it?

From the early days of this Republic, it has been public policy to encourage small business. "In this year's Economic Report of the President he stated, 'The public policy to encourage the expansion of a free economy must assign a high place to measures that keep the doors to opportunity open for new and small enterprises. . . . The Government has a responsibility to maintain easy entry into trade and industry, to check monopoly, and to preserve a competitive environment. . . . Most of our leading companies were once small, and got started because local banks had confidence

in the ability of the founders. Ideas and ability are to be found everywhere. And who is so likely to recognize these as the local banker who has the power to act on his judgment, and who will benefit his bank and his community by developing a substantial customer and employer. I am sure your home districts, like mine, offer many such examples. As the Commercial and Financial Chronicle has so well stated:

"Unit banking is peculiarly suited to the genius of the American people, to the democratic republican form of government which we have developed, to the nature of our business and industrial organization, to our social institutions, and to the individualism which is the foundation of our national progress. . . . Let us never despise the day of small beginnings nor the virtue inherent in small things."

Contrary to possible opinion, bank support for H. R. 2674 is not for selfish reasons. Holding companies offer the best market to those wishing to sell, which is the reason for their growth. Independent banks are more than holding their own with them in competition. Holding companies offer better salaries to management of banks to enlist their aid in buying stock. Some of us might find it profitable to form holding companies of our own. So we are really working against our financial interest. But we know what the end result will be. We want to see our communities continue to grow. We are fearful of what will happen to our customers needing character loans based on our personal knowledge; to our small merchants and manufacturers who are competing with national organizations; to our local papers who depend on local businesses, as do our lawyers, insurance agents, and other professional people. We have read some history, both American and foreign, and have observed that all power corrupts. Absolute power corrupts absolutely. We know that it can happen here.

We do not contend, nor do we believe, that those representing or connected with holding companies are motivated by any evil design. They are able and ambitious men, who are representing the corporations that employ them. We are not trying to put them out of business. H. R. 2674 is not punitive legislation. It takes none of their banks away from them. It simply requires them to respect our laws in future expansion.

There is cause for grave concern over the increasing trend toward concentration of control over our country's money and credit. We are rapidly following the example of England, whose many banks became the Big Five. She finally passed a law against further concentration. Do we dare wait so long? The Bank of England has been nationalized. France has nationalized its few banks. There are only a very few in all the other countries. The same will inevitably come to pass here unless we forestall it by legislation.

There is no question about what the reaction of the American people would be to such a condition. A nation that would not allow a monopoly over tobacco certainly will not condone one over the life blood of its economy—money and credit. Through their Representatives in Congress and the State legislatures they have at various periods erected legal barriers against such centralization. Some of these have fallen, some have corroded. It is urgently necessary that we stop the remaining laws from being eroded. H. R. 2674 would do this. Its adoption by the Congress is necessary if we are to preserve our free enterprise banking system, the economic counterpart of our political system. Each is essential to the other.

**The American Medical Association:
Power, Purpose, and Politics in Or-
ganized Medicine—Part I**

**EXTENSION OF REMARKS
OF**

HON. RICHARD BOLLING

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1955

Mr. BOLLING. Mr. Speaker, some time ago, an article in the Yale Law Journal of May 1954, concerning the American Medical Association, was called to my attention. Feeling that this piece of research should receive wider attention, I wrote to the Journal indicating my desire to insert the body of the article, minus footnotes, in the CONGRESSIONAL RECORD, and to the president of the AMA asking him to comment, if he wished, on any part of the article which seemed inaccurate or unfair.

I have received the approval of Mr. Gerald Walpin, the managing editor of the Yale Law Journal, to omit for the sake of brevity the article's 709 footnotes, which, he states, contain authority and explanation for almost every sentence in the text. In his reply, Mr. Walpin also said that they would be interested in my response from the AMA. "Before the article was published," he added, "we mailed galleys of the text and footnotes to the AMA requesting their criticisms and/or corrections. Instead, in the letter that the AMA released to the papers at the same time our article was published, they limited their comments to generalities."

In his reply to my letter to the AMA, Dr. George Lull, secretary and general manager, enclosed a press release of the Yale University News Bureau and a press release issued by the American Medical Association. The latter is printed below: I am omitting the former since it seems largely a restatement of the AMA release. Dr. Lull also said, "I might say that the students who wrote the article never visited American Medical Association headquarters, and many of the statements contained in the article are given an incorrect slant entirely."

There follows the American Medical Association statement on the Yale Law Journal article, The American Medical Association: Power, Purpose, and Politics in Organized Medicine:

**AMERICAN MEDICAL ASSOCIATION STATEMENT
ON YALE LAW JOURNAL ARTICLE**

(INFORMATIVE NOTE.—The July issue of the Yale Law Journal carried an article entitled: "The American Medical Association: Power, Purpose, and Politics in Organized Medicine." The soundness and worth of the article's conclusions are completely undermined by cumulative misstatements and distortion of facts, many of which are not even in accord with references presented in the footnotes. Herewith is the American Medical Association's answer to this article.)

CHICAGO.—An 84-page study of the American Medical Association, prepared by student editors of the Yale Law Journal, was branded by Secretary George F. Lull today as a mixture of misinformation and distortion.

The article, which criticizes the AMA for failure to use its excessive authority over medical practice as an instrument of progress, was written by student editors headed by David R. Hyde and Payson Wolff, both of whom received their law degrees from Yale last June.

The students, whose study required 2 years, claim that their conclusions are based upon studies of the American Medical Association's published records, interviews with both its critics and proponents, and a questionnaire directed to State medical societies.

"Yet," Dr. Lull said in Chicago, "the editors took neither the time nor trouble to visit the AMA headquarters office nor interview any of the AMA officers or staff people to get their facts correct."

FACTS ARE GIVEN NEGATIVE SLANT

"The real danger in this distorted article," Dr. Lull added, "is that nearly all of the facts are given a negative slant whereas they could have been presented in a positive light to reflect the major accomplishments of the American Medical Association since it was founded 107 years ago. It is very apparent that the young authors built up a strawman and then proceeded to knock him down; an obvious attempt to neutralize the conservative influence of one of America's great voluntary organizations."

"The attempt," Dr. Lull continued, "recalls the publicity fanfare in the summer of 1951 when the same publication, the Yale Law Journal, attacked the Federal Bureau of Investigation for allegedly invading academic freedom by pouncing on any student who joins a liberal organization."

"FBI Chief J. Edgar Hoover charged at the time that the pages of the Yale Journal had been used to distort and misrepresent the truth."

"Like the FBI, it is very difficult for the American Medical Association to understand how so many factual mistakes could have been made in the writing of this article. The errors, of course, will be plain to anyone familiar with the subject. Unfortunately, the article will be read by many without such knowledge."

JOURNAL CARRIES ERRONEOUS STATEMENTS

The Yale Journal articles finds that "no other voluntary association commands such power within its area of interest as does the AMA. It holds a position of authority over the individual doctor, wields a determining voice in medical education, controls the conditions of practice, and occupies a unique position of influence in shaping Government health policies."

For example, the authors charge that the AMA's power has been used to block virtually all plans for providing low-cost health and medical care unless subjected to medical society control. At present, the article continues, the AMA is opposing President Eisenhower's proposal for Federal Government reinsurance of voluntary health plans on the thesis that this might lead to socialized medicine.

Commenting on this statement, Dr. Lull said that "the American Medical Association opposed the Federal reinsurance plan because it was unnecessary and represents the intrusion of the Federal Government into a phenomenally successful area of private enterprise. Evidently the House of Representatives felt the same way because it recently killed the bill by an overwhelming majority—238 to 134."

The Yale Law Journal pointed out that although many physicians are critical of AMA policies, the AMA, with its total national income of \$9 million a year, is not truly representative of the Nation's doctors and does not tolerate conflicting opinions within its membership. The article claims further that the Journal of the AMA "rarely prints opinions in disagreement with posi-

tions taken by the organization's governing boards."

Dr. Lull branded this statement as false. "On the contrary, the AMA is so representative of its membership that many other organizations, including the American Bar Association, have modeled their organizational structure after the AMA. Furthermore, one sentence of the article carried this conflicting statement: 'The AMA . . . enjoys the consent and loyalty of an overwhelming majority of physicians.'"

ANOTHER FALSE STATEMENT

Doctors who defy AMA authority, the Yale students found, may be subjected to professional ostracism, which could cut them off from patients referrals and consultations, deny them advancement in hospitals, or bar them from professional appointments.

Dr. Lull also branded this statement as false. "The American Medical Association, as well informed people know, has almost no authority over individual physicians. It is the county medical society that disciplines members who are guilty of unethical practices."

"Despite the dangers inherent in such a concentration of power," the Yale article continues, "no interest group enjoys more freedom from Federal control than organized medicine."

Several steps are recommended by the authors to curb these powers.

First, to protect the individual doctor from unreasonable exercise of organized medicine's authority, the importance of society membership should be deemphasized in order to mitigate the severe consequences of its disciplinary powers. As one step, the writers suggest that this could be done by insuring availability of hospital privileges to non-members.

AMA HAS NO CONTROL OVER HOSPITAL STAFFS

Commenting on this statement, Dr. Lull said, "The American Medical Association has no control whatsoever over hospital staff appointments which are made by the local hospital board of trustees."

Second, the students urged that organized medicine should be divested of its control over the Nation's supply of doctors. This step could be accomplished by Federal aid to medical schools without impairing AMA powers to set educational requirements and to inspect these schools, according to the authors.

Dr. Lull termed this accusation "false and malicious." "The AMA," he said, "has no control over the Nation's supply of doctors. The Yale Medical School admission committee and all similar committees throughout the United States determine the number to be admitted. The AMA has nothing to do with control over the supply of doctors. The statement is ridiculous."

The students also argue that legislatures should divest State medical societies of their control over the formation of new methods of providing low-cost prepaid care. At present State statutes requiring approval or participation by the medical society or a majority of the doctors have foreclosed experimentation in solving pressing medicoeconomic problems.

"Independent groups of doctors, cooperatives, unions, and employers—as well as the medical societies—should be free to work out their own solutions. Government assistance to plans for low-income subscribers may also be required," they write.

Finally, the authors say, the AMA should provide a forum for dissenting opinions and conflicting viewpoints.

"This," Dr. Lull commented, "has been provided long ago. Twice a year the AMA house of delegates meet to discuss pro and con the policy issues of the association."

"New ideas," the article concludes, "which the association has accepted have been forced

upon it; by assuming leadership in experimentation with unproved systems of practice and payment, the AMA could become an instrument of progress."

To this statement, Dr. Lull said that the students' article, on the contrary, refers to innumerable instances where the facts belie this conclusion.

CITE ARTICLE'S INACCURACIES

Following are just a few examples of the article's inaccuracies, contradictions, and false implications:

In claiming the "lack of an effective forum for dissident opinion," the authors first make the untrue statement that the Journal of AMA rarely prints opinions contrary to organization policy. They also ignore the existence of Medical Economics, Modern Medicine, and other national medical publications, not to mention the many journals of the autonomous State and county medical societies. They further neglect the fact that any doctor member can appear before a reference committee of the AMA house of delegates to express his opinion. Above all, they minimize the basic fact that the policies of the AMA are established at the grassroots level by the members of county and State medical societies—just as the Nation's policies are established by the voters at the polls.

The article further demolishes its own point by naming several other organizations to which doctors can belong and through which they can express themselves—such as the American College of Physicians, American College of Surgeons, the Committee of Physicians for the Improvement of Medical Care, the Physicians Forum, the specialty organizations, and others.

FAILS TO CITE PUBLIC BENEFITS

The article dwells heavily on the penalties and disadvantages suffered by physicians who are denied membership or suspended from membership in medical societies. In fostering the impression of monopoly and coercion on this score, the authors fail to bring out the salient fact that the standards based have been formulated for the protection of the public, not for the protection of physicians.

As an example of an outright misstatement of fact, the article says that one of the purposes of Today's Health, the AMA monthly publication for the general public, is to gain public backing for health measures supported by organized medicine. Quite to the contrary, Today's Health avoids material of a medico-political nature and devotes itself to public-health education in such matters as disease prevention, family health problems, and medical advances.

As one of its major points the article hauls out the old, oft-repeated, and thoroughly discredited accusation that the AMA controls and curtails the supply of doctors in this country through its program of inspecting and approving medical schools. The only purpose of that inspection program is to maintain high standards of medical education so that the American public can be assured of properly trained physicians. It makes no difference to the AMA whether a medical school doubles, triples, or quadruples its enrollment, just so long as the school maintains high standards relative to its faculty, facilities, equipment, and teaching methods. The AMA never—before, during, or since the economic depression of the early thirties—has attempted to impose enrollment quotas on the Nation's medical schools; in fact, it has in the past turned down all such suggestions and is now actively encouraging the current expansion of medical schools which already are at record-breaking levels of enrollment.

ARTICLE MISREPRESENTS AMA PAST

The article has distorted or misrepresented the association's past and present attitudes toward such things as group prac-

tice, voluntary health insurance, public-health programs, and financial aid for medical education, while at the same time ignoring the constant AMA study and effort to bring about evolutionary, progressive developments based on sound medical and financial principles and a sincere concern for the public welfare.

The article, by mixing various portions of truth, half-truth, untruth, opinion, and implication, has greatly exaggerated the power and authority of the American Medical Association and has greatly understated the autonomy and independence of the individual physician, the country medical society, the hospital governing body, and the many other elements which make up the American medical system.

The American Medical Association: Power, Purpose, and Politics in Organized Medicine—Part II

EXTENSION OF REMARKS

OF

HON. RICHARD BOLLING

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1955

Mr. BOLLING. Mr. Speaker, there follows part II of the American Medical Association: Power, Purpose, and Politics in Organized Medicine:

THE AMERICAN MEDICAL ASSOCIATION: POWER, PURPOSE, AND POLITICS IN ORGANIZED MEDICINE

INTRODUCTION

In its hundred-odd years of existence the American Medical Association has attained a position of undeniable authority and influence over medical affairs. The power of organized medicine affects not only the physician but also everyone who requires the assistance of the healing arts. AMA successes in raising the quality of medical education, practice, and care are beyond question. However, in these endeavors it has acquired such power over both public and practitioner that it can channel the development of American medicine. Dangers inherent in such power are compounded by the layman's ignorance of medical matters and the AMA's monopoly position as spokesman for the profession. Out of this situation arise questions of grave significance. The AMA is motivated both by obligations to the public and loyalties to its own members. The demands on it from these two points of view underlie all its activities and suggest the possibility of conflict. To what extent does professional self-restraint, combined with present laws and institutions, assure that this conflict will be resolved in favor of the public interest?

THE AMA STRUCTURE

Membership

The American Medical Association consists of 53 State and Territorial (constituent) societies and 1,987 county (component) societies. Each county society sets its own qualifications for membership and its members automatically belong to the State association. Aside from racial barriers in most southern counties, all reputable and ethical licensed M. D.'s are eligible for membership. And in most areas virtually every practicing physician belongs to his local society. Until recently, all members of county and State medical societies were also automatically members of the national association. But in 1950 payment of dues, previously assessed only by the county and State groups, became a prerequisite to AMA mem-

bership. Now some physicians belong only to their county and State societies, and are not members of the American Medical Association. On the other hand, since belonging to a county society is a prerequisite to admission at all levels, membership in the AMA depends upon acceptance by the local organization.

Reasons for membership: Many factors contribute to the high percentage of physician membership in organized medicine—a proportion unique among voluntary professional associations. With membership in the society, the doctor receives ready access to the social and professional contacts indispensable to the growth of his practice—contacts which may lead to patient referrals and consultations. Additionally, there is the all-important factor of association with men engaged in his own science, with opportunities for exchange of knowledge and acquisition of professional status. The medical societies disseminate the latest scientific information through professional journals which are available to members either at no cost or at reduced rates, and through lectures, exhibits, and medical libraries which the societies support. In addition to these professional services, the local and State societies aid members by providing group malpractice insurance, and by offering legal advice. Many of the larger societies maintain bill-collection agencies. There may also be direct economic benefits incident to membership. Since the societies often contract to furnish medical care to indigents and veterans, participating physicians have a supplementary source of income from these programs. Membership can also be a conduit to such professional advancements as hospital staff appointments, teaching positions, and specialty ratings.

Beyond the advantages which accrue to the member physicians, there are services which the society renders to the profession as a whole. The AMA has improved curricula and facilities in American medical schools. It gives financial support to research projects and publicizes medical discoveries through its journals and meetings. Moreover, many doctors look to the American Medical Association to protect their interests against encroachment. Thus, the AMA spearheaded the drive against compulsory health insurance and other governmental inroads into private medical practice. And the association has worked to rid the profession of quacks, as well as licensed physicians thought guilty of malpractice, and to limit the activities of nonmedical practitioners. Since the entire profession profits by these efforts of the AMA, physicians may feel obligated to join and give their material and moral support.

Reasons for nonmembership: However, a substantial number of American doctors do not belong to the American Medical Association or its component units. Many of these are retired physicians who let their membership lapse, or young practitioners who have not yet fulfilled the residence requirements for their local society. Doctors who do not conform to the code of medical ethics are not eligible for membership. And many southern societies exclude Negro physicians. Salaried doctors, such as those on the staffs of universities and research institutes, and civil servants often do not join medical societies; here professional advancement is available through channels other than medical society membership. In remote areas services which the society can render may be so negligible that doctors have little incentive to join. Some physicians may find the dues prohibitive; for example, in parts of California the total of county, State, and National dues runs as high as \$190 annually. Undoubtedly some doctors do not join because of apathy, while a small minority of physicians do not choose to belong because they disapprove of the policies of the AMA.

Formal structure

The formal structure of the American Medical Association provides for the largest measure of direct democratic control in the county medical societies, and increasingly indirect representation at the State and National levels. Members vote directly for county officials and representatives to the State legislature, usually known as the house of delegates. These delegates select their own State officers and elect the State representatives to the national house of delegates. This body elects the president and other AMA officers and the nine-man board of trustees.

In theory, the policymaking function of the American Medical Association is vested in the house of delegates. However, since the house meets semiannually, many administrative and policy decisions are necessarily left to the board of trustees. Although it is responsible to the house of delegates, the board functions with little supervision when the house is not in session. The members of the board perform the typical role of corporate directors: they approve all AMA expenditures, and generally the chiefs of the association's operating bureaus are responsible to them. The trustees also appoint the secretary-general manager and the editor of the Journal. The president has little formal power in formulating AMA policy, although he enjoys tremendous prestige as chief spokesman for the organization.

The AMA functions through standing committees or councils elected by the house of delegates or appointed by the board of trustees. Each council directs the activities of the association in a particular field with the assistance of a full-time staff. The 900 employees of the national organization are supervised by the secretary-general manager of the association, who has chief responsibility for the day-to-day decisions of the organization between meetings of the board of trustees.

Real power structure

While democratic procedures exist at the county level, many members do not have sufficient interest in activities to attend meetings. Doctors are extremely busy with their practice and have little time to devote to the problems of organized medicine. In New York, for example, 25-percent attendance at a business meeting is considered good. Thus, the few doctors who are interested in medical politics can easily wield power and influence out of proportion to their numerical strength.

The nominating process for elections within the American Medical Association allows the officers in power to have the dominant influence in deciding who shall succeed them in office. At the county level, the president appoints a nominating committee which puts up a slate of officers and delegates for the State house of delegates. The State president functions in the same way in the selection of national delegates. These elections are rarely contested. In at least one State, Alabama, the delegates are appointed by the president. The election of the official slate is made easier by the fact that the State and national organizations forbid electioneering and soliciting votes for office. Even where the official slate offers alternative nominees, basic differences between the candidates are unlikely.

The nominating process, in combination with the apathy of the average doctor, assures domination by a single faction within the AMA. In New York—one of the few States where an organized opposition has developed—these challengers have had little success. State societies report that reelection of delegates is common, the same names appearing on the ballot year after year. Frequently officers progress steadily from county, to State, to national prominence as they acquire seniority.

One of the major obstacles to the formation of any opposition is the lack of an effective forum for dissident opinion. The Journal of the American Medical Association, which is the publication most widely read by members, rarely prints opinions in disagreement with positions taken by the house of delegates or board of trustees. In response to criticism of this policy the American Medical Association asserts that members can present their views initially in their county societies; that if these views win approval, delegates will present them to the State society, and finally the members' opinions will be presented to the national house of delegates for consideration. In practice, however, because of the indirect system of elections, such a procedure eliminates any dissident viewpoints above the county level unless they win majority support. And while a member can oppose official policy in his local society, the structure of organized medicine makes it almost impossible for him to effectuate his opinions within this framework.

One study of the American Medical Association has concluded that the physicians who rise to power within the medical societies are predominantly urban practitioners and specialists. Although there is only a slightly larger number of specialists in the United States than general practitioners, usually over 90 percent of the officers of the AMA are specialists. Specialists, whose incomes are above those of the average practitioner, are probably better able to devote time to medical politics. Statistics also reveal that cities contribute a larger proportion of officers than rural areas. And in the AMA house of delegates those who have served long terms are primarily from urban localities, while the shorter term delegates tend to be from the rural areas.

Although these officers are not average American doctors, it would not be accurate to say that their policies are unrepresentative. The support of the membership is clearly shown in the immediate response of most members to a voluntary assessment voted by the house of delegates. Most members also seem willing to distribute literature and advocate AMA policies. But perhaps the most indicative fact is that groups organized to oppose AMA policies regarding the economic and political aspects of medical practice have never gained widespread support among the doctors. No group of any significance that has been formed to modify or review AMA policy has offered itself as an alternative to the AMA. Doctors are free to join such organizations while retaining their AMA membership but few have enrolled. Even though the actively controlling group within the American Medical Association is a self-perpetrating minority its viewpoint is readily accepted by the passive majority. This acquiescence assists that governing minority in excluding dissident opinion from organized medicine.

SOURCES OF AMA POWER AND INFLUENCE

The essence of AMA strength is found in its power over the medical profession, its economic position, and the status of the doctor in society. Moreover, due to the character of its membership, organized medicine probably has a greater potential influence than organizations of other professions. And it has capitalized upon its latent strength by a skillful application of all the resources at its disposal.

Power over the profession

Consent: Fundamental to medical practice is the concept of professionalism. Practitioners are bound by a common interest in increasing the effectiveness and maintaining the integrity and prestige of the profession. This derives from recognition of a duty toward the public, as well as a desire to benefit individual members. In addition, problems and affairs of medical practice are

assumed to be beyond the comprehension of the layman. So, in order to realize its objectives, the profession must govern itself through an effective organization. The American Medical Association fulfills this function and enjoys the consent and loyalty of an overwhelming majority of physicians. Even potential dissenters may remain silent in the belief that the interest of the profession is best served by presenting a united front to the public.

Monopoly: This consent has enabled the AMA to attain a monopoly position within the profession. Doctors may believe rivalry between competing professional associations would be injurious to both public and practitioner. Consequently, other medical groups formed to fulfill specific needs have tended to cooperate or affiliate with the AMA. And until recently there was almost no disagreement within the profession concerning its proper interests. So the small minority which would today challenge AMA authority is confronted with an organization that has already built its position into one of natural monopoly.

No independent medical association provides the doctor with an alternative to membership in his local medical society. In the scientific realm there are such groups as the American College of Physicians, the American College of Surgeons, and organizations representing the recognized specialties. In the field of medical economics and politics the Committee of Physicians for the Improvement of Medical Care and the Physicians Forum actively oppose AMA policies. And the National Medical Association, composed of Negro physicians, is concerned with the problems of a minority group and seeks constituent membership within the AMA. These groups, whose members are usually AMA members as well, supplement its work or compete with it only in a limited sphere. None possesses the membership size, power, and influence of the AMA, nor can any challenge its claims to speak on behalf of the profession.

Coercion: To maintain what it considers the integrity and standing of the profession, the American Medical Association has established a code of ethics to govern the behavior of practitioners. The most basic of its standards have usually been enacted into State medical practice laws. For example the felon, abortionist, alcoholic, and in some States the fee-splitter is subject to suspension or revocation of licensure. But the medical societies have more exacting standards governing virtually every aspect of medical practice and care. Because almost all physicians recognize the need for some such standards, application of sanctions is rarely necessary. However, this nearly unanimous agreement does not extend to some ethical interpretations which inhibit experimentation in solving problems of medical economics.

Because the AMA has the consent and support of a great majority of doctors, its standards can often be enforced against an offender without formal action. The physician who is suspected of unethical practice may be subjected to professional ostracism. This may involve denial by member physicians of patient referrals and consultations, and the loss of advancement in hospital and other professional appointments. The mere availability of such sanctions is usually enough to deter possible violators of AMA's code of conduct.

If a physician does not respond to such techniques, formal sanctions may also be invoked. County medical societies generally have boards of censors to hear charges against members. A system of appeals is provided, culminating in the judicial council of the AMA. However, this body is bound by findings of fact made at the local level. Those found guilty of violating the standards of the organization may be subjected to rep-

rimand, suspension, or expulsion. Such safeguards as the requirement that charges be specified and proved and the right of appeal limit the availability of these sanctions.

The consequences of a denial of an application for membership are just as serious as those of expulsion. But admission is entirely at the discretion of the county society; there is no right to a hearing and no appeal from the society's verdict. In one extreme case a county medical society dissolved itself and then reformed without an alleged offender, who was then denied admission and had no further recourse. The threat of denial is particularly effective in controlling the behavior of the young physician who desires membership, as well as of the doctor who has transferred his residence.

The importance and effectiveness of these formal sanctions is reflected by their severe consequences. In addition to the imposition of the informal sanctions mentioned above, the physician who is expelled or denied membership loses the positive benefits and economic advantages conferred by organized medicine. Membership in organized medicine has also been adopted by some outside groups as a criterion of professional competency. Nonmembership may raise questions regarding the character of an applicant for reciprocal licensing privileges. The nonmember will also find it difficult to obtain malpractice insurance on terms comparable to those offered members, if he can obtain it at all. In one instance doctors were forced to obtain insurance from Lloyds of London after being refused by American companies.

The most serious consequences of rejection or denial are those which handicap the physician in the actual practice of his profession. As a nonmember, he is ineligible for specialty board examinations and ratings. Referrals and consultations, so essential to the growth of a new practice, are denied him. Expulsion or denial carries the stigma of unethical practice so that members who have professional relations with a rejected practitioner may themselves be considered unethical. Thus, as part of its enforcement program one medical society circulated a "white list" of approved doctors to its members. The disapproved physician will also be handicapped in caring for his patients. Unless he relinquishes control over the patient he may be unable to secure assistance in time of emergency. Perhaps most important, he will be denied the use of most hospital facilities. The Mundt resolution, passed by the AMA house of delegates in 1934, advises that the staffs of hospitals accredited for internship training be composed solely of members of local medical societies. Accordingly, hospitals with a combined total of up to 99 percent of their State's bed capacity require membership. Others give nonmembers limited privileges, or extend staff membership only to society members and those qualified for membership.

The medical societies will rarely choose to disrupt the professional life of nonmembers eligible for membership, or those excluded only by racial barriers. Member physicians will often cooperate with such doctors; they may find less difficulty in obtaining hospital appointments and may be invited to participate in the scientific programs of the medical society. It is the practitioner who is expelled or denied membership who finds the punitive tactics of organized medicine employed to their fullest against him. In those cases nonmembership amounts to a partial revocation of licensure to practice medicine. It is only the established physician with guaranteed tenure on hospital staffs and specialty boards, or one who has the security of a faculty or governmental position who can afford to challenge the ethical standards of the AMA. Few doctors enjoy such a status, and defiance of AMA authority means professional suicide for the majority.

The American Medical Association: Power, Purpose, and Politics in Organized Medicine—Part III

EXTENSION OF REMARKS

OF

HON. RICHARD BOLLING

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1955

Mr. BOLLING. Mr. Speaker, there follows part III of the American Medical Association: Power, Purpose, and Politics in Organized Medicine:

The financial basis of power

Physicians receive an average income higher than that of any other professional group. Consequently, organized medicine can receive considerable financial support by drawing on the resources of its membership. On the county level, where dues are the major source of revenue, assessments vary from nominal amounts to as much as \$125 per year. State dues range from \$20 to \$55 annually, while the AMA itself assesses each of its members \$25. On the State and national levels considerable income is also derived from subscriptions and the sale of advertising in the societies' publications. Total revenues of the national organization exceed \$9,000,000 per year. State societies have incomes ranging as high as \$500,000. With only 1,601 dues-paying members the Colorado State Medical Society, for example, has an annual income of \$120,000. Similarly, the financial strength of many of the county societies assumes considerable proportions. This substantial economic support enables organized medicine to attract new members, and to engage in a variety of costly activities which serve to enlarge its power and influence.

The political basis of power

Prestige: The political strength of the AMA is to a large degree attributable to the status of the doctor in society. Because of his services to humanity, his learning, and economic position, the physician enjoys prestige and public confidence. The public looks to the doctor for advice and gives great weight to his opinion. This trust, unchallenged in the realm of medical science, extends also into economic and political aspects of health. Because of the AMA's high percentage of physician membership and its status as spokesman for the doctor, the lawmaker turns to organized medicine to ascertain medical opinion.

Mastery of political tactics: Attempting to influence governmental decision is one of the historic purposes of organized medicine. Without encouraging public action of a regulatory nature, the early medical societies could not have fully realized their objective of raising medical standards. But regulation of the profession is a function of the States, and medical legislation has been, until recently, devoted primarily to policing medical practice rather than providing medical care. So the American Medical Association had few occasions to influence political action on the national level. However, with growing public acknowledgment of governmental responsibilities in furnishing medical care, the political activities of the AMA have expanded enormously. This development, most pronounced on the Federal level, has also been manifest in the States. But while the public may have confidence in the judgment of individual doctors, it may be suspicious of selfish motivations in an organized group. Therefore, organized medicine's new lobbying has developed techniques of creating a favorable public opinion to supplement the older techniques of direct contact with lawmakers.

The American Medical Association is considered by some observers the most powerful legislative lobby in Washington. Measures apparently assured of passage have been voted down, buried in committee, or substantially amended upon the announcement of AMA disapproval. In physical size the AMA's lobbying facilities are not impressive. Yet, during 1949 and 1950, the AMA reported the highest expenditures of any group registered under the Federal lobbying law. While its financial outlay has since declined, its potential influence remains unimpaired.

Both national and State organizations have public relations programs to present the views of organized medicine. Attempts are made to solicit editorial support and societies have purchased advertising in the press and on radio and television. These efforts are generally designed to illustrate the achievements of American medicine; sometimes they may be directed to medico-political issues. Member physicians are urged to participate in these political endeavors by delivering public addresses—the texts of which are often furnished by State or national headquarters, and by distributing literature in waiting rooms and with monthly bills. Doctors' wives, working through medical society auxiliaries, are also active in this type of work.

Organized medicine also attempts to demonstrate numerical support for its position by getting outside groups to "go on record" as allies. Related professions in particular share common political interests with medicine. The recently formed Inter-Association Committee on Health, consisting of the AMA and the American Dental, Hospital, Public Health, Nursing, and Public Welfare Associations, serves as liaison in this area. During health insurance controversies, medical supply houses, pharmaceutical firms, and insurance companies cooperated closely with the AMA, rendering financial assistance and publishing tie-in advertising furnished by the medical societies.

Some of organized medicine's present political power may be attributable to the increased activity of its members in political affairs. The AMA supports no party or candidate, but in many localities physicians organize separate "healing arts" committees to campaign for candidates favorable to the association's views. The formation of these committees has been approved and their choice of candidates endorsed in some instances by local medical societies, although the latter practice is not common. The work of these healing arts committees is thought to have been influential in several close congressional contests and primaries.

The medical societies also exert great influence over medical legislation on the State and local levels. The enactment of favored measures and the defeat of those opposed can usually be secured. State societies have a lobbyist or legislative agent, often the executive secretary. The societies also actively encourage their members to run for legislative positions to insure adequate representation of the organization's interests. Personal contact with each legislator, if possible by his own physician, is stressed. County societies may also endeavor to have prominent local doctors write their legislators and encourage their patients to do likewise. Much State medical legislation originates with the State societies, bills are often drafted with the aid of counsel, and such measures are easily introduced.

While influencing the actions of legislative bodies constitutes the most apparent means of determining governmental action, the continuing relationships of organized medicine with administrative agencies are no less important. It is at this level that much public health legislation originates and is implemented by rules and regulations; here also enforcement takes place. The AMA and its constituent societies have many councils and committees which serve public agencies in an advisory capacity. Such

bodies can gather information of a professional nature not readily available to Government officials. And by receiving the views of the profession on specific regulations the public agency obtains the opinion of one of the groups vitally affected and whose cooperation is necessary for the success of most programs.

The medical societies have also attempted to increase the profession's influence in administrative decisions by trying to make medical licensure a prerequisite for positions of control over health or medical programs. The influence of medicine upon administrative agencies is probably stronger on the State than on the national level. Many State health officials are appointed on the recommendation of the medical society, and it is often through their offices that Federal health grants are administered. Health officials, knowing the legislative influence of the medical societies, are not likely to incur their antagonism. Having accused Federal Security Administrator Oscar Ewing of sympathies toward socialized medicine, the AMA consistently opposed provisions which would grant his agency discretionary authority in administering health programs. But such outright enmity between organized medicine and health agencies is the exception rather than the rule.

Legal recognition. As a consequence of its monopoly position, financial resources, and political strength, organized medicine is able to maintain a quasilegal status in medical affairs. In many States, laws authorize State and local medical societies to appoint or recommend members of regulatory bodies. AMA standards in medical education, training, and practice are usually adopted by law. In addition, AMA inspection to determine whether its own standards have been satisfied is seldom subject to judicial review. Thus the political authority of the State itself has in effect been delegated to organized medicine.

THE APPLICATION OF AMA POWER

No aspect of medical affairs—from Hadacol to health insurance—is outside the scope of AMA interest. The power of organized medicine is exerted in a wide variety of ways. Its activities may conveniently be categorized as raising the quality of medical services, determining the conditions of practice and payment, and controlling an ever-expanding governmental interest in the national health.

Promoting the quality of medical services

Scientific Activities

Historically, the AMA has exerted influence and directed more than half its yearly expenditures into "scientific activities." It has felt a vital interest in the quality of products closely related to the practice of medicine. In the early years, the AMA's efforts in this respect were designed primarily to eliminate extravagantly advertised nostrums. Since then it has adopted a more positive approach—the policing and promotion of higher standards for recognized medical products.

Through laboratory tests and expert evaluation, AMA councils examine new drugs and medicines, dietary and other special-purpose foods, and therapeutic and diagnostic devices. A manufacturer of any such product may obtain an evaluation at no charge, or the AMA may investigate on its own initiative. Standards are above the bare minimum of harmlessness; requirements as to purity, effectiveness, and the truthfulness of the manufacturer's claims must be met. Even AMA critics concede the impartial scientific basis upon which the judgment is rendered. Products which meet AMA standards receive the privilege of displaying the Seal of Acceptance in their medical journal or lay publication advertisements. But the Seal of Acceptance is of greater value to a manufacturer than a mere advertising device. A medical product must be "accepted" before its manufacturer can buy advertising space

in the Journal or in the great majority of State society journals. Thus, products which depend to a great extent upon a doctor's prescription or recommendation cannot advertise in the medium which best reaches the medical profession unless AMA standards are met.

To buttress its work in this field, organized medicine has campaigned for legislation to protect the consumer further. The AMA was a sponsor of the Pure Food and Drug Act of 1906 and it has promoted similar State measures. Moreover, a provision in the AMA code of ethics forbids member-doctors from prescribing "unknown or secret remedies." Infractions are rare, for few physicians would risk use of a medicine untested by the association's staff.

The AMA does not attempt to develop new medical products directly, but it does foster independent research. The Committee on Research awards grants to projects which have particular medical significance. The committee also obtains outside sponsorship, often from pharmaceutical firms, for clinical studies of disease, nutrition, and long-term effects of new medicines.

Postgraduate Medical Education

The practicing physician must keep himself informed of improvements constantly being made in the field of medicine. And the average doctor has come to depend on his society as a highly important source of new medical knowledge. The process of instruction on the local level is carried on at society meetings largely by speakers from medical school faculties or the staffs of large hospitals. This service is of particular importance to country doctors whose contact with medical progress might otherwise be limited. The societies provide specialized courses of instruction, and, at their annual meetings, arrange for a concentrated series of scientific papers, demonstrations, and exhibits. Moreover, most State societies, or a small group of State societies, publish a journal, largely devoted to scientific matters. The national organization's most effective means of keeping physicians informed is through its publications. The Journal, published weekly, has the largest circulation and is one of the most respected of the world's medical periodicals. Its staff selects about 600 of the most outstanding of several thousand manuscripts submitted annually for publication. Its special departments, in addition to organizational and political news of interest to doctors, include reports of the tests conducted by various AMA councils and committees, medical book reviews, a medical question and answer column, and medical information.

The AMA's scientific sections, representing the various medical specialties, each present full programs at their annual national conventions. Nine of these specialties also publish their own monthly journals geared to the specialist's needs. Also valuable to the physician are the AMA's quarterly index of medical literature, a directory of licensed physicians in the United States and Canada, and various handbooks on drugs and diseases.

SERVICES TO THE PUBLIC

Much of the AMA's contact with the public is in the field of health education. Today's Health, a monthly publication, is written for the lay reader; its purposes are to gain public backing for health measures supported by organized medicine, and to foster understanding of the developments in medical science. The Bureau of Health Education also maintains a speaker's bureau, offers an extensive radio transcription service, and has recently added a series of packaged television shows. Another type of AMA educational work is directed toward making the member physician a more effective health educator. Materials on public speaking, radio presentation, health column writing,

and program planning are available to members.

The AMA also engages in extensive activities within specialized areas of public health. Association officers have cooperated with the National Education Association and other interested groups in formulating school health policies and programs. The Chicago headquarters has full-time personnel engaged in industrial health, rural health, and civil defense work. In all of these activities the AMA works closely with lay organizations to cosponsor conferences, stimulate interest, and publish materials.

The American Medical Association: Power, Purpose, and Politics in Organized Medicine—Part IV

EXTENSION OF REMARKS

OF

HON. RICHARD BOLLING

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1955

Mr. BOLLING. Mr. Speaker, there follows part IV of the American Medical Association: Power, Purpose, and Politics in Organized Medicine:

Setting the qualitative and quantitative standards for medical practitioners

The Campaign Against Nonmedical Practitioners

To protect the public against treatment by improperly trained practitioners, all States have passed statutes making a license prerequisite to the rendering of healing-art services. Legislative pressure by State medical societies has been largely responsible for the original passage and periodic revision of these Medical Practice Acts. Licensing requirements provide for minimum educational standards and successful completion of an examination given by a State examining board.

Quacks: One of the AMA's first goals was to bar from practice a wide variety of completely unqualified healers. This campaign complemented its role in removing non-scientific remedies from the market. Licensing requirements forced the quacks to withdraw or practice illegally. Since passage of these laws, the AMA's function in this field has been primarily one of policing. Advertising often provides a clue; the quack still relies upon ballyhoo to attract patients. Since the turn of the century, various medical societies have exposed mail-order diagnosis by urinalysis, vacuum treatments, cancer cures, diabetes cures, virility regenerators, and a wide variety of electric, radioactive, or otherwise miraculous remedies—all dispensed by unlicensed practitioners. The Association's Bureau of Investigation in Chicago keeps a file of known offenders and supports county and State societies in their detection and prosecution of the unlicensed invader.

Chiropractors and osteopaths: The emergence of conflicting theories of disease, particularly chiropractic and osteopathy, has complicated State medical licensing. Chiropractors are able to acquire licenses to practice in nearly all States but, due to strenuous opposition from State medical societies and the AMA, theirs is a limited privilege. Usually the practice acts restrict treatment by a chiropractor to manual adjustment of the spinal column and forbid administering or prescribing drugs, puncturing the skin, or practicing obstetrics. A few States limit the osteopath to almost the same narrow privileges granted chiropractors, but most allow

him to administer drugs or to perform surgery, although only upon a showing of additional special training. Several States license the osteopath for the same unrestricted practice as the doctor of medicine.

Despite limitations, these groups continue to provide the medical profession with active competition. Each year, 2 million Americans consult one of the Nation's 32,000 licensed chiropractors for the first time. There are over 11,000 licensed osteopaths in the United States; they maintain fully equipped hospitals, they sometimes serve in city and State health departments. And, although organized medicine's justification for limited licensing of the "cults" is expressed in terms of protecting the consumer from unqualified practitioners, there may also be present an element of self-protection from this economic encroachment.

Organized medicine's campaign against the chiropractor is presently a battle of containment. In four States the requirements for licensing are the same as those for a doctor of medicine; practically, the chiropractor has been excluded. Elsewhere, medical societies police the legal boundaries of a chiropractor's limited license and oppose legislative extension of his privilege.

Basic science requirements, although originally designed as a method of raising the standards of medical practice generally, are a weapon of great potential in organized medicine's struggle against chiropractic and other limited healing arts. But it is a weapon that has thus far failed. These requirements, adopted by law in 19 States and the District of Columbia, direct all applicants for any healing art licensure to pass examinations in anatomy, physiology, chemistry, bacteriology, and pathology. But often the examination taken by candidates for medical licensure is different from the chiropractic basic science test. Medical men have termed the chiropractic basic science exam a farce. Consequently, the AMA has proposed a uniform basic science act, applicable to "nonsectarian medicine, osteopathy, chiropractic, naturopathy, sanipractic, and other modes of healing." AMA's stand is: "Whatever may be said of separate licensing boards for the nonsectarian practitioner and the cultists, there seems to be no valid argument against a uniform examination in the basic sciences." Widespread adoption of this act could mean the end of the cults' challenge to organized medicine.

Recently, the National Chiropractic Association has engaged the AMA in a top-level clash of competing interest groups. The NCA was successful in having chiropractic colleges certified for the G. I. bill; by 1949 the Government had paid the tuition of 1,700 veterans studying chiropractic. And now the NCA is campaigning for Veterans' Administration recognition of—and reimbursement for—chiropractic care. In 1950 AMA spokesmen appeared before the House Veterans' Affairs Committee and helped defeat this proposal, arguing that chiropractic does not recognize the bacterial theory of disease, is not taught at any university or college supported by public funds, and therefore should not be recognized by the VA. So the NCA has moved the fight to the American Legion, from which it has sought backing. Thereupon the AMA urged its member veterans to become active Legionnaires in order to forestall any possible pressure from an organization equipped with lobbying power on a par with its own.

Historically organized medicine's struggle to limit the practice of osteopathy took the same form as that against the chiropractors. Courts have upheld the constitutionality of AMA-fostered differentials in licensing privileges granted an M. D. and a D. O. despite apparent similarity of training. Furthermore the United States Supreme Court has upheld the right of governing boards of public (and a fortiori of private) hospitals to

deny osteopaths use of their facilities. And hospitals seeking AMA accreditation for internship and residency training usually must bar osteopaths from their staffs.

Recently the City Council of Bay City, Mich., voted to allow osteopaths to use municipal hospital facilities. The 70 staff M. D.'s then walked out rather than "jeopardize their own ethical standings," and the AMA Council on Medical Education and Hospitals immediately withdrew registration and approval of the hospital. The struggle between local physicians and osteopaths was finally resolved by a referendum in which the voters chose nearly 3 to 1 to exclude osteopaths from their city's hospital staff.

An important recent change in the AMA attitude toward osteopaths has been a policy tending toward their absorption into the medical profession. Precedent for this trend exists in the case of the homeopathic physicians, who formerly were considered cultists but who now have approved medical schools, unlimited rights of practice, and membership in the AMA. Evidence of a similar policy toward osteopaths is clear. Although the AMA code of ethics provides that "[a]ll voluntarily associated activities with cultists are unethical," the judicial council has recently approved limited medical consultation with osteopaths, as well as sharing facilities with them in small, outlying hospitals. In many States medical society-sponsored Blue Shield plans allow osteopaths to participate. A resolution urging immediate action toward an eventual amalgamation of medicine and osteopathy was voted down by the house of delegates, yet AMA and AOA leaders have conferred with amalgamation in mind.

The basis for amalgamation is the present approximation of medical standards by osteopathic schools. The osteopathic curriculum is nearly the same as the medical, but includes osteopathic science, which to the AMA carries the stigma of cultism. Virtual abandonment of this teaching would probably permit M. D.'s to instruct in osteopathic schools, leading to eventual approval. Indeed, osteopathic services are already approved by the Veterans' Administration and the United States Public Health Service.

But AMA approval seems to depend upon economic as well as strictly medical factors. Amalgamation is opposed in rural States where general practice prevails and the osteopath provides strong competition to the physician. Support for amalgamation comes from large urban centers where specialists dominate medical practice. Probably a continued high demand for medical services, mitigating competition, will accelerate organized medicine's acceptance of the osteopath as an equal.

Psychologists: Originally the practice of medicine was limited to the care of physical disturbances; many State medical-practice acts still do not specifically require licensure for the treatment of behavioral or mental disorders. Both medical and nonmedical specialists have contributed to knowledge in the behavioral sciences. The psychiatrist claims exclusive jurisdiction in diagnosis and treatment of mental disease, asserting that his medical training gives him physiological knowledge requisite to an appreciation of the patient's overall condition. He regards the psychologist's role as ancillary, similar to that of the nurse or X-ray technician. Psychologists, who presently provide many diagnostic and therapeutic services to mental patients, do not agree that psychotherapy should be the sole province of the M. D.'s.

The American Psychological Association, much like the AMA, has attempted to raise the level of psychological practice. Since many States do not regulate the treatment of mental disorders, unqualified persons hold themselves out as competent psychologists. To set the qualified practitioner apart, many psychologists have urged passage of certification acts, whereby those meeting educa-

tional requirements and passing examinations may receive the privilege of calling themselves "Certified Psychologists." These acts, adopted in only a few States, do not limit psychological practice to those certified, but they do provide the public with a possible guide to competence. Bills have also been proposed in a few jurisdictions requiring licensure of psychologists and prohibiting practice by those not meeting prescribed standards. But psychiatrists, fearing that their sphere of competence might be invaded, have secured the support of organized medicine to defeat these measures. Governor Dewey vetoed the New York licensing bill and cited the "vigorous and impressive objections" of the State medical society and American Psychiatric Association. After this setback, the psychologists refrained from seeking legislation pending conferences with the medical profession designed to define each profession's scope of competency.

Recently, however, the psychiatrists have taken affirmative action to prevent the further encroachment of non-medical practitioners. The Medical Society of the State of New York, in cooperation with psychiatric groups, has unsuccessfully sought revision of the New York medical practice act to make only the M. D. competent to treat "mental and nervous disorders." Both the American Psychiatric Association and the AMA favor such legislation. But these laws would freeze the status of two professions which often work in a flexible and cooperative relationship. Under such circumstances, joint efforts to define each specialty's qualifications should be encouraged. This would leave both groups free to cooperate in eliminating the unqualified practice of psychotherapy.

Controlling the Quality and Supply of Doctors

Another key function of the AMA is its inspection of medical schools and its annual listing of those approved. All States require that an applicant for medical licensure be a graduate of an acceptable medical school. Standards of acceptability are set by statute, or by formal rule or informal policy of the State medical examining boards. These statutes or rules provide that the board will consider only graduates of schools approved by the AMA and/or the American Association of Medical Colleges, whose lists are identical. Since it is impossible for each State board to make an independent inspection of every medical school whose graduates apply for licensure, these boards must rely on an outside agency. The AMA fulfills this need and its list thereby acquires the force of law.

Through their reliance upon the AMA to inspect the Nation's medical schools, the States tacitly confer upon it the power to set the standards for approval. These standards, of course, fix the quality of medical education, but they also indirectly determine the size of classes in each school. Maximum student/faculty or student/cadaver ratios, for example, make expansion costly.

Moreover, many States require a medical school graduate to serve an internship in an approved hospital as an additional training requirement. Again, practical considerations require licensing boards to utilize the AMA standards and list of approved hospitals. AMA approval is vital to a hospital; without it, the hospital cannot obtain the low-cost services of interns. This power gives organized medicine a device to enforce conformity with policies occasionally unrelated to medical training.

Medical education: The improvement of medical education was one motive for the founding of the American Medical Association. Early attempts, however, were not successful. In 1910, the Carnegie Foundation's Flexner Report publicized the serious inadequacy of many of the medical schools in the country. Strong public opinion and State medical association pressure has since

forced State examining boards and medical schools to recognize the standards set by the AMA Council on Medical Education. Although 81 substandard schools have been forced out of existence, some formerly inadequate schools have managed to survive by rapidly improving in quality. Today there are 79 medical schools in the United States, all approved.

When adoption of AMA requirements forced disapproved medical schools to close, the annual graduating class of doctors was cut in half. But these numerical losses have been recouped. Existing schools have gradually expanded their facilities to a point where annual output exceeds the 1910 level. For the past 5 years, each freshman class has surpassed the previous year's record-breaking enrollment. The AMA has provided technical assistance to schools planning expansion. And State societies have sometimes advocated the formation of new medical schools, as in Maine and New Jersey, or supported the conversion of 2-year "basic science" schools into full 4-year schools, as in North Carolina and West Virginia. The resulting increase in physician supply has raised the American doctor/patient ratio to 136 per 100,000, second only to Israel with its large number of refugee Jewish physicians. This ratio is expected to hold despite rapid population gains.

But the AMA has not consistently pursued a policy of increasing the doctor supply. Moved by a desire to mitigate competition among doctors during the depression, the association attempted to reduce medical school enrollments. By 1932 the AAMC and AMA had become alarmed about an increasing surplus of doctors. In 1933 the AMA council on medical education invited the active support of the Association of American Medical Colleges in bringing about a substantial reduction of their enrollment. The council's secretary, in a speech before the AAMC, mentioned the alleged surplus of doctors and deplored the practice of making up classes in medical schools without any regard to the needs of the profession or of the country as a whole. He concluded: "The time has come when we must still further limit the enrollment of our medical schools. By 1934 the council could report that several schools were decreasing enrollments in adherence to the council's principles."

Even today, AMA's limited support for expansion in medical education may not be adequate to meet growing demand for physicians. Increased military needs, coupled with expanded public-health programs and private requirements, have created a doctor shortage which is becoming progressively more acute. Estimates of the adequacy of the doctor supply by 1960 vary greatly, depending on an intangible variable: desirable level of medical care. Maldistribution of physicians, resulting from the emphasis on specialization and the concentration of physicians in urban centers, has compounded the shortage. Local action by doctor-needy communities—guarantees and special inducements to young graduates seeking a location—may be a partial solution. Local and State medical society scholarships, granted on the stipulation that the recipient will practice in a small community, have also helped. A recent AMA campaign glorifying the general practitioner may have some effect. But the need for long-term regional or nationwide planning of the supply and distribution of doctors has not been met under AMA guidance.

Indeed, the wisdom of lodging quasi-legal authority over medical schools in the AMA may also be open to question. Without doubt, the quality of medical education has improved enormously under AMA guidance. And experienced medical educators and practitioners are best fitted to adjust standards to the needs and potentialities of the school

and student. But the power to determine supply, which resides inevitably within the power to set standards, should not rest solely in the hands of a private group which is neither directly responsible to the public nor necessarily responsive to the Nation's requirements.

Licensing of foreign-trained doctors: The establishment of licensure requirements for foreign-trained physicians was not a pressing problem until the late 1930's. With the rise and spread of European totalitarianism, however, the States received an increasing number of requests for recognition of foreign credentials. Today there are few displaced European physicians left. But in their place increasing numbers of Americans, unable to gain admission to medical schools at home, have gone abroad to study and now seek accreditation.

The official attitude of the State examining boards toward foreign-trained doctors has largely been the result of State medical society and AMA policies. By the 1930's, 22 States would not accept foreign physicians at all. In several others, full citizenship and additional training requirements achieved the same purpose. The exclusion of refugee physicians was accomplished over the protest of farmer and labor medical cooperatives, particularly in States suffering from doctor shortages.

Since the war, the AMA Council on Medical Education has established a less restrictive policy toward foreign medical school graduates. The AMA and AAMC have jointly issued a list of 50 European schools which they suggest for State board acceptance. But the list does not include institutions from which refugee doctors are likely to come—those of Germany and Austria. For these doctors an AMA spokesman has recommended adoption of the procedure followed by the Iowa Board of Medical Examiners. There the foreign doctor is placed as an assistant in a State institution for 1 year, during which he receives supervision, refresher courses, and grades from his physicians in charge. At the end of his trial period his file is considered by the State board and he is accepted or rejected.

It is of great importance to American students educated abroad that 23 licensing boards have reported willingness to consider graduates of foreign schools recommended by the AMA. But, despite the AMA's insistence that the list is "tentative," and that "absence of a school from the list does not necessarily imply disapproval," the tendency among these boards has been to consider only graduates of already approved schools. Yet, of the 1,121 American students in foreign schools in 1951, only half were enrolled in approved schools. Furthermore, 11 States still do not accept any foreign credits. And even in States which do allow foreign graduates to take the board examinations, the percentage of failures among them has been high. A European medical education is still not a reliable path to licensure in the United States.

The American Medical Association: Power, Purpose, and Politics in Organized Medicine—Part V

EXTENSION OF REMARKS

OF

HON. RICHARD BOLLING

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1955

Mr. BOLLING. Mr. Speaker, there follows part V of the American Medical

Association: Power, Purpose, and Politics in Organized Medicine:

Determining the conditions of practice and payment

The AMA "Principles of Medical Ethics" is a codification of the doctor's professional conscience as well as a blueprint for the organization of medical practice. In theory, the principles are not "laws to govern" but rather "guides to correct conduct." However, for the doctor they approach legal status since unethical conduct is a ground for expulsion from every county medical society. The code regulates, in general terms, a wide range of the doctor's conduct toward his patients, other physicians, and the public at large. Thus it is applicable to most matters affecting medical practice.

This code of ethics is geared to the typical unit of medical practice in America—the individual practitioner, remunerated on the basis of a fee for service rendered. But the pressure of changed conditions is forcing modifications in this pattern. Increased medical knowledge and new techniques have created the specialties, with consequent increased interdependence among doctors; much modern medicine is practiced by a team rather than by a lone practitioner. The need for expensive equipment and reliance upon technicians has made individual entrepreneurship difficult; hospitals, medical consumer organizations, and groups of doctors—able to supply needed capital—have hired physicians on a salary basis, shifting risk of loss or chance for gain to themselves. And a desire to anticipate unpredictable medical expenses has led the consumer to demand an application of the insurance principle to the cost of sickness. Each of these modifications—group practice, salaried practice, lay sponsorship, and prepayment—is still in the experimental stage.

Throughout this period, organized medicine has resisted or attempted to control change, rather than allow free experimentation. The physicians in positions of power within the AMA have risen to the top of the profession via the individual fee-for-service system. Any significant change in that system represents a threat to a familiar and tested method of practice.

The AMA has expressed or rationalized its opposition to change in terms of ethics. In so doing it has often failed to meet the economic issues realistically. By counterproposals, predicated on the fee-for-service system, it has attempted to satisfy the same needs which brought forth the new methods of practice. Organized medicine's purpose has thus been to contain developments within the orthodox pattern. Its effort to do so has called forth all the power at its command.

Methods of Practice

The vast majority of physicians in the United States practice alone. Yet group practice offers advantages both to patient and physician. It affords fuller use of, and a chance to spread the cost of, technical equipment and personnel. The doctor has ready consultation with other specialist-partners—a convenience to the patient, and a means of retaining control of the fee. Moreover, younger men in the profession, schooled in a dependence upon other members of the medical care team, often favor medical partnerships.

In the almost automatic referral from partner to partner, characteristic of group practice, critics have seen an infringement of the patient's free choice of physician. And they consider the division of income according to any partnership agreement other than value of services rendered, as akin to fee splitting. Early groups were disparaged as unethical. But within recent years active steps have been taken only against those groups offering a plan for some type of flat-

fee prepayment. Rather, the AMA has mildly discouraged combined practice by repeatedly denying the necessity for, or success of groups. Its studies have emphasized negative aspects of group practice, such as causes for frequent dissolution of groups and the legal snarls of partnership agreements. Failing to curb the spread of group practice, organized medicine has tried to keep existing groups within traditional bounds through the ethical code: "The ethical principles actuating and governing a group or clinic are exactly the same as those applicable to the individual."

Methods of Remunerating the Physician

Eight out of 10 practicing physicians are self-employed, either as individual entrepreneurs or as members of a partnership firm. But the number of salaried practitioners has been increasing. Organized medicine disapproves of this trend and has condemned some types of salaried practice as unethical, fearing that a doctor's primary loyalty will be to his employer rather than his patient.

For many years certain familiar types of salaried practice have been acceptable to the AMA. Physicians engaged in research, public-health work, and teaching do not establish a close relationship with patients, nor could the fee-for-service system be readily adapted to suit their circumstances. Military medicine, too, is far removed from the context of private practice. And one physician may hire another on a salary; the employer is subject to the same ethical requirements as the employee, and the patient commands the primary loyalty of both. Furthermore, such employment is usually for training purposes and temporary, similar to internship or residency.

But organized medicine has not accepted some of the newer developments in salaried practice. One of the most widespread has been the hiring of doctors by hospitals. The practice of radiology, anesthesiology, and pathology is most commonly associated with large institutions. Each involves large outlay for equipment and deals chiefly with hospitalized patients; none involves the customary strong doctor-patient relationship. And since these specialty departments—staffed by salaried M. D.'s—often provide profits which cover other operating deficits, hospital management is reluctant to abandon this system. But the average net income of the salaried specialist ranges well below that of his self-employed counterpart. The salaried anesthesiologist averages \$10,000 annually; the independent, \$12,700. The hired radiologist averages \$12,300 and the independent \$18,500. These differentials may have contributed impetus to AMA disapproval and action against hospital practice.

Medical societies have characterized hospital practice as primarily a moral problem; they fear exploitation and lowering the dignity of the profession, and envision lay-employer control as forcing a lower standard of care for the patient. The specially appointed Hess committee reaffirmed and clarified the AMA's long-standing position against salaried purvey of medical service. The committee condemned hospital practice and urged component societies to act against institutions and member physicians who work within this disapproved framework.

But there has been neither extensive nor highly successful activity on the lower levels. The head of anesthesiology of a Boston hospital attempted to change its salary-plus-share-of-profits system, charging that he was being forced to split fees with an institution. Although the hospital admitted making a profit in that department, the local medical society upheld the arrangement. And similar charges of unethical practices against the Yale Medical School were dropped. The school was retaining the fees paid to its affiliated hospital by patients for

services of salaried medical-school professors. While State specialty societies have impeded the spread of salaried practice to new hospitals by refusing to recommend, or threatening to expel a member who accepts salaried terms, they have not effected any appreciable change where the practice is already entrenched.

The national organization is unable to initiate action in cases of individual violations of the Hess report since it is bound by its constitution to wait for charges to proceed through regular channels. Instead, its officers have tried to work out agreements that can deter salaried hospitals. They have requested Blue Cross to refuse to pay hospital bills covering charges for salaried doctors' services. Conferences have been held with American Hospital Association officials in an effort to work out a compromise arrangement. Both sides have denied an irreconcilable conflict, but after 4 years of negotiation there is still no agreement.

Methods of Payment by the Consumer

In meeting the cost of illness, the consumer is faced with two alternatives. Under the traditional method, he pays in accordance with services actually rendered. But the need for medical attention is unpredictable and falls unevenly throughout the population. The costs of serious illness, particularly among low-income families, may be financially disastrous. Prepaid health insurance can alleviate such consequences by spreading the risk and expense over a large group. Under prepayment, the consumer pays in advance to receive medical care and treatment if and when they are needed—not for services actually received. Consequently he can budget a regular portion of his income to cover such potential medical needs as hospitalization, surgery, or complete medical care.

The AMA endorses the principle of health insurance provided participation is voluntary. However, organized medicine has not always had this favorable attitude. In 1932, the report of the Committee on the Costs of Medical Care, advocating expansion and development of voluntary prepayment plans, was severely condemned. Experimentation with various methods of prepaid hospitalization, such as Blue Cross, was disparaged and discouraged. The AMA today explains this early opposition on the grounds of inadequate standards of care under existing plans, insufficient payment to physicians, and a fear of governmental domination leading to compulsory participation. However, although some early plans did exploit both patient and physician, medical society opposition was directed against almost all such schemes. Not until serious proposals for governmental compulsory health insurance materialized did organized medicine enthusiastically espouse voluntary prepayment. State societies, encouraged by the AMA, then took the lead in establishing insurance plans. At the same time, the AMA attempted to shape voluntary plans into an approved pattern.

Prepayment plans may insure against the costs of hospitalization and/or the expense of physicians' services. The most common type of health insurance covers only specified hospital services. Commercial insurance companies, as well as the familiar nonprofit Blue Cross plans, offer such policies. State medical societies have approved the Blue Cross plans, but have objected to the reimbursement to hospitals for services of their salaried doctors. Other than this objection, and concern over the economic soundness of some insurers, hospitalization plans have caused no recent controversy within organized medicine.

The recent development of insurance covering the costs of physicians' services, however, has raised more fundamental problems. Two major types of medical care plans have appeared. Under the cash indemnity system,

money benefits are paid to cover specified medical expenses when incurred by the insured. The patient consults his own physician and is reimbursed by the insurance company according to a stipulated schedule. The insurance check may or may not equal the full amount of the doctor's bill. The physician has no contractual relationship with the insurer; he enjoys complete freedom as to the method of rendering his service and determining his fee. Such policies are offered by commercial firms or by several State medical societies under nonprofit Blue Shield incorporation.

In contrast, medical service plans offer their benefits in terms of physicians' services. The patient can consult only a participating physician, from whom he receives any needed care for which he has contracted. The physician is reimbursed for his services by the insurer according to a previous agreement, which may also determine the manner of practice. Lay organizations, independent groups of physicians, and a few State medical societies have sponsored such plans. The majority of medical society plans employ a combination of the two methods, providing for service coverage to lower income groups and cash indemnification for others. This permits the physician to collect from higher income groups a fee above that granted him by the insurer.

Only under medical service plans does the insurer become a middleman dealing with both physician and patient. He contracts with consumers to furnish care and must then obtain this care by securing physicians' services. As contractee with both parties, the insurer is in a strategic position to determine the standard of medical care, services covered, financial arrangements with both parties, consumer membership eligibility, and type of physician participation. For this reason, organized medicine has laid great stress on the sponsorship and control of service plans.

If a medical service plan is operated for profit, the AMA fears exploitation of both patient (through lowering of standards) and physician (by reduction of income). This objection cannot pertain to cash-indemnity systems—even those operated commercially—because the doctor deals only with the patient and retains control over standards and fee setting. Service plans controlled by State medical societies are said to provide professional safeguards for the patient and a free choice of physician; also, the AMA believes that medical society sponsorship shifts the consequences of financial failure. Subscribers of some early insolvent service plans never received paid-for benefits since funds were insufficient to engage doctors. But in medical society plans participating doctors guarantee to provide their services, bearing the risk of the insurer's financial inadequacy. More important from the standpoint of the profession, medical society plans are open to all member doctors and therefore do not affect competition within the membership group. Furthermore, remuneration rates are set on an individual fee-for-service basis and at a level determined by medical society representatives.

At one time, organized medicine vigorously attacked prepaid service plans operated by independent physicians; some of these arrangements now receive qualified approval. These plans have uniformly combined prepayment with group practice. The choice of physician is thus limited to those practicing as a unit; subscribers are removed from the doctor's competitive market for patients. The economies of group practice may also enhance the plan's competitive position. But because the insurer is a group of doctors, themselves subject to ethical precepts, the AMA does not fear exploitation of this favorable economic position. Rates to subscribers, compensation to participating practitioners, and standards of practice are all under professional control. Medical socie-

ties do not encourage such plans, but, unless they violate the professional code by such tactics as advertising, neither do they actively oppose them.

The major area of controversy over voluntary health insurance concerns lay-sponsored service plans. There has been little change in organized medicine's tenacious opposition to provisions found in such plans. However, the AMA has provided a method for approval of these schemes if they conform to certain principles. The concessions necessary to gain organized medicine's approval are so severe that, as yet, virtually none have complied.

The earliest of the lay-sponsored service plans were formed by industrial employers. Employee groups, often under collective-bargaining agreements calling for management support, soon followed. Schools and universities often employ this device to insure their student bodies. The number of potential subscribers in each instance is limited to the size of the specified group. On the other hand, groups of consumers outside of industry have formed cooperatives or community-sponsored nonprofit corporations to provide prepaid medical services. These are open to the entire community, subject only to the limitations of available facilities. AMA opposition to this latter type has been much more pronounced than to restricted membership plans.

Regardless of the nature of the sponsoring body, the AMA has laid great stress upon placing control in professional hands. Such control involves two aspects: Over standards of medical care, and over terms of physician participation. Lay sponsoring bodies readily grant the former. But the power to set terms of physician participation means determination of the method of practice and the type and level of doctor remuneration. This, in effect, means control over the table of fees which the plan pays the physician and consequently the rates which the plan must charge the consumer. Furthermore, this latter aspect of professional control must, to meet AMA approval, be vested in a committee representing all the doctors in the community, not just those serving the plan. So in order to qualify for approval, the lay-sponsored plan must duplicate the essential elements of medical society plans. Thus it would relinquish the very power which might enable it to outbid individual practitioners and other prepayment systems in the medical market.

Virtually all disapproved service plans render medical care through group practice. The combination of lay-sponsored prepayment and group practice has been condemned by the AMA as panel medicine. The subscriber must seek his medical services from the limited number of doctors in the group; the AMA views this as a denial of his free choice of physician. But from the non-participating doctor's standpoint, there is also a denial of access to potential patients. Another reason for medical society hostility to the panel medicine combination is its tendency to employed disfavored methods of remunerating the doctor. Distribution of the group's income on a fee-for-service basis is apparently not utilized. Payment according to the number of patients treated, another possible method, is condemned as tending to lower the quality of care to each individual. The most common form of physician payment is by salary.

From the consumer's standpoint, prepayment group practice schemes offer several advantages. Aside from the economies of group practice, these plans tend to offer more thorough coverage. Subscribers may contract to receive comprehensive medical care, often with hospitalization as well. Because it is to the advantage of the plan to minimize illness among members preventive medicine is often stressed. In contrast, most medical society plans limit benefits, up to

a stipulated maximum, to surgery and medical care for hospitalized cases. To justify the exclusion of such low cost services as occasional house and office calls, the AMA contends that these costs are not susceptible to the insurance principle. The risk falls evenly and widely throughout the population so that the administrative costs of such insurance are unjustified. But this argument does not apply to a vast range of unusual medical exigencies which do not require hospitalization.

The public demand for broader coverage and competition with lay-sponsored prepayment systems has forced many medical society plans to liberalize their terms. Some now offer disaster riders, covering costs above the standard maximum. A few have removed income discrimination while others have expanded benefits to cover complete medical care.

The American Medical Association: Power, Purpose, and Politics in Organized Medicine—Part VI

EXTENSION OF REMARKS

OF

HON. RICHARD BOLLING

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1955

Mr. BOLLING. Mr. Speaker, there follows part VI of the American Medical Association: Power, Purpose, and Politics in Organized Medicine:

Methods of Controlling Disapproved Voluntary Prepaid Health Insurance Plans

Even a close analysis of the AMA attitude toward various types of prepaid insurance schemes does not provide absolute predictability of medical society reaction to any given plan. All nonmedical society plans contain a diversity of features any of which may be objectionable either alone or in combination with others. Intangible factors, such as the climate of political and public opinion, the prestige and influence of the lay sponsors, and the intensity of professional attitude, also govern medical society responses. Yet the two broad considerations of professional integrity and economic interest set outer limits beyond which no privately sponsored plan can venture without incurring vigorous opposition. And these factors provide clues to probable intensity of resistance against any plan containing objectionable features.

Discrimination against participating physicians: For many years attempts to form medical-service plans were opposed by organized medicine through direct disciplinary action against participating physicians. The medical practitioner has much to lose when membership in his medical society or the good will of fellow physicians are denied him. It was, therefore, inevitable that organized medicine would apply its strongest weapon in opposing early attempts to form medical-service plans. The AMA's record contains various examples of techniques for disciplining physicians associated with disapproved schemes.

In 1929 the employees of the Los Angeles department of water and power entered into a doctor-sponsored prepayment service through an agreement with the newly established Ross-Loos Clinic. The plan called for comprehensive medical care by the clinic group's participating physicians as well as hospitalization insurance benefits. Subsequently, some of the clinic's doctors, including a former president of the Los Angeles County Medical Society, were expelled by

that society. They were later reinstated on appeal by the AMA's judicial council because of procedural defects in the local society's action. Since that time the Ross-Loos Clinic has not encountered further opposition from organized medicine, neither has it accepted opportunities for normal expansion of its facilities or enrollment.

In 1937 HOLC employees in the District of Columbia organized Group Health Association, a nonprofit, prepayment medical care and hospitalization program for a limited number of qualified Government employees. Physicians were hired on a full-time salary basis to provide low-cost medical care for members and their families. The local medical society, however, objected to this lay-sponsored group and employed its coercive powers to destroy this competitive threat to private practitioners. The District Medical Society expelled or otherwise disciplined several of the doctors hired by Group Health; in some instances mere threats of such action led to resignations from the GHA staff. Moreover, the society circulated a "white list" of approved organizations and individuals, from which GHA was excluded, thereby making it impossible for GHA doctors to obtain consultation with fellow physicians. Furthermore, Group Health had no hospital of its own but depended upon the availability and cooperation of local institutions. The AMA and the District Medical Society virtually crippled GHA by enlisting nearly all the hospitals in the District to deny GHA physicians staff privileges and bed space for their patients. The effective combination of these tactics resulted in the Justice Department's successful criminal prosecution of organized medicine under the Sherman Act.

In the State of Washington, Group Health Cooperative of Puget Sound was created in 1946 to give prepaid medical and hospital service to members of several granges, unions, and consumer cooperatives. It hired a staff of 20 doctors to be remunerated by salary and participation with subscribers in a profit-sharing arrangement. Like the District of Columbia group, it lacked hospital facilities of its own. Again local medical society intervention caused hospitals throughout the area to refuse GHA doctors staff privileges, and even emergency surgical facilities. The society's characterization of GHA's staff as unethical resulted in its withholding or withdrawing membership from several physicians who consequently lost consultation privileges and certification by specialty boards requiring society membership. In 1949 group-health doctors sued to enjoin the county medical society under a provision of the Washington State constitution forbidding combinations or agreements to fix prices or limit production of any commodity. In 1951, the Washington Supreme Court decided for the cooperative and delivered a forceful condemnation of organized medicine's tactics in attempting to halt the development of private medical programs in the State.

Sponsorship and promotion of competing plans and restrictive legislation: Despite determined medical-society disciplinary action against staff members of disapproved prepayment groups, various forms of medical service plans have continued to grow steadily. Furthermore, the use of discriminatory tactics has been found illegal under both Federal and State law. Consequently, organized medicine has softened the use of such techniques, and adopted subtler, but possibly more effective methods of meeting the threat of prepayment plans.

A concerted effort to set up competing medical society sponsored and controlled plans was the first of these. Before 1940 three such plans, California Physicians' Service, Michigan Medical Service, and Western New York Medical Plan, were in actual operation. But their formation focused at-

tention upon two legal questions: whether these plans were subject to State laws governing insurance companies and insurance contracts; and whether these plans constituted the unlawful corporate practice of medicine. In several jurisdictions, these obstacles had proved fatal to nonsociety plans. While the elimination of these obstacles to the development of medical society plans provided much of the incentive for organized medicine's promotion of special enabling legislation, many of the resulting laws were also designed to insure medical control of all ensuing prepayment schemes.

To a varying degree most of these statutes restrict the formation and operation of plans to those with medical society approval or control. One type of statute requires that a majority of directors be doctors or they may provide for State medical society approval of directors. Other statutes bar any prepayment plan from providing medical services unless it includes a majority of the licensed physicians in the area of service. The practical effect of such laws is to prevent lay sponsors or small medical groups from offering prepaid services.

The increased threat of compulsory national health insurance in the 1940's gave added impetus to organized medicine's development of its own voluntary medical care plans. Although disapproved voluntary plans gained little or no respite from organized medicine, society sponsored plans provided the AMA's positive answer to the argument for governmental action. In 1942 the AMA could point only to 11 medical society sponsored or approved plans; by 1951 the total was 104 such plans. Medical society plans frequently offer less comprehensive coverage than the independent plans with which they compete. However, they have exploited their competitive advantages through "medical public education" campaigns and word-of-mouth promotion by family physicians to effect an impressive growth of membership.

The struggle against HIP: Organized medicine is presently bringing the utmost power at its disposal against the health-insurance plan of Greater New York. HIP, with almost 400,000 subscribers, is one of the largest group practice, prepayment medical service plans in America. It was originally promoted by Mayor La Guardia to provide comprehensive health insurance for New York City government employees and their families; half of the premium is borne by the city and half by the insured. Since its formation, HIP has opened its enrollment to other employed groups and some individuals.

HIP's organization resembles that of the typical lay-sponsored plan. The plan is headed by a doctor, but a majority of directors are laymen. The board has control over the premium rates and contracts with groups of physicians who, in turn provide medical care to subscribers. Each of the 30 affiliated groups receives a per capita payment based on the number of subscribers registering with it. The group divides its receipts among member-doctors as it wishes; most choose salaried practice, with annual earnings ranging from \$7,500 for starting physicians, to \$18,000 for senior partners. The subscriber may select any one of the 30 groups, from which he receives comprehensive medical care. And the enrollee may choose any doctor within his group as his family physician. Preventive medicine is particularly stressed since it is to the advantage of the group to minimize illness among its patients. Premium rates vary according to income and size of family: an individual with an income under \$5,000 pays \$42.72 per year; a family earning under \$6,500 pays a maximum of \$155.52. HIP does not cover hospitalization; its subscribers are required to enroll in Blue Cross or an equivalent.

From its inception, HIP has steadily grown in size, and the local medical societies' pressure against it has increased proportionately. When Mayor La Guardia suggested the formation of a comprehensive health plan for city employees the medical societies urged utilization of existing services, and liberalized the benefits of the society-sponsored United Medical Service. Since then, a controversy between these two competing plans has ensued over the right to advertise. The ethical code permits society plans to attract subscribers through advertising on the theory that all doctors benefit equally. Although the local medical societies initially tolerated advertising by HIP, they recently have changed their view and branded the practice as unethical. An appeal from this ruling has recently been denied at the State level.

Rather than inviting comparison of their plan with HIP in terms of quality, coverage, and premiums, the local medical societies have disparaged HIP for its alleged denial of free choice of physician. It is true that HIP subscribers can obtain services only from doctors in a participating group. But the independent subscriber can exercise a free choice originally between any available plan, or no plan at all. And if he chooses to join HIP, he has a choice of several groups and of numerous doctors within each group. Perhaps the doctors' hostility stems from HIP's denying their free access to 400,000 potential patients.

Condemning HIP as unethical conveys a threat of possible disciplinary action against affiliated doctors, and may implant the fear that fellow physicians will view their participation as detrimental to the profession's welfare. Nevertheless, increasing numbers of doctors have joined HIP affiliated groups. Consequently the New York medical societies have advocated State legislation designed to destroy the HIP panel practice system. Under the guise of guaranteeing free choice of physician, the proposed act would have forced prepayment group plans to compensate any physician rendering services to subscribers. But the 1954 New York Legislature adjourned without passing this measure: Now the State medical society is attempting to secure its objective of destroying panel practice groups by "clarifying" its own ethical code. One new interpretation condemns the salaried practice of medicine except in institutions where patients are public charges; this ruling would necessitate a fundamental change in the income distribution system of HIP affiliated groups, but would not destroy the plan. Another interpretation, asserting free choice to be denied whenever the patient must choose a physician from a panel or group, would inevitably outlaw any group practice prepayment system. Whether the New York medical societies will enforce this ruling by disciplinary action against participating physicians is the crucial question.

AMA attitudes toward health measures under Government auspices

Governmental activities in the field of public health have steadily increased. This expansion has occurred not only through changes in our social and economic philosophies, but also from advances in scientific knowledge. Communicable disease was once thought to result from environmental defects with a consequent limitation of public health activities to sanitation. But bacteriological knowledge has demonstrated personal communicability, and led to a public concern for the welfare of the individual as well as his environment. Consequently, public health functions have come to include such programs as diagnosis, treatment, and hospitalization. More recently these programs have been broadened so as to cover not only communicable, but degenerative disease, and maternal and child-welfare projects as well.

The development of many public-health activities has met with hostility from the medical profession. Physicians often resisted such early programs as smallpox inoculations, diphtheria immunizations, and venereal disease clinics as invasions of the domain of private practice. Often State health departments, their personnel being influenced by the medical societies, were themselves opposed to expansion into areas of general medical care. Where health officials did institute new programs, they sometimes had to resign from their local medical societies because of opposition to these ventures. And where medical societies gave approval to diagnosis and treatment by public-health agencies, they have favored furnishing care by private practitioners on a free choice, fee-for-service basis, rather than by the less costly salaried physician hired by the State.

Measures providing public medical care directly to the patient have usually met with the opposition of organized medicine when made available to those able to pay for private services. These programs, it is charged, put the State in competition with private practitioners of medicine. As a consequence of opposition from medical societies, the initiative for most public-health development has come from outside the medical profession. Although the American Medical Association today approves a number of public-health measures once opposed by medical societies, it would still define the scope of public health more narrowly than most public-health officials. A recent resolution would limit health departments to such activities as vital statistics, health education, sanitation, communicable disease, and laboratory and clinical services essential to the control of such diseases. This concept of public health excludes programs in the field of maternal and child welfare, sight and hearing conservation, care of crippled children, degenerative disease, and mental health.

Governmental Level of Sponsorship and Control

AMA opposition to governmental health measures, occasionally expressed in terms of general principles, is more often aimed at particular features of administration, sponsorship, or control. Medical Society opposition increases in intensity as local administration is bypassed and control is lodged in the Federal Government. Most State medical societies do not uniformly follow AMA pronouncements defining the proper sphere of public health. In many instances State societies formerly in opposition, now cooperate and participate in State administered maternal and child health or degenerative disease programs for the benefit of indigents. Nevertheless, similar programs under Federal sponsorship have encountered AMA opposition. Organized medicine primarily expresses objection to centralization of control in the Federal Government, not the purposes of the particular program. Possibly a further explanation for the differential in State and national activity lies in the State society's relatively greater control over health programs within its jurisdiction.

On the State level, medical society control is facilitated by the State health department's relative freedom from legislative and executive supervision over enforcement, regulation, and development of new programs. And, under Federal grant-in-aid programs, funds originating in Washington, but destined for local communities, are routed through the State health office, which thus occupies a strategic position in indirectly determining national policy. Joint coordinating committees of State health department and medical society representatives often draw up regulations and allotments under various specified programs. Such a relationship may promote the efficient administration of public-health meas-

ures. But medical society influence goes deeper, pervading health department activity. In many States, the department head is nominated, appointed, or recommended by the State medical society; in a few States membership in a county medical society is a requirement for departmental appointments. And, since the statewide cooperation of doctors is essential to the success of any program, health departments must permit the medical societies to participate in the formulation of policy. This leverage enables organized medicine to protect the interests of the profession against governmental encroachment.

The national organization has been less influential in shaping Federal administrative policy. In fact, health leaders of the recent Democratic administrations were openly hostile toward organized medicine. Since 1876 the AMA has advocated assembling the medical functions of the Federal Government into a single agency of cabinet rank headed by a physician. The AMA opposed and contributed to the defeat of two reorganization proposals submitted by President Truman consolidating health services together with welfare and education. Hostility was grounded upon the fear that Oscar Ewing, advocate of compulsory health insurance and the AMA's arch-enemy, would gain control over medical matters, and that health services would not be independent of other agencies. However, after the 1952 election, the same proposal was submitted by President Eisenhower, and on this occasion organized medicine abandoned its former stand. This reversal followed Presidential assurances that the new office would not advocate compulsion in the medical field. Organized medicine probably anticipates a relationship on the national level similar to that enjoyed in the States.

The American Medical Association: Power, Purpose, and Politics in Organized Medicine—Part VII

EXTENSION OF REMARKS

OF

HON. RICHARD BOLLING

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1955

Mr. BOLLING. Mr. Speaker, there follows part VII of the American Medical Association: Power, Purpose, and Politics in Organized Medicine:

Federal Grants-in-Aid for Health Purposes

Federal grants-in-aid in the health field began with the Chamberlain-Kahn Act of 1918 for control of venereal disease. Three years later the Shepard-Towner Act was passed providing for grants to the States for maternal and child welfare. The 1918 act received qualified approval from the medical societies, but the latter measure was denounced as "a form of bureaucratic interference with the sacred rights of the American home." The AMA based its objections not on public activity in this field, but on Federal participation in it. Shortly thereafter the association announced its blanket opposition to Federal grants-in-aid for medical services. After a few years both of these grants were allowed to die, and the AMA successfully resisted efforts to revive them until the passage of the Social Security Act. Under this measure both programs were reactivated, and grants were established for general public health activities as well. At the present time funds are allocated for a wide variety of public-health services, research, and hospital construction.

Grants for health services: The American Medical Association now accepts the allotment of Federal grants to the States as a well-established principle in our Government. In fact, it has itself called for the extension of public-health services to areas where needed. However, the association emphasizes that public health is primarily a local responsibility, and that there must be a showing of actual need by the States. Similarly, the AMA favors local autonomy in administration. Professional advisory committees are favored, especially if their recommendations are made binding on administrators. Even when these conditions are met the AMA will resist grants for treatment of all but the most contagious diseases unless made contingent on the recipient's inability to pay.

Thus, the AMA opposed the Pepper bill of 1945 which would have increased the authorized expenditures for maternal and child health, crippled children, and child welfare. The association protested that the measure contained no means test—grants being available without regard to need—and also that the chief of the Children's Bureau had too much discretionary authority in administering the program. However, the AMA gave its approval to the Priest bill in the last Congress. This authorized financial assistance to States and subdivisions for local public health units, particularly in national-defense areas. Approval followed the adoption of amendments suggested by the association to guarantee local autonomy and to clarify the types of service that might be rendered.

Grants for medical research: When grants-in-aid for medical research were first proposed in the late 1930's the AMA expressed its disapproval. Their objections were said to be based on a fear that Federal subsidies would discourage private gifts, and that such subsidies would not be given without Federal control over the manner in which funds were to be used. But the AMA's position changed after grants for such purposes had been passed. The work of the Office of Scientific Research and Development during the war had demonstrated that Federal funds could be applied advantageously for promoting research and accelerating the use of medical discoveries. Since that time the AMA has usually favored measures providing for research grants. The creation of a National Science Foundation, as well as a National Cancer Institute and National Heart Institute, has been approved; such Federal institutes direct important research projects in medicine.

Grants for hospital construction: The AMA has consistently favored Federal grants for hospital construction, provided that local need is shown. Thus the association approved the original Hill-Burton Act of 1946 for hospital surveys, construction, renovation, and improvement. Hill-Burton funds are applied only to the physical plant of hospitals, not for medical services. Also this program has operated primarily to assist hospitals of small capacity in rural areas where need is greatest. And Federal funds, as in most grant programs, are channeled through State health departments.

Grants for medical education: The increased cost of medical education has led to recent proposals for Federal aid. No measure submitted thus far has received organized medicine's approval—and none has been enacted—despite AMA denial that it opposes Federal grants to medical schools. At first such grants were incorporated into the omnibus National Health Act along with controversial compulsory health insurance proposals. In the hope of expediting bipartisan action on the aid to education portion, Senators Murray, Pepper, Taft, and Donnell sponsored a separate bill in 1949. This measure and its House counterpart, after committee consultation with AMA representa-

tives, were amended to limit Federal participation in the budget of any medical school to 40 percent, and to give a professional advisory council, responsible to Congress, the duty of making recommendations to the United States Surgeon General before he could promulgate regulations under the program. In addition, any Federal direction, supervision, or control with regard to personnel, curriculum, or instruction was expressly forbidden. After Senate passage of this measure by unanimous vote the American Medical Association announced its opposition to the measure. In accordance with the association's recommendations, the House then placed a 30-percent limit on Federal participation, but AMA still opposed the bill, and it died in committee. Similar measures introduced since that time have met a like fate. The AMA has announced that it would support single installment Federal grants for the construction and renovation of medical school plants similar in terms to the Hill-Burton grants for hospital construction.

The AMA bases its opposition to medical education subsidies on a fear that Federal domination over the schools will result, and that educational standards will deteriorate. Critics of this argument, particularly the deans of the medical schools, who have been overwhelmingly in favor of Federal aid, point out that the schools are already receiving large grants for research and these have resulted in no Federal control. Some observers attribute organized medicine's attitude to a fear that medical education subsidies would constitute a further acknowledgment of Federal responsibility in providing medical care and thus pave the way for socialized medicine. And perhaps the AMA fears loss of some of its present power to influence the size of medical school enrollment.

Furthermore the AMA contends that adequate support for medical education may be had from voluntary sources, that the availability of such sources has not been fully explored, and that Federal subsidies would discourage the development of private support. The AMA has supported the efforts of the National Fund for Medical Education in obtaining contributions from private and corporate sources. And in 1951 the association announced the formation of its own American Medical Education Foundation to aid the National Fund. The foundation has received large amounts from the AMA and its constituent and component societies, as well as individual physicians. Critics charge that the fund is a mere diversionary action to shift attention from the need for Federal aid, and is sure to be inadequate to meet the annual deficits of the medical schools. Indeed, while estimates of medical school needs above present income range from \$10 million to \$40 million annually, the fund contributed less than \$2 million in 1953. However, the AMA claims that private contributions can provide a solution to the financial crisis facing medical education.

Federal Health Services

United States Public Health Service: Many Federal health measures are carried out through grants-in-aid whereby the Public Health Service is responsible only for overall administration, with most discretionary authority being delegated to the States. But the Service itself directly administers numerous programs. Many of these are old-line public-health functions such as vital statistics, pollution control, and international quarantine. In addition, the Service now operates direct programs for the treatment of narcotic addicts, employees of certain governmental services, and seamen, and for the provision of a wide variety of other health services. The development of such projects has not met with the opposition from

organized medicine that have some of the grant proposals. Most Public Health Service programs are of a limited nature, not competitive with private practitioners.

Military and veterans' medicine: During World War II, Congress instituted an emergency maternal and infant care program to provide medical care for servicemen's wives and children. Although the AMA endorsed the program it opposed direct EMIC cash payments to participating physicians, and some medical societies refused to cooperate unless payments were made to servicemen's wives. Today, the national organization is resisting efforts to revive any form of EMIC. Servicemen's dependents can now receive medical care in military hospitals on the post provided there is sufficient capacity. Families not living within range of the post hospital must arrange and pay for treatment on their own. A series of recent bills introduced to provide off-the-post care has been unsuccessful and the AMA no longer fears the likelihood of a broader EMIC program.

Ever since the establishment of governmental medical services for World War I veterans the AMA has consistently led efforts to block the extension of Veterans' Administration care to include non-service-connected disabilities. Under present law VA hospitals are permitted to care for such cases to the limit of available beds and if the recipient cannot defray the expense of private treatment.

The VA's intensive hospital construction program is constantly increasing available facilities. During its campaign against compulsory health insurance, the AMA, not wishing to alienate the American Legion, soft-pedaled its opposition to the growth of VA medicine. But more recently, organized medicine has opposed further construction of VA hospitals and urged that treatment even of service-incurred disabilities be kept within the limits of existing facilities. The AMA is against any Federal care of non-service-connected disabilities; it advocates State or local care for veterans unable to pay for private care. In lieu of this, however, it has urged a more exacting means test to disqualify financially able veterans. Of 24 bills concerning veterans' medicine pending in the 1954 Congress, the AMA has announced its active approval of only 1—a bill to investigate the VA.

Compulsory Health Insurance

Federal health insurance proposals were a culmination of two lines of development: The recognition of the insurance principle as adaptable to meeting medical costs, and the increasing scope of governmental interest and participation in the provision of medical care. The public and many individual doctors have accepted both patterns, often from direct contact with voluntary prepayment schemes on the one hand, and with State and Federal health services for fractional segments of the population on the other. Organized medicine has generally resisted each of these developments. However, these encounters with innovation seem but skirmishes in comparison to the bitter struggle which followed the merging of the two lines into compulsory health insurance.

Development of a national health program: While prepaid governmental medical care has become a major issue in this country only recently, European experiences stimulated some mild interest here nearly 40 years ago. The AMA at this time received reports from abroad with equanimity and began to consider the possibility of adopting such programs in the United States. But by 1920 its position was clearly one of opposition to Government controlled or regulated medical service. In 1932 the majority report of the Committee on the Costs of Medical Care indicated tentative approval of tax-supported health insurance, and received wide atten-

tion in medical circles. It was in 1935 that the New Deal became interested in the passage of a health-insurance law as part of the social-security program. By 1938 the issue of compulsory health insurance had assumed more threatening proportions for the AMA. The President's Technical Committee on Medical Care, appointed to study the 1935 Social Security Act, recommended a program of medical care and sickness insurance. In an address to the Congress, President Roosevelt asserted that medical care for the people was a matter of public concern.

At this point the AMA abandoned its resistance to the insurance principle for meeting the costs of medical care. The issue became whether medical society or governmental auspices for health insurance provided the best solution. Organized medicine opposed anything which might divest it of any part of its control over medical services.

The first serious legislative proposal for a national health program was introduced by Senator Robert Wagner, of New York, in 1939. It followed closely the program of the President's Technical Committee and provided for grants-in-aid to the States to enable them to develop plans of their own choosing—subject to basic standards set by the Federal Government. Despite a favorable interim report from the subcommittee which studied the bill, the AMA's own study committee submitted 22 distinct arguments against it and no further action was taken. The next significant health measure was the first Wagner-Murray-Dingell bill of 1943. This provided for a Federal system of medical and hospital benefits, with medical care payments from a fund composed of equal payroll contributions from employer and employee. Senator Wagner denied that the bill would socialize the medical profession, pointing to provisions maintaining the doctor's freedom to remain outside the program, to choose his own patients, and to determine by what method he should be paid. However, the bill provided that each patient could select the doctor of his choice only from participating physicians. Moreover, the Surgeon General was given extensive powers to set fee schedules and limit the size of the doctor's panel of patients. These proposals brought forth violent reaction from organized medicine and the bill died in committee. A similar Wagner-Murray-Dingell proposal followed President Truman's special message to Congress in November 1945, but even with outspoken administration support the bill was no more successful than its predecessor.

In 1946 and 1947, however, Senator Robert A. Taft sponsored an alternative measure to the administration's program. The Taft bill, instead of health insurance, proposed locally-administered Federal subsidies to the States to assist "those families and individuals in the State having insufficient income to pay the whole cost of" health services. The AMA did not react unfavorably, but fearing the possibility of lay administration at the local level, it was unenthusiastic. Also in 1947 the newly-elected Republican Congress considered a significantly modified Wagner-Murray-Dingell bill. Conforming to criticism of the earlier bills, the sponsors assigned the duties formerly designated for the Surgeon General to a 5-man board in the Federal Security Agency, and control of the proposed program was further decentralized; but more services were offered, and more groups were covered.

The last major administration health insurance bill was inspired by the Ewing report of 1948. This report endorsed a national health program and was instrumental in the identification of its author with compulsory health insurance. Ewing's proposals received the full backing of President Truman in the 1948 presidential campaign.

AMA anxiety was heightened by the election returns and the prompt introduction in January, 1949, of a bill similar to the 1947 Wagner-Murray-Dingell proposal.

AMA tactics of opposition: Organized medicine's earlier attempts to block the passage of compulsory health insurance displayed an essentially ad hoc approach. The earliest proposals for national health insurance required little more than vocal opposition by medical spokesmen. With the introduction of Senator Wagner's 1939 bill, however, the AMA and many State societies intensified their campaign against Government medicine. The AMA's cause was almost entirely taken up by the newly formed National Physicians Committee for the Extension of Medical Service, which served as the propaganda arm of organized medicine. Although the AMA denied any official connection with this organization, the NPC was headed by AMA members and supported by its fund-raising machinery. For nearly 10 years the AMA itself confined its official opposition to State insurance to public addresses, to editorials in the Journal, resolutions in the House of Delegates, and testimony before legislative committees.

The NPC undertook organized medicine's first concerted effort to influence public opinion. Working largely through doctors, the committee is reported to have distributed 25 million pamphlets. But the occasional crudeness of its methods reduced its effectiveness. In 1948 the press protested the NPC's "attempt to buy editorial opinion" through a \$3,000 prize offered for the best published antinational health insurance cartoon. And when the NPC distributed copies of a letter signed by "Reverend" Dan Gilbert, editor of the notorious Defender and former associate of Silver Shirt Gerald Winrod, severe criticism from AMA members followed. By the end of 1948 the NPC's utility as a rallying point for organized medicine was negligible.

Similarly, Dr. Morris Fishbein, editor of the Journal and the recognized spokesman for organized medicine had become the symbol of old reactionary leadership in the profession, at a time when favorable public opinion was becoming increasingly important. The AMA's decision in 1946 to hire a special public relations counsel was an important step officially taken to curtail Fishbein's activities. Finally, in 1949, the board of trustees announced the retirement of Dr. Fishbein after 37 years of devoted service.

By the end of 1948 it was apparent to AMA leadership that a more positive and drastic program was needed to forestall the enactment of compulsory health insurance. The Ewing report, followed by the Democratic victories in the fall, increased the likelihood that Congress would pass a national health program. Moreover, the new British experiment in socialized medicine had fostered public interest and discussion concerning the adoption of a similar program in the United States. The discrediting of the National Physicians Committee and the retirement of Dr. Fishbein cleared the road for new, more effective opposition techniques.

The interim session of the house of delegates convened in St. Louis the month following the November elections in a spirit of great urgency. The delegates voted to assess each AMA member \$25 to build a \$3,500,000 political war chest to fight socialized medicine. Despite considerable adverse criticism from members the AMA went ahead with plans for an enlarged Washington office and an advertising campaign to educate the American people. And it soon announced that its national education campaign would be conducted by the public relations firm of Whitaker & Baxter.

**The American Medical Association:
Power, Purpose, and Politics in Organ-
ized Medicine—Part VIII**

**EXTENSION OF REMARKS
OF**

HON. RICHARD BOLLING

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1955

Mr. BOLLING. Mr. Speaker, there follows part VIII of the American Medical Association: Power, Purpose, and Politics in Organized Medicine:

The experts whom the AMA chose to lead its campaign were already well known for their successes in California politics. Chief among these was their victory, on behalf of the California Medical Association, over Governor Warren's proposal for statewide compulsory health insurance. Whitaker & Baxter were called in immediately after Governor Warren announced his legislative program in January 1945. In accordance with the procedure they had evolved for short, urgent campaigns, they "started at the top and worked down." They obtained public endorsement from the leaders of more than 100 State organizations, enlisted the support of more than 200 newspapers, made speeches to some 9,000 physicians, and induced doctors, druggists, insurance executives, and dentists to speak to hundreds of thought leaders. A statewide Voluntary Health Insurance Week promoted membership in the society-sponsored California Physicians Service. Medical groups bought 40,000 inches of paid advertisements, and sympathetic merchants another 30,000. At the end of 3 months, Warren's bill was defeated by 1 vote. In 1947 a similar bill failed by a wider margin, and today State health insurance is given little or no chance of passage in California.

The Chicago office of the AMA's national education campaign, with a staff of 37, was established in January 1949. To overcome opposition from within the profession to the campaign and its \$25 assessment, public-speaking tours and circulars were successfully employed and intense doctor support was stimulated. During the first year of the campaign all but a few members displayed posters and nearly 20 million pamphlets were distributed to patients; Congressmen were contacted by their personal physicians and urged to support AMA views. A campaign blueprint published in February indicated that the first year's strategy would be to mobilize lay group leaders who, in turn, would urge the membership of their groups to back the AMA in communications to legislators.

By December 1949, the national education campaign headquarters reported that it had the public endorsement of 1,829 separate organizations, ranging in size from a few to more than 5 million members. In addition nearly 55 million pieces of literature had been distributed to an estimated 100 million people at a cost of more than \$1 million. Traveling press representatives and selected spokesmen operating through speakers bureaus, and 250,000 physicians, druggists, and insurance men under less formal organization, had spoken, written, and distributed AMA material. Half of the first year's budget was allocated to defense and attack, the other half to extending and improving the services of the voluntary health insurance system. The latter was to be organized medicine's affirmative answer to the Ewing program. Insurance companies and doctors were urged to promote the sale of voluntary health insurance policies under

the slogan "The voluntary way is the American way." The rate of enrollment in 1949 was nearly 1 million each month.

The national education campaign soon produced a marked effect. Former congressional supporters of the President's plan began to withdraw their backing, and by November many sponsors conceded that there was no hope of enacting any health insurance law in the first session of the 81st Congress.

Realizing that its 1949 success provided only temporary respite, organized medicine planned its 1950 campaign to end conclusively the threat of national health insurance. The house of delegates, in December 1949, voted to impose permanent yearly dues of \$25 for all AMA members. There were fringe bills to defeat and, most important, there was a decisive congressional election to be won.

Much of the strategy of the 1950 campaign was a continuation of the previous year's blueprint. Furthermore, an intensive 2-week advertising campaign was timed to influence the congressional elections. \$1,100,000 was set aside—one-half for newspaper advertisements and the remainder equally divided for radio time and magazine space—to arouse public opposition to compulsory health insurance.

Since the AMA could not openly endorse any candidates, it urged individual members to engage in political action supplementary to the national education campaign. Member doctors formed healing arts or medical-dental committees to help defeat supporters of national health insurance. Previous experience in special elections had demonstrated the effectiveness of such committees. During the 1949 election in the 26th Pennsylvania Congressional District the healing arts committees mailed more than 190,000 letters, made more than 120,000 personal telephone calls, placed a series of 12 advertisements in every newspaper in the district, and purchased radio time to urge the election of JOHN P. SAYLOR and the defeat of his Democratic opponent, who had endorsed the President's program. The total vote approached the district's turnout for the 1948 Presidential election and more than 20,000 Democrats switched their votes to elect SAYLOR.

During the 1950 campaign, doctors in many congressional districts formed their own political committees. In Wisconsin, the Physicians for Freedom helped to defeat Representative Andrew Biemiller through posters, advertisements, and campaign literature included with monthly bills to patients. In Florida, similar tactics were used against Senator Claude Pepper in his unsuccessful bid for renomination. Tallahassee hospital patients received breakfast trays upon which were placed cards reading, "This is the season for canning Pepper." And in Ohio the Physicians Committee for Taft was politically active in enlisting support.

The national education campaign and the healing arts committees were rewarded by the election returns. Some of national health insurance's most active supporters were defeated. The president of the AMA called the results very reassuring and announced to the House of Delegates that in the light of the recent campaign any compulsory health insurance bill in Congress today would go down to defeat by at least a 2-to-1 vote.

Despite the fact that national health insurance seems a dead issue, organized medicine has maintained a continuing interest in political affairs. The Democratic platform in 1952 made no mention of national health insurance. Governor Stevenson stated his opposition to such a plan but commented on the need for assistance in financing the costs of illness. The Republican platform unequivocally stated opposition to Federal health insurance and General Eisenhower left no doubt that he was opposed to social-

ized medicine. A nonpartisan organization, the AMA took no official sides. But by October a National Professional Committee for Eisenhower and Nixon was mailing letters from the National Education Campaign's former address, urging that medical and related groups support the Republican ticket. The letterhead featured the names of former AMA presidents Henderson as chairman, and Cline and Irons as vice chairmen, as well as Whitaker and Baxter.

Since the defeat of the Truman-Ewing plan, controversy concerning the role of the Federal Government in the health-insurance field has centered around proposals to aid voluntary projects. The Magnuson report, prepared by President Truman's Commission on the Health Needs of the Nation, recommended Federal grants to subsidize either these plans or potential subscribers having low incomes. In a 1954 message to Congress, President Eisenhower advocated a different measure: Federal "reinsurance" of voluntary plans. At present, most voluntary schemes place a limit upon the protection given their subscribers. This leaves the cost of catastrophic illness to be borne largely by the individual. Under reinsurance the Federal Government, in return for premiums received from the plans, would insure against claims over a certain figure so that coverage could be extended to include high-cost services. The AMA opposed the Magnuson recommendations because they called for Government subsidies. They have similarly condemned reinsurance, fearing that it might lead to subsidization and constitute an "opening wedge to socialized medicine."

Throughout its recent campaign to halt governmental inroads into medical affairs the AMA has adopted an essentially emotional approach. The basic issues are obscured by the AMA's use of catch phrases, like "socialized medicine," and such devices as mass distribution of the famous Sir Luke Flides painting, "The Doctor," captioned "Keep politics out of this picture." Organized medicine's counterproposals, advocating local controls or private, voluntary remedies, often provide inadequate or partial solutions. By presenting the profession's views realistically, the AMA's campaign against Government health programs could lead to enlightened discussion of the merits rather than exchange of invective.

LIMITATIONS ON AMA POWER

No other voluntary association commands such power within its area of interest as does the AMA. It holds a position of authority over the individual doctor, wields a determining voice in medical education, controls the conditions of practice, and occupies a unique position of influence in shaping Government health policies. Despite the dangers inherent in such a concentration of power, no interest group enjoys more freedom from formal control than organized medicine. The individual physician, subjected to disciplinary authority of the medical society in his local community, has little redress outside the framework of organized medicine. Courts, comparing society membership to affiliation in fraternal or benevolent organizations, find that expulsion or denial of membership deprives the doctor of no property right, and are reluctant to interfere unless the society's own prescribed formalities were not observed. Even if the scope of judicial review encompassed an examination of the merits, and resulted in admission or reinstatement of unreasonably disciplined physicians, the remedy might still be of little use. Legal process cannot prevent informal sanctions and ostracism. And within the framework of organized medicine, the doctor who challenges AMA authority to determine his method of practice is tried and judged by his fellow physicians who may have an economic interest in proscribing his allegedly offensive conduct.

Moreover, while the disapproved prepaid medical service plan is better able to cope with some of organized medicine's weapons, the legal protections available to it are probably inadequate. True, in *American Medical Association v. United States*, the Supreme Court held organized medicine in violation of the Sherman Act for its conspiracy to destroy Group Health Association in Washington, D. C. The Court viewed the furnishing of prepaid health services as a trade or business within the scope of the antitrust laws. It found the conduct of group health doctors to be prohibited by the principles of medical ethics, but refused to give legal status to the principles by holding that the societies' attempt to enforce them constituted a restraint. However, the Government was not required to show an effect upon interstate commerce; this case was brought under the Sherman Act's section 3, which regulates activities within the District of Columbia.

United States v. Oregon State Medical Society demonstrates the practical difficulty of such an action under sections 1 and 2. There, nonmedical society plans and organized medicine had been engaged in a bitter "tooth-and-claw struggle." One charge, alleging a conspiracy to restrain competition between several medical society sponsored plans, was dismissed because these plans did not operate across State lines. The other charge, alleging conspiracy by organized medicine to destroy private plans which were operating across State lines, was dismissed for failure of proof, thus avoiding the necessity for deciding the question of interstate commerce. Even if interstate commerce had been involved here, the commerce clause remains an obstacle to Sherman Act relief; practically all other private plans operate within the confines of a single State. Local sponsorship of such groups plus variations in restrictive State medical service acts have prevented expansion into neighboring States.

Actions such as *Group Health Cooperative of Puget Sound v. King County Medical Society*, brought under the Washington State constitution, do not encounter this problem. However, State courts may not construe antimonopoly provisions as broadly as did the Washington supreme court. And, most important, in a majority of States medical societies have obtained restrictive legislation which makes their plans legal monopolies.

Perhaps the major obstacle to antitrust prosecution under either State or Federal law is the difficulty of proving a conspiracy. The District of Columbia and Washington State cases were characterized by such acts as expulsion and denial of hospital facilities. But in the Oregon case, medical societies had abandoned such tactics in 1941, 7 years before the action was brought. Recently, organized medicine has conveyed veiled threats to doctors participating in disapproved plans by outspoken condemnation of such plans in ethical terms. Such indirect, less overt opposition probably discourages physicians from affiliating with disapproved plans, but is less susceptible to antitrust prosecution.

Perhaps a more effective limitation on the power of organized medicine stems from developments in medical technology and public demand for more medical care. The growth of group practice has been inevitable, despite AMA discouragement, because of advances in medical science, increased specialization, and interdependence among doctors. And increased public awareness of the necessity for more frequent and complete medical attention has created an incentive to provide medical services under systems which encourage lower costs, facilitate budgeting, and utilize governmental assistance. These tendencies constitute an underlying limitation on organized medicine's ability to control the development of medical practice.

CONCLUSION

To protect the individual doctor from unreasonable exercise of organized medicine's authority, the crucial importance of society membership should be deemphasized. This approach would mitigate the severe consequences of the medical society's disciplinary powers. Dissident physicians might better be able to resist AMA views if, for example, Government and specialty board appointments were not dependent upon membership. The societies' power to punish serious medical offenses would be weakened, but the medical practice acts can afford the public adequate protection. And revocation or suspension of licensure, unlike medical society disciplinary action, is subject to the impartial scrutiny of judicial review.

Perhaps the most effective method of deemphasizing membership would be to insure availability of hospital privileges to nonmembers. Montana has achieved this through legislation prohibiting discrimination by hospitals against any licensed physician. If he is qualified to practice under State law, the Montana doctor may send his patient to any hospital. This type of provision might require qualification in teaching hospitals and in urban areas where variations in the desirability of hospitals would necessitate some limitation on use of facilities. However, its primary effect is to remove organized medicine's coercive power over doctors without impairing professional standards.

Secondly, to promote greater responsiveness to the public's medical requirements, organized medicine should be divested of its control over the Nation's supply of doctors. Presently the AMA sets educational standards and the State societies dominate licensing boards. It is desirable that agencies composed of physicians control qualifications for admission. But organized medicine's resulting power over supply can be diminished without sacrificing the quality of a doctor's training. Existing high AMA standards, combined with lack of funds, impose a practical limitation upon the number of M. D.'s graduated each year. The doctor supply, so crucial to the Nation's well-being, should not hinge upon the financial condition of medical schools. Federal aid to medical education would help divorce the size of classes from standards of quality. AMA power to set educational requirements and to inspect schools would not be impaired. But the public's need for physicians, rather than financial considerations, would determine our doctor resources.

Organized medicine also exercises quasi-legal authority over the formation of health insurance plans. To foster the development of new methods for providing low-cost prepaid care legislatures should divest the State societies of this control. State statutes requiring approval or participation by the medical society or a majority of doctors have foreclosed experimentation in solving pressing medico-economic problems. No existing plan, irrespective of sponsorship, satisfies all requirements. Variations among the needs and financial capacity of medical consumers necessitate different types of practice, coverage, and sponsorship. While indemnity insurance against hospitalization and surgical costs may be adequate for some, comprehensive coverage under group practice may be highly desirable for others. Independent groups of doctors, cooperatives, unions, and employers—as well as the medical societies—should be free to work out their own solutions. Governmental assistance to plans or low-income subscribers may also be required.

The Illinois Voluntary Health Services Plans Act of 1951 is a unique example of progressive health insurance legislation. This statute enables the formation of nonprofit medical service plans under consumer sponsorship. Thirty percent of the trustees of

such groups must be licensed physicians; doctor representation is assured, but lay control is permitted. Group practice is facilitated because there is no requirement that all or a majority of doctors in the area participate. The Illinois State Medical Society assisted in securing the passage of this legislation. But other medical societies have not been so forward looking.

Finally, there is a range of activity which external restraints upon organized medicine cannot reach. Certainly no legislation can require the AMA to provide a forum for dissenting opinion. But so long as conflicting viewpoints are sidetracked at the lower levels and denied space in the Journal, the AMA cannot accurately claim to speak for the profession. Similarly, no legislation can prevent organized medicine from prejudging new ideas and disparaging them in evasive ethical terms. In the past, the AMA has condemned as unethical various medical practices which it now approves and advocates; the "principles," as interpreted by the medical societies, are not unchanging. And until organized medicine meets questions of medical economics in terms of the real issues, it will not contribute to the solution of current problems. New ideas which the association has accepted have been forced upon it; by assuming leadership in experimentation with unproved systems of practice and payment, the AMA could become an instrument of progress.

Antarctica

EXTENSION OF REMARKS OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mr. BURDICK. Mr. Speaker, from explorations made by citizens of this country in the Antarctic, there is no question but what, if followed up, the claim of the United States to large areas of this great continent would be recognized. If we do nothing about it, time will obliterate any claims we have. I desire to present herewith an article by Miss E. A. Kendall, of Chevy Chase, Md., which appeared in the *Wall Street Journal* under date of January 5, 1955:

INTO ANTARCTICA

EDITOR, THE WALL STREET JOURNAL:

The recent column (December 28) by Mr. Chamberlin quoting Herbert Hoover's splendid words about nationalism and patriotism, and the tone of some letters from your readers at times, would seem to indicate that there is considerable thought nowadays about whether or not this Nation is behaving as a sovereign nation. At this point this is a most healthy trend, for it often appears (judging from our statesmen's attitudes and actions) that perhaps we are not much longer to be a sovereign nation. Let us hope this is merely surface appearance. Deep down we all know that a sincere nationalism treated always with altruism and common sense can be all to the good, both for ourselves and for our neighbors everywhere.

I should here like to comment apropos of this, and most urgently, that there is one step probably we should take at once in the role of a sovereign nation. I speak of the matter of claiming our rightful territory in Antarctica. Taxayers with whom I have talked about this feel that there is no overriding reason for delay in making land

claims. The Antarctic Continent is almost 6 million square miles in area and obviously whatever countries are interested in development of minerals and ocean products thereabouts will find that there is room for each one in proportion to her earnest activity and attention. It is to be hoped that decency and love of freedom will prevail in such activity and attention. Ten percent of the planet's land surface is in question. Profound study of any complications in its development, whether political, economic, physical, or psychological is in order. And, as a taxpayer, I consider this one of the most urgent problems for our Nation to handle. Congress has had measures in pigeonholes and these may well be brought next session into the full light of public attention. The whole citizenry, it would seem, should have knowledge and a part in decisions of what to do about Antarctica. It is no small matter and no thing that we can postpone indefinitely. We can and should act as a sovereign nation with the kind of nationalism and patriotism that has proven of value to us and to the whole world through us.

E. A. KENDALL.

CHEVY CHASE, Md.

Paper Revolution

EXTENSION OF REMARKS

OF

HON. WILLIAM H. NATCHER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Paper Revolution," which appeared in the February 27, 1955, issue of the Park City Daily News of Bowling Green, Ky.

The editorial is as follows:

PAPER REVOLUTION

We hear a lot of talk about the industrial revolution that started us on the path we are traveling today at such breakneck speed. But we do not hear enough about the paper revolution that went right along with it.

If you asked them, most people probably would say the steel mill stack or the electric dynamo was the perfect symbol of our civilization. But maybe it ought to be the filing cabinet. Or the wastebasket.

In and out of our offices (not to mention our homes) pours a torrent of paper—letters, reports, appeals, advertising material, documents, and so on.

This deluge of white stuff is almost overwhelming at times. After the material is shuffled about for awhile, it usually heads for one of two destinations—the basket or the file cabinet. Some of the toughest decisions in government and business hinge on which place to pitch a paper you hold in your hand.

The school of thought that automatically thinks "file it" is the right choice evidently believes we're living in such a marvelous age that nothing ever recorded on paper should ever be destroyed.

At the other end of the scale are those who seem to figure that so much happens every day that nobody will care much what occurred a week or two back. They're the wastebasket feeders.

Recently the new Hoover Commission had occasion to report on the paper flood as it affects government. What the Commission found was pretty staggering. The Federal Establishment creates or handles about 25 billion pieces of paper a year, not counting

untold tons of pamphlets, technical manuscripts, and so on. Wastepaper consequently is the largest item shipped out of Washington for industrial use.

Office space for the 750,000 workers engaged in full-time paper handling—one way or another—is equal to 36 Empire State buildings. The space required for the 24 million cubic feet of Federal records equals 7 Pentagons.

The Commission estimates all this costs the Government \$4 billion a year. And this averages out to \$100 in taxes for a family of four.

The investigators thought about \$255 million savings might be managed on paperwork. Not a paltry sum, yet hardly large enough to suggest great confidence that the paper snowstorm can be reduced to harmless flurries.

The cost is only one sad aspect of this thing. Think of all those trees.

Mexican Press Shouts Praise of Nixon

EXTENSION OF REMARKS

OF

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mr. WILSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the San Diego Union of February 17, 1955:

MEXICAN PRESS SHOUTS PRAISE OF NIXON

(By David Hellyer, Inter-American Affairs Editor)

The reception accorded Vice President and Mrs. Nixon and their party in the Mexican capital went way beyond the bounds of mere protocol. A courteous reception usually is guaranteed all visiting diplomats. But such a tumultuous, spontaneous, and joyous welcome, stemming from the grassroots, and reflected in the plaudits of the nation's press—this is something different.

Press reaction in Mexico is significant. Sentiments expressed by the capital newspapers usually mirror accurately the sentiments of Mexico's Government leaders. Thus it is interesting to note the markedly friendly reaction in two of the capital's principal dailies, *Excelsior* and *Novedades*.

Calling Nixon a great and sincere friend of Mexico, and referring to Mrs. Nixon as a charming lady, *Novedades* said in a front-page editorial:

"We must say, loudly, that this eminent ambassador of friendship which the United States has sent us has made a definite impact on the heart of Mexico, and has inspired the confidence of our people."

In visiting Mexico's famed Basilica of Guadalupe, the Vice President endeared himself even more firmly. Both newspapers commented editorially on the visit. *Excelsior* quoted Nixon as saying on the occasion: "Fortunately, the peoples of the United States and Mexico have in common the conviction that man does not live by bread alone, but must also elevate his spirit toward God."

This statement hit the heart of the Mexican people, who are deeply religious. Commented *Excelsior*: "It is very satisfying to thus confirm that North America's leadership understands the way of life of our people. . . . It is this understanding and mutual respect on which is built authentic and lasting friendship between the United States and Mexico."

Nixon's natural personal warmth won him hosts of friends among the Mexican people. Too often our diplomats and leaders have kept themselves aloof, either because they have felt unsure of themselves, or out of an ill-concealed sense of superiority. Nixon's ingenuous readiness to shake hands with every comer thus was a refreshing change from the coldness to which many had become accustomed.

Nor did the Vice President lose any friends for the United States with his statement of frank admiration for President Ruiz Cortines. After 3 or 4 hours of cordial visiting with Mexico's Chief Executive, Nixon termed Ruiz Cortines one of the great national leaders of this age. This is an appraisal on which many agree, both within Mexico and outside it, and was not mere political sugar talk.

The Vice President again is proving to be a great statesman.

The Nixon visit to Mexico will go down in both Mexican and United States history as a major contribution to lasting understanding between our peoples, and as a master stroke in United States diplomacy.

Radio Report by Hon. George S. Long to Constituents

EXTENSION OF REMARKS

OF

HON. GEORGE S. LONG

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1955

Mr. LONG. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by me over station KALB, Alexandria, La.:

Ladies and gentlemen of the radio audience, this is your Congressman George S. Long speaking to you from Washington, D. C., by tape recording.

A great deal of discussion has been had through the newspapers and by various individuals regarding the salary raise just voted to the Congressmen, Senators, and Federal judges. Inasmuch as it concerns me, your Congressman, I shall devote a brief part of this talk to discussing this subject. In the first place, this is the first salary raise that the Congress has had for many, many years. Like all others, the Congressmen's expenses have increased year by year. I have been in Congress now for almost 3 years and on the present salary have not been able to save \$1. To the contrary, I have used money derived from other sources to help bolster my expenses in order that I might stay in Congress and represent you.

Briefly, may I say that I have to keep 2 homes—one in the District and I in Washington. While I do not entertain a great deal, I do entertain some of those coming to Washington on business. I felt that a salary raise was due; I voted for it honestly. I have only this to say to my constituents. You have 2 years now in which to watch my work and see if you think I am worth the salary I am receiving.

At the end of 2 years, if you do not feel I am worth the money, then this will afford you the opportunity to select a man who is. May I say with all candor that you do not need a cheap man in Congress. You need one who is worth the salary he will receive and if I am not that man, I shall find no fault with you should you elect someone else to serve in my stead.

On Thursday, February 24, the United States House of Representatives was again

considering legislation designed to provide tax relief for our taxpayers. The bill, H. R. 4259, was sponsored by the Democrats and, unlike last year's Republican-sponsored bill which gave relief only to the favored wealthy, this bill will provide, among other things, a \$20 credit against the individual income tax for each personal exemption. It goes right home to the individual taxpayer whether he be wealthy or poor.

I recall that last year I tried to get the tax exemption for each individual raised from the \$600 allowed to \$1,000. This was blocked, and the figure was lowered to \$900. This, too, failed and an exemption of \$700 was sought. The Republicans opposed even that small relief for our taxpayers and the bill they forced through Congress bypassed the little man completely.

That bill, H. R. 8300, can be explained this way. In our area in Louisiana we have a lot of people who work with their hands and who earn \$3,000 and less. Take a man with a family who earns \$3,500 farming. He works with his hands 12 months in the year. His wife works, and all of his children work. They make \$3,500 in 12 months—if they are lucky. His tax under this bill approximately is \$60. But take the man who uses 12 minutes of his time, instead of 12 months. A man who clips bond coupons in the amount of \$3,500—his tax is in the neighborhood of \$20. Now have you helped the little man or have you helped the big man? Those are the facts.

Last year's tax bill contained 875 pages. On every page you find help for the big taxpayer. On every page he turns, he finds a golden nugget which takes care of him. But for the little fellow in the low brackets you might just as well send him a Sears Roebuck catalog, which would do him more good than this bill, H. R. 8300, did for him. Republicans say that this \$20 tax reduction will not do anyone any good and that it is a phony. A \$20 bill, my friends, is never a phony. You will find that one \$20 bill will buy just as much food for empty stomachs as another. Twenty dollars is \$20 in anybody's language. This is not just \$20 to the taxpayer. His wife gets \$20 and each of the children get \$20. A family of 5 get \$100.

The Republicans say this is politics. You bet this is politics. H. R. 8300 was politics. That was Republican politics and it did not help the little man in this Nation. But now this is politics, too—this is Democratic politics that believes in filling the stomachs of the hungry people of America. While I admit that \$20 is very small, it goes to every man, woman, and dependent in this great Nation of ours. This will bolster the economy of this country and will put purchasing power in the hands of the people. This is an extra \$20 that all of us will have to spend. We do not hesitate to give relief to other nations when they are in need. Then why in all good reason should we not give relief at home? Let me repeat, the only thing wrong with this tax cut, it is not enough.

I was very pleased when this tax-relief bill passed the House on Friday, February 25, despite the opposition of the Republicans. I am pleased because it is a definite step in the right direction. While small, it begins the journey which I hope will lead us to greater tax relief.

In my humble opinion, we must have relief from the burdensome taxes we are now paying. This small cut that we are making now could be easily cared for by just a little of the money being curtailed that we are giving to the foreign-aid program.

Thank you for allowing me the privilege of coming into your home, and may God bless you.

William Wallace Royster

EXTENSION OF REMARKS

OF

HON. ROY W. WIER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mr. WIER. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include a letter from Mr. Gottfrid Lindsten, of Minneapolis, Minn., commending Mr. William Wallace Royster, a former Soo Line locomotive engineer, for originating the basis and essentials of the railroad pension law, and extending congratulations to him on reaching the age of 83 years.

Mr. Lindsten's letter follows:

MINNEAPOLIS, MINN., February 12, 1955.

HON. ROY W. WIER,

Representative in Congress,

Third Minnesota District,

House Office Building,

Washington, D. C.

DEAR CONGRESSMAN WIER: May I take this occasion to remind you once again that March 7 is just around the corner, and I trust that I and thousands of more railroad employees here in the upper Midwest can prevail upon you to join with us in paying homage and our deep respect and reverence to a man whose birthday always will be an important milestone in the hearts and minds of thousands and thousands of railroad employees for whom he strove so long and arduously to bring a little security into the future for us oldtimers on the rails.

William Wallace Royster resides in Vallejo, Calif. He will be 83 years of age on March 7, 1955. The Board of County Commissioners of Pope County, Minn., appropriately recognized the monumental work of their former resident of Glenwood, Minn., through assigning an excellent space in the main lobby of the courthouse in the county seat, Glenwood, for the bronze plaque memorializing Mr. Royster, following an impressive dedication and unveiling ceremony in the high school there September 27, 1952.

The plaque was largely purchased through voluntary subscriptions of railroad employees. A few weekly newspapers in Minnesota, including the dailies, the Minneapolis Star and the Vallejo, Calif., Times-Herald, published excellent articles re: the Royster railroad pension plan project and efforts extended by him in the development of the plan, and the memorial to him now erected in the courthouse in Glenwood, Minn. Aside from this press recognition, I do not recall of any national press recognition being given Mr. Royster, except in a limited way when President Roosevelt was photographed with a group of railroad brotherhood officials when he signed the Railroad Retirement Act, which photographic cut appeared in the railroad union's weekly Labor. The cut included Mr. Royster of the National Pension Association.

Some time ago, a young switchman in the St. Paul Union Depot Co. yard, observed to me that he thought "the Government gave the pension to the railroad employees." This must be the reaction of thousands upon thousands of railroad employees in this country who do not know how the railroad pension law originated, nor its procedural enactment. The Government, incidentally, does not finance the railroad retirement pen-

sion, this being done by the carriers, the employees, on an equal contributory basis.

Quite naturally, many railroad employees who knew Mr. Royster, or about him and his masterful pension work, revere their great benefactor. The large balance of railroad employees, with newer employees in mind, have not had the benefit of a public relations expert to publicize the Royster pension project. Aside from the devoted, informed, he is literally unhonored and unsung. This would appear incomprehensible, considering his contribution to a pension system—outstanding welfare measure of its type, so beneficial and utterly necessary that its value cannot be over-estimated or over-emphasized.

An appropriate congressional resolution for the official record indicative of the Royster pension achievement would, per se., be an unparalleled recognition of his work.

I have conferred with the Honorable JOHN F. BALDWIN, JR., Member of Congress, Sixth California District, in which district Mr. William Wallace Royster resides at 2 Short Street, Vallejo, Calif., regarding a congressional resolution as afore discussed. Perhaps a joint effort could be established in the premises as pertains to such resolution.

Thanking you for your interest, I am
Respectfully yours,

GOTTFRID LINSTEN.

RAILROAD RETIREMENT ACT: AN APPRECIATION

Numerous railroad employees, especially those of more recent carrier employment connection, are unaware of the origin of the concept of the railroad pension plan as developed through the indefatigable efforts and applied genius of William Wallace Royster, a former Soo Line locomotive engineer in Minnesota, now retired and residing in California. Old timers express the deepest and most heartfelt gratitude for Royster's successful crusade in behalf of retirement pensions for railroad employees. The project, forerunner of the present Federal pension law—Railroad Retirement Act—formulated by William Wallace Royster, working until early hours in the morning at his home in Glenwood, Minn., after completing his run, represents the outstanding achievement of this type in our national railroad annals.

Essentials of the pension plan were developed by Royster in 1928. Various railroads afforded a gratuity pension to such employees as management deemed worthy. The pensions could be terminated at will by the carriers. Obviously, too, discrimination could be evidenced. Royster's formal pension plan of February, 1929, later printed in pamphlet form—copies lodged with the Minnesota Historical Society and the Smithsonian Institute Washington D. C., eliminated injustice incident to gratuity pensions, and made it compulsory to pay a pension to any qualified employee.

Equal carrier-employee pension contribution obtains in the present Railroad Retirement Act, which sustains the fund and administration thereof.

Royster's plan met with spontaneous rank and file response. Enthusiastic "rails" rallied nationwide to Royster's pension crusade, despite some railroad brotherhood officialdom opposition. Subsequently, accord was attained between both groups as in requesting congressional support for the joint proposed pension law, which assistance was procured, defects in the first enactment being corrected in a later enactment, signed by President Franklin Roosevelt. The organic act represents the first plan for providing a retirement pension for industrial employees ever offered in the United States of America, becoming a Federal law before

legislation for the Social Security Act was submitted as a bill in Congress.

"Ralls" salute William Wallace Royster, intellectual pioneer of their large group and time, a benign personality, preeminent benefactor of railroad employees, a real American.

Two Schools of Thought Sometimes Conflict

EXTENSION OF REMARKS

OF

HON. TOM STEED

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mr. STEED. Mr. Speaker, I am placing an editorial from the Oklahoma City Times in today's CONGRESSIONAL RECORD because it deals with one of the most difficult problems in the Congress, a conflict of interest in national affairs. At a later time I may discuss again how well the advice and logic of this editorial, and others like it, has been received in the community served by this newspaper. The editorial follows:

[From the Oklahoma City Times of March 1, 1955]

Two Schools of Thought Sometimes Conflict

A few months ago the Denver Chamber of Commerce issued a notable declaration which said, in substance, that from now on this organization will refrain from asking for Federal funds for local improvements. The reasons back of such a pronouncement are compelling and inescapable.

The national debt has risen to an all-time high. When President Eisenhower took office 2 years ago he expressed high hopes that this debt could be progressively reduced, and that the era of lavish Federal spending was over. The previous 20 years had been marked by reckless involvement in all kinds of Government handouts and pork-barrel projects. It was obvious that a halt had to be called, or the Nation would face the extremely serious possibility of insolvency and repudiation of its sacred obligations. In short, ruin.

President Eisenhower found, however, that a combination of factors made the economy program difficult.

First, of course, is the Federal bureaucracy which had been progressively infiltrated and dominated by the "gimme" school of thought, and that policymaking could not be taken over by elected officials. The old crowd of spenders continued to call the signals.

In the second place there are countless special-interest organizations throughout the land which continue to make Federal grants one of their foremost objectives, and it is impossible to muster the necessary congressional support for economy when our national lawmakers are continually being prodded and needled for Federal grants in aid for local projects.

In this set of circumstances the old familiar line always appears: "The Federal Government may be going broke—it looks like it is going broke—but it continues to hand out money, and if we don't get that money someone else will; we are paying taxes to replenish the Treasury, so we had better get ours while the getting is good."

This is an insidious and seductive doctrine ("after us, the deluge"). More and more dope until the patient dies.

Is there any way of getting off the dope and embarking on a course of action that will save our children and children's children from national insolvency?

The Denver Chamber of Commerce realized the potency of this question and adopted the resolution.

However, sad to relate, it wasn't long before a special appeal was made for the Federal financing of the vast Upper Colorado and Frying Pan projects in Colorado, and the chamber was put on the spot, since many leading Denver citizens demanded this pork-barrel item. It is not plain that the chamber got off the spot, but at any rate it did not rebuke this vast new raid on the public treasury.

Tomorrow, in Oklahoma City, will be held the annual meeting of the Oklahoma Public Expenditures Council—an organization aimed chiefly against governmental extravagance. In its leadership are found many men who also belong to many other civic organizations.

There is a conflict between some of the objectives.

Should communities and States demand as many Federal handouts as possible, or should they stand solidly back of the taxpayers' organizations who have frequently and forcefully demanded economy in all government—municipal, county, State, and Federal? There is the critical question. Certainly it doesn't make sense when one influential organization demands one thing and another demands the opposite, especially when memberships overlap from one into the other.

It is a hard choice that must be made, but we are repeatedly, patriotically, solemnly, and convincingly warned that if we don't "get off the dope," our country is sure to face disaster. And this process, like charity, begins at home.

Our Soldiers Convicted Under Foreign Laws

EXTENSION OF REMARKS

OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mr. BURDICK. Mr. Speaker, we always thought the Constitution follows the flag, but that idea now is purely a myth. Congress passed an act making our soldiers subject to the laws of the country in which they are stationed.

Here is a case where a soldier assaulted a taxi driver in France and was given a 5-year sentence. In this country he would have probably been fined and perhaps given a few days jail sentence.

The following item appeared in the Washington Daily News of March 1, 1955:

The Supreme Court yesterday refused to review the case of Pfc. Richard T. Keefe, 26, formerly of 5310 Hamilton Street, Riverdale, who was sentenced to 5 years in jail in 1953 for assaulting a taxicab driver in Orleans, France. His wife, Gladys, contended that he was deprived of his rights in the French trial.

In view of the act passed by Congress, the Supreme Court could make no other decision.

Time of Decision

EXTENSION OF REMARKS

OF

HON. RICHARD BOLLING

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mr. BOLLING. Mr. Speaker, the following column which appeared in the New York Post of Thursday, March 3, is worthy of our most serious consideration:

TIME OF DECISION

(By Thomas L. Stokes)

WASHINGTON.—This seems none too early to direct attention to an opportunity which, if missed, could endanger something very vital to us and the world and something seemingly very much endowed with the hopes and ideals of the American people.

That something is the U. N., and the opportunity is to make it stronger and better. Such an opportunity will be offered this fall when the U. N. General Assembly is to decide whether to call a conference for review of the U. N. Charter and possible revision to improve the machinery for preserving peace. The charter adopted at San Francisco in 1945 provided that the General Assembly at its 10th annual session should take up the question of review and revision.

In the tumult and confusion of events in the tense times of recent months, this important decision bearing on the whole future of the U. N. has been pushed to the background. Now the date for the decision is slipping up on us.

If our Nation and the rest of the nations are to capitalize upon the opportunity, it is very clear that enthusiasm and determination must replace a presently apathetic attitude that is noticeable both in our Government and among our people. While friends of the U. N. have been passive, its enemies have been most active. They have busily exploited the frustrations natural to this unsettled and troubled era to try to weaken or destroy the international organization we created here on our soil with such high hopes.

About all that seems fairly positive now is that our government will support a U. N. review conference when the issue comes before the General Assembly in a few months. That assurance came from Secretary of State Dulles when he appeared over a year ago, January 18, 1954, before a special Senate Foreign Relations subcommittee which is exploring the whole subject of U. N. review and possible revision. At that time the Secretary said that "present indications are that a review conference will be held."

State Department officials charged with U. N. affairs are studying the possibilities of a review conference, though, it is reported, with rather a negative, pessimistic attitude because of the veto power of the permanent members of the U. N. Security Council, including ourselves, Russia, and Great Britain, which applies to proposed amendments to the charter as it applies to regular operations. A similarly discouraged attitude was manifested at the convention here this week of the American Association for the U. N. It has been one of the most active promoters of the U. N.

There are two events between now and the General Assembly meeting in New York this autumn which offer a means of generating interest, that is, if properly capitalized by our leaders.

For one, the special Senate Foreign Relations subcommittee on U. N. review and re-

vision will resume hearings about the middle of next month on proposals for revision which it began over a year ago. Last year the committee visited several cities in the Middle West where scores of individuals representing all sorts of groups flocked before the committee to submit ideas about how the U. N. might be strengthened. It was a heartening demonstration.

On April 18, the committee will hold a public hearing in Atlanta, and on the next day at Miami. Thereafter it plans to visit the Pacific coast and Far West and New England for further hearings before it winds up with concluding hearings here and makes a report to the Senate.

As for the second event—in late June—there will be the celebration in San Francisco lasting for over a week of the 10th anniversary of the U. N., which was created in that city. The occasion, which will be attended by representatives of the 60 member nations, offers another opportunity for a revival of interest in the UN and ways to improve and strengthen it.

What our people need so desperately in their groping and searching for peace through improvement of the machinery embodied in the U. N. is leadership that can arouse their hope and faith and direct it.

It is equally clear that President Eisenhower, who is himself so firm an advocate of the U. N., must assume that leadership and exert it forcefully if the apathy and confusion in our government and among our people are to be dispelled. His voice carries weight also among people all over the world who, likewise, must be aroused if the U. N. is to become more useful.

We face a great opportunity which we cannot afford to forfeit to indifference, cynicism, or delay.

Supreme Court and U. N. Charter

EXTENSION OF REMARKS OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mr. BURDICK. Mr. Speaker, every day adds cumulative evidence to the proposition that we should get out of the United Nations at the earliest possible moment. This we can do by an act of Congress, as I have explained heretofore. We do not need any constitutional amendment to do it, although that would accomplish the purpose and further would make future so-called treaties like the Charter of the United Nations impossible.

The question came up squarely in the Steel Seizure case, where an attempt was made to declare the Charter of the United Nations superior to the provisions of the Constitution. Five Justices of the Supreme Court said "No," but the Chief Justice and three others said "Yes" or took no part. This decision saved the Constitution, and I thought it not likely that another attempt would be made to assault its authority. But it came up in the Iowa Supreme Court, where the decision declared unequivocally for the Constitution, and held that the Charter of the United Nations could not override the State laws of Iowa.

That decision was appealed to the Supreme Court of the United States, where

4 Justices declared for the Charter of the United Nations and 4 declared against it. One vacancy on the Court caused this 4-to-4 decision, and, there not being a majority of the Court ready to declare the charter superior to a law of Iowa, the Constitution was saved again.

This last case was a close call, for if it had gone the other way the Charter of the United Nations would have been declared superior to any law in any State.

You cannot, therefore, blame the Members of the Senate of the United States for being suspicious of the appointment of John Marshall Harlan, for, being a Rhodes scholar, and knowing the purpose of the Rhodes scholarships from their own definition, the chances are that this new Judge would be more apt to uphold the Charter of the United Nations as being superior to any State law. Senator EASTLAND, in opposing the confirmation of Mr. Harlan, has put his finger on the danger to the Constitution that could easily arise from the confirmation.

Two Finnish Holidays

EXTENSION OF REMARKS OF

HON. COYA KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mrs. KNUTSON. Mr. Speaker, I want to bring attention to two Finnish holidays, that of February 5 and February 28, which are tributes to a hardy, hard-working people. Under leave to extend my remarks of these significant holidays, I include the following:

JOHAN LUDVIG RUNEBERG: FINLAND'S
NATIONAL POET

February has a double significance in Finnish literature. February 5 is the birthday of the great Finnish poet, Johan Ludvig Runeberg. In the early part of the 19th century Finland was under the rule of Russia, but in 1820 a nationalistic movement began which was accompanied by a keen interest in Finnish folklore. Johan Runeberg's poems, with their idealistic depiction of rural life inspired the patriotic love of the people for their sleeping nation. Later, political philosophers encouraged the idea of a Finnish national state and guided the awakening from the literary to the political sphere. It would be difficult to overestimate the value of Runeberg's patriotic poems in this early awakening. He is now considered the Finnish national poet, and one of his poems has been adopted as the Finnish national anthem.

KALEWALA DAY

Each year on February 28, the Finnish people commemorate the Kalewala—the great Finnish national epic poem. Well they might, for the influence of the Kalewala in Finland has been extensive and profound. Literature, painting, music, and scholarship have found inspiration in this long epic poem. Its fame abroad has also been remarkable for it has been translated into many languages, including English. It has served as a model for poets in other countries, in fact, our own American poet, Longfellow, was very much influenced by the Kalewala in his own epic poem Hiawatha.

Until the 19th century, the Kalewala existed only in fragments in the memories and on the lips of the peasants of Finland. But in 1835, Dr. Elias Lonnrot wandered about the country, into the most remote places and took down in writing these favorite songs of the people. After unwearied diligence, Dr. Lonnrot succeeded in collecting 12,000 lines and arranged them systematically in story form.

Today, the great Finnish people, who deeply cherish their freedom and their national heritage, recite in song and verse, the beautiful Kalewala. From generation to generation the great epic is treasured in the memories and in the writings of the people. We Americans have our own favorite poems and songs which reveal the stories and the ideals of our own national heritage. It is not hard, therefore, for us to imagine the pride and happiness with which the Finnish people set aside February 28 as a day of celebration of this great epic song.

Thomas Garrigue Masaryk

EXTENSION OF REMARKS OF

HON. T. JAMES TUMULTY

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mr. TUMULTY. Mr. Speaker, on March 7, 1850, Thomas Garrigue Masaryk was born in southeastern Moravia. He later became the first President of Czechoslovakia. A Slovak by birth and the son of poor parents, he entered the University of Vienna in 1869. There he studied and later lectured on philosophy. In 1891 he was elected to Parliament as a member of the Young Czech—Liberal—Party. However, soon thereafter he resigned his seat and during the next 15 years wrote a series of books on the Czech question, the principles of nationality, and social philosophy. In 1900 he founded the small but influential Realist, or Popular, Party.

At the outbreak of the First World War he envisaged the breakup of Austria and the emergence of the Czechoslovak state. He fled to Italy and then to France, England, Russia, and the United States. In May 1917 Masaryk founded the Czech National Council, with its headquarters in Paris. He then went to Russia and created the Czech Legion out of Czech deserters from the Austrian Army. After the Bolshevik Revolution he secured the consent of the Soviet government for the exit of the legion through Siberia.

He came to the United States, and to a great extent through President Wilson's support for the Czech cause, the Republic of Czechoslovakia was recognized in 1918 by Italy, Great Britain, Japan, and the United States. The Czechoslovak Declaration of Independence was formally published at Washington, D. C., on October 18, 1918, and the Republic was formally proclaimed at Prague on October 28, 1918. Masaryk was elected the first President of the Republic. As President-Liberator, he wisely guided his country's affairs until 1935, when he resigned for reasons of

health. Two years later Masaryk died, beloved by all his countrymen.

Masaryk ranks among the great as a philosopher and a statesman. Above all, he will take his place in history as a devoted Czechoslovak patriot who dedicated both himself and his country to the ideals of liberty and democracy. He was a friend and admirer of the United States and the principles for which it stands. He was an enemy of tyranny and a friend of freedom. As long as his memory and his teachings endure in the minds and hearts of the Czechoslovaks, the Communist regime which now oppresses them is doomed to fail. The Czechoslovaks can be sure that they have the sympathy and support of the American people in the trials through which they are passing.

Foreign Aid Cost to the United States for 1954 Exceeded All Payments to Operate Our Government, Including Checks to Individuals, by \$831,661,737

**EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK**

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mr. BURDICK. Mr. Speaker, the following tables will point out just how our Government expense account audits up, and shows how much money we spent and on what project spent, during 1953. We hear many complaints about the cost for old-age assistance, assistance to dependent children, the crippled and the blind, aid to veterans and hospitals for veterans, the agricultural conservation program, unemployment compensation, readjustment benefits to veterans.

Here is the actual accounting sheet:

Grants to States and local units

ACTIVITY AND TOTAL AMOUNT TO ALL STATES

Agricultural experiment stations, grants.....	\$12,285,308
Cooperative agricultural extension work.....	31,485,726
National school-lunch program, grants.....	81,665,047
National forest fund, shared revenues.....	17,608,984
Submarginal land program, payments for.....	448,049
State and private forestry cooperation.....	10,275,566
Removal of surplus agricultural commodities.....	66,024,948
Commodities donated by CCC to schools.....	12,986
Federal airport program, CAA.....	26,990,836
Bureau of Public Roads, highway grants.....	515,444,540
Bureau of Public Roads, emergency grants.....	1,866,254
Support of State maritime schools.....	266,432
Lease of flood-control lands, Army.....	869,051
Federal aid, wildlife restoration.....	12,474,131
Distribution under Minerals Leasing Act.....	17,010,013
Distribution from receipts, Migratory Bird Act.....	485,694

Payments to States from grazing receipts.....	\$7,190,714
Unemployment compensation and service.....	197,779,364
American Printing House for the Blind.....	185,000
Office of Vocational Rehabilitation.....	22,244,093
Colleges for agricultural and mechanical arts.....	5,030,000
Cooperative vocational education.....	25,420,754
School construction, and survey, grants.....	118,308,139
Maintenance and operation of schools, grants.....	65,994,669
Venerable disease control, grants.....	7,162,260
Tuberculosis control, grants.....	5,300,000
General health assistance, grants.....	13,536,970
Mental health activities, grants.....	3,049,736
Cancer control, grants.....	2,894,606
Heart disease control, grants.....	1,348,104
Water pollution control, waste, studies.....	1,113,416
Hospital construction and survey.....	109,302,421
National Cancer Institute, grants.....	2,301,773
National Heart Institute, grants.....	1,685,740
Old-Age Assistance, regular grants.....	899,390,252
Aid to dependent children, grants.....	338,549,221
Aid to permanently disabled, grants.....	59,317,125
Aid to the blind, grants.....	32,668,872
Maternal and child health services, grants.....	13,299,919
Services for crippled children, grants.....	11,814,776
Child welfare services, grants.....	6,388,437
Housing aids of all kinds, grants.....	30,715,401
Disaster relief.....	4,629,128
Civil Defense Administration, grants.....	13,890,743
Federal Power Commission, payment to States.....	33,531
State and Territorial homes for veterans.....	3,722,190
Supervision, on-the-job training, veterans.....	1,890,574
Self-employment allowances for vets.....	242,156

Grants-in-aid..... 2,802,365,266

PAYMENTS DIRECT TO INDIVIDUALS

Agricultural conservation program.....	\$206,797,815
Administration Sugar Act, subsidies.....	61,210,169
Farm Housing Repair program, grants.....	56,310
Forest Highways, Bureau of Public Roads.....	22,334,373
State marine schools (4 States only).....	273,298
National Guard and Air Guard.....	150,941,660
Unemployment compensation for veterans.....	25,907,392
Research grants, several fields, total.....	21,052,428
Traineeship awards, several fields, total.....	2,230,488
Teaching grants, etc.....	6,661,928
Fellowship awards, grants, total.....	1,784,673
Autos for disabled veterans.....	18,223,614
Readjustment benefits for veterans.....	734,073,888
Total payments to individuals.....	1,251,576,528
Plus grants-in-aid.....	2,802,365,266
Grand total (1953).....	4,053,941,794

For all of the purposes, which in a great republic like ours was necessary. Compare that total of \$4,053,941,794 to the total handed out to foreign countries during the same period of time. This total was \$4,885,003,528.

The only place we can save money, and take off the backs of the people the onerous load of taxes, is to do it by cutting down this foreign aid. We cannot reduce our appropriations for national defense; we cannot do less than we have for the people of the United States—we should do more—but we can plug up this hole through which our billions are going in foreign aid.

The figures are taken from the News Bulletin No. 45, issued by Paul Peters.

Atomic Energy Progress Confronts Upper Colorado River Project With New Obstacle

**EXTENSION OF REMARKS
OF**

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mr. HOSMER. Mr. Speaker, the age of nuclear power has arrived and electric power companies are now building at their own expense new plants which will supply electricity produced by atomic fission.

What does this mean to conscientious legislators who must evaluate proposals to invest large sums of money in new Federal hydroelectric projects?

Simply that they must look at them, not only in the light of all factors heretofore considered, but with this additional question in mind: In the foreseeable future will nuclear power be transformed into electric energy at cheaper rates than electric energy can be obtained from water power?

If the answer is "Yes," then our vast hydroelectric plants may become obsolete white elephants, giving way to more efficient nuclear-electric plants just as the horse and buggy gave way to the more efficient automobile. If this should happen, the Federal Treasury would never recover the millions it might pour into hydroelectric and related developments.

With millions, and possibly billions at stake, consideration of this possibility is absolutely essential if Congress is to act with responsibility in this day of swiftly moving scientific progress.

The proposed multi-billion-dollar upper Colorado River storage project is a specific instance.

Bills now before the Congress call for a spending authorization ranging from \$1 billion to \$1.8 billion on the upper Colorado River. They would construct numerous irrigation projects, the revenues from which could repay only 10 percent of their cost. Tied in the bills are expensive hydroelectric projects, the power revenues from which would be expected to repay not only the cost of the power dams and installations, but also 90 percent of the cost of the irrigation projects.

Planning figures show that it may take up to 100 years to pay for these projects out of the hydroelectric power cash register.

Thus, for financial success, nuclear-electric energy must not be produced more cheaply than hydroelectric energy for at least 100 years.

What are the prospects in this regard?

Simply, that not in 100 years, not in 50 years, but in a much shorter time nuclear-electric energy will be produced much cheaper than hydroelectric energy.

Remember, just 15 years ago, in 1940 nuclear power was practically unheard of. By 1945, 5 short years later, the first A-bomb had exploded over Hiroshima. Research for peacetime use was so concentrated during the subsequent 10 years that today commercial nuclear-electric energy generating plants actually are being constructed.

The British Government announced a 10-year program for building 12 atomic power stations at an estimated cost of \$840 million. The British say these plants will produce electricity at a cost of 6 mills per kilowatt-hour in comparison with their present convention generating cost of 7.2 mills.

United States cost figures prepared by James A. Lane, of Oak Ridge National Laboratory, show the average figure in this country for producing electricity in conventional steam plants is 7 mills per kilowatt-hour, while the cost in a nuclear plant would be 6.7 mills.

That is without considering that nuclear-electric plants can actually produce plutonium as a byproduct which can be sold for a high price, in the neighborhood of \$100 a gram.

If this be done, there is little cost left for power generation to bear, and a reactor plant could put on the transmission line 1 or 2 mill current instead of 6.7 mill current. Even if the military demands become satisfied and the price of plutonium eases back to its fuel value of about \$20 a gram, the sale of byproduct plutonium can be a substantial source of operating revenue.

That is why Representative CARL T. DURHAM, of North Carolina, Vice Chairman of the Joint House-Senate Atomic Energy Committee, just a few days ago predicted that atomic experts will develop a reactor in the next 2 years that will produce power as cheaply as oil, coal, or water.

Within 5 years, he said, atomic powerplants should be commercially competitive with present lower cost sources of power, which, of course are the hydroelectric plants.

During a speech in Los Angeles on February 15, Floyd B. Odum, financier and president of Atlas Corp., predicted that by 1975 all electricity in the United States will be generated by uranium-based powerplants. He, too, said that even at present atomic energy is practically competitive with other fuels for the generation of electric power.

Using a cubic-inch block of wood as a symbol representing a similar block of uranium 235, Odum said that 20 such little blocks of U-235 would supply enough energy to provide New York City with all its electrical needs for a 24-hour period.

Of course, there are numerous technical difficulties yet to be overcome in the production of nuclear electricity. But the fact is they are being overcome and sometimes in the very process of building nuclear-electric facilities.

Consolidated Edison of New York, one of the Nation's leading power producers, boldly announced only a month ago that it will soon build a nuclear-electric generating plant to add to its system.

Thus the problem is facing us squarely, and we cannot dodge it in connection with the Upper Colorado proposal. The Bureau of Reclamation and the Congress must have their eyes open to these facts of modern day life. There must be a clear-cut determination as to whether or not nuclear-electric energy developments will turn this proposed multi-billion-dollar expenditure into a dead loss. We cannot inflict such an enormous new burden on the Nation's taxpayers for several generations to come.

Therefore, Congress must hold thorough hearings on this point. It must even delay consideration of the legislation for a year or two, if need be, so that it may be evaluated in the light of results of nuclear-electric energy research and development now underway.

So that the Congress may be further informed I am backing up this plea by citing additional information collected over the past few weeks.

On March 27, 1954, the Joint Committee on Atomic Energy said in a report that—

Economically competitive atomic power will be a reality in the United States within the next 10 years.

On March 9, 1954, Henry D. Smyth, member of the Atomic Energy Commission, said in an address:

It is evident that we can build powerplants which will convert the energy released in nuclear fission into electrical energy to be fed into transmission lines.

The electric companies public information program said in a 1953 report:

Nuclear power looms on the horizon as an energy source which might well become competitive with coal, oil, gas, or falling water in the next few years. Within the past 2 years nuclear heat has converted water to steam, from which electricity was generated.

In a report to Congress in July 1954, the AEC stated it could be reasonably expected that nuclear fuel would be economical enough to compete with conventional fuels in the foreseeable future. Atomic material costs have been brought to a record low, and ore processing developments have resulted in major reductions in the cost of fissionable materials and paid for themselves many times.

Thorium, which can be converted by atomic reactions into a fissionable material, is 3 or 4 times as plentiful as uranium, the report said.

Dr. John R. Dunning, dean of engineering at Columbia University, said on June 3, 1954:

The important conclusion from the data is that already, with only about 10 years of any appreciable searching for uranium, we have completely reversed our position held in the immediate postwar period when most so-called experts were saying we couldn't possibly have enough uranium to build an atomic power economy.

In this short space of time, there has come general agreement that our uranium reserves constitute the major fuel reserves in the world for the future. A figure something like 25 times as much energy in uranium as in coal, oil, and gas is now usually quoted.

There, again, this figure has to be viewed as a tentative figure. It wouldn't surprise some of us too much to find there were 100 times as much energy in the form of atomic fuels as future progress develops in atomic energy release methods, atomic fuel recovery methods, raw material prospecting, and so on down the line.

The important lesson is that our future energy reserves are abundant in the atomic field.

On December 20, 1954, the Associated Press reported from Washington in the Salt Lake Tribune:

Within 20 years about twice as much electric power will be furnished by the atom as is now generated by waterpower, according to a private study prepared for the use of investor groups.

The growth will represent conservatively a private investment of about \$6 billion in nuclear-powered electric plants, it was estimated, of which more than \$1 billion will go into reactors alone.

The survey was made by H. Dewayne Kreager, metal and power specialist associated with John R. Steelman. Steelman, a top assistant to former President Harry S. Truman, now is an industry consultant here. Kreager until mid-1953 was the executive officer of the Office of Defense Mobilization.

Labeled "an economic timetable," the survey predicted that from 1975 to the end of the century, 80 percent of all new generating capacity installed in this country will be atom-powered.

"The first 10 years should be regarded as an experimental period," the study says. "Nineteen hundred and sixty-five is the estimated and somewhat arbitrary date at which power from nuclear reactors is expected to become economically competitive with existing thermal (coal- or oil-fueled) plants."

"However, 1965 is an outside date; competitive electric power from nuclear energy may come as early as 1960."

A 5-year program of the AEC will embrace 5 different reactor projects costing a total of \$241 million.

The projects are:

First. A full-scale nuclear powerplant to be built by Westinghouse Electric and Duquesne Light near Pittsburgh.

Second. A boiling-water reactor to be built by the Argonne National Laboratory. This reactor promises to cut power costs substantially.

Third. A sodium-graphite reactor to be built by North American Aviation, Inc. This reactor may produce more atomic fuel than it burns.

Fourth. A fast breeder reactor to be built by Argonne.

Fifth. A homogeneous reactor to be built at Oak Ridge.

In March 1954 a report of the Joint Committee on Atomic Energy stated:

There is real confidence that atomic power can be produced at a cost competitive with fossil fuels such as coal and oil within the next decade by exploring these five approaches.

Lawrence R. Hafstad, Director of Reactor Development for the AEC, said, on July 21, 1954:

In uranium we have what promises to be both a compact and a cheap source of energy. * * * One pound of uranium, about a

cubic inch, contains as much energy as * * * 1,500 tons of coal. That this energy promises to be cheap, we can see by calculating the cost of the 1,500 tons of coal. At \$8 a ton, this would be in the neighborhood of \$10,000, whereas the cost of 1 pound of uranium is more like \$20.

A story in the New York Times, December 12, 1954, said:

Leaders of the Nation's \$25 billion electric light and power industry have come to the conclusion that they must build nuclear reactors. This decision has been reached despite the greater efficiency of coal at present for generating steam for power.

In a private report being sent to the executives and engineers of the country's power companies, emphasis is placed on atomic fission as the future source of energy. * * *

Some of the finest atomic engineering minds in the country put the findings together after considerable research. The report is being issued by the electric power companies information program (PIP).

"The consensus of opinion is that within 10 years, or possibly sooner, private industry will cross the threshold of economic nuclear power," the study says.

Congress has appropriated more than \$13 billion for atomic energy activities.

The Atomic Energy Commission already is the world's third largest business. Only Metropolitan Life Insurance and American Telephone & Telegraph have greater assets. Physical assets owned by the AEC is considerably larger than such assets of General Motors and Standard Oil of New Jersey. If the present expansion program continues, the AEC will soon be the world's largest single enterprise.

More than 150,000 persons were given employment under the AEC program in 1953.

Faced with a growing shortage of coal for power generation, Great Britain has turned to the development of commercial nuclear power reactors as before noted. "This is a historic day for Britain," declared Geoffrey Lloyd, Minister of Fuel and Power, when he announced the plan to Parliament February 15. He spoke of tremendous prospects that offer possibility of a new industrial revolution.

Canada is completing a big reactor, after which private enterprise will be permitted to develop commercial nuclear power.

Norway and Sweden are engaged in extensive work to develop nuclear power for commercial use.

Brazil, Australia, and India are at work to develop nuclear power for commercial use.

The Edison Electrical Institute said in its 1953 report:

Commercial utilization of nuclear energy * * * could result in important conservation of the Nation's reserve of fossil fuels, a highly desirable long-range objective. Moreover, this potential source of fuel may ultimately provide a means for reducing fuel costs at central stations.

On February 17, 1954, President Eisenhower said in a message to Congress:

In 1946, too, economic industrial power from atomic energy sources seemed very remote; today, it is clearly in sight * * * largely a matter of further research and development.

Coal Age View of the 1955 Picture

EXTENSION OF REMARKS

OF

HON. WILLIAM H. NATCHER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Coal Age View of the 1955 Picture," which appeared in the February 28, 1955, issue of the Messenger, of Madisonville, Ky.

The editorial is as follows:

COAL AGE VIEW OF THE 1955 PICTURE

The bituminous coal industry will continue its upward trend in 1955, with a maximum production gain of 5 to 10 percent, or 20 to 25 million tons over 1954. Coal Age, McGraw-Hill publication, predicts. Anthracite production, however, is expected to continue its downward course this year, due to home-heating competition from natural gas and oil.

Total bituminous production was down to 392 million tons in 1954, or 14.3 percent under 1953. However, much of the loss occurred in the first 3 months of the year, and, from April on, the general trend was up. Output of anthracite, which totaled 27,118,000 tons last year and was 12.4 percent under 1953, is expected to drop another 10 percent or more in 1955. Coal prices, which were down for both bituminous and anthracite in 1954, should remain steady this year, with no major price rise expected.

Electric utilities, steel, and other industry will be coal's best market in 1955, the magazine says. Coal for kilowatts, for example, should increase by 20 million tons this year, while steel consumption of coal should rise by about 12 million tons to a total of 100 million tons, as compared to about 88 million tons in 1954. Decreased steel consumption last year, the magazine notes, was responsible for the coal industry's biggest loss.

Industrial consumption of coal, down some 16,450,000 tons to 89,350,000 tons in 1954, showed a 15.5 percent drop from the 105,799,000 tons in 1953, primarily because of decreased business activity. This year, however, increased business should bring the total up by 7 to 10 million tons.

Railroad and retail coal consumption, on the other hand, are expected to drop 3 to 5 million tons apiece during 1955. In 1954, railroads used only 17 million tons of coal—a drop of 25.9 percent under 1953, while diesel fuel, coal's chief competitor in the rail market, rose and will continue to rise this year, the magazine reports. In the retail market, natural gas should register a gain this year, while oil sales will rise, but more modestly.

Although bituminous coal exports overseas increased last year to 15,088,000 tons over 14,176,000 tons in 1953, shipments to Canada dropped sharply from 19,590,000 tons in 1953 to 15,838,000 tons last year. Further railroad dieselization in Canada is expected to continue a downward trend for bituminous exports to that country.

Although losses to competitive fuels continued to plague bituminous coal in 1954, they were far outstripped by losses resulting from the 1954 business recession, particularly in steel. The bright spot last year was electric utilities, which increased their burn by 2 million tons. Even with this gain, however, total loss over 1953 is estimated at 63 million tons. Production suffered by

an additional 10 million tons taken out of stockpiles.

However, changes in the competitive picture, at least in the heavy-fuel market, are favoring coal. And Government authorities, it appears, are alert now to the plight of coal, and the need for maintaining a strong industry.

As Things Look to Me

EXTENSION OF REMARKS

OF

HON. ORVIN B. FJARE

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mr. FJARE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include the following speech by Mr. Ancher Nelson, Administrator of Rural Electrification Administration, entitled "As Things Look to Me":

AS THINGS LOOK TO ME

(Address by Ancher Nelson, Administrator, Rural Electrification Administration)

Years ago in Minnesota we had a farm magazine called the Farm Stock and Home, and a former editor of that paper by the name of Harry Owens used to write a column entitled "As Things Look to Me." Harry would tell us each month just exactly what was on his mind, what he thought was right and what he thought was wrong. He gave his own opinion and appraisal of happenings of the day and these expressions represented his honest views. As a result, his readers eagerly followed his column month after month.

I am going to borrow that column heading to use as the title of my speech here today. I want to emulate also Harry's forthrightness in stating the facts as I see them as I give my annual report to the farm people who make up this rural electrification program.

This opportunity to speak to so many of you people who have the first-hand responsibility to your farm neighbors for the management of the rural electric system over the country is to me a real challenge. As co-op directors, you are carrying a responsibility which I used to have in my own co-op, and actually I feel more at home talking with you whom I consider fellow directors than in talking as REA administrator.

As directors and officials of the rural electric systems, you are the custodians of a great trust which your neighbors and friends have placed in you. You share in responsibilities which are common to all of us in this program. The fact that more than 9 out of 10 of our farms today are enjoying central station electric service does not mean that the trust has been discharged. No, not by any means. In some respects, your responsibilities are just starting.

We in REA have responsibilities too. Most of them are similar to yours, area coverage, financial soundness, adequate low cost power, self-reliance. These are among the things that concern you as well as REA.

Since coming to REA from my local co-op now nearly 2 years ago, I have tried to keep a clear picture in my mind as to what our job should be and with the help of the many dedicated people we have in REA, we have sought to shape a program of action aimed at getting those jobs done. What we have is a program that is working effectively on many fronts.

I want to make use of this opportunity here today to give you a report of that comprehensive action program and the progress we are making toward the major REA goals. If you will accept this report with an open mind, weighing fairly what has been done, I am convinced you will agree that REA has gone forward so that today rural electrification stands more firmly on solid ground than ever before.

Let us outline the major jobs that we have before us and then appraise what we have done about them.

First, there is area coverage.

REA was established in the first place to accomplish this job. The REA borrowers came into being to accomplish this job. It is a responsibility that is shifting more and more to you, the borrowers. REA continues to have the financing part of the job but, in the final analysis, whether or not area coverage is achieved depends upon what you do.

During the last year the percentage of farms electrified moved a little nearer the 95-percent mark. REA approved loans in calendar 1954 that will finance central-station electric service to a total of 116,000 consumers, a substantial increase over the year before.

Loans are the first step in area coverage and we have sought to speed up our handling of loan applications. We adopted a fast, hard-hitting type of organization, with competent people in the key jobs, and we cut redtape to the bone. This has speeded up our handling of loan applications, and we have been able to cut down the backlog of applications to just about half of what it was a couple of years ago. There will, of course, always be some backlog but the present situation means that there is a minimum of delay for borrowers in getting their loans approved.

Moving over into the telephone program, we have proceeded diligently to speed up operations there too, and we believe that new preloan engineering procedures now in effect will speed things up still more. In calendar 1954 we made more than \$66 million in telephone loans, more than in any other calendar year since the program began. More than 100,000 rural homes now have received new or improved service through the program, and construction is proceeding at a good pace.

One of the big difficulties in the telephone program is to get enough qualified telephone engineers. We need them for our own staff and there is also a need for more private consulting engineers to work with borrowers.

Good progress in the telephone program requires a high degree of industrywide cooperation. Every borrower must have connecting arrangements of some sort—always for nationwide long-distance service and usually for local service into trading centers as well.

Our endeavor has been to cultivate an atmosphere of understanding and cooperation with the industry. In turn we have expected their cooperation. Gradually much of the distrust and misunderstanding is being overcome. We have repeatedly indicated that we are not interested in building an empire in the telephone field. We are only interested in making telephones available to the farmers. To the extent the industry is financially able and willing to do this, that is fine. Where the industry can't, REA will push ahead as hard as it can to find ways for doing the job.

From President Eisenhower on down the administration objective in both the electric and telephone programs is to meet the needs. The needs are being met and there is going to be money left over.

When this fiscal year has been completed, we will have made another reduction in the backlog of loan applications and there will

be a total of \$56 million of surplus loan funds that will not have been used. Remember that statement.

In one State as of now, it seems likely that the State allotment formula will handicap the making of loans, but keep this one thing in mind: more money is not the solution to that difficulty.

If we were going to circumvent the law by asking Congress to pour extra appropriations into the State allotment formula, it would take a truly fantastic additional loan authorization. The figure would be something like \$250 to \$350 million and we would end the year with a carryover of unused loan funds of about \$300 million.

The sensible answer is to remove the State allotment formula from the law. That is exactly what we have asked the Congress to do.

In the early days of the REA program this formula served a useful purpose in making sure that the lines were built where the need was the greatest. Today, it is no longer needed with almost every State at or above the 90 percent level of connected farms. It is obvious that the greatest need for loan funds will be in those States where improvements are needed in systems already built and in those States that need new or extra sources of power.

Briefly, the need of funds in the various States can no longer be measured accurately on the basis of farms without electricity. On the contrary, the size of the REA program in the State will be the principal determining factor as to how much will be needed.

As to our new budget it recognizes greater loan requirements next fiscal year than this. The 1956 budget provides for \$20 million more than the amount loaned in each of the last 3 years.

Incidentally, I want to thank all the borrowers which cooperated with us so extensively in our survey of loan needs. We obtained responses from more than 80 percent of the borrowers.

In addition to the funds being provided in new loan authorization, there is still nearly a half billion dollars of approved loans that has not yet been drawn by the borrowers, so it is hard to think that any borrower can be hurting for lack of construction funds. If there is, I would ask this fact be brought to our attention.

In this 20th year of the program, however, area coverage is primarily a responsibility of the systems serving the rural areas. Area coverage can never be completely realized unless they continue to forge ahead toward this objective.

How many of REA's borrowers actually have 100 percent area coverage in their proper service area? That is a question that you should ask yourselves. Here are some of the questions you ought to consider:

Have you determined the geographical area within which you should be responsible for seeing that electric power is available?

Have you recently surveyed this area? If not, shouldn't you do so to determine if there are people without service who rightfully look to you for service?

Have you developed plans which you are carrying out that will make electric service available on a sound and businesslike basis to all those people?

If not, what should you do about it? What do you think REA should do to help you?

We can see as we travel over the country that progress toward area coverage has been made. What's before us now is a challenge of seeing to it that you, with the help of REA, can finish the job so well begun.

The second major responsibility, as I see it, is to build financially sound systems. That is another responsibility shared by both REA and the borrowers. Certainly the Government's stake is great. The REA loans will soon total \$3 billion, and the only way

to get this repaid—as it is being repaid—is to have financially sound businesses.

Although the Government's stake is large, ours as rural people is even larger. We must build financially sound electric systems so that we can be sure of continuing to have the benefits of electricity in our homes and in our farming operations.

From REA's standpoint, our action program is geared to approach this matter of loan security from several angles.

First of all, I would like to say a good word about the work of the Management Advisory Committee which represents your association in the field of management. The group executive training meetings and management improvement activities that this committee has helped push along constitute one of the most significant developments of the last year. If this work is continued and expanded as it should be, it will do more for the future safety of rural electrification than any other single thing that I can think of.

Conversely, if serious financial reverses or defaults should occur, it would give the program a real body blow. Just at this time, we face one of the most serious threats of this type that has ever confronted the program. We have one borrower that is in a hopeless financial condition, and a loss amounting to upward of a half million dollars is possible if it goes under. Even though this loan was made before I became Administrator, I certainly don't want to see the program get such a black eye and we are giving the situation our closest attention, working with every agency we know of that can help.

In the program as a whole, we are working with co-op directors and managers not only in identifying the difficulties that may lie in the future but in drawing upon the kind of practical and tested skill and experience that is needed if we are going to have financially sound systems in the future.

One point on which we have the opportunity to draw upon this experience resource is in connection with capital credits. A number of people from many areas have raised questions with us as to the capital credits plan and we have it under examination with the air of bringing about improvements as these can be developed.

We proudly point to the fact that of the approximately 1,000 borrowers, only 14 are delinquent in their loan repayments. However, a look at the principal and interest payments that will come due in the period ahead will illustrate that we cannot be complacent but must plan carefully for the future. In 1954, the amount due on loans was about \$72 million. By 1958, it will amount to \$116 million. In other words, this debt amortization load will increase 50 percent within a short period of 4 years.

How well prepared is your cooperative to meet your future obligations so that you can maintain a sound, enduring business?

One way to answer this is to calculate how you would stand if you faced your full amortization schedule today. We have made that calculation for all of the borrowers, and we have found that nearly a fourth of the borrowers would be in some financial trouble to a major or minor degree in that case. I am happy to report that as a result of our joint efforts with borrowers, about three-fourths of those systems with financial problems have achieved some improvement in their position during the past year.

Another interesting thing we have found is this: Of the total number which need to do something to improve their future outlook, about half are selling less electricity than was figured at the time the loan was made. If they were meeting these estimates, they would be out of the woods.

That is one of the reasons why we started last spring to strengthen the power use program and get some results in the form of load-building. This program is tremendously important to you as a director respon-

sible for the successful operation of your power system and it is even more important to you as a farmer who has much to gain from the use of electric power.

The big thing that was done in this program was to organize the Inter-Industry Farm Electric Utilization Council, headed by Deputy Administrator Fred Strong. Today, through this council's efforts, borrowers in most States are working in cooperation with all segments of the electric industry and with the colleges and extension service. It is a game where everybody wins—the REA borrowers, the electric appliance people, the power companies, who serve part of the farms directly and sell you more than \$50 million a year in wholesale power. And the one who will benefit the most from this power-use program is the farmer himself as he makes more profitable use of electric power on his farm and in his home.

My third point has to do with our goal of adequate low-cost power.

During 1954, we made major progress in improving the supply of electric power in rural areas. REA has been determined to work with borrowers in whatever direction promises better and cheaper service for the farmer, whether it be generation or buying wholesale or a little of both. We have made generation and transmission loans where these have been necessary and we have encouraged integration and interconnection where this approach has been to the borrowers' advantage. From the standpoint of the long-range view, we are keeping a careful eye on developments which may lead to lower cost power whether it involves conventional fuels or atomic energy.

As I have previously stated, I believe the REA authority to make G-T loans is important to the farmers. It is a fundamental part of the REA program and must be preserved. To keep it we must use it wisely. This is our aim and we are making G-T loans where they are the means to lower cost electricity for the farmer.

We approved G-T loans in 1954 in the amount of more than \$40 million. This was nearly a quarter of all the loans approved by the Agency during the year, slightly higher than usual for the Agency through the years.

We were providing financing that will boost the generating capacity of the cooperatives by something over 100,000 kilowatts. At the same time, loans already approved were making possible the construction of a record-breaking amount of generating capacity. During the calendar year 1954, REA borrowers in 10 States and Alaska put into service more than 200,000 kilowatts of generating capacity. This is more capacity than there was in service on all REA-financed generating plants on January 1, 1948. This new capacity sets a record for any one year of the program.

You don't get very far into this matter of power supply before you run up against the question: Do we get it alone or do we engage in an effective cooperative effort with all other segments of the electric industry?

It seems to me that the only sound approach to that question is to think about what is best for the farmer, because the program was set up to benefit him. Looked at from that viewpoint, the cases where it will pay to go it alone are might few and far between.

We have learned by experience that an isolated system of relatively small capacity means high-energy costs and requires stand-by capacity that adds to the expense. During the past year, an alarming number of distribution borrowers have come to us because they feel their rates are higher than their distribution systems can continue to stand. Some are paying their wholesale bills under protest and some have requested that we agree to their release from their contracts to buy power from their own G-T systems. Developments of this kind, unless solutions

are worked out, might well be a threat to the future of the G-T co-op which in turn would be a blow to the whole program. It underscores the need to move forward soundly and carefully.

These are some of the reasons why we have recommended that consideration be given to interconnections where capacity can be merchandised into a power pool and peaking capacity purchased, resulting in a better power rate to the farmer and in turn protecting the distribution cooperatives. Interconnection and integration agreements were actually completed in three States during the past year, while in other instances studies are under way to see what the possibilities might be for savings. In one case, the co-op saved about \$3 million in transmission lines, and in another a co-op saved close to a million dollars by exchanging with a power company and alternating the installation of new generating capacity.

Half the power input of your systems is being purchased from power companies at this time. Generally speaking, you are getting rates than in earlier years. The average rate of power company purchases today is 8.2 mills as compared with 12.4 mills 15 years ago. The cost of power through G-T federations is higher, although it is improving gradually. I anticipate that further reductions in costs of power produced in REA-financed generating plants will be achieved through the marketing arrangements like the ones I have mentioned.

Another question for us to consider as Government officials and as electric co-op people is: What about the challenge of atomic energy?

Nobody can say for sure that atomic energy will lead to cheaper production of power than the fuels we are presently using. However, we have tried to gear our operations on the assumption that this will be the case because we want the farmer to benefit along with other consumers if it is.

For approximately a year, we have been working with the Atomic Energy Commission. We have asked for and received security clearance for five of our top people and through them we keep advised on the progress and research and development in that field and also are able to keep the Commission informed as to our needs.

The suggestion has been made that REA should employ physicists, metallurgists, and other specialized personnel for experimental work in the atomic field. However, we have been assured by AEC that people on its staff will give us the help we need at no additional cost to REA or to the taxpayers. This would appear to be the wise and effective course, and it is the course we intend to follow.

At the present time, we are contacting borrowers which are planning construction of generation plants. We are seeking to determine their interest in looking into the possibilities of nuclear power as a source for generating electricity. Where any of them is interested, we will help them get security clearance so that they can work with AEC and us in getting the up-to-date information they need to make their decision.

On the basis of information available to our people who are working with the Atomic Energy Commission, the prospects are not bright for obtaining power cost reductions in the near future through the use of atomic energy. As of now, nuclear power reactors are in a developmental state and their costs are therefore high. Commercially atomic energy is not yet competitive. Moreover, there are questions of service interruptions, site of plant locations and liability that have a bearing on the consideration of this matter.

At the same time, AEC's research is steadily going forward and we must keep up with it. In that way, we will keep informed and we will take advantage of every development

that gives concrete assurance of a lower cost power source that will be dependable and feasible. We are determined that the REA co-ops will be able to move into the atomic age just as soon as it makes economic sense to do so.

In these days we are in the midst of a great debate on what our national power policies ought to be for the future. It is good that this debate is going on. But let us not permit emotionalism to decide the course for us. One of the questions before us is this: What is the proper role of the Government in the electric-power picture? We know that many have decidedly strong points of view on what the answer should be. I do not pretend to be a judge on this but I am impressed by that large group of our citizens who do not see a solution in any extreme—rather in a moderate program that will harness both our natural resources and our private capital for the benefit of all our people.

What is the role of government?

Lincoln said—as we have frequently heard quoted—"The legitimate object of government is to do for a community of people whatever they need to have done but cannot do at all or cannot so well do for themselves."

That certainly spells out a job for government. But the rest of that Lincoln quotation is this, and I quote: "In all that the people can individually do so well for themselves, government ought not to interfere."

And that spells out a job for you and me as private citizens. I am convinced we will be better off if we spend at least as much time and thought trying to figure out how we can do things for ourselves as we sometimes spend trying to figure out how we can get government to do things for us.

Thomas Jefferson's view on that subject was this: "Were we directed from Washington when to sow and when to reap, we should soon want bread."

And that brings me to my fourth point—that of borrower self-reliance. The rural electrification program is free enterprise. We own and operate our system. We have borrowed money to build our lines. We intend to pay it back. We are proud of our accomplishments to date. Likewise, we need to remember that there are others who have invested their savings and facilities who also deserve tolerant consideration on our part. We should always be willing to give the same degree of attention, respect, and recognition to the problems that others face. Common-sense and mutual understanding are not always easy to achieve, and the test of leadership is to find answers through those means.

It is sometimes tempting and easy to be critical, but there are many constructive things to be talking about. In the words of the popular song, let's "count our blessings instead of sheep."

Counting our blessings, we find that Congress in its wisdom and generosity has made some \$3 billion available as loans to you and me so that we might have electric and telephone service.

We find that human ingenuity has designed and built more efficient equipment so that in spite of commodity cost increases, you and I are able to buy electricity cheaper today than ever before.

We find that a farm today can enjoy a telephone, running water, freezer, television, and countless other home appliances, as well as milking machines, hay driers, and motor-driven devices by the score for farmstead chores.

Taking stock of these and the many other blessings we enjoy, let us not lose sight of the fact that these are times of international tension and peril. We must keep our program in its proper perspective, mindful always of the overall interests and problems of our country. As President Eisenhower has said, "Citizenship is not just a privilege, but also a responsibility."

Looking to the future, we, the directors, managers, and officials in this rural electrification program need always remember that the best insurance we can get for the program is to establish in other people confidence in us and in our integrity.

I know that every employee of REA joins with me in expressing the hope that our handling of your business with REA will merit your confidence because of our performance.

If all of us in the program are fair, tolerant, and sound—if we are willing to hear all the facts in regard to a question—we will be accepted with dignity and we need have no fear that any force can destroy the program.

Think back to your own community and recall the men well regarded and who have earned roles of leadership and influence. You will find their stature has grown from conduct guided by fairness, soundness, and reasonableness.

So as we look to the future of our program let us remember the principles that have proved to be of enduring quality. There is a quotation hanging on the wall in a Missouri co-op which goes like this:

"Four ways to test:

"1. Is it the truth?

"2. Is it fair to all concerned?

"3. Will it bring good will and friendship?

"4. Will it be beneficial to all concerned?"

Proceeding on such a basis, I am sure, will lead the way to a great future for rural electrification.

Rural Delivery Mail Service

EXTENSION OF REMARKS

OF

HON. JACKSON E. BETTS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mr. BETTS. Mr. Speaker, on February 7 I introduced H. R. 3655, which would extend rural delivery mail service to persons desiring such service and residing on or near improved roads. Since that time I have received favorable response to this proposed measure, not only from my own constituents, but from others who feel that rural patrons are entitled to this improved service. I submit the following letter which typifies the comments which I have received.

DEAR MR. BETTS: We were so pleased to see your item in the Marion Star (our daily paper) in reference to rural mail route extensions. We have lived in our present home 45 years and have gone one-fourth mile for our mail. This means a long wait sometimes or miss the mailman, which is getting to be quite a problem for us as we are in our seventies and in very poor health. We pay taxes on 190 acres and we feel like we are entitled to adequate mail service if we share the tax burden, as was mentioned in the article. It was also mentioned there should be 3 families to the mile; there isn't and never will be another house on this mile as we own the three-fourths mile south of us on our side of the road and the owners on the other side live on east and west roads and get their mail at their door. We have a good black-top road and a good drive for the mailman to turn in and we will appreciate it very much if you can help us get the extension. Thanks so much, and we hope and pray that your bill will pass.

We will be glad to hear from you if possible. We hope you won't forget us when extensions are being made.

AN EIGHTH DISTRICT, OHIO, CONSTITUENT.

The Future of the Arab Refugees

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, February 25, 1955

Mr. MULTER. Mr. Speaker, the following statement made by Ambassador Michael Comay before the U. N. General Assembly's Ad Hoc—Political—Committee on November 26, 1954, is deserving of our attention. Mr. Comay is the Ambassador of Israel to Canada and acting chairman of the Israel delegation to the ninth session of the U. N. General Assembly.

THE FUTURE OF THE ARAB REFUGEES

Year after year, this Committee has sought to discuss the task of UNWRA in a humane and constructive spirit, free from rancor and political controversy. Year after year, to our deep regret, the Arab representatives have exploited this item for propaganda warfare against Israel. My delegation has now asked itself whether it should react at all. The facts about the origins of the problem have repeatedly been placed on record at previous sessions. Many of the attacks are irrelevant to this issue. To repeat these stale and unprofitable debates can only reduce the chances of peace in the Middle East, without helping a single refugee. Prompted by what we believe to be in the interests of Arab-Israel relations, and in the best interests of the refugees themselves, my delegation will therefore refrain from replying in detail to a number of provocative statements made in this Committee and I shall confine myself to a few general observations.

For one thing, Arab speakers are welcome to establish by copious quotation that Jews criticize each other, or that opposition papers in Israel find fault with the Government. That fact need not claim our special notice. Nor do I propose discussing the excerpts from Professor Toynbee which have been read out. In his historical philosophy, there does not appear to be any place for small states. In particular, he seems seriously displeased that the Jewish people should be creating a vigorous young state, despite the fact that he has dismissed us as a "dead relic of a vanished civilization."

It is the professor's privilege to be a vehement anti-Zionist if he so chooses, but the historical record must be allowed to speak for itself. The cardinal and undisputed feature of that record is that the Palestine Arab leaders announced they would resort to arms, and did so; that the Arab states announced they would invade Palestine, and did so—proudly announcing the fact in a telegram to the President of the Security Council.

Nobody can foresee how a war will alter the lives of persons and nations. This refugee problem, like other refugee problems, is the bitter fruit of war. Those who started it cannot now cast the blame upon the United Nations, the great powers, Israel, and everyone else. But for the Arabs' fateful decision there would never have been a single refugee. Arab and Jew would have been allowed quietly to work out their common destiny and the world might have been allowed to relax about the relations between the two semitic peoples. That is what we wanted, and that is what we offered. It did not happen. We have little inclination to dwell on the might have been or to continue an exercise in the apportionment of past blame. Unless I am mistaken, there is even less such inclination among the rest of you, members of the international community, who find

yourself saddled with the tragic aftermath of a war which was not your war. I shall therefore proceed without much ado to a sober restatement of my Government's attitude upon the central problem raised by the Director's report: the problem of the refugees' future.

I. THE CONTRIBUTION BY ISRAEL

Though Israel did not create this problem, it cannot be insensitive to the human tragedy involved. We have done and will do what we can to alleviate it, and I shall refer to a series of practical measures.

A measure of reintegration

I would first of all direct the committee's attention to the first of the tables annexed to the Director's Report on page 7. When the agency was set up, 4 years ago, it had 48,500 refugees on its relief rolls in Israel territory. By 1952, we had progressively reduced this number, by absorption, to some 20,000. The Israel Government thereupon relieved UNWRA of all further financial or administrative responsibility for the remaining refugees. This meant a large annual saving to the agency, and enabled it to wind up its operations in Israel, transfer its personnel, and devote the whole of its funds and attention to its work elsewhere. For us this was no facile gesture. As my government wrote to Mr. Blanford, the former director of the agency, on May 18, 1952, it "would throw a substantial additional burden on the Government, particularly as up to half the remaining refugees are social cases who are not expected to become self-supporting and will remain a permanent charge on the community." The same letter states, "The Government contemplates that there will then cease to exist in Israel a distinct category of Palestinian refugees, with a status which differs from that of other inhabitants of the country." In this way, a part of the problem, concerning nearly 50,000 persons, has been settled by reintegration. This is only a small part of the whole, but it compares favorably with the total of 8,000 refugees taken off the relief rolls by other means. Incidentally, the position of the Israel Arabs, with whom these former refugees have now been merged, is quite unlike the picture of misery which has been painted here. This is not a matter before the United Nations and I do not want to dwell on it, although we take some pride in the rapid progress our Arab community is making.

I would only express regret that a hostile frontier evidently acts as a distorting mirror. I would be happy to have the distinguished delegate of Iraq visit my country as our guest; he would be relieved to see for himself that the Arabs in Israel are first-class citizens, participating fully in our democratic life and already enjoying standards of well-being from which the corresponding classes of Arab society elsewhere are still remote.

While the refugees within our borders were thus being integrated, a measure of repatriation was also taking place. Certain categories of relatives of Arabs living in Israel were permitted to come in, in order to reunite broken families. Also, a large number who had filtered illegally into the country were permitted to remain as legal residents. These two processes contributed to the rapid growth of our Arab population, which numbered less than 100,000 in 1948, and is by now over 180,000. For reasons which I shall shortly explain there is little prospect that Israel will be able to take in any more of the refugees now in the Arab countries.

Release of blocked accounts

Next, there is the question of blocked accounts. In his opening statement, Mr. Labrousse made a somewhat critical comment on this matter, but I fear he had not been fully informed about its progress. In the first phase of releasing these frozen bank

accounts, which is still in progress, nearly \$2 million are being paid out to refugees in Arab countries. Arrangements have since been concluded to pay out the balance, amounting to over \$8½ million. Any slight delay there might have been was solely due to the Israel Government's wish to obviate the obstructions and difficulties which presented themselves in the first release, by inviting the representatives of the account holders themselves to suggest improvements in the procedure. This they did, with the result that the procedure has been simplified, and the Government has been able to satisfy all their requests about the conditions of the release.

The Committee might take note of this as a case where Israel and the persons directly concerned have reached a satisfactory agreement by sensible negotiation.

On November 16, the same day that the Director of UNWRA spoke in this Committee, my Government made a public statement in Jerusalem. In view of the various inaccurate stories put before the Committee, I shall take the liberty of reading this statement, and would request that it be fully inserted into the record. It reads:

"On September 27, 1954, the Israel Government announced its intention, which was elaborated on November 3, 1954, to proceed with the release to absentee or refugee owners, of outstanding balances of their accounts with banks in Israel and of articles held in safe custody and the contents of lockers. The Israel Government has since been considering practical proposals for implementing its decision and is now able to announce the following release procedure:

"All account holders already receiving releases at a monthly rate of 50 pounds to 500 pounds maximum will shortly receive letters addressed to them at the address given on their previous application forms, enclosing a simple form of request for release and transfer of the remaining balance. The completed form should be submitted either directly or by the applicant or through any local organization he may select, to the nearest branch of Barclay's Bank or the Ottoman Bank, or to the London offices of these banks, or through the nearest UNWRA office. Account holders who have not yet submitted applications, or those whose applications were not eligible under the previous scheme, are required to make application in the above manner on special forms which should be available within 2 weeks at branches of Barclays and Ottoman Banks and UNWRA offices in neighboring countries. Application forms will also be available at the London offices of the two banks.

"The Israel Government will ensure that applications are dealt with expeditiously and certainly within 14 working days of receipt. All amounts deducted under the 10 percent compulsory loan, and all amounts transferred to the custodian from balances of accounts exceeding 500 pounds, will be refunded and included in the final release. The transfer of the amount released will be made in sterling at the rate of 1 Israel pound equal to 1 sterling, in a single payment.

"Applicants requiring release of safe custody articles of contents of lockers must complete a special application form. After verification by the bank and approval by the Israel Government, articles can be released in one of the following ways:

"(a) To the depositor on personal application.

"(b) To his representative on production of an adequate letter of authority.

"(c) By posting the articles either to a bank nominated by the applicant or to the applicant himself on his written application, subject to compliance with normal customs regulations in force at the time, but not to any currency or exchange control regulations, which will not be applied in respect of any article released by the custodian.

"If in terms of (a) the depositor wishes to make a personal application, the Israel Government is prepared to facilitate this by providing an escort and transportation for depositors and their property. The Israel Government reserves the right to refuse entry to any person at its discretion."

I would merely add that since then the forms have been printed and distributed to the banks, and we are awaiting the applications, which as the notice says, will be dealt with in at most 14 days.

The question of compensation

My government reaffirms its willingness to consider a measure of compensation for abandoned Arab lands. Our original position, a perfectly logical one, I submit, was that this question was one aspect of the larger problem, and could best be dealt with in the context of a general Israel-Arab settlement. Subsequently, because of the humanitarian nature of the refugee problem, my government announced that it was prepared to enter into discussions on compensation with any appropriate United Nations organ, in advance of any general settlement.

My government is now giving fresh consideration to ways and means whereby a measure of compensation might be made available, and might be used to help in the process of integration. This is a complex matter, and in order that the committee should have a realistic picture of it, I must mention the two main difficulties which have to be surmounted.

The first, quite simply, is money—the ability to pay. It will be understood, that such a financial operation does not depend only on us, and with the best will in the world, it would be premature to make specific proposals until we have found means of making the necessary sums available.

Provided the necessary funds become available, we are willing in principle to incur these heavy obligations. But here there arises the second of the two problems to which I have referred. This is the state of economic siege which the surrounding Arab countries maintain against Israel. It takes a number of forms: the severing of all communication ties, the outlawing of all trade relations, the illegal blockade of the Suez Canal, the pressures on third parties to cease dealing with Israel, and so forth. We suffer severe losses from this economic warfare. In 6 years of this it had directly and indirectly cost the Israel economy an amount which is probably not less than that of the value of abandoned Arab property, estimated by an expert U. N. body at a figure of 100 million pounds. These losses spell a harder life and sharper austerities in the daily lives of our people. Yet it is poor psychology, for tightening our belts only tightens our resolve and spurs us to greater efforts. The Arabs suffer losses too, particularly Jordan, which denies itself access to our Mediterranean ports and our markets. In fact nobody gains from this wasteful situation, except for such emotional satisfaction as it may give to short-sighted political leaders. Among those who suffer most are the refugees, for no compensation scheme could operate in such an abnormal setting of economic warfare. It would not make sense if Israel were to pump large sums of precious foreign currency into the economies of countries which were at that very time doing their best to ruin Israel's economy. In the formal sense the two issues could be separated; in practice, they are organically connected. The host governments must choose which is more important to them—carrying on a war against Israel in the economic field or making it possible for compensation to be paid. The committee must surely hope that they will adopt the latter course, thus liberating the economic energies of our region for constructive purposes, and above all for resettlement and compensation of the refugees.

Jordan-Yarmuk project

The distinguished delegate of the United States has referred to the negotiations which Mr. Eric Johnston has been carrying on with the governments concerned, including Israel, about the Jordan-Yarmuk development project. As this scheme holds such a central place in UNWRA's plans, I would put on record my interest in it. The Israel Prime Minister and Foreign Minister recently referred to it in the course of an interview which appeared in the U. S. News & World Report on September 17 last. He stated that the idea was eminently sound, "both for its own sake—that is, for the sake of the water settlement—and as a means of getting the parties to realize that they can only achieve something worthwhile if they pull together and not apart. So, from both these standpoints, it is the right approach." Asked about the basic proposals, Mr. Sharett added that "everything depends on the details of the actual plan. That means primarily on the allocation of the waters. If water is going to be used as a political bribe, no agreement will be possible. But if the water will be allocated on the principle of how much water each state actually needs and how much water it can put to beneficial use, that is another thing." Pointing out that our whole future depended on the possibilities of irrigation, Mr. Sharett hoped that Mr. Johnston would hammer out something acceptable to all parties.

These discussions are continuing, and I understand Mr. Johnston will be visiting the area again shortly. Meanwhile the committee may safely discount the distorted Arab accounts given here about this important mediation effort.

Border adjustments

There has been some discussion in the committee on the passages in the director's report dealing with the so-called economic refugees—that is to say, persons who have lost their livelihoods because the demarcation lines between Israel and the Arab States deprive them of access to part of their former farmlands in Israel. It should be remembered that the demarcation lines were determined by negotiation between Israel and the Arab States concerned and incorporated in the armistice agreements between them, which were approved by the Security Council.

Where the demarcation line follows the old frontier of western Palestine, there is no problem of village lands. That is generally the case with the Lebanese and Syrian borders, and in the south with the Egyptian and Jordan borders. But in the central region, a large irregular part of former Palestine territory was occupied by Jordan forces and annexed to Jordan. Between this area and Israel territory the armistice agreement created a new border, which unavoidably cut across village lands in a number of cases. Undoubtedly hardship was caused on the local level wherever a village was thus deprived of a portion of the lands which it used to cultivate. On a lesser scale, the same situation exists with regard to the Gaza strip, another Palestinian area which was occupied and is held by Egypt. Here again, a new border has come into existence.

The distinguished delegate of the United Kingdom has asked whether this problem could not to some extent be relieved by local adjustments of the demarcation line. It is not always feasible for an armistice line, which is also an international border, to zigzag back and forth so as to fit around village boundaries. However, my Government has always been willing to explore the possibility of adjustment.

The armistice agreements themselves lay down that the line can only be altered by the mutual consent of the signatory governments. From time to time we have attempted to deal with the situation by land

exchanges which would overcome some of the anomalies in the frontier. Thus in January 1951 we proposed such an exchange which would have improved the situation in the Qalyubiya area. On May 9, 1952, the Jordan representative informed us that our suggestion was rejected.

On January 30, 1952, negotiations took place for the division of the Latrun no-man's-land. Under this transaction, Israel would have gained some 20,000 dunams and Jordan 25,000 dunams. An agreement was provisionally worked out in the Mixed Armistice Commission. On May 29, 1952, however, we were informed that Jordan had rejected the agreement.

Again, an arrangement for the exchange of land in the Zeita area, suggested by Israel was worked out as a joint plan in the Mixed Armistice Commission by Israel and Jordan representatives, in the presence of United Nations observers. In November 1952, the Jordanians withdrew their agreement to the suggested exchange.

The Israel Government is ready to reopen negotiations on this matter at any time with the Arab governments concerned, within the context of the armistice agreements. Although this subject is outside UNWRA's terms of reference, I have set out the relevant facts because they have a bearing on the question of the economic refugees.

II. REPATRIATION OR RESETTLEMENT

In the various ways with which I have dealt, Israel has tried to contribute to a solution of the problem. We hope to contribute in the future by way of compensation. But it is obvious that Israel cannot solve it. For several years past, it has been clear that the basic solution lies in the permanent integration of the refugees amongst their own kin, in the Arab countries. During these years a number of the most responsible delegations of the United Nations have had the realism to state this view, however unpopular it might be in some quarters. During the present debate there have been fresh affirmations of this evident truth, in particular by the distinguished representatives of the Netherlands, the United States, and France. My delegation owes it to the committee to set out the Israel position on repatriation with complete frankness.

Problem of security

Many governments are concerned with sensitive problems of internal security, and carefully inquire whether those who wish to cross their borders and settle in their countries might not be a danger to the State. Is Israel, of all countries in the world, so fortunately placed that it need take no thought for its own safety? The refugees we are discussing have never identified themselves with our State. On the contrary, they left their former homes, at their leaders' behest, in the course of an armed struggle. The express object of that war was to prevent Israel from being established, in accordance with the General Assembly resolution of November 29, 1947.

The host governments who demand the right of the refugee to return to Israel refuse even now to concede Israel's right to exist, and make it clear that they would destroy it if they could. Their state of mind is unhappily only too clear from their own recent actions and declarations, including statements made in this debate.

Against such a background, is it probable that the refugees would enter our borders in order to become loyal citizens of the state, giving their full allegiance to its government and its laws, willing to defend it against any threat; would they now accept the national objectives of a country which is Jewish by definition, and is dedicated to fulfilling the historic tasks of Zionism? I regret that there is little sign of such a change of sentiment. My distinguished colleagues have

had the benefit of hearing a refugee point of view, and it must have struck them how fully Dr. Tannous corroborated what I have just said. The really significant aspect of his statement was the state of mind it revealed. Since he and his fellow refugees evidently believe that Israel is in illegal occupation of the country, that it is enemy No. 1, that the Arab minority within it is suffering persecution, that this is a hundred years' war—how could we safely throw open our borders to a fresh influx of such people? What is likely is that Israel, beleaguered as it is by hostile neighbors, would also be fatally disrupted from within.

A larger state could perhaps minimize the risk by settling elements of dubious loyalty well within its interior, where contact with unfriendly neighbors might be difficult. Unfortunately Israel has not been endowed with an interior. Our state is 70 miles across at its widest part, 10 miles at its narrowest. The whole country is a border strip, with frontiers that from their length and physical nature cannot be sealed off. What this lack of depth means for our security has been only too plain to us, in our efforts to curb infiltration and marauding. Were there to be repatriation, our internal-security problem would become insoluble, and our country indefensible.

A sovereign right

Israel is deeply concerned with retaining the good will of the world—particularly of those countries which have sympathized with the need of our ancient and sorely tried people to have a home of its own once more. That is why, when the United Nations is faced with this painful problem, we wish to gain your understanding for what has been called our negative attitude on repatriation. It is not a question for us of the semantics of resolutions or the tactics of debates. The question is whether any government and any state can be required to do things inconsistent with its own survival. Here I should like to say a word on our right of decision to admit or not to admit people from neighboring territories. We have listened with deep interest to the views of other governments on this matter. But the determination whether the admission of any person or group of persons to our territory is or is not conducive to the national security or welfare is a sovereign right of the Government of Israel, just as all other countries possess and do not hesitate to apply a similar sovereign right. I am grateful to those of my colleagues who have shown understanding of this problem.

Economic aspect

Reluctance to create a Trojan horse in Israel is a decisive obstacle to repatriation, but not the only one. From the economic point of view it is a mistake to think of repatriation as simply allowing refugees to trek back across the border, and pick up the threads of their former lives in their former homes. One can understand the tendency of all uprooted persons to live in the past. That is a human and a natural feeling which merits our compassion. But the world they once knew has vanished. Their businesses and jobs disappeared during the Arab exodus. The derelict villages have crumbled away; the abandoned lands have been resettled. The repatriates would be, in effect, new immigrants, to be settled afresh in a country which has been rapidly transformed, and bears little resemblance to the territory they once left. In the economic sense, therefore, repatriation is a misleading term. In practice it would not be an alternative to resettlement, but a more difficult and more costly resettlement than elsewhere.

Exchange of minorities

There is a further aspect we must examine. Would repatriation, even a partial repatriation, pave the way to peace between

Israel and the Arab States? In the face of every discouragement, we continue to believe that such peace will come—that Israel and its neighbors will live and work together as good neighbors should, for the benefit of our region as a whole. But we are convinced that nothing could be more calculated to bedevil Israel-Arab relations for all time, than creating in Israel a large Arab irredenta, having the deepest ties with its conational States which surround us. The world is only too familiar with the impact of such minority problems on relations between States. Nearly 20 years ago, when a British Royal Commission first proposed the partition of Palestine, it also suggested an exchange of minorities, for the sake of harmony. This is in fact what has happened, through the rough surgery of a war which was none of our seeking. The bulk of the Palestine Arabs are in the Arab lands; the bulk of the Jews from those lands have been resettled in Israel. This two-way movement has created a factual situation which cannot be rubbed out, but on which a better future could be built.

The 1948 resolution

The General Assembly Resolution of 1948, which spoke of a right to return was adopted only a few months after the end of the mandate, at a time when the fighting was not yet over. Even at that time, when the realities of the problem were less plain than they are now, the Assembly qualified its recommendation with reference to two criteria: peace and practicability. The views I have expressed today do not offend against the original resolution. The two stipulated conditions for return do not exist, and it is not helpful to the refugees themselves to keep the idea alive in their minds.

Lessons from other areas

It may be instructive to glance at the experience of other areas. The political changes which took place in the immediate postwar period, including no less than five partitions, produced a number of large-scale refugee movements. I would refer, for instance, to the 13 million refugees in West and East Germany, the 15 million in India and Pakistan; the 400,000 Karelians in Finland; the 350,000 Volksdeutsche in Austria; the 2½ millions who moved from North to South Korea and an unknown number in Indochina. The circumstances may have differed in each of these problems, but they have certain striking features in common, to which I would draw the Committee's attention:

Firstly, in no case was repatriation the answer to the problem;

Secondly, in each case the problem was solved because there was no conational or coreligious host country which was willing to solve it;

Thirdly, international organizations or private charitable bodies could assist a willing host country, but could not be a substitute for one.

Jewish experience

These conclusions are also borne out by Jewish experience since Hitler came to power. I do not need to recall the prewar problem of finding new homes for Nazi victims. There was no Jewish State, but there was a community in Mandatory Palestine which had the international status of a Jewish National Home, and which was eager to take in as many as possible of its persecuted brethren. As a result, nearly 200,000 found a new life there—a large slice of the total problem. After the war, the world once more faced the pitiful challenge of the Jewish DP's in European camps, and the Jewish communities which faced persecution in a number of countries. The problem seemed insoluble until the birth of Israel. Jewish homelessness was no longer an international concern, because now there was a national

State prepared to take the problem on to itself.

Challenge to Arab statesmanship

The only solvent for mass refugee problems in our time has been through the refugees being able to invoke the family sentiment of kindred host countries. That lesson has a bearing on the present case too. The problem presents a major challenge to Arab statesmanship—which is whether it has the capacity to make a home for these refugees who live amongst their own relatives. Nobody would wish to minimize the size of the task, its real difficulties, or the time it will take. The director has referred to some of these factors in his able report. One special difficulty is that the great bulk of the refugees have remained concentrated around the armistice lines, whereas the most promising resettlement areas are farther afield in the Arab hinterland.

But the elements of a solution do exist. I was surprised at the talk we have heard about foreigners. The Arab peoples insist that they are a single people, and that no Arab is a foreigner in any of their countries. Surely this makes it feasible to resettle the refugees among 40 million of their kin in 8 sovereign states—with unexploited land and water in some—with huge oil revenues in some, and with international funds and assistance available in generous measure. The ultimate factor is not physical resources, but the will to do so, and the courage to say to their own people and the refugees that it must be done.

The present discussion has revealed very mixed feelings. Our admiration for the splendid work done by the director and the agency in feeding the refugees and providing them with essential services, is tempered with dismay at the lack of progress toward a solution, after 6 years of international effort. The United Nations and the contributing governments are now being asked to carry the burden for 5 more years. We can but hope that during that time the problem will be substantially settled. That will only happen if it is lifted out of the political and emotional bog in which it is now so unhappily embedded, and if it is clearly and frankly examined. I have tried to put the Israel Government's views before the committee in that spirit.

William Wallace Royster

EXTENSION OF REMARKS OF

HON. EUGENE J. McCARTHY

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mr. McCARTHY. Mr. Speaker, today, March 7, is the 83d birthday of William Wallace Royster, a former resident of Glenwood, Minn., and now of Vallejo, Calif.

Numerous railroad employees, especially those of the old days, value the contribution that Mr. Royster made to the idea of a pension plan for railroad employees. Many old-timers of the railroads have expressed deep and heartfelt gratitude for Mr. Royster's efforts.

His story, as told to me by Gottfrid Lindsten, is that after completing his run as a Soo Line engineer in Minnesota, Mr. Royster worked into the late night hours to develop a railroad pension plan that was one of the earliest of these plans.

The essentials of a pension plan were developed in 1928 by Mr. Royster, when various railroads offered gratuity pensions to such employees as the management considered worthy, which pensions could be terminated at will by the railroads. In these plans discrimination was possible, but Mr. Royster's plan sought to eliminate possible injustices of the gratuity plans, making it obligatory for the railroads to pay pensions to qualified employees. His plan, printed in pamphlet form, was filed with the Minnesota Historical Society in St. Paul and with the Smithsonian Institution in Washington.

Many railroad employees supported Mr. Royster's plan; many joined his movement to effect such a plan. Their efforts, as well as those of many others, were successful when the Railroad Retirement Act was passed by Congress and signed into law by President Franklin D. Roosevelt.

It is fitting, therefore, that William Wallace Royster be remembered publicly today as he is remembered by many of his friends and coworkers, the old-timers of the Nation's railroads.

Mr. Good Neighbor

EXTENSION OF REMARKS OF

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mr. WILSON of California. Mr. Speaker, under leave to extend my remarks in the Record, I include the following editorial from the San Diego Union of March 1, 1955:

MR. GOOD NEIGHBOR

In the realm of inter-American relations, the term "good neighbor" has become a diplomatic catchword in recent years. Deplorably, the term has sometimes proved to be little more than a mere catchword. We have often been charged by the Latin Americans, and not always unjustly, with caring more for the show than the substance of good neighborliness.

In helping to restore the spirit of the term, the present tour of Vice President Nixon through the Central American Republics is performing an invaluable service to our foreign policy in that area. The Central Americans have found a genuine friend in Mr. Nixon, and his warm personality has done much to restore amity between their nations and ours.

In the realm of diplomacy, Mr. Nixon's visits with Central American chiefs of state already have produced significant results. Without appearing to meddle in their internal affairs, Mr. Nixon has succeeded in bringing the Presidents of Nicaragua and Costa Rica closer to a peaceable settlement of their long dispute than they have been for many months. This he has been able to do because these leaders recognized and respected Mr. Nixon's sincere friendship, and his desire to serve the cause of inter-American amity.

For years to come, RICHARD NIXON will live in the minds and hearts of these people as Mr. Good Neighbor himself.

The Tyranny of Labels

EXTENSION OF REMARKS OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 28, 1955

Mr. MULTER. Mr. Speaker, I believe all our colleagues are vitally interested in the health of this Nation and are, therefore, also interested in a good health program. With this in mind, I am pleased to direct the attention of our colleagues to the following very fine article written by Dr. Max Seham, which appeared in the February 28, 1955, issue of the New Republic magazine. Dr. Seham, a practicing physician in Minneapolis, is a member of the Committee for the Nation's Health.

THE TYRANNY OF LABELS

(By Max Seham)

President Eisenhower, in his 1955 health message to the Congress, has placed major emphasis on the renewal of a proposal rejected by the 83d Congress last year—a limited reinsurance plan. This plan, in the President's view, "is the only logical alternative to socialized medicine." He counts on it to solve the problem of the continually rising costs of medical care by extending health insurance to farm families, providing more protection against the costs of prolonged illness, and insuring low-income families against doctor bills, as well as hospital bills.

Briefly, the Eisenhower reinsurance scheme would set up a \$25 million governmental fund to stimulate insurance companies into offering better health coverage by providing for "broad sharing among health insurance organizations of risks of experimentation."

The fund would pay 75 percent of a private company's losses in any one year, if according to designated yardsticks such losses were unavoidable. The theory is that with this Federal guaranty behind them, insurance companies will take the risk of giving better coverage to the 100 million present holders of bona fide voluntary insurance, and that they would be encouraged to enroll a large segment of the 63 million people who now have no health insurance at all.

But the administration-sponsored health bill of 1955 does nothing to require significantly more comprehensive benefits from insurance companies. In fact, the bill's suggested model plan for lower-income families would leave the insured to pay such an appreciably large and unpredictable portion of his medical bills that it is difficult to see how a low-income man could find such a policy attractive, and hence, why any insurance company would want to bother about it.

What is badly needed if health standards in the United States are to be raised is lowering of premiums for low-income groups and lowering the cost of enrolling rural groups and self-employed persons. The reinsurance plan does nothing in the direction of cutting the high cost (reflected in premiums) of enrollment. And it cannot of itself improve benefits without increasing the costs which essentially determine premiums. The reinsurance plan cannot, in effect, lower the cost of health insurance. All it encourages is experimentation with different arrangements of benefits, which needs no encouragement at all.

By placing the health of the people in the hands of the commercial insurance companies, the administration's plan does not provide for social health insurance in any accepted meaning of the term. Premiums

still would be too high for those who need protection most.

When the President's plan went to Congress last year the odds were in its favor. American Medical Association leaders before they analyzed the bill were elated by the President's assurance that it would "forever lay the ghost of compulsory health insurance." They were so sure of the New Look that they even dropped their multimillion-dollar national education campaign against progressive health legislation.

Insurance company representatives were invited to the White House and handed the program with luncheon. New and Fair Dealers in the House and Senate offered no active opposition. The House Committee on Interstate and Foreign Commerce reported the bill with no important changes. The House Rules Committee approved it unanimously. Then came a stunning bipartisan defeat, 238 to 134, 75 Republicans joining 163 Democrats to kill it.

Why was this pet administration project—which denied the label of subsidy, claimed to embody the principle of self-help, and placated an economy-minded Congress—so decisively defeated? It now seems clear that Eisenhower was hit from four sides—by the commercial insurance companies, by the AMA, by the Democrats, and by the spokesmen for the public. The plan satisfied no one.

The insurance companies rejected the plan because, as they put it, the impaired health of a large minority of the population made it unprofitable to insure these people: "To attempt to insure the indigent would impair if not eventually destroy voluntary insurance." They also said, with more candor than the administration could muster, that the Federal reinsurance fund would bring Government into direct competition with private business. They disagreed with Secretary of Health, Education, and Welfare Oveta Culp Hobby's assertion that the plan would reduce the cost of health insurance, and make it available to groups or areas not now within the reach of insurers. They concluded that they saw "no need for such a plan at the present time." They declared their confidence in this administration, but they feared the plan might become more socialized under another administration. The AMA, which deserves most credit for defeat of the bill, gave practically the same arguments, stressing the danger of Government interference and calling the plan "an entering wedge toward state medicine." So much for the administration's private enterprise allies.

On the other side of the fence, Members of both Houses also spoke their opposition, but for entirely different reasons. SAM RAYBURN called the bill a "blundering stupid way to start a health program." Senator JAMES MURRAY, Democrat, of Montana, thought it was "puny, paitry, and parameciumlike." Representatives of organized labor, farmers, and white-collar workers joined against the bill. People from both urban centers and neglected rural areas told tragic stories of their's and neighbor's experiences with disease that is allied to poverty. Negroes related incidents of discrimination which cut them off from hospital care. The testimony added up to a demand for nothing less than early and continuous, preventive, diagnostic, and curative care for the entire family.

This year's plan has been completely rewritten in an attempt to meet some of the criticism leveled against it last year; but the changes are superficial; it is the same plan.

Studying the President's message, I find myself confused by his semantics. He seems

to be speaking with two voices. As chief spokesman for the new look he repeatedly insists that he is "flatly opposed to socialized medicine and will continue to reject it." As Chief Executive of our country he urges Congress to enact into law a health program supported by Federal tax funds. Nowhere has he defined what he means by "socialized medicine." Does he have in mind a pure State medicine system like that in Russia, with the State in complete control of the entire medical system? Does he agree with those who label President Truman's compulsory (contributory) pre-payment plan, Kremlin directed? The cold war over socialized medicine has created a babel of language. Whether on the floor of Congress or in town hall debates, it has become a popular sport for opponents of social progress to call anyone who proposes national health legislation a Socialist. Reforms in health legislation have too long been retarded or defeated, not because the programs were impractical or revolutionary, but because the tyranny of labels has frightened legislators from backing health measures.

Whether we recognize it or not, the American medical system today is a mixture of what may be called limited State medicine—socialization through Government financing and/or control—and private practice. Of total 1954 medical expenditures amounting to \$14 billion, Federal tax funds supplied some \$4.5 billion. And the programs this Federal money is spent on all are continued in Eisenhower's plan: Vocational rehabilitation; hospital, nursing-home, and convalescent-home construction; public-assistance grants; public-health services; research on air and water pollution; mental-illness control; medical research; and medical care for the 500,000 Indians in America. These matters, he has even said, required boldness and imagination (qualities conspicuously absent from his recommendations) and a little more money. Our system could not function without such a partnership.

Unless we get rid of the phrase "socialized medicine" or agree upon an exact meaning for it, there will never be a meeting of the minds. Precise and meaningful adjectives like compulsory, or contributory, Government, tax-supported, grants-in-aid, etc., might help. The test after all is not whether a health program is private or public, Federal, State, or local, but whether it is a sound, practical, democratic way to do the job.

Like the President's semantic confusion about socialized medicine is that about another abused term—subsidy. Why does Eisenhower deny so vehemently that his reinsurance plan is a subsidy? Are all subsidies pure socialism? And what about the subsidies for farmers and banks and airlines, etc.?

Yet despite the confusion there is reason to think that the 20-year cold war in medical economics may reach a decisive stage in the 84th Congress this year.

For many years the American people, confused by political propaganda, frightened by the bogey of socialized medicine, were complacent and indifferent to their best health interests. But through firsthand, cumulative experience with the financial hazards of illness, they have become aware of the pressing needs for better financial protection and more equitable distribution of medical services. The present system of private practice plus the limited benefits offered by commercial and medical-society prepayment plans are but a stopgap for millions of people who suffer preventable sickness and die prematurely because they do not have the dollars to buy the miracles of modern medicine, surgery, and hospitalization.

New 50-Star Flag Designed by Orpha Klinker, Noted California Artist

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 23, 1955

Mr. McDONOUGH. Mr. Speaker, now that statehood for Hawaii and Alaska is a definite possibility, it is appropriate to give some advance consideration to the necessary change in the design of our flag which must be made when statehood is granted.

Too often while much time is given to the deliberation on the question of so vital an issue as statehood for a Territory, little attention is given to the necessary flag changes until statehood is granted and an immediate change is necessary so that our flag will carry the white star to represent the new State on the field of blue, which represents the whole of our Union.

Miss Orpha Klinker, of Los Angeles, Calif., one of our outstanding artists whose paintings have been exhibited in public and private showings, has become interested in probable change in our flag design, and has developed one of the most appropriate suggestions, in my opinion, to be submitted for consideration since the original design was completed by Betsy Ross.

Miss Klinker is a native daughter of the Golden State of California, from one of the first families of the State. She is established as an artist of great creative ability, and is especially noted for her portrait and landscape paintings.

She is also the creator of a series of paintings of historical events and sites depicting the history of the State of California. Among her famous works is her painting of The Four Freedoms in which freedom of religion, freedom of the press, freedom from want, and freedom to petition the Government of the United States are represented.

Miss Klinker has conceived a new and unique design of the American flag which includes two additional white stars on the blue field to represent Hawaii and Alaska, when they are admitted as new States in the Union.

The total of 50 white stars are arranged on the blue field to spell the word "Freedom." Nothing else in the design of our flag is changed.

I have seen the design and it is very inspiring, patriotic, and carries a message to the world of the precious freedom the people of the United States enjoy under the United States Constitution and the Government of the United States.

In my opinion, Miss Klinker's design adds beauty and additional interest to the flag of the United States, and it has already been submitted to the Heraldic Branch of the Department of Defense for consideration with any other new designs proposed for the flag when

Hawaii and Alaska are admitted to the Union.

The proposed freedom design is most appropriate because the flag of the United States of America is an emblem which stands for freedom from oppression to people of every other land on earth. It represents a Nation where there is equal opportunity for every citizen, where there is complete freedom of religion, where a free press can publish the truth to the people uncensored by Government dictatorship.

We seldom hear of a citizen of the United States renouncing his native land and leaving America to take up citizenship in some foreign land.

But millions upon millions of people from all other parts of the world are constantly seeking admission to the United States, eagerly awaiting the day when they can leave their native lands to come to America where they may enjoy the benefits found nowhere else in the world.

The United States has established in the world a unique experiment in human relations. Here under the stars and stripes, the American people established a nation dedicated to the individual liberty of every citizen. This is a far cry from many other parts of the world where men for generations have been ruled by monarchs or dictators, and have never known true freedom.

Today it is of vital importance, if we are to preserve our Nation and our American way of life, that our citizens be aware of the blessings that are our heritage, and that we realize that only through constant vigilance can we maintain the freedoms which were guaranteed to us by our Constitution and Bill of Rights when the United States was founded.

Our flag is the symbol of all that America represents, of the opportunity offered to us in this Nation, of the wealth of our land which supplies our food and daily needs, of the freedom which makes each man the master of his own destiny.

On June 14, 1777, the Continental Congress adopted a resolution which stated that "the flag of the 13 United States shall be of 13 stripes of alternate red and white, with a union of 13 stars of white in a blue field representing the new constellation." This resolution was promulgated by the Secretary of the Congress on September 3, 1777.

Since that date the Stars and Stripes has proudly flown as the official emblem of our great Nation. It was first carried into battle in the Battle of the Brandywine on September 11, 1777, and has gone with our troops into every battle since that day on land, on sea, and in the air, and from our own shores to the far corners of the earth.

Since that day in 1777 when the Stars and Stripes first unfurled as the emblem of our great Nation, the country has steadily expanded, and with each forward step new States have been admitted to the Union, each State a new star in the flag.

The rearrangement of the constellation on the field of blue has followed the admission of each new State, and now, once again the American frontier has

expanded so that two more Territories clamor for admission to statehood.

They cannot be long denied, and again we must consider a change in the design of stars on the flag. The design created by Miss Klinker symbolizes the spirit of freedom which has ever represented the guiding principle of our American way of life, and when we again rearrange the stars of the flag, adoption of this design would truly represent within our flag the spirit of America.

Lack of Understanding Poses Problem

EXTENSION OF REMARKS OF

HON. WILLIAM H. NATCHER
OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Lack of Understanding Poses Problem" which appeared in the February 26, 1955, issue of the Messenger and Inquirer of Owensboro, Ky.

The editorial is as follows:

LACK OF UNDERSTANDING POSES PROBLEM

Correspondents traveling about Europe and Asia keep talking about the continuing current of anti-American feeling that exists in many places. We would be foolish if we were not disturbed about this.

Basically the catalog of complaints is all too familiar. We're imperialistic, our policies are confused, we're rattling the sword, we're insensitive to the real needs of other nations, we won't take advice, we're brash and inexperienced, and so on.

Much of the criticism is unfair, but not all of it. And just because we know a good deal is unsound, we must not fail to search out and seek to meet the reasonable complaints. We are not the perfect people some Congressmen like to say we are. Any adult American knows we have our shortcomings, that we have made many mistakes, and will make more.

Still, we are not as bad as some unhappy foreigners would paint us. Their tendency to overstress our failings, and even to manufacture some, is gravely puzzling unless we look hard at these people's history and their current difficulties.

Some of these nations once were great leaders in their own right. They cannot help feeling resentment at the young America which now has become world leader. Prodded by envy, bitter at their lost power and status, they assail what seems to them the symbol of their troubles, though it be a country avowedly their friend and helper.

Other nations never have had power and have either just cast off or are trying to cast off the yoke of outside rule. As the colonial grip on them has weakened, they have been chagrined to learn they are moving into a tense world where two colossi—Russia and the United States—stand at the head of great rival forces contending for dominance.

They can see America only as the friend of the colonial powers. They are unimpressed by argument that the Communist conqueror is a greater threat than any they ever knew.

Moreover, they have not found the uses of their long-sought freedom so easy as they may have imagined. Confronted by today's harsh realities, they have been plagued by frustrations and defeats. "As most men do—

especially including Americans—they have sought a scapegoat. The United States, rich friend of the hated colonial overlord, was the logical choice: We are to blame for all their ills.

As France worries more about her ancient despoiler, Germany, so the lands of Asia can find scant room for fear of a new enemy in minds crowded with the old colonial hatreds.

We are loved even less because we, having been burned twice in great wars, are alert this time to the menace to peace, and are pressing these peoples to join old enemies—whom they know firsthand—to stand against a new enemy whom they know only second-hand.

In all this they are showing themselves to be terribly human. Probably these attitudes will change only with the long passage of time. All we can do to assist the change is try unflinchingly to show these peoples what we really are, and extend to them more understanding and more generosity of spirit than they seem willing to offer us in return.

Israel's Border and Security Problems

EXTENSION OF REMARKS OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, February 25, 1955

Mr. MULTER. Mr. Speaker, I direct the attention of our colleagues to the following very interesting article written by Maj. Gen. Moshe Dayan, which appeared in the January 1955 issue of Foreign Affairs:

ISRAEL'S BORDER AND SECURITY PROBLEMS

(By Maj. Gen. Moshe Dayan)

I

Seven years after its war of independence the State of Israel still faces a security problem of unusual complexity. The area of the country is only 8,100 square miles. But owing to the configuration of its territory there are 400 miles of frontier. Three-quarters of the population of Israel lives in the coastal plain, running from north of Haifa to south of Tel Aviv, with a slender salient branching off to Jerusalem. This densely settled area has an average width of no more than 12 miles between the Mediterranean and the Jordanian border. From the Israel Parliament buildings in Jerusalem the armed sentries of the Jordan Arab Legion can be seen a few hundred yards away. The headquarters of the Israel general staff in the coastal plain are within clear view from the hills which mark the Jordan frontier. The country's main roads and railways are exposed to swift and easy incursion. Scarcely anywhere in Israel can a man live or work beyond the easy range of enemy fire. Indeed, except in the Negev, no settlement is at a distance of more than 20 miles from an Arab frontier.

Thus the term "frontier security" has little meaning in the context of Israel's geography. The entire country is a frontier, and the whole rhythm of national life is affected by any hostile activity from the territory of neighboring states. On the other hand, the Arab States are in no such position. Border tensions affect a narrow fringe of their territories, beyond which stretch deep hinterlands entirely remote from the hazards and strains of frontier life. An American citizen who can cross a vast continent without seeing a foreign, let alone a hostile, face may require an unusual measure of imagination and humility to un-

derstand the unique vulnerability which geography imposes upon the people of Israel.

The effects of geographical vulnerability are aggravated by the fierce antagonism directed against Israel across her embattled frontiers. There is no other state in the world community whose very right to existence is so persistently challenged by all its contiguous neighbors. This is not the classic pattern of international conflict in which neighboring peoples recognize each other's statehood but are divided by specific disputes which they have failed to reconcile. The hostility of the Arab governments toward Israel is more fundamental. It has passed through three phases: First, before 1948, there was a determination to prevent the establishment of an independent Israel; second, in 1948, there was an unsuccessful attempt to destroy Israel's independence at its birth by armed assault; and, third, in the period 1948-54, there has been an attitude of inveterate revenge based on nonrecognition and the undying hope of Israel's extinction. The elementary duty of members of the United Nations to recognize each other's right to sovereignty and integrity has never found any reflection in the relations of the Arab world with Israel.

More than 15 years ago a British Royal Commission had recorded the official Arab view presented by the Mufti of Jerusalem that the Jewish population of Palestine was too large and should be reduced by military action. In November 1947 the United Nations' recommendation for the establishment of a sovereign Jewish State in Palestine was the signal for a purposeful attempt to put this doctrine into effect. In the General Assembly, Arab spokesmen frankly asserted their refusal to acquiesce in the new international policy or even to abstain from using force against it. Six delegates mounted the rostrum of the world peace organization to announce their intention of violently destroying the community whose right to independence had just received international confirmation. On November 30, 1947, this assault began with the slaughter of 36 Jews in the first week of hostilities commenced by Palestinian Arab guerrillas. A liberation army organized by Arab governments moved into Palestine to continue the carnage. Finally, on May 15, 1948, when the British Mandate expired, the armies of all the Arab States invaded Israel with the avowed aim of destroying her independence. Iraqi and Jordanian battalions took over the Arab half of Palestine, then pressed on toward the coastal plain while Israel stood with her back against the sea. Syrian tanks crashed into farming villages in the upper Jordan Valley. Lebanese regulars and irregulars from Syria converged upon Galilee. Egyptian forces began what was intended as a triumphal march on Tel Aviv, coming within 9 miles of the city's suburbs. Aircraft bombed Israel's undefended cities. A ring of fire encircled Jerusalem and exposed its population to the horrors of bombardment, famine, and siege.

There has never been any serious dispute about the origins of this assault of its aggressive character. In the spring of 1948 a United Nations Commission reported: "Powerful Arab forces are defying the resolution of the General Assembly and attempting to overthrow by force the recommendations contained therein." The authoritative international view was further expressed in the United Nations by Ambassador Warren Austin, speaking for the United States, in the Security Council, on May 22, 1948:

"Probably the most important and the best evidence we have on that subject is contained in the admissions of the countries whose five armies have invaded Palestine that they are carrying on a war.

"Their statements are the best evidence we have of the international character of this aggression. They tell us quite frankly that their business in Palestine is political and

that they are there to establish a unitary state. Of course, the statement that they are there to make peace is rather remarkable in view of the fact that they are waging war."¹

The American representative then invited his colleagues to determine that this "aggression of international character" constituted a breach of the peace within the meaning of article 39 of the U. N. Charter. The fighting between May 15 and June 13, when a 30-day truce was concluded, had involved the Arab governments in the open rejection of the Security Council's 3 cease-fire orders.

When the 30-day truce expired, the United Nations ordered its renewal. The Arab States refused to accede, arguing with frankness that if there no fighting it would be impossible to prevent the State of Israel from continuing to exist. In a resolution adopted on July 15, 1948, the Security Council renewed its verdict of Arab responsibility by resolving that the Arab refusal to prolong the truce constituted a breach of international peace and security. This was the first time that such a determination under chapter VII of the Charter had been made by the United Nations on any issue.

The repulse by ill-equipped defenders of this assault was Israel's first achievement, and it won her high renown. But both the Army and the civilian population sustained cruel loss of life. Some of the patient rewards of five decades of pioneering had been ravaged. The State of Israel had come into existence in the shadow of imminent destruction, and the memories of escape from fearful dangers have attended the people of Israel from the very dawn of their independence. These memories abide with us still, and go far to explain the depth of our preoccupation with security. Nor have the Israel people ever forgotten that in their supreme ordeal they received no direct assistance from outside, although waves of sympathy flowed in from free peoples everywhere and provided a valued consolation.

The acceptance of a permanent truce in July 1948 did not signify the end of the war. Contrary to the terms of the truce and to the rulings of the United Nations Truce Supervision Board, the Egyptian Army blocked the supply road to the Jewish villages in the south and renewed the attack on Israel positions in the Negev. A convoy was sent to supply the Negev villages. It was heavily attacked by the Egyptian forces from positions secured after the truce. Seven days' more fighting ensued, which gave to the Israel forces control of Beersheba, center of the Negev, as well as of the northern Negev with the exception of the Gaza strip and the Faluja pocket. In a statement made on October 25, 1948, by the United Nations Chief of the Truce Supervision Board to the Egyptian commander in chief in Gaza, he attributed the renewal of the fighting in the Negev primarily to the failure of the Egyptians to comply with ruling No. 13 of the Truce Supervision Board regarding the passage of convoys to the Jewish villages in the south. In March 1949 the Israel forces occupied the Wadi Araba up to the Gulf of Elath and thus gained control of the Negev—a desert area which had been part of Israel since her establishment but had been unoccupied by any forces up to that time. Neither the Egyptians nor the Jordanians had ever possessed international sanction to occupy this part of Israel in the first place, and if their patrols had ever crossed or scantily supervised it prior to its occupation by Israel—a claim that was never substantiated—their expulsion was a blow against aggressive conquest.

The purpose of the Arab invasion had been the destruction of the state of Israel and the ejection of the Jewish population from

the soil of Palestine. In a statement made by Azzam Pasha, then Secretary General of the Arab League, on May 15, 1948, the eve of the invasion of the Arab armies, the Arab war aim was formulated in unambiguous terms: "This," he said, "will be a war of extermination and a momentous massacre which will be spoken of like the Mongolian massacre and the crusades." Indeed, the Arab attack, especially in its first guerrilla stage, did not lack cases of disregard of the rules of war.

There are at present more than 180,000 Arabs living in the state of Israel, but not a single Jew survives in any part of Palestine that came to be occupied by the invading Arab armies. The Jewish quarter in the old city of Jerusalem, with its ancient synagogues and monuments, was completely destroyed; even the Jewish cemetery of the Mount of Olives was desecrated and laid waste.

II

In 1949 a series of armistice agreements were concluded under United Nations auspices between Israel and each of the Arab states which had participated in the war, with the exception of Iraq. It was assumed that this step marked the conclusion of the war and that the armistice would herald the early advent of a lasting peace. Indeed, in their preambles, the armistice agreements were described as designed to facilitate the transition from the present truce to permanent peace in Palestine. They provided that no aggressive action should be undertaken or threatened by either party against the other and that the right of each party to its security and freedom from fear of attack by the armed forces of the other was to be fully respected. The conclusion of the armistice was described as an indispensable step toward the liquidation of armed conflict and the restoration of peace in Palestine.

The events of the past 5 years have belied these hopeful expectations. No sooner had the Arab States recovered from the shock of Israel's successful resistance than they began to question the character of the armistice agreements as a phase in the progress toward a final settlement. So far from regarding them as an arrangement "to facilitate the transition to permanent peace," the Arab signatories, in a joint statement issued on April 1, 1950, pledged themselves not to conduct peace negotiations with Israel and declared that any Arab State doing so would be treated as a traitor and an outcast. Subsequent policy has been in full accord with that declaration. Instead of abstaining, as required by the terms of the armistice, from all threats of aggressive action, their spokesmen in parliament, press, and radio have incessantly warned Israel of a coming second round.

This concept of Israel as a temporary bridgehead to be eliminated by war or blockade still dominates Arab official utterances. "In demanding the restoration of the refugees to Palestine," wrote Muhammad Salah-ad-Din, a former foreign minister of Egypt, "the Arabs intend to annihilate the State of Israel."² No less outspoken was King Saud in a statement made in Riyadh soon after his accession to the throne: "The only way which the Arab States must go is to draw Israel up by her roots. Why should we not sacrifice 10 million out of 50 million Arabs so that we may live in greatness and honor?"³ Against this mood of war and revenge, reason has little chance of prevailing. "The Jews are our enemies," Baghdad radio told its listeners on June 28, 1949, "and it does not matter how peace-loving they may be. We shall never cease to prepare for the day of reckoning, for the second round, when the Jews will be driven off our soil."

¹Footnotes at end of speech.

²Footnotes at end of speech.

In this matter, the new regime in Egypt, contrary to early expectations, has not diverged from the traditional slogans. In his opening address to the Arab armistice delegations, made in Cairo on April 13, 1953, Mohammed Naguib, then President of Egypt, said: "The existence of Israel is a cancer in the body of the Arab nation." Col. Gamal Abdel Nasser, Prime Minister of Egypt, was equally frank: "Israel is an artificial state which must disappear," he said on May 8, 1954, to a representative of the Greek newspaper Kathimerini. During his visit at the Lebanese Parliament on July 1, 1954, the Egyptian Minister of National Guidance, Maj. Salah Salem stated: "The evacuation of the occupation forces from our country will free essential forces of ours. We shall then be able to raise our voice and to liberate Palestine. We shall prepare the forces that will liberate Palestine. And, with the help of God, there will be a great revival."

It has been a habit of Arab propaganda to assert that their refusal to make peace is justified by the prior demand to have the original recommendation of the United Nations fulfilled. There is no juridical or moral force in the contention that Israel has a duty to set aside its rights under existing treaties in favor of the recommendations which Arab governments themselves destroyed by force. Indeed, it was because of Arab opposition that the United Nations abandoned its 1947 resolution and called upon the parties to reach their own binding agreements. This they have done; and nothing in the armistice system may now be changed without consent. In December 1952 the General Assembly of the United Nations rejected by vote the Arab thesis that fulfillment of old recommendations was a prior condition of a negotiated peace. But in any case, this argument belongs to the tactics of controversy, not to the reality of the Arab position. Mohammed Salah-ad-Din said recently: "The Arabs will not be satisfied with the implementation of United Nations resolutions. We shall only have complete satisfaction when Israel is finally blotted out from the map of the Middle East. The Arabs will find no rest until this cancer has been removed from their heart." While on November 3, 1954, the Syrian Prime Minister, Faris Al Khoury, declared in Parliament:

"Certain Arab leaders say that there can be no peace with Israel before the implementation of the U. N. resolutions. . . . They link peace with Israel with these terms. I denounce such a statement, and I say that there is no connection between peace with Israel and the return of the refugees and the U. N. resolutions. . . . Whether they return the refugees or not, peace must not be concluded with Israel in any form. I do not believe that the Arabs would approve peace so long as the Jews remain settled in that spot, the heart of the Arab States, threatening all those around them, and spreading corruption and evil. . . . How can we possibly make peace with them while they remain there? This was the first round and, unfortunately, it was not successful. The Arabs, we included, should prepare for a second round and do their utmost."

In such an atmosphere, the idea of progress towards peace with Israel is regarded as a form of treason: "Whoever thinks of making peace with the enemy signs the death warrant of all the Arab nations," said Dr. Fadhl Jamali, the Foreign Minister of Iraq, on his way to Washington to negotiate for the receipt of weapons for the Iraq Army.

Such statements cannot be lightly regarded in any discussion of Israel's security problem. No other state has Israel's experience of being constantly threatened with violent destruction by hostile neighbors a few miles away.

Nor has Arab hostility been confined to warlike propaganda. From the very incep-

tion of the State of Israel, an economic boycott has been enforced against it by the Arab States, of which the most significant aspect is the closing of the Suez Canal to all Israel shipping and the interference with the passage of ships of other nations carrying cargoes to Israel. This action of the Egyptian Government is a violation of the Constantinople Convention of 1888, under which the power contiguous to the Suez Canal is bound to keep the canal "always . . . free and open in time of war as in time of peace to every vessel of commerce or of war without distinction of flag." The Security Council of the United Nations on September 1, 1951, ruled that under the Armistice Agreement neither party could assert that it was actively a belligerent or entitled to exercise the right of visit, search, and seizure. The Council found that Egyptian interference with the passage through the Suez Canal of goods destined for Israel was "inconsistent with the purpose of the armistice agreement" and "an abuse of the exercise of the right of visit, search, and seizure." It called upon Egypt to terminate all such restrictions. No heed has been paid to this decision, and the Egyptian blockade has recently taken the form of the flagrant seizure of an unarmed Israel ship in the international waterway.

A widely ramified boycott machinery has been set up, with headquarters in Cairo, to prevent trade between the Arab States and Israel, indeed between Israel and other countries. International firms trading with Israel are blacklisted, airlines and shipping companies are denied servicing in Arab airports, and harbors, if they maintain contact with Israel. A conspicuous example of this policy was the campaign of intimidation conducted by the Arab States against the German Federal Republic which had signed a reparations agreement with Israel. Danger to international air traffic has been caused by the refusal of Arab airports to provide flight information to aircraft proceeding to or from Israel. The boycott of the Arab States against Israel extends even to the denial of information on the movement of infectious diseases or locusts. Neither considerations of humanity nor the common ills of nature have prevailed against this intense hostility.

III

The facts already enumerated would themselves be sufficient to give a disquieting picture of the threat to Israel's security. No state is as vulnerable as Israel in the configuration of its frontier; none has such memories of recent aggression; none is beset by the nerve-racking experience of hearing the renewal of aggression repeatedly threatened; none is assailed even now by every form of hostility short of regular warfare. But the picture is still not complete without reference to the wider international context, which subjects Israel's fragile security to additional strains.

Israel, while subjected to regional hostility, is not immune from any of the dangers which might ensue from a world conflict reaching into the Middle East. Indeed, a great power conflict in the Middle East would face Israel with a double peril—attack by an invading great power and a simultaneous assault by neighboring Arab states.

Moreover, Israel faces these manifold dangers with no sure prospect of assistance from any quarter. Israel is not integrated into any system of defense pacts or security guarantees. The Arab League collective security pact, the British treaties with Iraq, Jordan, and Egypt, the defense association growing up around Turkey and Pakistan, and American arms aid agreements in the Middle East are all oriented exclusively toward the Arab states and are based on Israel's exclusion. There is thus not a single country in the world which has contracted a firm, unequivocal obligation to help defend Israel by armed force in the event of aggression. Recourse

to the United Nations Charter which in 1948 had some effect in limiting the duration of the war and localizing its effects is now a dubious safeguard. In the present conflict between the great powers and in the light of the veto provision twice exercised in the Arab-Israel context by the Soviet Union, it may be doubted whether Israel, if attacked, could even obtain a cease-fire resolution from the Security Council. Six years ago the Security Council was able to adopt five such resolutions, two of which the Arab States obeyed and three of which they defied. Thus not only does Israel face formidable dangers; she also faces them in unusual solitude.

The effect of great-power policies in the present international situation has been to increase this already grave disadvantage. For, while the Soviet Union has twice prevented any action in the Security Council favorable to Israel's security, the Western Powers have embarked upon a policy of unilateral Arab rearmament. The British treaties with Jordan, Iraq, and Egypt constitute guarantees of Arab security of a kind which Israel entirely lacks. But now, in addition, Egypt under the new treaty with Britain is about to inherit one of the greatest military bases in the world, with its airfields, installations, and factories. Iraq has signed an agreement for military aid from the United States, and a similar agreement has been offered to Egypt. In thus increasing the strength of Israel's neighbors, the Western Powers have so far failed to maintain the principle of equality by offering similar arrangements to Israel. Nor have they sought from Arab governments any relaxation of their hostility to Israel as a condition of Western assistance. This policy of one-sided reinforcement of Israel's neighbors appears to the Israel people as a deviation from the best standards of international morality or prudence. It also implies a retreat by the Western Powers from the undertakings contained in the Tripartite Declaration of May 1950, under which they pledged themselves to maintain the military balance between the Arab states and Israel and to enable "Israel and the Arab states" (not the Arab states alone) to contribute to the defense of the area against aggression.

These policies increase the existing advantage which the Arabs possess as a result of their geographic and demographic preponderance. They have vast expanses of territory and vital strategic strong points. They have huge resources of oil. They have enormous reserves of manpower. Their financial and economic resources are vastly superior to those of Israel. These advantages may or may not be reflected in their current military posture. But this is of small moment. In discussing a regional security problem the criterion is one of basic potential, not of current military strength, and in such terms the Arab States possess an advantage even without the treaties and arms agreements showered on them and withheld from Israel by the United States and Britain. In recent years all the Arab States have been strengthening their armies, their military industry, and their equipment. Huge military budgets that cannot be matched by Israel's struggling have enabled them to purchase modern western equipment, such as jet planes, artillery, tanks, and armored war machines. The military budgets of the Arab States in the current year exceed the total of Israel's entire budget for all purposes, civil and military.

It is against this background that the specific problem of border insecurity, of marauding and infiltration, should be viewed. An intermittent guerrilla war on Israel's borders, especially those with Jordan and the Egyptian-occupied Gaza strip, is the spearhead of comprehensive hostility. It is difficult to imagine that a quiet border could coexist with the political and emotional

attitudes of the Arab leaders which I have described. An improvement of relations between governments is a prerequisite of a more peaceful frontier life. Yet specific consideration is needed for the movement of Arab infiltration, which is acknowledged by both parties and by the United Nations to be the primary specific cause of recent outbreaks.

The process of infiltration began in the period immediately following the conclusion of the armistice agreements. It was at first a sporadic trickle of illegal crossings actuated in part by motives of family reunion. Efforts made by Israel to regulate this movement by agreement with the Arab States failed owing to the Arab refusal to legalize any transit of persons between their respective territories and Israel. As a result, these illegal crossings became a regular practice, which after a time degenerated into wholesale infiltration accompanied by theft and smuggling. The Government of Israel first took no steps to suppress this movement, regarding it as a temporary phase. It also put into operation an official scheme of its own for the reunion of Arab families separated by the war, and as a result several thousand Arabs have rejoined their kinsfolk in Israel. Contrary to expectations, however, the movement showed no sign of abating. Theft, robbery, holdups, and eventually murder and sabotage became of frequent occurrence. As the border region became more tense with constant violence, the Israeli villagers in the area were authorized to organize their own defense against invaders.

It has been asserted quite wrongly that this infiltration is conducted primarily by refugees. The nightly incursions into Israel territory, which in most cases show careful planning, are not the work of destitute refugees but of highly trained gunmen acting on paramilitary lines. They openly sell their booty in the markets of the Arab border towns, not infrequently sharing their gains with the appointed organs of security. In a number of cases, where the Israel authorities supplied to the Arab Governments data on the identity and the crimes of the infiltrators, these were not brought to trial, and only rarely have the stolen goods been returned.

There can be little doubt that much of this guerrilla war is of a military character. The targets chosen, the form of attack, the types of arms used, and the methods employed indicate that many of these raids are planned on military lines. The setting of mines, the ambushing of watchmen, and firing at guards are clearly not the work of hapless refugees. In more than one case the raids have been well synchronized and carefully planned military operations executed with a high degree of precision. This campaign affords first-class opportunities for instructing men in guerrilla tactics, gathering military information and making the raiders familiar with the territory in which the second round may one day be fought.

The dimensions which the guerrilla war against Israel has assumed in recent years may be gathered from the following data. From 1949 to the middle of 1954 there have been an average of 1,000 cases of infiltration per month along the several frontiers, the majority of them on the Israel-Jordan border. The number of clashes with armed marauders on the latter border alone amounted during the last 4 years to 1,069, the incidents of theft, burglary, and armed robbery to 3,573. Livestock, seed, fertilizers, agricultural implements, and irrigation pipes have been among the principal booty of these marauding expeditions. Miles of telephone wires have been stolen and telephone poles destroyed, while the cutting of electric wires has seriously interfered with agricultural and industrial activities. All this material damage, however, is overshadowed

by the fearful toll of human life. On the Jordan border alone 513 Israelis were killed and wounded during the past 4 years. The commander of the Arab Legion proclaims the innocence of a process which, unless checked, may bring ruin to the whole armistice regime.

A summary of incidents within a brief period of time and along a single sector of the Jordan frontier was presented by the Israel representative at the United Nations to the Security Council on November 12, 1953. The nightly attacks there recorded, with their ever-increasing toll of lives, have created nervous tension in the Israel border villages which militates against the self-restraint maintained during the early phases of this war. It is not the first time that the Jews of Palestine have been exposed to this trying ordeal. In 1920, 1921 and 1929 there were serious Arab attacks in Jerusalem, Jaffa, the coastal plain, Hebron and Safad, in which hundreds of Jews were massacred and a number of Jewish villages destroyed. In 1936, countrywide disturbances began which lasted intermittently until the outbreak of the Second World War. In these conflicts it was the policy of the Jewish authorities, upheld by the bulk of the community, to abstain from retaliation. The same restraint was maintained when after the establishment of the State of Israel, the old guerrilla attacks and marauding expeditions were resumed. Tension in the border areas, however, has of late become so acute as sometimes to result in a breakdown of that traditional attitude.

Many of the attacks have occurred not along the "frontier" but deep inside Israel territory. The innumerable wadies and tracks covered by sand make it easy for raiders to enter and escape undetected. Not infrequently Israel watchmen and border police wounded by shots have been dragged across the frontier and cruelly done to death, their mutilated bodies then being presented as evidence of Israel aggression against Jordan. The Jordan Government has distributed arms and ammunition to village youths in the border areas, labelling them "national guards," without effective control or training. Its agreement has not yet been received for any radical measures to stop guerrilla activities along the border, such as the regular policing of the area, the division of no man's land or the marking of the armistice line.

According to a report of the Chief of Staff of the Truce Supervision Organization to the Secretary-General of the U. N., dated October 30, 1952, no effective system of frontier demarcation could be set up "since the Jordan authorities have been unwilling to agree to any 'permanent' scheme for the marking of the demarcation line." According to the same report, "an Israel survey team engaged in the marking of the border was fired on from Jordan-controlled territory," and the "officer in charge of the surveying team was seriously wounded." This has happened in many instances. The case of the Lebanese frontier, which is clearly marked by cairns placed every few hundred yards and where the local gendarmerie maintains order, indicates that where there is a will, an end can be put to violence across the border. In articles and interviews¹ the Commander of the Arab Legion has said that "in international practice every nation is responsible for the prevention of illegal entry into its frontiers" and that "the Israelis must deal with such incidents in their country and not expect the military command in Jordan to do so"—the implication clearly being that notwithstanding the terms of the armistice agreement, the Jordan military authorities do not feel obliged to stop the evil at its source. In July 1954 the United States, Britain, and France proposed the de-

Footnotes at end of speech.

marcation of the frontier and the erection of barriers as a measure to prevent infiltration and reprisals. This suggestion was accepted by Israel and again rejected by Jordan. It is hard to see how refusal to mark the border and consolidate its defenses can be reconciled with peaceful intention or purpose.

A serious situation, second in gravity only to that on the Jordan frontier, has developed in recent months on the Egyptian border. Though the constant raids into Israel territory across the Egyptian armistice line do not, like those from Jordan, operate in populous areas, they have created in the wide expanses of the Negev a state of insecurity necessitating exceptional measures of vigilance to safeguard the lives and property of the rural population. Many of these raids reveal paramilitary training and careful reconnaissance of the ground and of the local farmers' habits. Flocks numbering many hundred heads of sheep have been driven off, plantations uprooted, and vital communications mined. A special problem is presented by the Bedouin in the area. The Egyptian authorities frequently employ their own Bedouin for attacks on the Israeli Bedouin, particularly at times of political tension.

IV

The prospects of removing such a profound tension by palliative measures are not hopeful. A development of the armistice agreement into a peace settlement is the only radical cure. But if there were a desire to move progressively toward peace, many effective steps could be taken. The first would be to stop the campaign of incitement in the Arabic press and radio, and the public statements of political leaders. A second step would be the elimination of the economic boycott against Israel which is doing the Arab countries no less, if not indeed more harm than Israel. Third, a number of specific measures could be adopted for improving conditions on the border. A series of such proposals was submitted by Israel to Jordan in March 1953, but met with categorical rejection. The most important measure to prevent trouble in the border region would be the demarcation of the present lines by clearly visible signs on the ground. A further preventive measure would be the partitioning of the "no man's land" areas on the border which considerably hamper the effective policing of the frontier region. To remove the incentive of booty, searches should be carried out to discover goods stolen by marauders in Israel. At the same time, the responsibility of the local authorities to prevent the infiltration of marauders into Israel territory should be enforced by disciplinary measures. Firearms should be carefully registered and licensed and all unauthorized explosives and their detonating agents should be confiscated by the competent authorities in Jordan.

Another measure intended to stop infiltration was the agreement reached on March 5, 1951, between Israel and Jordan for the holding of regular meetings of local commanders for setting border problems, exchanging information on marauders, arranging for the return of stolen property and providing for the return of persons who had inadvertently strayed across the unmarked line. After a year's trial it became clear, however, that the Jordanian authorities had no intention of cooperating effectively in the prevention of marauding. Stolen property was for the most part sold openly in Jordan market places and was returned only in very exceptional cases.

On January 8, 1953, Israel informed the Jordanians that it saw no purpose in continuing this agreement. In June 1953 Israel took the initiative in proposing a new local commanders' agreement, following a suggestion made by Secretary of State Dulles. The Jordanians were reluctant, but in the

end grudgingly signed it. The new agreement, too, remained a dead letter. Very little was done by the Jordan police to return stolen property and apprehend marauders even when their names were officially communicated to them by the Israel authorities. Israel also proposed the setting up of telephone lines in exposed districts, such as the area of Al-Kubelbelatrun, to facilitate a speedy exchange of information. This proposal, too, was first held up and then rejected. The Israel authorities also suggested that in certain areas the armistice line be redrawn, so as to enable villagers to work on their fields without crossing the border. In this matter, too, the Jordanians have maintained their negative attitude.

Israel would welcome any measure, however temporary and palliative, that might help in some measure to reduce tension. In recent weeks, especially since the appointment of General Burns to lead the U. N. Truce Supervision Organization, there has been a promising reduction of tension. Israel has no aggressive designs against her neighbors. If she had, she could have had many opportunities in recent years, when Arab States were weakened by internal disturbances and coups d'etat. There has been a scrupulous abstention by Israel from exploiting these instabilities. Nor would an aggressive Israel support American and British proposals for reinforcing the armistice demarcation line as a tangible barrier to movement from either side. Israel urgently needs peace for economic development and for accomplishing the great task of absorbing the 700,000 Jewish refugees who have come from all parts of the world—including 350,000 immigrants driven by intolerance from Arab lands. Some Arab leaders must be aware that peace with Israel would benefit the Middle East and open out a new horizon of regional progress; but such moderation, if it exists, has not yet found tangible expression in official policy, the Arab leaders having become slaves of their own bellicose slogans which they cannot now recant.

Despite this negative attitude Israel has from time to time outlined concrete peace proposals. In the Seventh General Assembly of the United Nations in 1952 the Israel Government submitted an elaborate blueprint for a peace settlement and regional cooperation between Israel and the Arab states. These proposals were categorically rejected by the Arab spokesmen. In November 1953 the Government of Israel made another effort to seek an agreed settlement of outstanding issues with Jordan by requesting the Secretary-General of the United Nations, in conformity with article XII of the armistice agreement, to convoke a conference of both parties for the purpose of revising and improving the armistice agreement in the light of past experience. Although the terms of the armistice agreement make attendance at such a conference obligatory, the request of the Secretary General, supported by the Western Powers, was rejected by the Government of Jordan. In October 1954, the Israel Government released the blocked accounts of Arab refugees and proposed the conclusion of nonaggression pacts as an intermediate stage between the armistice and a peace settlement.

At the time of writing, despite a comparative lull on the Jordan border, no long-term solution is in sight. It does not appear likely that local border incidents will develop into a general collapse of the armistice frontier; but the air is heavy on both sides of the frontier, and peace hangs on a tenuous thread.

No international question has been so much discussed and so little solved. The discussions have at least defined the three

avenues of progress. The first and best alternative would be a negotiation between Israel and each Arab state with the object of making a transition from the armistice to permanent peace. There is nothing revolutionary or unreasonable in this suggestion. It expresses the duty of all civilized states to live together in neighborliness and tranquillity. It does not involve the Arabs in any new commitments; for the armistice agreements are defined in their own terms as acts of transition to permanent peace. There is an impressive volume of world opinion in favor of the doctrine that the armistice system, with its many improvised and impermanent features, has lasted too long and should be succeeded by a more stable system of international relationships. The Great Powers and the United Nations would do well continually to articulate this as the determined will of the international community. Six years ago Mr. John Foster Dulles, addressing the General Assembly of the United Nations, clearly expressed the view that it would be perilous to allow a provisional military relationship to endure too long. He said: "Fighting must give way to truce, truce to armistice, and armistice to final peace." There can be no assurance that negotiations between Israel and her neighbors would lead to swift agreement; but a stubborn refusal even to negotiate is surely out of accord with any doctrine of international duty.

A second alternative, which might bring relief until a peace negotiation takes place, would be to utilize the opportunities of review and revision inherent in the armistice agreements themselves. Article VIII of the armistice agreement with Jordan provides for a special committee for settling many dangerous problems, especially in the Jerusalem area. In 1952 the United Nations chief of staff reported that Jordan refused to meet Israel in that committee. This refusal still persists. There are articles in each armistice agreement which oblige either party to accept the U. N. Secretary-General's invitation to attend a conference, convoked at the request of the other party, for the purpose of reviewing, modifying, or suspending any or each article of the armistice agreement. Here, too, Jordan has refused to honor its signature obliging her to meet Israel under the procedures laid down in the armistice agreement. It is extraordinary for a government to proclaim fidelity to an international agreement while declining to meet the central provision of that very agreement for revision or review. Recently, the policy of ostracism has been carried to even more extreme lengths by Jordan's refusal to attend meetings of the United Nations Security Council because the charter makes such attendance conditional upon the acceptance of an obligation of pacific settlement.

A third and more modest line of possible improvement has recently been tried in the form of proposals for marking the border and erecting obstacles at suitable points. This too has been rejected on the Arab side.

The Israel Government and its defense forces will not neglect any idea or opportunity which seems likely to offer hope of a remedy. In these circumstances the basic question is clearly not one of procedure but of policy. Does there exist any international influence which can overcome the comprehensive negation which the Arab Governments have chosen to adopt? Refusal to discuss peace; refusal to develop the armistice agreement into more lasting accords; refusal to review the armistice agreement under article XII; refusal to confer with Israel under article VIII of the armistice; refusal by Jordan to attend the Security Council's meetings under article 35 of the charter; refusal to mark the frontier; refusal to erect barriers to infiltration; refusal

to restrain the eruption of marauding bands across the frontier; refusal to desist from inflammatory propaganda and incitement; refusal by Egypt to abandon an illicit blockade—all this together adds up to a political attitude which will surely have to be modified if the tension in the Middle East is to be relieved. Until then the Israel defense forces will face a heavy task, and face it virtually alone as the solitary effective means for safeguarding Israel's physical integrity.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

DISTRIBUTION OF THE CONGRESSIONAL RECORD

To the Vice President and each Senator 100 copies; to the Secretary and Sergeant at Arms of the Senate, each, 25 copies; to the Secretary, for official use, not to exceed 35 copies; to the Sergeant at Arms, for use on the floor of the Senate, not to exceed 50 copies; to each Representative, Delegate, and Resident Commissioner in Congress, 68 copies; to the Clerk, Sergeant at Arms, and Doorkeeper of the House of Representatives, each, 25 copies; to the Clerk, for official use, not to exceed 50 copies; and to the Doorkeeper, for use on the floor of the House of Representatives, not to exceed 75 copies; to the Vice President and each Senator, Representative, Delegate, and Resident Commissioner in Congress there shall also be furnished (and shall not be transferable), 3 copies of the daily Record, of which 1 shall be delivered at his residence, 1 at his office, and 1 at the Capitol.

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Agriculture and Forestry
Messrs. Ellender (chairman), Johnston of
South Carolina, Holland, Anderson, Eastland,
Clements, Humphrey, Scott, Aiken, Young,
Thye, Hickenlooper, Mundt, Williams, and
Schoeppel.

Committee on Appropriations
Messrs. Hayden (chairman), Russell,
Chavez, Ellender, Hill, Kilgore, McClellan,
Robertson, Magnuson, Holland, Stennis,
Clements, Bridges, Saltonstall, Young, Know-
land, Thye, McCarthy, Mundt, Mrs. Smith of
Maine, Messrs. Dworshak, Dirksen, and Potter.

Committee on Armed Services
Messrs. Russell (chairman), Byrd, Johnson
of Texas, Kefauver, Stennis, Symington,
Jackson, Ervin, Bridges, Saltonstall, Flanders,
Mrs. Smith of Maine, Messrs. Case of South
Dakota, Duff, and Welker.

Committee on Banking and Currency
Messrs. Fulbright (chairman), Robertson,
Sparkman, Frear, Douglas, Lehman, Mon-
roney, Capehart, Bricker, Ives, Bennett, Bush,
Beall, Payne, and Morse.

Committee on the District of Columbia
Messrs. Neely (chairman), Gore, Bible, Mc-
Namara, Beall, Hruska, Case of New Jersey,
Allott, and Morse.

Committee on Finance
Messrs. Byrd (chairman), George, Kerr,
Frear, Long, Smathers, Johnson of Texas,
Barkley, Millikin, Martin of Pennsylvania,
Williams, Flanders, Malone, Carlson, and
Bennett.

Committee on Foreign Relations
Messrs. George (chairman), Green, Ful-
bright, Sparkman, Humphrey, Mansfield,
Barkley, Wiley, Smith of New Jersey, Hicken-
looper, Langer, Knowland, Aiken, Capehart,
and Morse.

Committee on Government Operations
Messrs. McClellan (chairman), Jackson,
Kennedy, Symington, Ervin, Humphrey,
Thurmond, McCarthy, Mundt, Mrs. Smith of
Maine, Messrs. Cotton, Bender, and Martin
of Iowa.

Committee on Interior and Insular Affairs
Messrs. Murray (chairman), Anderson,
Long, Jackson, O'Mahoney, Scott, Bible, Neu-
berger, Millikin, Malone, Watkins, Dworshak,
Kuchel, Barrett, and Goldwater.

*Committee on Interstate and Foreign
Commerce*
Messrs. Magnuson (chairman), Pastore,
Monroney, Smathers, Daniel, Ervin, Bible,

Thurmond, Bricker, Schoeppel, Butler, Potter,
Duff, Purtell, and Payne.

Committee on the Judiciary

Messrs. Kilgore (chairman), Eastland, Ke-
fauver, Johnston of South Carolina, Hen-
nings, McClellan, Daniel, O'Mahoney, Wiley,
Langer, Jenner, Watkins, Dirksen, Welker,
and Butler.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Neely,
Douglas, Lehman, Kennedy, McNamara,
Smith of New Jersey, Ives, Purtell, Gold-
water, Bender, and Allott.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chair-
man), Neely, Pastore, Monroney, Hennings,
Scott, Neuberger, Carlson, Jenner, Langer,
Curtis, Martin of Iowa, and Case of New
Jersey.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, Gore,
Symington, Thurmond, McNamara, Neu-
berger, Martin of Pennsylvania, Case of
South Dakota, Bush, Kuchel, Cotton, and
Hruska.

Committee on Rules and Administration

Messrs. Green (chairman), Hayden, Hen-
nings, Gore, Mansfield, Jenner, Barrett, Mc-
Carthy, and Curtis.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel
Sheraton-Park, Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St.,
Alexandria, Va.
Mr. Justice Reed, of Kentucky, the Mayflower.

fornia, Nevada, Arizona, Alaska, Hawaii.
Tenth judicial circuit: Mr. Justice Clark,
Colorado, Wyoming, Utah, Kansas, Oklahoma,
New Mexico.

Appendix

"He Is One of the Finest Institutions of Washington"—A Personal Portrait of Speaker Rayburn by a Correspondent of the British Broadcasting Corp.

EXTENSION OF REMARKS
OF

HON. LEONOR K. SULLIVAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1955

Mrs. SULLIVAN. Mr. Speaker, the Members of the House will be interested, I believe, in a word portrait of the great American who presides over the House of Representatives as carried in a broadcast recently in the General Overseas Service of the British Broadcasting Corp., and which has just been brought to my attention by a constituent from St. Louis who sent me a reprint of it in the BBC's publication *London Calling*.

This personal portrait of SAM RAYBURN, written by BBC correspondent Robert Waithman, formerly assigned, I believe, to Washington, accurately describes our Speaker as "the most beloved figure in the House." It discusses his role in accomplishing the reconciliation of views and of sectional interests here in the House in order to make democracy function for the whole Nation.

The Members will also be interested in the BBC correspondent's description of the legislative processes of the House and of the Speaker's role.

I think that without exception all of us will agree with Mr. Waithman of the BBC that our great Speaker is one of the finest institutions of Washington.

The article follows:

SAM RAYBURN

(By Robert Waithman)

In the small hours of the morning of November 3, 1954, some scores of newspapermen were frowning over tape machines and radio and television sets in Washington trying to make sense of the election results that were coming in spasmodically from all over America: I was one of this uncertain crew. One of the brethren of the typewriter rose, picked up the wad of copy paper he had been using to work out his calculations and said: "Well, SAM RAYBURN's back, anyhow."

SAM RAYBURN has been elected 21 times without a break by his constituents in north Texas. He is the 8th son of a family of 11: his father was a cotton farmer. He worked his way through college, became a school teacher, then a lawyer, went into politics and got himself elected to the State legislature. At the age of 29 he was Speaker of the Texas House of Representatives—the youngest man ever to hold that post. Then he stood as candidate for Congress and was elected. So he came to Washington—in 1912.

He sought and obtained, and for 42 years he has been well satisfied with, membership of the Lower House. He has never wanted

to move up into the Senate. He has developed a fierce and abiding love of the noisier, faster-moving House of Representatives.

A RECONCILER OF INTERESTS

There are 435 Members of the House, elected according to the voting strength of the population from districts all over America—a pretty accurate cross section of the Nation. They often have the difficult job of reconciling national interests with the local interests they are expected to promote when they get to Washington. If they want to be re-elected, as all but a fraction of them do, they must keep themselves in the headlines of their local papers at home. The Speaker knows that. But he also knows that there is considerable national business to be done, and only a limited time to do it in. So he allows the Members to make use of a little device that often fascinates legislators from other parliaments in other countries. It is the practice of obtaining the House's permission, as the phrase has it, "to extend my remarks." This means a speech, which is never in fact delivered, nevertheless appears next day in the *CONGRESSIONAL RECORD*, the Hansard of Washington.

When, in 1940, Mr. RAYBURN succeeded Speaker Bankhead—Tallulah Bankhead's father—he permitted another agreeable practice. He allowed Members to talk for 1 minute only on any subject under the sun for a short, introductory period each day while the House was settling down to business. That released a lot of inhibitions, and, as he had rightly calculated, made it possible to get along faster with the important work. And there is a lot of important work. The authority of the House of Representatives is greatly enhanced by a provision of the Constitution that all revenue bills—every sort of legislation touching the public purse—must originate there, and not in the Senate. One of the Speaker's first jobs is to see that this business is attended to, first in the relevant House committee and then on the floor of the House, with all possible speed and efficiency. And with this duty goes considerable power.

In the first 10 years of this century the House found itself with a Speaker who used his powers so ruthlessly that he turned his office into a little dictatorship—and brought retribution on his head. This was Speaker Joseph Gurney Cannon, who put the committees into the pockets of his own political clique and crushed all minority groups until a coalition of Republicans and Democrats passed new legislation which broke his power and reduced the power of all subsequent Speakers. But since then the United States has moved into a new place among the world's nations—as leader of a great alliance. Today the Speaker of the House has responsibilities and opportunities such as the dictatorial Joe Cannon never imagined at the height of his authority.

It is doubtful whether anyone could have exercised them more carefully or more successfully than has the gentleman from Texas. The office is one that could be exploited by anyone who wanted to talk his way into the public consciousness. But Mr. RAYBURN is one of the most taciturn men in Washington. One consequence is that what he does say is listened to with respect. Another is that the office of Speaker of the House is invested, while he occupies it, with a dignity which a garrulous man could not give it.

He is patient and restrained, both on and off the floor of the House. There are days when as many as 100 visitors, mostly Congressmen in search of guidance or counsel, seek and obtain appointments to see him, singly or in small groups. Plainly he cannot spend much time with any of them, but almost nobody comes away from SAM RAYBURN's office with the feeling that he has been slighted or rebuffed. And for a new Congressman, uncertain of the ropes and unsure when to speak or act, it is of vast comfort to have seen the Speaker and to have got his advice.

This is not to say that Mr. RAYBURN is not capable of being both outspoken and tough when he thinks the need arises. At election times he reveals himself to be a Democrat of the deepest dye, pouring scorn and fury upon the Republicans. As to his toughness there probably is no better illustration than the story of what happened in the House on the afternoon of August 12, 1941—a day when America came terribly close to inviting disaster.

It was less than 4 months before the Japanese attack on Pearl Harbor. President Roosevelt had called upon the Congress to extend the Selective Service Act—which enforced conscription in what was peacetime for America. The isolationists were fiercely fighting this bill. They were intent upon bringing about an immediate demobilization of the American forces. And when in the House the vote came out at 203 to 202 in favor of passage of the bill there was furious noise and excitement on the floor. Speaker RAYBURN accepted a motion for a recount. When it was over the vote stood as before. Scores of Members leaped to their feet, and there is little doubt that many of them were looking for a chance to change their vote. But Mr. RAYBURN banged the gavel and froze this vote, making another count impossible, and though there were angry challenges thereafter it was seen that in the 15 seconds when he had used the Speaker's power SAM RAYBURN had almost certainly saved the Nation from weakening itself at the crucial hour.

MOST BELOVED FIGURE IN THE HOUSE

But these exhibitions of the iron hand are the exception, not the rule. Mr. RAYBURN has attained his influence far more by gentler means, and those same means have made him the most beloved figure in the House. There is, and there long has been, no doubt about the affection that is felt for him in the Congress—and there is certainly a wealth of evidence to prove it.

For instance, when the Democrats lost control of the 1947-48 Congress, and SAM RAYBURN had to step down from the Speaker's chair, he relinquished the right to use the official limousine attached to the job. So a fund was started to buy a car "so that SAM won't have to walk," it was explained at the time. A number of Republicans sought to contribute to the fund, but their checks were all politely returned. This was a Democratic gesture. The big new car for SAM was bought, and in it there was affixed a small plate which reads, "To our beloved SAM RAYBURN—who would have been President if he had come from any place but the South."

There may be a tinge of southern bitterness, a reflection of unforgotten history, in that sentiment. A lot of Americans would say, though, that there is a touch of truth in

it, too. Certainly there cannot be many people in America, in or out of the Democratic Party, who do not admire the firm, knowledgeable, upright, self-disciplined gentleman from Texas, or who have any doubt that the high office of Speaker of the House, will be discharged in the present Congress.

It was on January 6, 1955—RAYBURN's 73d birthday—that President Eisenhower drove up Capitol Hill to deliver his state of the Union message to the Senate and House assembled in joint session. The President began by acknowledging the RAYBURN anniversary in an interpolated sentence which did not appear in the official text of the message. The Congress, to a man, rose to hail this graceful bow by a Republican President to a leader in the opposite camp. But SAM RAYBURN is more than that. Full of years and honor, he is one of the finest institutions of Washington.

Accounting Provisions of the Internal Revenue Code of 1954

EXTENSION OF REMARKS OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Friday, February 25, 1955

Mr. REED of New York. Mr. Speaker, in the course of its extensive overhaul of our tax system during the last Congress, one of the most widespread complaints received by the Committee on Ways and Means was that artificial divergences had developed between the computation of income for tax purposes and the computation of income for business purposes as determined under generally accepted accounting provisions. These differences were confined almost entirely to questions of when certain types of income and expenses should be taken into account in arriving at net income.

As a result, the new Internal Revenue Code of 1954 sought to bring the income tax provisions of the law into harmony with generally accepted accounting provisions and, as stated in the report of our committee, "to assure that all items of income and deductions are taken into account once, but only once in the computation of taxable income." Sections 452 and 462 of the new code were designed to meet these objectives.

Under the prior law, payments received in advance for the use of property in future years or for services to be rendered in future years were includible in the income of the recipient in the year they were received. This was true regardless of the taxpayer's method of accounting. However, well established accounting procedures provide that, in the case of taxpayers on an accrual accounting system, payments for rentals, club dues, warehouse fees, and the like should be included in income in the year in which income is earned and in the year in which the related expenses are incurred. Obviously, this is not necessarily in the year of receipt.

As a consequence, section 452, in general, permits accrual basis taxpayers to defer the reporting of advance payments as income until the year, or years, in

which, under the taxpayer's regular method of accounting, the income is earned.

With respect to deductions for expenses and losses incurred by a taxpayer, prior law provided that these deductions could be taken only when all events had occurred which fixed the fact and the amount of the taxpayer's liability. This rule, in many cases, was at variance with generally accepted accounting principles which require all determinable liabilities relating to reported income to be taken into account.

As a result, section 462 of the new code conformed the tax treatment of expenses more closely to general business treatment by permitting an accrual basis taxpayer to deduct reasonable additions to reserves for estimated expenses.

These two provisions, sections 452 and 462, were strongly advocated by the accounting profession of the United States. Each section was approved by the unanimous vote of both the Republican and Democratic members of the Committee on Ways and Means.

It has developed recently that there is a sharp difference of opinion between taxpayers and the Government as to the scope of these sections. The tentative regulations issued by the Treasury on January 22 in order to carry out the provisions of the law have come under strong attack as being too restrictive. For example, the tentative regulations would not permit a deduction for additions to reserves for estimated repair and maintenance expenses. Taxpayers have already served notice that they intend to litigate this restriction. Should they be successful in the courts, the revenue loss under the law would be far in excess of anything contemplated by the Congress.

In addition, the tentative regulations also require that the reserves which these sections permit for tax purposes must be shown on the regular books of the company which are used for statements of financial condition to stockholders. This requirement is also under attack although it would seem to be in line with the objective of the law to bring tax accounting into harmony with business accounting.

Therefore, it seems clear that many groups will seek an opportunity under these sections to receive tax benefits substantially in excess of anything anticipated by the Congress. If the present provisions remain in effect, extended litigation appears inevitable. As a result, I believe that the two sections in question should be repealed in order to prevent this type of uncertainty and to avoid possible taxpayer abuse. The Secretary of the Treasury has recommended this action. I have introduced a bill, H. R. 4726, to carry out this objective.

There is absolutely no question in my mind but that the objective which Congress sought to achieve by these provisions was and still remains highly desirable. Tax accounting should not depart in an artificial manner from generally accepted principles of business accounting. Therefore, it is my earnest hope that this matter will receive further study with a view to solving the

transitional problems which have occurred. Mr. Speaker, I am confident that effective and practical legislation along these lines can and should be developed.

Resolution Dealing With the American Legion Position Opposing the Federal Medical Services Report of the Second Hoover Commission

EXTENSION OF REMARKS OF

HON. JOHN J. DEMPSEY

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES
Monday, March 7, 1955

Mr. DEMPSEY. Mr. Speaker, under permission to extend my remarks in the RECORD, I include the following resolution of the American Legion adopted at the 32d annual national rehabilitation conference of the American Legion on March 3, 1955:

Whereas the Second Hoover Commission has filed with the Speaker of the House of Representatives and the President of the Senate its report and recommendations in the field of Federal medical services; and

Whereas said report contains many vicious, unwarranted and unjustified attacks on the sick and disabled veterans of America; and

Whereas, in addition to the official report, the accompanying task force report contains misinformed discussions and presentations critical of the existing structure of veterans benefits and services; and

Whereas the report would form a Federal advisory council on health, another super-agency which, among its other duties, would exercise indirect control over the Veterans' Administration; and

Whereas the report would transfer the cost of disability compensation, pensions, and military retirement from their proper place as a delayed cost of war and make this an added charge to the Nation's health program; and

Whereas the report contains direct attacks on disability compensation of those who received their disability in service and are entitled to the greatest consideration which the American public can offer; and

Whereas the Commission recommends the closing of 20 hospitals when at this time there are thousands of eligible veterans certified for hospitalization unable to secure proper medical care and treatment because of the lack of beds; and

Whereas the Commission believes that authority to evaluate the extent of disability should be vested in the Department of Medicine and Surgery when the complicated laws, rules, and regulations governing rating are a joint legal, occupational, and medical matter now exercised by the VA Department of Veterans Benefits; and

Whereas the Commission has disregarded the health needs of our disabled veterans as established by the Congress and the people of the United States and recommends that authorizations to construct and money which is already appropriated for the construction of badly needed beds be rescinded; and

Whereas this Commission has branded the Nation's veterans as goldbrickers and implies that our sick and disabled veterans are a group of perjurers to our country which they defended and which they patriotically uphold and support; and

Whereas they have recommended that a system of socialized medicine be instituted in the United States by permitting veterans

to use the VA hospitals and outpatient medical services and pay at a later date when, and if able, and this program is an expanded, uneconomic, and costly program to the American taxpayer and unworthy of serious consideration by informed people; and

Whereas the Commission's proposal to require our service-connected disabled veterans to file an economic statement in order to secure hospitalization for disabilities other than their service-connected disabilities: Now, therefore, be it

Resolved, That, for the above-mentioned reasons, the American Legion expresses its great shock, disappointment, and disapproval of these unfounded, uneconomic, and heartless recommendations and deplores the direct attack on our disabled veterans who have so courageously served to protect our freedoms; and be it further

Resolved, That we call these matters to the attention of the President of the United States and request his sympathetic understanding in the solution of the problems of the disabled veterans whom he committed to war service; and be it further

Resolved, That the case of America's disabled be placed before the Members of the 84th Congress, with full confidence that the Members of that body will continue to reflect the generous attitude of the American people in connection with the care of our disabled.

Tuition Expenses Should Be Deductible

EXTENSION OF REMARKS

OF

HON. CHARLES A. VANIK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1955

Mr. VANIK. Mr. Speaker, I have today introduced a bill to provide an income tax deduction for amounts paid as tuition or fees to public and private institutions of higher education for the education of any dependent of such individuals.

This is a matter of tax justice which should be carried through by this Congress at the earliest practicable time. The average taxpayer can generally provide for his family until he faces the high and ever-increasing costs of higher education for his dependents, over and above the normal expenses of support. While higher education and training for dependents may be a matter of personal pride for the taxpayer—it is also a matter of investment in human life which pays fruitful dividends to the whole economy.

Higher education and training makes for a more useful citizen—in every respect. Not only is the educated or trained dependent more productive—but through such increased productivity he earns more income and pays more income taxes. Therefore, the entire national economy is benefited by the development of its most important resource—its young people. Taxpayers who contribute and help in this important way are certainly entitled to a tax deduction for the costs of education and training for their dependents. We should give the taxpayer credit for his contribution to the national wealth. When a taxpayer educates his dependent, he does so for the benefit of the entire American economy.

Family life is the very bulwark of our democracy—a fact which should be recognized in our tax structure. The family as our most cherished institution must not be allowed to suffer through present tax inequities.

We must recognize that the wealth of the Nation is more in its people than in its atoms. We must help the family develop the latent I. Q.'s buried under N. S. F.—not sufficient funds.

What Price Automation?

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1955

Mrs. ST. GEORGE. Mr. Speaker, in the following article by Mr. Benjamin F. Fairless, which appeared in the newsletter, Human Events, of March 5, the bogymen of automation is laid quietly and efficiently to rest.

We humans are always fearful of what we do not understand, whether it be the U. S. S. R. or automation.

Mr. Fairless shows clearly that our way of life is basically geared to the use of better, bigger, and more effective machines; that, far from creating fewer jobs, they have created better and more jobs.

Finally, in the words of the late Philip Murray, president of the CIO: "I do not know of a single, solitary instance where a great technological gain has taken place in the United States of America that it has actually thrown people out of work."

Mr. Speaker, automation is just one more great technological gain.

WHAT PRICE AUTOMATION?

(By Benjamin F. Fairless)

There is nothing new, of course, about man's fear of machines. Nearly three centuries ago, an inventor in Danzig built a loom that could weave six webs at once. The workers seized the hapless inventor and drowned him in a nearby creek.

At the outset of the so-called Industrial revolution in England, mobs of angry workers broke into the mills and tried to destroy the new automatic machinery which they feared would leave them jobless.

Today we know that it was the machine alone which enabled England to support her rapidly growing population and provide it with a rising standard of living. In countries like India and China, where mechanization did not occur, the standard of living fell far below subsistence levels and the population was decimated by starvation and disease.

Twenty-five years ago, similar fears of the machine were widely prevalent here in the United States. A popular Broadway play of that period, R. U. R., brought the word "robot" into our language.

Today, the same old blind, unreasoning fear of machines is reappearing among us; but we are being frightened—not by the advance of technology itself—but by a strange new word: "automation."

The Public Opinion Index took a poll among more than a thousand factory workers, and asked them two questions: First, did they favor the use of more new and improved machines? They did, by about 3 to 1. Then they were asked how they felt about

more automation. But they opposed that, 3 to 2.

Yet the two things, of course, are really identical. There is nothing new about automation. The mechanics of it are older than our own American Republic.

Back in 1784—before our constitutional Government was established—a man named Oliver Evans, living near Philadelphia, built a flour mill about as automatic as any mill can be. A system of conveyors, run by waterpower, picked up the grain, carried it through all the grinding operations, and delivered the finished flour. But when an auto manufacturer in Detroit builds a plant which handles engine blocks in exactly the same manner, we think it's something new, and it worries us.

Nowadays, too, we marvel at the modern business machine which writes checks and keeps records through the use of punch-cards. And on our production lines are other wonderful machines which are automatically controlled by a punched paper tape. But is this really new? Not at all.

More than 150 years ago, a Frenchman named Jacquard built an automatic loom which wove all kinds of complicated patterns in accordance with instruction that were also punched in paper.

So let's face it. This thing called automation is simply evolution—not revolution. It is only another little step in the slow and plodding progress of man toward a richer, fuller life and a better, freer world.

Suppose we think for a moment of the three outstanding examples of automation that we have seen in our lifetime:

The first one that comes to mind, probably, is the dial telephone. We would naturally assume that it must have thrown thousands of telephone operators out of work; and some of the current propaganda on the subject would seem to confirm that assumption completely. But what are the facts?

Between 1940 and 1950, the number of telephone operators in this country increased by 159,000—or 79 percent.

Next we come to business machines and these fabulous new electronic brains that we've seen on television. Surely we don't need accountants any more. But still the census shows that the number of accountants and auditors increased 71 percent in this same 10-year period.

And how about these so-called automatic factories in Detroit, where the word "automation" was thought up? Are the automobile workers losing out? Not by a long shot. Their number doubled in 14 years. Automobile mechanics and repairmen have increased 75 percent. And for every new job in the auto industry, five new jobs are created in allied fields which supply the raw materials and components that go into the manufacture and equipment of new cars.

But this, of course, is not always the case in every industry and every occupation. Dislocations do occur in some instances, and men do have to change from one job to another. That has been true in farming for nearly 40 years. Moreover with the falling demand for coal, employment in the mines has also dropped off substantially, and there is recent evidence of a mild decline in oil refining.

Where are these men to go? Has automation made it tougher for them? Look at the picture as a whole. Just what really has happened in the last 15 years or so—say from 1939 through 1953?

During this period the population of the United States has increased 22 percent. But the total number of jobs has grown by 35 percent—or more than half again as much. In the field of manufacturing itself—where automation has advanced most rapidly—employment has gone up 73 percent, or more than three times as fast as the population.

This rapid increase in employment has occurred because of mechanization—not in spite of it. The building of machines them-

selves—plus their installation, maintenance, and the construction of new factories to house them—has opened up thousands of job opportunities that never existed before.

Employment in the field of electrical machinery, for example, has more than trebled during this period. In other machinery it has increased by 150 percent.

In the specialized field of automation itself, the mere manufacture of the necessary instruments of measurement and control has mushroomed into a \$3 billion business which already employs as many men as the auto industry did in the middle 1930's.

But that is only the beginning. As mechanization has enlarged the output and the purchasing power of our people, it has also multiplied enormously their demand for services. So they, in their turn, employ more doctors and dentists, more engineers and scientists, and more teachers and clergymen. They send out more of their laundry, and they eat more often in restaurants. Even the fact that they have more leisure time has created more jobs for others. Employment in tourist courts and camps has more than tripled. Theaters, movies, amusement parks, and similar establishments provide 75 percent more jobs than formerly. The purchase of books has doubled, and expenditures for home music have trebled. And so it goes. Employment in the service industries alone has risen by more than 2 million during these 14 years. That is a jump of 65 percent.

The same thing has happened, too, in the general field of trade. As the volume of production has increased, it has taken more workers to sell and to handle these goods. Thus 6 million new jobs have been opened up by the growing employment demands of department stores, shops, offices, builders, bankers, utilities, bus lines, trucking companies, and others in this category.

Finally, of course, our advance in technology has created whole new industries and vast new fields of opportunity. In television, antibiotics, airconditioning, many new branches of electronics, and now, in atomic energy—just to mention a few. So with each passing year, and with every new invention, our people have a wider choice of jobs; and today it is reported that there are more than 40,000 different ways whereby Americans can earn a living.

But suppose, for example, that all technological progress in the auto industry had stopped back in 1908, and that we were to try to build a 1955 car, at today's wages, with the tools and machines we used then. Such a car, if it could be produced at all, would cost well in excess of \$65,000.

How many cars would there be on the road? And how many roads would we have? How many jobs would there be in Detroit, and in the oil fields, and the tire-making industry—or even in our steel mills for that matter? Why, millions of our workers would be idle, and America would rank among the so-called backward nations of the world.

The time has come to nail this propaganda for the fraud that it is. The facts show that only through the widest possible use of new and better machines can we hope to achieve the fullest measure of employment and a higher standard of living.

While we are at this business of nailing, let's tackle another dangerous deception that the busy propagandists are perpetrating these days: That is the charge that the greedy owners of industry have grabbed the lion's share of the fruits of technology, while the workers have been robbed of the rightful rewards of their mounting mechanized production.

Fortunately, the facts are readily available in a study made by Allen W. Rucker, published by the Eddy-Rucker-Nichols Co., Cambridge, Mass. This study covers the 33-year period from 1914 to 1947 and is based entirely on the United States Census of Manufacturers and other official Government reports.

I do not suppose that anyone will challenge the authenticity of the facts which he presents. This is what they show:

On a man-hour basis, over this entire period, the output of the workers and machines, in American manufacturing as a whole, increased by 161 percent; the real wages of the men, measured in terms of purchasing power, increased 157 percent; the relative prices of manufactured products, measured in terms of hourly wages, declined 61 percent.

The real wages of the worker have advanced "at almost exactly the same rate as the improvement in productivity." Under the American system of manufacturing, the advance in such wages "depends wholly upon advances in productivity." The report concludes that the manufacturing industry on the whole has passed on to its customers and employees "virtually all the 'savings' from increased productivity"—that rarely, and only temporarily, have the owners retained any gains whatever from this source.

To support Mr. Rucker's statements, I call attention to one additional fact which is not contained in his report: Back in 1914, the share of the national income which went to the owners of business in the form of dividends was about 6 percent; but in 1947, their share amounted only to about 3 percent. So over this 33-year period the owners who put up the money for all the machines that made increased production possible found that their slice of our total economic pie had been cut approximately in half.

It may well be asked, of course, why industry continues to spend billions of dollars upon the development and purchase of improved machines if its owners receive no direct gains from these expenditures. And the answer to that, as we know, is all bound up in one simple and compelling word: competition.

When a business in America fails to keep its plants modern, and thus allows its more efficient competitors to undersell its products in the marketplace, that business is on the way out. Unless it can recover its lost ground quickly, it is through. The money that its owners have invested in it will be largely wiped out—and so, of course, will the jobs of all its employees. Thereafter, in a very important sense, technological improvement is simply the process by which we protect, not only the investment of the owners, but also the job security of every industrial worker.

I conclude my argument with a quotation from Philip Murray, president of the CIO. Standing before a convention of the CIO, not long before his unfortunate death, he said:

"I do not know of a single, solitary instance where a great technological gain has taken place in the United States of America that it has actually thrown people out of work. I do not know of it—I am not aware of it—because the industrial revolution that has taken place in the United States in the past 25 years has brought into the employment field an additional 20 million people."

Minimum Wage Legislation

EXTENSION OF REMARKS OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1955

Mr. McCORMACK. Mr. Speaker, in connection with the consideration of legislation to increase the minimum wage from 75 cents per hour to \$1.25 per hour, I include in my remarks certain

information prepared for me by a reliable source.

The information follows:

Number and classes of employees covered under Fair Labor Standards Act of 1949 and number and classes not covered or are exempted

	Covered and not exempted	Not covered or are exempted	Total
Manufacturing.....	15,448,000	683,000	16,131,000
Mining.....	747,000	21,000	768,000
Construction.....	614,000	1,951,000	2,565,000
Wholesaling.....	1,933,000	846,000	2,779,000
Retailing.....	230,000	6,698,000	6,928,000
Finance, insurance, real estate.....	1,048,000	744,000	1,792,000
Transportation, communication, and utilities.....	3,441,000	515,000	3,956,000
Miscellaneous.....	741,000	3,447,000	4,188,000
Agriculture, forestry, and fisheries.....	14,000	3,052,000	3,066,000
Domestic service.....		2,021,000	2,021,000
Total.....	23,976,000	19,978,000	43,954,000

Source: Department of Labor.

The Fair Labor Standards Act applies, with certain sizable exceptions, to all employees engaged in interstate commerce or in the production of goods for interstate commerce, with out regard to size of firm or whether the employee works in factory, office, or at home.

Coverage under the wage-hour provisions deals with the worker individually, rather than with the employing establishment; if the individual's work is in interstate commerce and his job is not exempt, he is covered regardless of the basic nature of the business. Many firms employ both covered and noncovered workers on the same premises.

Exemptions in the act exclude about half of the workers in interstate commerce who would otherwise be eligible. White-collar jobs—executive, administrative, professional, and outside selling jobs—are specifically excluded. Employees in retail or service establishments where more than 50 percent of the annual dollar volume of sales is made within the State are exempted. Also exempt are certain cannery workers and food processors, workers in logging if the total number of employees does not exceed 12, certain agricultural workers and handlers of agricultural products within the area of production, certain employees of the fishing and maritime industries, workers on small county newspapers, and switchboard operators at exchanges with fewer than 750 stations.

The law permits payment of subminimum rates to learners, apprentices, messengers, and handicapped persons in protected employment. It sets no monetary rates for these categories but authorizes the Wage-Hour Administrator to approve pay scales lower than 75 cents an hour through certification of a limited number of subminimum workers to the extent necessary in order to prevent curtailment of opportunities for employment.

HOW IS ENFORCEMENT OF THE ACT SUPERVISED?

Enforcement is in charge of an administrator who has a staff of employees in Washington. The continental United States is divided into 10 regions, each under the supervision of a regional director. The territories embraced by the regional offices are as follows:

Boston: Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, and Vermont.

New York: New Jersey and New York.

Philadelphia: Delaware, Maryland, and Pennsylvania.

Birmingham: Alabama, Florida, Georgia, Mississippi, and South Carolina.

Cleveland: Michigan and Ohio.

Chicago: Illinois, Indiana, Minnesota, and Wisconsin.

Kansas City: Colorado, Iowa, Kansas, Missouri, Nebraska, North Dakota, South Dakota, and Wyoming.

Dallas: Arkansas, Louisiana, New Mexico, Oklahoma, and Texas.

San Francisco: Arizona, California, Idaho, Montana, Nevada, Oregon, Utah, and Washington.

Nashville: Kentucky, Tennessee, Virginia, and West Virginia.

In North Carolina enforcement is under the supervision of the State Labor Department under a cooperative agreement. The same arrangement is true with respect to approximately one-half of the counties in Minnesota.

In addition to the continental regional offices there are Territorial offices in Alaska, Hawaii, and Puerto Rico. Field offices under the jurisdiction of the regional offices are located in almost every State.

The actual number of investigators throughout the States and Territories at present fluctuates between 480 and 500. The investigators have authority under the statute to enter places of business, examine books and records and to interview employers and employees to determine whether the statute is being violated.

The remedies available where violations are found are:

1. Suits for injunctions to prevent future violations.
2. Criminal prosecution.
3. Suits by the Secretary of Labor to recover unpaid wages when such suits are requested by employees.
4. Suits by employees themselves to recover double the amount of unpaid wages.

Number of employees and number of violations for each of the last 8 fiscal years

Fiscal year	Employees	Violations
1947	1,509	20,570
1948	1,131	15,799
1949	1,110	18,180
1950	1,253	13,446
1951	1,821	18,908
1952	1,618	24,321
1953	1,375	22,136
1954	1,046	20,694

Source: Department of Labor.

GAAT Renews United States Curbs on Food Imports

EXTENSION OF REMARKS OF

HON. CLEVELAND M. BAILEY

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1955

Mr. BAILEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I desire to call the attention of my colleagues to a news dispatch from Geneva, Switzerland, under date of March 7, and appearing in the Washington Post and Times Herald of March 8.

The article has to do with the General Agreements on Tariffs and Trade—GATT—and brings forcibly to mind the recent battle on the House floor over the renewal and extension of our Trade Agreements Act.

Our farm groups should be on guard, since already our unknown members of this outlaw group at Geneva have prom-

ised other nations that restrictions set up under the general agriculture act are soon to be set aside.

Some of the outstanding proponents of our trade policies are in for a surprise. I refer to the steel and automobile groups. The latest move by GATT is to admit the six-nation European steel and coal group to membership. It is just possible some of our big domestic mass-production industries will join the great bulk of our domestic producers at the tariff "wailing wall."

The article follows:

GATT RENEWS UNITED STATES CURBS ON FOOD IMPORTS

GENEVA, March 7.—The 34 member nations of the General Agreement on Tariffs and Trade have granted permission for the United States to continue to impose quantitative restrictions on certain agricultural imports, it was learned here today.

But the members also gave other countries permission to retaliate and seek compensation if affected by the restrictions, which are contained in section 22 of the United States Agricultural Adjustment Act.

This section mainly concerns imports of dairy produce and has led to clashes with several nations in the past. Holland once retaliated by slashing imports of wheat from the United States.

The United States is understood to have assured GATT that it will end any restrictions under the act as soon as they are no longer needed, and consult with interested countries before taking further action.

It also was learned that Switzerland will seriously study this year the possibility of joining GATT. It is thought that Switzerland would try to join it if it can obtain protection for home agriculture similar to that granted to the United States.

A statement published here today revealed that the six nations of the European coal-steel community intended to seek permanent recognition of organizations such as theirs in the revised GATT agreement.

The Mather Story

EXTENSION OF REMARKS OF

HON. THOMAS L. ASHLEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1955

Mr. ASHLEY. Mr. Speaker, I should like to bring to the attention of the Members of the House a news story which well illustrates the happy results which can be achieved when labor and management join forces to solve a mutual problem.

The labor history of Toledo, Ohio, a great industrial center, is not unmarred by strikes and discord. In fact, there was a time when the city bore the stigma of poor labor-management relations and new industries were reluctant to locate there.

Today the situation is quite different—different because the labor unions and management leaders found that they had a common stake in better labor-management relationships and went to work to do something about it. Much of the credit goes to the Labor-Management Citizens Committee of Toledo, to the Toledo Industrial Development

Council, and to the individual leaders of labor and industry whose foresight, wisdom, and sense of community responsibility have made labor-management co-operation possible. Above all, tribute must be paid to the workers for their unselfishness, courage, and faith in the future of their city.

That is why I am proud, today, to insert in the CONGRESSIONAL RECORD the Mather Story as told in the Toledo Blade of February 6, 1955. It is the latest example of how labor and management are working together for their mutual benefit which will be reflected in the welfare of the community as a whole.

THE MATHER STORY—UNION AND COMPANY COOPERATED—SUCCESS ACHIEVED BY JOINING HANDS IN FACE OF ADVERSITY

(By Frank R. Kane)

Henry T. Mather, president of Mather Spring Co., and other officials of his company had a date last night with their employees in UAW-CIO Local 12's headquarters.

Behind that meeting lies a remarkable story of union-management cooperation in a Toledo plant. It is the story of how a company and a union that had fought each other for years suddenly joined hands in the face of adversity and found that they could work together in solving common problems.

Three years ago Henry Mather would never have even contemplated meeting his employees at a union hall. To understand why not, you have to go back as far as 1911, when his father, Gordon M. Mather, founded Mather Spring in Toledo.

Gordon Mather was one of the pioneers of the auto industry. He developed the use of strong, flexible alloy steel for automotive springs and became the sole supplier of springs for Henry Ford's Model T. He also became friend and associate of such rugged early automotive giants as Ford and William C. Durant, founder of General Motors. And he ran Mather Spring much as Henry Ford operated the Ford Motor Co., as almost a one man show.

Mr. Mather was fiercely proud of maintaining an intimate relationship with his workers. He felt he had a personal responsibility for their welfare and he took pride in the fact that he had kept the firm operating in the depression and paid relatively high wages. But he also was convinced that so-called "outsiders" could never represent the interests of the employees effectively.

Naturally, when the UAW-CIO later organized Mather Spring, there was little love lost between Gordon Mather, with his strong personality and convictions, and a union that appeared to be challenging his single-handed control of the destinies of the company. Mr. Mather and the union respected each other as tough adversaries, but they also eyed each other with mutual suspicion and they fought hard and frequently.

Six years ago, Gordon Mather withdrew from active participation in the business because of advancing age and his son Henry took over. Henry Mather admired and respected his father and saw no reason to change his policies, particularly his fighting attitude toward the union.

Then 3 years ago, Mather Spring's management could see trouble coming. Throughout the years it had maintained a high level of quality in its product, but it had not kept pace with its competitors in improving plant efficiency and worker productivity. As a result, the company's production costs and prices were drastically out of line with the rest of the automotive-spring industry.

As Henry Mather later explained it, "The only reason that we were still in business in late 1952 was because the Government had imposed controls on alloy steel. Because of our high volume of production in

previous years, we had large allocations of this alloy steel and many auto firms found that if they wanted alloy steel springs, they had to buy from us."

Mr. Mather and other company officials were not kidding themselves. They knew that when the Government lifted controls on alloy steel, many of their customers would shift to lower-cost spring suppliers.

Drastic action was needed to reduce operating costs and make Mather Spring competitive. So Mr. Mather arranged for an impartial, objective survey of the business by an organization of management consulting engineers.

Together Mather officials and the consultants studied every phase of the company, figuring where they could reduce costs. Among other things, they reduced the number of different types of steel being stocked, so they could cut handling costs. They streamlined accounting procedures and they developed new production methods such as a \$150,000 assembly line which would combine operations then being done at 14 different centers in the Toledo plant.

During the discussions, the management consultants also pointed out that individual worker productivity would have to be considerably increased and this could only be done with the wholehearted cooperation of the employees and the union. So Mather officials arranged a meeting with the plant committee and international representatives of the UAW. They also conferred with Richard T. Gosser, UAW vice president.

Clarence "Buck" Tucker, chairman of the Mather unit of UAW Local 12, later said, "We went to that first meeting determined that we would be nothing more than good listeners. We thought the company was just going to wave a crying towel at us."

"But the management went into every detail of the company's competitive situation and their proposed program. They told us how they needed our help, that they wanted to install a new assembly line which would mean retiming practically every job in the plant."

"They convinced us that they were sincerely asking our cooperation. We decided to go along."

Both union and company officials later agreed that if the union had continued to maintain its attitude of suspicion and mistrust and fought the proposed changes, the cost-cutting program would have been a failure.

Both sides, however, settled down to cooperation. The union aided in the installation of the new assembly line and other improvements and did not oppose the introduction of new job standards as it could have done. The company agreed that in any case where there was a dispute over a time study of a job, a joint time study would be conducted by the management and the union. Actually the program worked so smoothly that the joint time-study provision was invoked by the union only a few times.

The company also conducted a training program for supervisors, on every subject from labor relations to departmental budgeting. It increased the supervisors' responsibilities and successfully encouraged early settlement of problems at the foremen-steward level.

A real test of the program at Mather Spring came early last year when the company had opportunity to bid on a big spring contract being let by one of the largest automobile manufacturers. At that time a number of Mather employees from the finishing department were laid off. If Mather got the business, seniority provisions in the union contract would require that these workers be called back before any new employees were hired.

But as William B. Barney, plant manager, pointed out: "This meant that the company

would be recalling the finishing department workers and placing them in other departments where they would have to be trained to do that work."

"Then when production in those other departments got underway more jobs would open up in the finishing department and those former finishing workers would go back to their department. Then we would have to hire new workers for the other departments and do the training job all over again. If we did it that way, it might take 6 months to get the new production underway."

Union officials explained the situation to the laid-off finishing department workers, who agreed to allow new workers to take the jobs in the other departments and to remain on layoff for another few weeks until work expanded in the finishing department.

"Because the union and the workers cooperated, we were able to meet our planned schedules on that very important contract," Mr. Barney said.

Company officials, however, reserved their highest praise for the continuing vigorous campaign for higher productivity that union officials themselves conducted at union meetings.

Mather Spring also improved its engineering, research, and sales departments. Within a few months the program was definitely on the way to success. Costs were reduced to competitive levels and the company was beginning to reestablish its former strong position in the industry.

Last night Henry Mather and other company officials reported on progress of the program to members of the Mather Spring unit of local 12 and their wives at a social get-together in the union hall. They had a good story to tell.

In the last 2 years employment has just about doubled at Mather Spring's 2 Toledo plants to 500. Last year the company had its biggest sales in history and employer-employee relationships have improved greatly. There has been only 1 written grievance filed by the union in 2 years.

At the same time the company is working to increase job security for the workers by developing new products in an attempt to lessen the firm's dependence on the auto industry.

In his letters to employees during this period, Henry Mather has always concluded with the phrase: "We are going places together." Today Mr. Mather, union officials, and rank-and-file workers at Mather Spring are looking forward to the future with confidence that by working together they can make their company successful from every standpoint.

Civil, Military Leaders Battle Over Airways

EXTENSION OF REMARKS OF

HON. MARTHA W. GRIFFITHS

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1955

Mrs. GRIFFITHS. Mr. Speaker, I want at this time to draw the attention of my colleagues to an article published in the Detroit News of February 27, 1955, which deals with a subject vital to the defense and commerce of our Nation.

In this article the writer, Mr. Robert S. Ball, gives an accurate picture of the behind-the-scenes struggle between civilian and military interests over what kind of common air-navigation system we should have.

The facts in this controversy are not all in but the background which this article supplies is important. I commend it for the attention of my colleagues:

CIVIL, MILITARY LEADERS BATTLE OVER AIRWAYS

(By Robert S. Ball)

WASHINGTON, February 26.—A bitter battle for control of the Federal airways system finds the might of the military establishment arrayed against embattled components of civil aviation.

The battle already has cost the public a reported \$500 million, and many additional millions are yet to be spent before it is resolved, whichever way it goes.

When the controversy erupts in a public inquiry, as now appears certain, these charges will be aired:

1. That the Pentagon has, under a veil of secrecy, spent more than \$350 million on an electronic short-range navigation system that still does not work satisfactorily, and will not for another 3 years.

IGNORED CONGRESS

2. That the Department of Defense violated the will of Congress in developing a system competitive with one agreed upon by all components of aviation and ordered into operation by congressional act.

3. That after the military air navigation system was once rejected by an interdepartmental committee evaluating competitive proposals, the Navy quietly pushed ahead with the competitive development which has led to the present controversy.

4. That the Defense Department has usurped the prerogatives of the State Department by seeking to impose its system as the universal air navigation system, for both military and commercial operations, in all North American Treaty Organization (NATO) countries.

SEEK TO JUNK SYSTEM

Immediately at issue is a decision to junk, starting June 30, a substantial portion of the existing civil airways system on which \$92 million already has been spent and an additional \$15 million is committed.

While the controversy is basically a split between military and civilian aviation, it has resulted in sharp disaffection between the Civil Aeronautics Administration (CAA) and its parent Department of Commerce, has State Department aviation chiefs seething, and has split the Air Transport Association (ATA) down the middle.

Here is the story as pieced together from official documents and the statements of informed persons who only recently were partially released from a pledge of secrecy:

Back in 1947 Congress directed the civil and military agencies to cooperate in the development of a common navigating system. A special committee of the Radio Technical Commission for Aeronautics recommended a general system.

APPROVED PROJECT

Congress approved the recommendation and the project was launched with firm military support.

A new interdepartmental agency, the Air Navigation Development Board (ANDB) was established to amalgamate military and civilian technical knowledge, and finally there was evolved, what is known as VOR-DME (very high frequency omniranges and distance-measuring equipment).

This was adopted as the common system, to be used by both military and civilian aircraft, for cross-country navigation.

Pilots using this equipment are constantly informed as to their heading on the transmitter to which they are tuned as well as to the exact distance from the homing point.

NINETY PERCENT COMPLETE

In effect, the control tower operator can keep precise tabs on all approaching and departing aircraft.

Installation was begun in 1950. Today, the Federal common system is nearly 90 percent completed.

In addition to these CAA-operated ground stations, there are nearly 54,000 sets operating in aircraft, representing a total investment of approximately \$50 million.

It is now disclosed that almost immediately after the joint military-civilian agreement to proceed exclusively with the VOR-DME common system, the military started developing a rival system called TACAN (tactical air navigation).

What makes this duplicate expenditure of public funds even more grievous, in the eyes of Pentagon critics, is that the TACAN system is incompatible with the present system—in other words, it is on an overlapping wave band and both cannot be used.

Anniversary of the Independence of Estonia

EXTENSION OF REMARKS OF

HON. JOHN LESINSKI, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1955

Mr. LESINSKI. Mr. Speaker, on February 24, 1918, Estonia proudly proclaimed her independence. For two centuries Estonia had suffered under Russian domination, beginning with the period when Peter I conquered the territory in 1710. Independence came only after many uprisings and bloody reprisals, of which the most notable was the revolution of 1905. In November of 1918 Estonia declared herself a democratic republic and repulsed an invading Red army. But in 1940 the Soviets seized the country.

It is important for us to remember that the spirit of freedom that lived in the hearts of Estonians in the past is no less alive today. We in the United States should keep faith with the principles upon which our Nation was founded. Ours is a nation forged out of the strength and convictions of people from many countries. Ours is a nation that has the capacity to aid in the rehabilitation of displaced persons. We should not be blinded by our fortunate position so that we cannot appreciate the hardships of others less fortunate. Nor should we forget that a concrete basis of hope is sustained by a generous policy of immigration and by a continued and more revealing congressional investigation of the Soviet crimes against the Baltic peoples. It is desirable that we correct any shortcomings in this respect.

One closing thought that I wish to call to the attention of the House is this: We in the United States are fundamentally one people. We are one people in the support of the Constitution of the United States. We believe in the freedom and dignity of man. We have faith in the ability of man to learn and grow and to overcome the obstacles in the path of his development. It seems to me that there might be more time spent toward

establishing a more certain and a more effective long-run policy of carrying the message of the American people to the world, and this applies to those locked behind the Iron Curtain.

Remarks of Mr. Paul M. Butler, Chairman, Democratic National Committee, Before the Kiwanis Club, Tallahassee, Fla., March 1, 1955

EXTENSION OF REMARKS

OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1955

Mr. SIKES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith the text of a splendid address delivered by the Honorable Paul M. Butler, chairman of the Democratic National Committee, before the Kiwanis Club of Tallahassee, the capital city of Florida, on March 1. Paul Butler has assumed executive leadership of the Democratic Party with a firm and capable hand, and his philosophy on politics and government is particularly refreshing. I recommend the reading of his address to my colleagues on both sides of the aisle.

The address follows:

Mr. Chairman, honored guests, and members of the Kiwanis Club, I deeply appreciate the graciousness extended to me since I arrived in your Sunshine State. I feel even more honored by the fact that my visit to Florida coincides with the 110th anniversary of Florida's admission to the Union. Although this is not my first visit to Florida, it is by all odds the most pleasant. So much so, in fact, that I would like to remain much longer than the few short days my schedule permits.

How easy it must have been for the one who coined the phrase—"Any place in Florida is better than anywhere else"—though I suppose a minority of people elsewhere is still hard to convince.

I am especially pleased to accept the hospitality of your invitation and to have this opportunity to meet with you on the 40th anniversary of the founding of the first Kiwanis Club. It was in 1915 that an exciting new idea entered the lives of a few business and professional men in Detroit, Mich., and in Cleveland, Ohio. Allen S. Browne, a professional organizer, set about to form a mutual-interest club for Detroit businessmen. So 5 men, together with 100 other pioneers, organized the first Kiwanis Club. The idea expanded beyond the limits of the community where it was born. Later in the same eventful year, Cleveland businessmen found the Kiwanis idea had magic appeal. They, too, set up a club and there established the universality of what was soon to become an international movement.

The very next year saw Kiwanis grow from 2 to 32 clubs. Today, after 40 years of unselfish service which has made life better for everyone it has touched, we have seen the Kiwanis international membership move steadily toward the quarter-million mark.

The whole concept of Kiwanis has been one of ever-expanding service and understanding. It found expression in its broad policies of rural-urban cooperation, public affairs and working with underprivileged children. It has emphasized the need for international understanding.

During World War II, Kiwanis pledged itself to morale building for the war effort. But you did more than just that. You started collecting scrap rubber and metal, sponsoring victory gardens, marshalling blood donations, entertaining troops, and watching over the dependents of men who were fighting overseas. Your motto was: "Victory by united effort—by individual service." In 1945, Kiwanis was keyed to victory with the theme, "Win the war—build the peace."

In 1948, the Kiwanis awareness of the realities of world leadership was reflected in the growing number of public affairs activities. Much interest was shown in the United Nations, housing, universal military training, and other vital matters.

In evaluating the 40 years since the first Kiwanis Club was formed, Mr. Dan E. Engdahl, president of the Kiwanis International had this to say:

"As 1954 drew to a close, there was a growing awareness that the year ahead, while marking 40 years of growth, would also mark 40 years of preparation for tomorrow.

"We have moved from one milestone to the next until today we find ourselves at No. 40. Here the road forks. One branch is straight and level. It goes on and on until the road is lost in the mist.

"The other fork winds upward over narrow ridges and chasms. The grade is steep. The way is sometimes clogged with boulders. But leads to the summit of the towering mountain—this we can see.

"The easy road, the way of least resistance, is not worth taking. By following the rugged path of challenge we continue to be worthy of those many men whose pioneering efforts have built our Nation and our beloved Kiwanis.

"The rugged road means ever-expanding service . . . and more dynamic leadership for the free world."

It is about our preparation for tomorrow and the road we choose that I would like to talk with you today. We will be able to follow the rugged road of ever-expanding service; we will be able to give dynamic leadership for the free world only if we understand what living in a free democracy means, only if we have greater tolerance and understanding of one another here at home and of our allies abroad.

Your invitation to me as chairman of the Democratic National Committee, a political partisan, is a fine example of what living in a democracy means—of what tolerance and understanding of one another means. If the time should come in America when a gathering of this sort becomes impossible, then we are in trouble.

Now politicians have always been looked upon with a certain suspicion in our country. You may remember what Artemus Ward, the American humorist of the last century, once said in recommending himself: "I am not a politician and my habits are good."

This attitude of apprehension and caution which many of us hold toward politicians is strongly rooted in America. The ever-present raised eyebrow and tongue in cheek of the man in the street when he talks about the professional politician is in part healthy.

For all of us, as citizens in a democracy, should keep constant check upon those men and women who, from every level of public office, from township advisory board to the White House, govern us.

It is our task as citizens to see that they use the power which we have entrusted to them in a responsible way. We need constantly to keep looking over their shoulders to see what they are doing in the public trust.

What disturbs me, however, is the attitude of almost complete cynicism with which too many of us look upon politics. How many of you have not heard someone say, or perhaps yourselves have said, with ill-disguised contempt, "I want no son or daughter of mine in politics."

To serve one's country in the armed services is considered an honor but to serve one's country by taking part in the process of government and the selection of our officers of government, which is politics, is too often considered not quite respectable.

Perhaps this is because in the past few years officeholders, from both parties, have betrayed their public trust. And because they were in public service, their betrayals received widespread attention. But we can no more generalize about politicians than we can about any other group. I think it well to recall the wise words of Thomas Jefferson: "The want or imperfection of the moral sense in some men, like the want or imperfection of the sense of sight and hearing in others, is no proof that it is a general characteristic of the species."

What I am concerned about is that we recognize in America the importance and, indeed, the necessity of politicians if democratic government is to be more than just a high-sounding phrase.

In a country as large as the United States, with so many sectional and economic and social differences, we must have persons skilled in the art of resolving conflict, persons able to bring out the seemingly irreconcilable variety that is America, national policies which will keep our country from falling either into revolution or reaction, but rather moving steadily ahead.

Such artists are all too infrequently described as what they are: Politicians.

Therefore, we must seek in America to recruit the best talent that we have for political leadership, in both our major parties.

A good way to begin this task is to remove some of the stigma we commonly attach to the word "politician," while keeping an ever-vigilant eye on our public officeholders. And those of us who have some responsibility of political leadership can do much in this respect by seeing to it that men and women of integrity and capacity are encouraged to seek public office.

It is, or least has been with few exceptions, the hallmark of the American system of government that our political parties freely and enthusiastically compete at the polls and then graciously, though often reluctantly, accept the people's verdict.

The victory does not as a rule try to exterminate the loser. Our democratic form of government has grown strong on the basis of our two-party political system.

The annihilation of one party by labeling it the party of treason would, indeed, be fatal to that most successful political system in the history of the world.

I wish that all of you might have heard the fine tribute that was paid by the Democratic Speaker, SAM RAYBURN, to the outgoing Republican Speaker, JOE MARTIN, on the opening day of the new 84th Congress a few weeks ago. Mr. RAYBURN pointed out that he treasured the personal friendship that had existed between Mr. MARTIN and himself for a number of years. And then Speaker RAYBURN said: "There are no degrees in truthfulness. There are no degrees in honesty. You are 100 percent, or you are not. I have found you, JOE MARTIN, 100 percent in both."

This is not to say that the two great parties do not have genuine and profoundly different convictions about the important political issues of the day. But because the Republicans believe sincerely in one issue, and we Democrats believe with equal sincerity the opposite, it does not make one or the other lacking in honesty, integrity, or more important, in patriotism.

Character assassination has become a comparatively recent but nonetheless vicious part of our political campaigns. It is a political role unbecoming to the American scene, a campaign technique that places the desire for political office above the interests of our country. And it has been

known to reach beyond political campaigns into the personal lives of the American people wherein neighbor is turned against neighbor, and even family ties are threatened by accusations, many times unfounded, and more often unproved.

Let us remember the Ten Commandments in our daily lives and in our political campaigns. Let us disagree honestly and vigorously on public issues but without stooping to impugn the personal character of the men and women who disagree with our own point of view.

It is in great part the genius of America that we are all free to be different. The maintenance of that freedom is surely one common goal on which all of us can and should unite in the best interests of our common country.

Hon. Arthur G. Klein, of New York, Receives Community Service Award

EXTENSION OF REMARKS

OF

HON. SIDNEY A. FINE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1955

Mr. FINE. Mr. Speaker, on Sunday, February 27, one of our distinguished colleagues, the Honorable ARTHUR G. KLEIN, Representative of the 19th Congressional District of New York, was awarded a plaque by the East End Temple of New York. This was in recognition of his exceptional services to the community and took the form of a citation, hailing him as the Man of the Year. Mr. Samuel Nichols, president of the Men's Club of the East Side Temple, presented the award with an introductory statement that I will include in the CONGRESSIONAL RECORD.

He said:

We are presenting Congressman ARTHUR G. KLEIN with our first community service award today. We all feel deeply indebted to him for his immeasurable services to the East Side. His help to people, institutions, and organizations has been outstanding. There is not a philanthropic or communal enterprise in this part of the city, Catholic, Protestant, Jewish, or nonsectarian, that has not known the benevolent influence of his assistance, and often his direct participation. There is not an institution with a public service objective that has not known the warmth of his encouragement.

But while we are here to pay recognition to these community services of his, I must not forego the opportunity to remind all of us of Congressman KLEIN's exceptional services to the maintenance of the noblest traditions of our country. Whatever our political views, we must acknowledge with respect that in him we have a tireless champion of the freedoms and rights of every American, that have been granted to us by the work of the Founding Fathers of this country. I recall in particular his forthright challenge to the iniquities of the McCarran Immigration and Naturalization Law. I recall his courageous stand, in and out of Congress, that this country must not put up with the concept of second-class citizenship. I recall his almost solitary voice against the invasion of our privacy by the condonement of wire-tapping practice. I recall his humane understanding of the needs of the latest of our large immigrant groups when he designated for a West Point appointment a young man

of Puerto Rican origin. I recall, too, his forthright challenge to the late Mr. Rankin.

Congressman KLEIN is a son of the East Side. As its Representative in Congress he has been responsive to the needs and wishes of his constituents; but he is remarkable in another and broader aspect. He has been responsive, in and out of Congress, to the heartbeat of all Americans.

We are proud of you, Congressman KLEIN; and I am proud to be able to give you the citation in behalf of our temple.

Memorandum Prepared by the Massachusetts Maritime Academy for the Consideration of the Massachusetts Congressional Delegation

EXTENSION OF REMARKS OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1955

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include an informative memorandum prepared by Arthur C. Sullivan, chairman of the Massachusetts Maritime Academy, showing why necessary appropriations should be made for the fiscal year of 1956 to keep in existence the present State maritime academies.

The memorandum follows:

MEMORANDUM PREPARED BY THE MASSACHUSETTS MARITIME ACADEMY FOR THE CONSIDERATION OF THE MASSACHUSETTS CONGRESSIONAL DELEGATION

It is reported that no money is to be appropriated to carry out the aims and purposes of a law enacted under which the various States have assumed obligations in the way of establishing colleges in the furtherance of the merchant marine.

The law to which reference is made is "An act for the establishment of marine schools, and for other purposes," enacted on June 20, 1874, and later, the purposes of the 1874 act were reaffirmed by H. R. 24145, approved March 4, 1911.

This law is now included in the United States Code, title 34, chapter 19, starting with paragraph 1121, and has as its purposes:

I

"To promote nautical education, the Secretary of the Navy is hereby authorized and empowered to furnish . . . a suitable vessel of the Navy . . . to be used for the benefit of any nautical school or school or college having a nautical branch established at each of the following parts of the United States: Boston, Philadelphia, New York . . . upon the condition that there shall be maintained at such port a school or branch of a school for the instruction of youths in navigation, steamship marine engineering, and all matters pertaining to the proper construction, equipment, and sailing of vessels or any particular branch thereof."

This law has been amended as it applies to specific locations, but otherwise it is in force and effect.

II

This law also provided:

"That a sum not exceeding the amount annually appropriated by any State or municipality for the purpose of maintaining such a marine school . . . is hereby authorized to be appropriated for the purpose of aiding in the maintenance and support of such school or schools, provided, however, that

the sum for any one school would not exceed \$25,000."

The Massachusetts Legislature has appropriated the following amounts for each of the last 5 fiscal years:

1950.....	\$211,416
1951.....	200,704
1952.....	236,159
1953.....	261,700
1954.....	279,231

It is to be noted that the annual grant of \$25,000 has not been increased since 1874.

III

The law also provided that "The President of the United States is authorized . . . to detail proper officers of the Navy as superintendents of or instructors in such school."

At the present time the superintendents at all the State academies are former naval officers; 1 is a vice admiral, 2 are rear admirals, and the other is a commodore.

There are officers and enlisted personnel assigned by the Navy Department to conduct a course in naval science corresponding with similar courses at other colleges, to which reference is herein made to Brown University at Providence, R. I., Dartmouth College in Hanover, N. H.; Harvard College at Cambridge, Mass.; Holy Cross College at Worcester, Mass.; Tufts College, Medford, Mass.; Yale College at New Haven, Conn.

In compliance with the 1874 law, academies were established in four States, and these academies were later authorized to grant bachelor degrees.

New York was the first to comply with the law by establishing a maritime academy in 1874. Later there were academies established:

Massachusetts, 1891.

California, 1929.

Maine, 1941.

For a period supervisory control of the State academies was under the Navy Department and later for a short period the supervision was taken over by the Coast Guard, but the general supervision of the State academies and other colleges comes under the Maritime Administration.

After the enactment of the Merchant Marine Act of 1936 and in accordance with the amendment thereof, the Maritime Administration took over the supervising control of the State maritime academies and adopted rules and regulations for the administration of the State maritime academies.

In 1938 there was established by the Maritime Administration the United States Marine Cadet Corps and for a period to 1942 the members of this corps were all trained in State maritime academies, and it was provided that it was a requirement for Federal aid that the State academies agree to admit out-of-State residents as students in the State academies in a number not to exceed one-third of the academy capacity.

It was determined in 1942 that the requirements of the Maritime Service exceeded the capacity of the State academies, so a Federal Academy was established at Kings Point to supplement the available opportunities for the training of officers.

It is to be noted that when the war requirements for officers were met and the normal needs did not require the full capacity of the State and Federal Academies, the contest started as to whether the United States Government should recognize its obligation under the 1874 law or should such money as is available for maritime training be used exclusively for the maintenance of the Federal Maritime Academy. The authorized enrollment at the 4 State academies is approximately 710 students, which is approximately the same number as those under training at Kings Point. The Federal subsidy to the State academies is re-

ported to be about 20 percent of the cost of operating and maintaining the Federal Academy.

The decision to discontinue the Federal subsidy under the 1874 law is not based upon the economy of the situation for the training at the State academies is at substantially less cost than the training at the Federal Academy. At the Federal Academy the Federal Government provides the premises, as well as all of the instructors for the academic subjects whereas in the State academies, the Federal Government merely makes a contribution to partially reimburse the State academies.

It appears to be the present opinion of some that the 1874 law which has been in effect over 80 years does not reflect our national tradition so that Federal aid to State colleges should be discontinued on the 81st year.

In addition to the grants and allowances under the 1874 act, there have been other funds made available, but these funds are in the manner of assistance to the students in attendance at the State and Federal Academies as indicated below.

Starting in 1942 the Federal aid was increased so that the students in attendance at the Federal and State Maritime Academies were granted aid in two ways:

1. There was a subsistence allowance of approximately 75 cents a day.
2. There was an allowance to each cadet of \$65 per month. In 1950 this was changed to \$200 a year.

For the fiscal period ending June 30, 1955, the Federal aid to the students was \$200 for books, uniforms, etc., plus \$275 for subsistence, on the basis of 710 students at the State academies and the same number at the Federal academy.

During the last session of Congress the House of Representatives acted favorably upon House bill 9434 which established that the need for officers for the maritime service was so demanding as to require the establishment and continuance of a Federal Maritime Academy with the students to have the same financial allowance as granted the cadets at the United States Academies for the Army, Navy, and Air Force.

It is reported that the President has recommended that the appropriations to the various States in compliance with the 1874 law be discontinued, as well as the subsistence and other allowances to the students in an amount on a parity with the students in attendance at Kings Point.

If the Commonwealth of Massachusetts is required to provide the training ship at the academy the cost would be prohibitive, as it would be for all the other State academies.

It appears to be a determined fact that the need for maritime training is an essential today as in the past, or there would be no need for the continuance of a Federal academy at Kings Point on the basis suggested by House bill 9434.

At the present time the applications are being considered by the commissioners of the Massachusetts Maritime Academy for the class to be admitted in August 1955, and the appropriation for the fiscal year ending June 30, 1956, is being considered by the Massachusetts Legislature, so some present policy determination must be made in connection with the Federal subsidy.

The above is not intended to be all inclusive, but is merely a summary of the situation.

It would be appreciated if each member of the Massachusetts congressional delegation would advise as to what further details are desired.

ARTHUR C. SULLIVAN,
Chairman, Board of Commissioners,
Massachusetts Maritime Academy.
FEBRUARY 1, 1955.

Good Evening

EXTENSION OF REMARKS OF

HON. E. ROSS ADAIR

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1955

Mr. ADAIR. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the Good Evening column by Clifford B. Ward, of the Fort Wayne News-Sentinel. The views expressed by this article, in my opinion, are both important and timely.

GOOD EVENING

(By Clifford B. Ward)

Most human beings have a tough time of it. There may be a few favored individuals who go through life without ever encountering any bad bumps in the road, but I doubt it.

Living is a battle and only a few take part in a battle without getting hurt.

I think that a lot of death certificates are improperly made out.

Most people die, not of the things that doctors write on death certificates, but as a result of having lived. An auto ends up on the junk pile, not because its fuel pump failed, but because of the long service which caused not only the fuel pump but a lot of other things to fail. But human beings, of course, are differently constituted. One person gets bumped and becomes embittered, another one gets bumped and becomes a more mellow, kinder person as a result of it. The one person feels sorry for himself, the other has a better appreciation of what the other fellow's sorrow is.

MARKED DIFFERENCES

Now and then I run into people with a grudge against the American system of private enterprise because of what happened to them back in the depression days in the early thirties. Most people who went through that period were hurt badly. Some of them took it in stride, others made it an excuse for espousing causes aimed at destroying our country. But there again we run into the differences between people. Some people can take a lot of pain, others can't take any. One person's first inclination is to feel sorry for himself, another would rather die than yell "ouch."

At any given time in any community, there are hundreds and hundreds of cases of human beings in serious trouble of one sort or another. Every once in a while some particular case is dramatized for public attention making it seem that the case is unique, but actually for every one case dramatized there are many just like it that never get attention, simply because many people do not want to bring attention to their troubles.

DEPRESSING ITEMS GALORE

Actually, on any day any newspaper could be filled from front page to last page with news stories of human beings in trouble. Almost any large hospital has scores of cases that would rate commanding the attention of the public, but normal human beings couldn't take living constantly in an abnormally stressed atmosphere of suffering and death. Oddly enough those who probably have the greatest claims on the pity of other human beings object to having their troubles publicized.

This is not an age in which much attention is paid to any virtues. Virtues are moral things and moral things are ignored. Most people have never heard of the word "fortitude," do not know it is such a thing

as a virtue and know even less about its moral necessity. If life is a battle, it is fought with weapons and the weapons are virtues. All of the good things derive from virtues. Loyalty, courage, patriotism, honesty, manliness, generosity, kindness, and the like are all moral things. The word "virtue" itself derives from the Latin for "manliness." What a ghastly thing it is to send a soldier onto a battlefield without having taught him anything about how to fight in defense of himself. It is even more ghastly to send people onto a battlefield of life without any training in the use of the moral weapons they must have if they are to survive the fight.

Kalewala Day of Finland

EXTENSION OF REMARKS

OF

HON. JOHN LESINSKI, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1955

Mr. LESINSKI. Mr. Speaker, on February 28, 1835, the Finnish national epic, the Kalewala, first appeared in book form. The 120th anniversary of this great epic was celebrated on the 28th of February of this year. Composed of folk verses about the deeds of three semidivine brothers of gigantic stature who lived in Kalewala, the epic has had a great effect on all Finnish art.

The Kalewala is a mythical land of happiness and abundance. This epic of rich mythology is composed in the eight-syllable trochaic line that was imitated by Longfellow in *Hiawatha*. Scholars had known of the Kalewala since 1733, but the verses had to wait until the following century to appear in print.

The verses were first collected by two Finnish physicians, Dr. Zakarias Topelius, who published fragments of the epic in 1822, and Dr. Elias Lönnrot, who was responsible for the 1835 edition and the Kalewala as it appears today.

Appropriately close to Kalewala Day is the date of March 5, the anniversary of the birth of John Ludvig Runeberg, 1804-77. This great national poet of Finland, like all Finnish authors of his day, wrote in Swedish. From 1837 until the end of his life, he served as professor of Latin at Provoo, near Helsinki. The Finnish national anthem was taken from Runeberg's *The Tales of Ensign Stal*, 1844. Among his other best known works are the peasant epic *The Elk-hunters*, 1832, a cycle of romances, *King Fjalmar*, 1844, and *Nadeschda*, 1841. Runeberg's works have been, in part, translated into English.

The country of Finland, through its struggle to remain free and independent, has endeared itself in the hearts of all Americans. The relations of the United States with Finland have been noteworthy for the respect each holds for the other. It would be a sad day for the world if Soviet imperialism ever endangered Finnish independence. And I know that I speak for all Americans in saying that we intend that a free Finland shall continue the fine contributions that distinguishes her history and traditions.

National Better Material Handling and Packaging Week

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1955

Mr. RODINO. Mr. Speaker, under leave to extend my remarks in the Record, I wish to include herein a communication from J. Wellington Hall, national secretary of the American Material Handling Society, Inc., commenting in House Joint Resolution 231 designating a National Better Material Handling and Packaging Week:

AMERICAN MATERIAL HANDLING SOCIETY, INC.,
Toledo, Ohio, March 4, 1955.

HON. PETER W. RODINO, JR.,

Member of Congress, House of Representatives, Washington, D. C.

DEAR MR. RODINO: That you are thoroughly cognizant of the varied activities of the material handling industry and profession is evidenced in the extension of remarks you prepared in regard to a National Material Handling Week. I will, therefore, not take your time in a long discourse on material handling functions, as the contents of your speech is indicative of your familiarity with the subject.

I would, however, like to again state that there can be no industrial activity in which material handling does not occupy a most important niche. Consider the United States Postal Department as a governmental function.

The conveyor industry has in operation some moving sidewalks. R. C. Sollenberger, in an article from the Conveyor Equipment Manufacturers Association Bulletin, states, and I quote:

"On May 24, 1954, the country's first public passenger conveyor went into service at the Erie terminal of the Hudson & Manhattan Railroad, Jersey City, N. J. Length of the conveyor 227 feet, more than half of it up a 10-percent grade, with an approximate speed of 1½ miles per hour and a capacity of 10,800 people per hour."

In planning, may be the replacement of the 42d Street subway shuttle trains by passenger conveyors, as announced by Col. Sydney H. Bingham, manager of New York's Transit Authority. Other projects in planning are: In Cincinnati, an 80 block long system for keeping buses out of the downtown area, a 14-block long system for Cleveland, and many others, all intended to reduce the traffic and congestion in the downtown areas of great cities. Quotes Mr. Sollenberger, "It took the unholy traffic congestion in our cities to make them (passenger conveyors) economically feasible and probably downright necessary."

To cite another example of the material handling engineer's use of all available means to reduce the cost of transportation, the communications industry has increased the efficiency of material handling equipment tremendously. By use of two-way radio communication, it is now possible to have the apparatus do the work for which it is intended, eliminating the time formerly lost waiting for assignments, by having a piece of material handling equipment formerly assigned to a small area, because of lack of communications, now able to cover tremendously large areas, because of the central control. Today, no piece of mobile equipment, be it a bulldozer, crane, overhead or crawler, yard locomotive, lift truck, highway

truck, steamship, airplane, or freight train is further away than the microphone.

In my original letter to you, requesting a National Material Handling Week, the intent was to project the material handling industry and profession into the niche in the industrial organizational structure of this Nation which it is, and by right should be, entitled to occupy.

The designation, in itself, poses a particular problem. The organizations participating, in the strictest sense of the word, make and use as many types of equipment and materials as can be found in an analysis of American industry.

The one common interest is material handling. And material handling is composed of many things. The railroad, the highway truck, the airplane, the conveyor, the pipeline, the fork lift truck, the industrial tractor-trailer train, the lowly, but so important hand truck, ad infinitum.

But, basic to all of these is the package. How shall it be handled? How can it be handled? How best can we transport or warehouse bulk commodities in steel, brass, bar, coil or strip stock or chemicals, liquids and powders? How best can we load and fully load, ships, planes, trucks or freight cars.

Then, too, the manufacturers of pallets for transportation and warehousing are an integral part of the tremendous material handling machine.

Therefore, the communications industry, the packaging industry, the pallet industry are basic to the concept of good material handling.

It is with extreme pleasure that I note your resolution House Joint Resolution 231, a National Better Material Handling and Packaging Week.

This designation acknowledges the various organizations which are vital cogs in the immense machine known as material handling, whose various contributions to the function have contributed so much to the Nation's economy.

I would request of you, in the furtherance of this effort, that this letter be inserted into the CONGRESSIONAL RECORD as of value to the program to establish a National Better Material Handling and Packaging Week.

Very truly yours,

J. W. HALL,
National Secretary.

Thomas G. Masaryk—World Hero

EXTENSION OF REMARKS

OF

HON. ROBERT D. HARRISON

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1955

Mr. HARRISON of Nebraska. Mr. Speaker, on March 7, 1850, Thomas G. Masaryk was born.

The world was busy that year. Jenny Lind, the Swedish Nightingale, was giving her first American concert. California was admitted as a State. Senator Henry Clay was striving to bring together the rapidly dividing interests of the North and the South.

But, to the world, nothing that happened in 1850 was more important than the birth of this one child.

Thomas Masaryk might have gone down in history as a great organizer. It was through his dedicated efforts that the diverse peoples of Czechoslovakia were welded into one.

Thomas Masaryk might have had his name graven among the great as a scholar. The brilliance of his pen produced books which will, long after his death, be praised as outstanding contributions to the science of politics.

Thomas Masaryk might have been forever known as a prophet. It was he who said, "A Communist is only a Czarist with his uniform on wrong side out."

But, to me, Thomas Masaryk was more than an organizer, more than a scholar; even more than a prophet.

He was a patriot who lived with his people; for his people. He was a lover of liberty who extended the hand of enduring friendship to all men who loved freedom, irrespective of their breed or their birth.

Thomas G. Masaryk was—and is—a hero of the world.

Prime Minister Churchill's Address on Deterrent Defense and the Hydrogen Bomb

EXTENSION OF REMARKS

OF

HON. STEWART L. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1955

Mr. UDALL. Mr. Speaker, I am placing in the RECORD today the full text of the address delivered to the House of Commons last week by Prime Minister Churchill. This is certainly the most thorough and perceptive analysis of defense in the age of the hydrogen bomb which we have yet had. Those interested in this paramount problem will, I am sure, want to read, and reread, this statement. The address follows:

We live in a period happily unique in human history, when the whole world is divided intellectually and to a large extent geographically between the creeds of Communist discipline and individual freedom, and when at the same time this mental and psychological division is accompanied by the possession by both sides of the obliterating weapons of the nuclear age.

We have antagonisms now as deep as those of the Reformation and its reactions, which led to the Thirty Years' War. But now they are spread over the whole world instead of only over a small part of Europe. We have to some extent the geographical division of the Mongol invasion in the 13th century. We only more ruthless and more thorough. We have force and science, hitherto the servants of man, now threatening to become his master.

I am not pretending to have a solution for a permanent peace between the nations which could be unfolded this afternoon. We pray for it. Nor shall I try to discuss the cold war which we all detest but have to endure. I shall only venture to offer to the House some observations, mainly of a general character, on which I have pondered long and which I hope may be tolerantly received as they are intended by me.

NEW SOURCES OF POWER

And here may I venture to make a personal digression? I do not pretend to be an expert or to have technical knowledge of this prodigious sphere of science. But in my long friendship with Lord Cherwell I have

tried to follow and even predict the evolution of events. I hope that the house will not reprove me for vanity or conceit if I repeat what I wrote a quarter of a century ago:

"We know enough," I said, "to be sure that the scientific achievements of the next 50 years will be far greater, more rapid and more surprising than those we have already experienced. High authorities tell us that new sources of power vastly more important than any we yet know will surely be discovered."

"Nuclear energy is incomparably greater than the molecular energy which we use today. The coal a man can get in a day can easily do 500 times as much work as the man himself. Nuclear energy is at least 1 million times more powerful still. If the hydrogen atoms in a pound of water could be prevailed upon to combine together and form helium, they would suffice to drive a 1,000-horsepower engine for a whole year. If the electrons—those tiny planets of the atomic systems—were induced to combine with the nuclei in the hydrogen, the horsepower liberated would be 120 times greater still."

"There is no question among scientists that this gigantic source of energy exists. What is lacking is the match to set the bonfire alight, or, it may be, the detonator to cause the dynamite to explode."

This is no doubt not quite an accurate description of what has been discovered, but as it was published in the Strand magazine of December 1931—24 years ago—I hope that my plea to have long taken an interest in the subject may be indulgently accepted by the house.

What is the present position? Only three countries possess, in varying degrees, the knowledge and the power to make nuclear weapons. Of these, the United States is overwhelmingly the chief.

Owing to the breakdown in the exchange of information between us and the United States since 1946, we have had to start again independently on our own. Fortunately executive action was taken promptly by the Right Honorable Gentleman, the leader of the opposition, to reduce as far as possible the delay in our nuclear development and production. By his initiative we have made our own atomic bombs. Confronted with the hydrogen bomb I have tried to live up to the Right Honorable Gentleman's standard. We have started to make that one too.

GRAVE DECISION

It is this grave decision which forms the core of the defense paper which we are discussing this afternoon. Although the Soviet stockpile of atomic bombs may be greater than that of Britain, British discoveries may well place us above them in fundamental science.

May I say that for the sake of simplicity and to avoid verbal confusion, I use the expression "atomic bombs" and also "hydrogen bombs" instead of "thermonuclear," and I keep "nuclear" for the whole lot.

There is an immense gulf between the atomic and the hydrogen bomb. The atomic bomb, with all its terror, did not carry us outside the scope of human control or man-made events in thought or action, in peace or war. But when Mr. STERLING COLE, the chairman of the United States Congressional [Atomic] Committee, gave out a year ago—February 17, 1954—the first comprehensive review of the hydrogen bomb, the entire foundation of human affairs was revolutionized and mankind placed in a situation both measureless and laden with doom.

It is now the fact that a quantity of plutonium—probably less than would fill this box on the table, and quite a safe thing to store—would suffice to produce weapons which would give indisputable world domination to any great power which was the only one to have it. There is no absolute

defense against the hydrogen bomb, nor is any method in sight by which any nation or any country can be completely guaranteed against the devastating injury which even a score of them might inflict on wide regions.

What ought we to do? Which way shall we turn to save our lives and the future of the world? It does not matter so much to old people. They are going soon anyway. But I find it poignant to look at youth in all its activities and ardor, and most of all to watch little children playing their merry games, and wonder what would lie before them if God wearied of mankind.

The best defense would, of course, be bona-fide disarmament all around. This is in all our hearts, but sentiment must not cloud our vision. It is often said that facts are stubborn things. A renewed session of a subcommittee of the Disarmament Commission is now sitting in London and is rightly attempting to conduct its debates in private. We must not conceal from ourselves the gulf between the Soviet Government and the NATO powers, which has hitherto, for so long, prevented an agreement. The long history and tradition of Russia makes it repugnant to the Soviet Government to accept any practical system of international inspection.

A second difficulty lies in the circumstances that, just as the United States, on the one hand, has, we believe, the overwhelming mastery in nuclear weapons, so the Soviets and their Communist satellites have immense superiority in what are called "conventional" forces—the sort of arms and forces with which we fought the last war, but much improved.

The problem is therefore to devise a balance and phased system of disarmament which at no period enables any one of the participants to enjoy an advantage which might endanger the security of the others. A scheme on these lines was submitted last year by Her Majesty's Government and the French Government, and was accepted by the late Mr. [Andrei Y.] Vishinsky as a basis of discussion. It is now being examined in London.

UP-TO-DATE ARMS NEEDED

If the Soviet Government has not at any time since the war shown much nervousness about the American possession of nuclear superiority, that is because they are quite sure that it will not be used against them aggressively, even in spite of many forms of provocation.

On the other hand, the NATO powers have been combined together by the continued aggression and advance of communism in Asia and in Europe. That this should have eclipsed in a few years and largely effaced the fearful antagonism and memories that Hitlerism created for the German people is an event without parallel but it has to a large extent, happened. There is widespread belief throughout the free world that, but for American nuclear superiority, Europe would already have been reduced to satellite status and the Iron Curtain would have reached the Atlantic and the Channel.

Unless a trustworthy and universal agreement upon disarmament, conventional and nuclear alike, can be reached and an effective system of inspection is established and is actually working, there is only one sane policy for the free world in the next few years. That is what we call defense through deterrents. This we have already adopted and proclaimed.

These deterrents may at any time become the parents of disarmament, provided that they deter. To make our contribution to the deterrent we must ourselves possess the most up-to-date nuclear weapons and the means of delivering them. That is the position which the Government occupy. We are to discuss this not only as a matter of prin-

ciple: There are many practical reasons which should be given.

Should war come, which God forbid, there are a large number of targets that we and the Americans must be able to strike at once. There are scores of airfields from which the Soviets could launch attacks with hydrogen bombs as soon as they have the bombers to carry them. It is essential to our deterrent policy and to our survival to have, with our American allies, the strength and numbers to be able to paralyze these potential Communist assaults in the first few hours of the war, should it come.

The House will perhaps note that I avoid using the word Russia as much as possible in this discussion. I have a strong admiration for the Russian people—for their bravery, their many gifts, and their kindly nature. It is the Communist dictatorship and the declared ambition of the Communist Party and their proselytizing activities which we are bound to resist, and that is what makes this great world cleavage which I mentioned when opening my remarks.

There are also big administrative and industrial targets behind the Iron Curtain, and any effective deterrent policy must have the power to paralyze them all at the outset, or shortly after. There are also the Soviet submarine bases and other naval targets which will need early attention. Unless we make a contribution of our own—that is the point which I am pressing—we cannot be sure that in an emergency the resources of other powers would be planned exactly as we would wish or that the targets which would threaten us most would be given what we consider the necessary priority, or the deserved priority, in the first few hours.

These targets might be of such cardinal importance that it would really be a matter of life and death for us.

All this, I think, must be borne in mind in deciding our policy about the conventional forces, to which I will come later, the existing services.

Meanwhile, the United States has many times the nuclear power of Soviet Russia. I avoid any attempt to give exact figures, and they have, of course, far more effective means of delivery. Our moral and military support of the United States and our possession of nuclear weapons of the highest quality and on an appreciable scale, together with their means of delivery, will greatly reinforce the deterrent power of the free world, and will strengthen our influence within the free world. That, at any rate, is the policy which we have decided to pursue.

That is what we are now doing, and I am thankful that it is endorsed by a mass of responsible opinion on both sides of the House, and, I believe, by the great majority of the Nation.

A vast quantity of information—some true, some exaggerated, much out of proportion—has been published about the hydrogen bomb. The truth has inevitably been mingled with fiction, and I am glad to say that panic has not occurred. Panic would not necessarily make for peace. That is one reason why I have been most anxious that responsible discussions on this matter should not take place on the BBC or upon television, and I thought that I was justified in submitting that view of Her Majesty's Government to the authorities, which they at once accepted—very willingly accepted.

APPALLING PROSPECT SEEN

Panic would not necessarily make for peace even in this country. There are many countries where a certain wave of opinion may arise and swing so furiously into action that decisive steps may be taken from which there is no recall. As it is, the world population goes on its daily journey despite its somber expression and earnest longing for relief. That is the way we are going on now.

I shall content myself with saying about the power of this weapon—the hydrogen

bomb—that, apart from all the statements about blast and heat effects over increasingly wide areas, there are now to be considered the consequences of "fallout," as it is called, of windborne radioactive particles. There is both an immediate direct effect on human beings who are in the path of such a cloud and an indirect effect through animals, grass, and vegetables, which pass on these contagions to human beings through food.

This would confront many who escaped the direct effects of the explosion with poisoning or starvation, or both. Imagination stands appalled. There are, of course, the palliatives and precautions of a courageous civil defense, and about that the Home Secretary will be speaking later on tonight. But our best protection lies, as I am sure the House will be convinced, in successful deterrents operating from a foundation of sober, calm, and tireless vigilance.

However, a curious paradox has emerged. Let me put it simply. After a certain point has been passed, it may be said, the worse things get, the better. The broad effect of the latest developments is to spread almost indefinitely and at least to a vast extent the area of mortal danger. This should certainly increase the deterrent upon Soviet Russia by putting her enormous spaces and scattered population on an equality, or near equality, of vulnerability with our small, densely populated island and with Western Europe.

I cannot regard this development as adding to our dangers. We have reached the maximum already. On the contrary, to this form of attack continents are vulnerable as well as islands. Hitherto crowded countries, as I have said, like the United Kingdom and Western Europe, have had this outstanding vulnerability to carry. But the hydrogen bomb, with its vast range of destruction and the even wider area of contamination, would be effective also against nations whose population hitherto has been so widely dispersed over large land areas as to make them feel that they were not in any danger at all.

PROSPECTS FOR FUTURE

They too become highly vulnerable; not yet equally perhaps, but still highly and increasingly vulnerable. Here again we see the value of deterrents, immune against surprise and well understood by all persons on both sides—repeat, on both sides—who have the power to control events. That is why I have hoped for a long time for a top-level conference where these matters could be put plainly and bluntly from one friendly visitor to the conference to another.

Then it may well be that we shall, by a process of sublime irony, have reached a stage in this story where safety will be the sturdy child of terror, and survival the twin brother of annihilation. Although the Americans have developed weapons capable of producing all the effects I have mentioned, we believe that the Soviets so far have tested by explosion only a type of bomb of intermediate power.

There is no reason why, however, they should not develop sometime within the next 4, 3, or even 2 years more advanced weapons and full means to deliver them on North American targets. Indeed, there is every reason to believe that within that period they will. In trying to look ahead like this, we must be careful ourselves to avoid the error of comparing the present state of our preparations with the stage which the Soviets may reach in 3 or 4 years time. It is a major error of thought to contrast the Soviet position 3 or 4 years hence with our own position today. It is a mistake to do this either in the comparatively precise details of aircraft development or in the measureless sphere of nuclear weapons.

The threat of hydrogen attack on these islands lies in the future. It is not with us now.

According to the information that I have been able to obtain—I have taken every opportunity to consult all the highest authorities at our disposal—the only country which is able to deliver today a full-scale nuclear attack with hydrogen bombs at a few hours' notice is the United States. That surely is an important fact, and from some points of view and to some of us it is not entirely without comfort.

It is conceivable that Soviet Russia, fearing a nuclear attack before she has caught up with the United States and created deterrents of her own, as she might argue that they are, might attempt to bridge the gulf by a surprise attack with such nuclear weapons as she has already. American superiority in nuclear weapons, reinforced by Britain, must therefore be so organized as to make it clear that no such surprise attack would prevent immediate retaliation on a far larger scale. This is an essential of the deterrent policy.

For this purpose, not only must the nuclear superiority of the Western powers be stimulated in every possible way, but their means of delivery of bombs must be expanded, improved, and varied. It is even probable, though we have not been told about it outside the NATO sphere, that a great deal of this has been already done by the United States. We should aid them in every possible way.

I will not attempt to go into details, but it is known that bases have been and are being established in as many parts of the world as possible and that over all rests the United States Strategic Air Force, which is in itself a deterrent of the highest order and is in ceaseless readiness. The Soviet Government probably knows in general terms of the policy that is being pursued, and of the present United States strength and our own growing addition to it.

Thus, they should be convinced that a surprise attack could not exclude immediate retaliation. As one might say to them: Although you might kill millions of our people, and cause widespread havoc by a surprise attack, we could, within a few hours of this outrage, certainly deliver several, indeed many times, the weight of nuclear material which you have used, and continue retaliation on that same scale. We have, we could say, already hundreds of bases for attack from all angles and have made an intricate study of suitable targets.

GUIDE OF SOVIET INTERESTS

Thus, it seems to me, with some experience of wartime talks, you might go to dinner and have a friendly evening. I should not be afraid to talk things over as far as they can be. This, and the hard facts, would make the deterrent effective.

I must make one admission, and any admission is formidable. The deterrent does not cover the case of lunatics or dictators in the mood of Hitler when he found himself in his final dugout. That is a blank. Happily, we may find methods of protecting ourselves, if we were all agreed, against that.

All these considerations lead me to believe that, on a broad view, the Soviets would be ill-advised to embark on major aggression within the next 3 or 4 years. One must always consider the interests of other people when you are facing a particular situation. The Russian interests may be the only guide that is available. We may calculate, therefore, that world war will not break out within that time. If, at the end of that time, there should be a supreme conflict, the weapons which I have described this afternoon would be available to both sides, and it would be folly to suppose that they would not be used. Our precautionary dispositions and preparations must therefore be based on the assumption that, if war should come, those weapons would be used.

I repeat, therefore, that during the next 3 or 4 years the free world should and will

retain an overwhelming superiority in hydrogen weapons. During that period it is most unlikely that the Russians would deliberately embark on major war or attempt a surprise attack either of which would bring down upon them at once a crushing weight of nuclear retaliation. In 3 or 4 years' time—it may be even less—the scene will be changed. The Soviets will probably stand possessed of hydrogen bombs and the means of delivering them not only on the United Kingdom but also on North American targets. They may then have reached a stage not indeed of parity with the United States and Britain but of what is called saturation.

MEANING OF SATURATION

I must explain this term of art. "Saturation," in this connection, means the point where although one power is stronger than the other—perhaps much stronger—both are capable of inflicting crippling or quasi-mortal injury on the other with what they have got. It does not follow, however, that the risk of war will then be greater. Indeed, it is arguable that it will be less, for both sides will then realize that global war would result in mutual annihilation.

Major war of the future will differ therefore from anything we have known in the past, in this one significant respect that each side at the outset will suffer what it dreads the most—the loss of everything that it has ever known. The deterrents will grow continually in value. In the past an aggressor has been tempted by the hope of snatching an early advantage. In future, he may be deterred by the knowledge that the other side has the certain power to inflict swift, inescapable and crushing retaliation.

Of course, we should all agree that a worldwide international agreement on disarmament is the goal at which we should aim. The western democracies disarmed themselves at the end of the war. The Soviet Government did not disarm, and the western nations were forced to rearm, though only partially, after the Soviets and Communists had dominated all China and half Europe. That is the present position. It is easy, of course, for the Communists to say now, "Let us ban all nuclear weapons." Communist ascendancy in conventional weapons would then become overwhelming. That might bring peace but only peace in the form of the subjugation of the free world to the Communist system.

I shall not detain the House very much longer and I am sorry to be so long. The topic is very intricate. I am anxious to repeat and to emphasize the one word which is the theme of my remarks, namely, "deterrent." That is the main theme.

The hydrogen bomb has made an astounding incursion into the structure of our lives and thoughts. Its impact is prodigious and profound, but I do not agree with those who say, "Let us sweep away forthwith all our existing defense services and concentrate our energy and resources on nuclear weapons and their immediate ancillaries." The policy of the deterrent cannot rest on nuclear weapons alone. We must, together with our NATO allies, maintain the defensive shield in Western Europe.

Unless the NATO powers had effective forces there on the ground and could make a front, there would be nothing to prevent piecemeal advance and encroachment by the Communists in this time of so-called peace. By successive infiltrations the Communists could progressively undermine the security of Europe. Unless we were prepared to unleash a full-scale nuclear war as soon as some local incident occurs in some distant country, we must have conventional forces in readiness to deal with such situations as they arise.

CONTRIBUTION TO NATO

We must, therefore, honor our undertaking to maintain our contribution to the

NATO forces in Europe in time of peace. In war, this defensive shield would be of vital importance, for we must do our utmost to hold the Soviet and satellite forces at arms' length in order to prevent short-range air and rocket attack on these islands. Thus, substantial strength in conventional forces has still a vital part to play in the policy of the deterrent. It is perhaps of even greater importance in the cold war.

Though world war may be prevented by the deterrent power of nuclear weapons, the Communists may well resort to military action in furtherance of their policy of infiltration and encroachment in many parts of the world. There may well be limited wars on the Korean model, with limited objectives. We must be able to play our part in these, if called upon by the United Nations Organization. In the conditions of today, this is also an aspect of our commonwealth responsibility. We shall need substantial strength in conventional forces to fulfill our worldwide obligations in these days of uneasy peace and extreme bad temper.

To sum up this part of the argument, of course, the development of nuclear weapons will affect the shape and organization of the Armed Forces and also of civil defense. We have entered a period of transition in which the past and the future will overlap. But it is an error to suppose that, because of these changes, our traditional forces can be cast away or superseded.

The tasks of the Army, Navy, and Air Force in this transition period are set forth with clarity in the defense white paper. The means by which these duties will be met are explained in more detail in the departmental papers which have been laid before the House by the three service ministers. No doubt, nothing is perfect; certainly nothing is complete, but, considering that these arrangements have been made in the first year after the apparition of the hydrogen bomb, the far-seeing and progressive adaptability which is being displayed by all three services is remarkable.

I understand that there is to be a vote of censure. Well, certainly, nothing could be more worthy of censure than to try to use the inevitable administrative difficulties of the transitional stage as a utensil of party politics and would-be electioneering. I am not saying that anyone is doing it; we shall see when it comes to the vote. The future shape of civil defense is also indicated in broad outline in the defense white paper. This outline will be filled in as the preparation of the new plans proceeds, but the need for an effective system of civil defense is surely beyond dispute.

It presents itself today in its noblest aspect; namely, the Christian duty of helping fellow mortals in distress. Rescue, salvage, and ambulance work have always been the core of civil defense, and no city, no family, nor any honorable man or woman can repudiate this duty and accept from others help which they are not prepared to fit themselves to render in return.

If war comes great numbers may be relieved of their duty by death. But none must deny it as long as they live. If they do, they might perhaps be put in what is called coventry. I am speaking of the tradition, and not of any particular locality.

The argument which I have been endeavoring to unfold and consolidate gives us in this island an interlude. Let us not waste it. Let us hope we shall use it to augment or at least to prolong our security and that of mankind.

But how?

There are those who believe, or at any rate say: If we have the protection of the overwhelming powerful United States, we need not make the hydrogen bomb for ourselves or build a fleet of bombers for its delivery. We can leave that to our friends across the

ocean. Our contribution should be criticism of any unwise policy into which they may drift or plunge. We should throw our hearts and consciences into that.

OWN NEEDS STRESSED

Personally, I cannot feel that we should have much influence over their policy or actions, wise or unwise, while we are largely dependent, as we are today, upon their protection. We too must possess substantial deterrent power of our own. We must also never allow, above all, I hold, the growing sense of unity and brotherhood between the United Kingdom and the United States and throughout the English-speaking world to be injured or retarded. Its maintenance, its stimulation, and its fortifying is one of the first duties of every person who wishes to see peace in the world and wishes to see the survival of this country.

To conclude, mercifully, there is time and hope if we combine patience and courage. All deterrents will improve and gain authority during the next 10 years. By that time, the deterrent may well reach its acme and reap its final reward. The day may dawn when fair play, love for one's fellow men, respect for justice and freedom, will enable tormented generations to march forth serene and triumphant from the hideous epoch in which we have to dwell. Meanwhile, never flinch, never weary, never despair.

The 105th Anniversary of the Birth of Thomas G. Masaryk

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1955

Mr. FLOOD. Mr. Speaker, as a tribute to a great and worthy man, whose very life exemplified the highest ideals and traditions, I call attention to the 105th anniversary of the birth of Thomas G. Masaryk, the father of the Czechoslovak Republic. It is only fitting that we here in America should note this anniversary because the Communist masters of Masaryk's homeland have banned any celebration, as did the Nazis before them. And why? Simply because they know that as long as the name of Masaryk lives in Czechoslovakia their rule is insecure. The spirit of Masaryk is the spirit of belief in the individual, of tolerance, of respect for truth and hatred of insincerity, and of belief in one's Creator. No dictatorship in the world can permit these truths to flourish and itself long endure.

Even in his personal life Masaryk can serve as an inspiration. He was born to a low station in life, but raised himself to a position of eminence by hard work and perseverance. Yet he never hesitated to jeopardize that hard-won standing by embracing causes that he believed to be right, regardless of popular or official opposition. He was undismayed in defeat, and magnanimous in victory.

A true friend of the United States, he created a Czechoslovakia that was an embodiment of the democratic ideal. We regret profoundly that this anniversary cannot be honored in his own land. The world needs more men like Thomas G. Masaryk.

Death Takes Jim Thomas, Director of District 15

EXTENSION OF REMARKS OF

HON. VERA BUCHANAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1955

Mrs. BUCHANAN. Mr. Speaker, the sudden death of James J. "Jim" Thomas, director of district 15, United Steelworkers, came as a deep shock to his many friends, among whom I had the privilege to count myself.

Jim Thomas was a close friend of mine and of my late husband Congressman Frank Buchanan, for many years. His efforts and his accomplishments on behalf of the Steelworkers were tremendous. He earned and enjoyed the respect and affection of his fellow workers and of his community, to which on many occasions, he devoted his great diligence and his many talents. His death is a tragic loss to the United Steelworkers and a truly personal loss to me. To his devoted wife and family I extend my heartfelt sympathy.

Under leave to extend my remarks in the RECORD, I wish to include the following article from the March 1955 issue of Steel Labor:

DEATH TAKES JIM THOMAS, DIRECTOR OF DISTRICT 15—"OLD FAITHFUL" IN STEEL UNION MOURNED BY MEN OF THE MILLS

Death has struck down one of the mainstays of the United Steelworkers of America.

James J. "Jim" Thomas, director of one of the largest districts in the steel union, died unexpectedly, February 22, of a heart ailment while he was confined to Homestead, Pa., hospital for a series of tests and treatment. He had been in the hospital for about 2 weeks. He was 55.

The news stunned his thousands of friends, both inside and outside the labor movement. It was a particularly heavy blow to the 50,000 members of the union in district 15, where Jim had labored so faithfully for 15 years in building the United Steelworkers into a solid, closely knit organization.

President David J. McDonald, who was in Washington for the CIO executive board meeting, expressed the grief felt throughout the union:

Jim Thomas was one of the old faithfuls who devoted all of his life and the vast store of ability and energy to the people he loved best—the men of the mills and their families.

"The services he rendered to this union simply cannot be measured. He was a man who could be depended on no matter how rough the going might be. We will miss him in countless ways, and the imprint he leaves on the United Steelworkers of America will be felt as we move down through the years."

Mr. Thomas was a steelworker all of his working life. He was a union man in the truest sense of the phrase. He went into the mills of Jones & Laughlin Steel Corp. at a very early age and was active in union affairs while still in his teens. Born in Uniontown, Pa., in 1900, Jim moved to Hazelwood, in Pittsburgh, with his family and went to work in Jones & Laughlin's Hazelwood mills. He learned the machinist trade, advanced to first-class machinist, and worked in that plant until 1940.

As far back as 1919, when an attempt was made to organize basic steel by the old Amal-

gamated, Jim poured all his youthful drive into the campaign. When the attempt failed he bided his time until the steelworkers organizing committee was formed in 1936 and became one of the very first volunteer organizers while continuing his regular job in the mill.

When local 1843 was formed Jim became a key officer, holding most of the posts in the local. The union called him to take on the job of director of district 15 in 1940, a position he filled until his death. He was reelected without opposition in every referendum.

Jim Thomas was a man who was easy to know and easy to love. He was a kindly man, always ready to sit down and reminisce or worry about someone else's problems. A perpetual smile creased his face, regardless of the tenseness that surrounded many union problems he bucked day in and day out. He experienced great joy in mingling with his people—the steelworkers—in their homes, their local unions, their clubs.

His genial personality sometimes hid an uncanny shrewdness that enabled him to cut through to the heart of a problem. That, plus the fact that he knew the steel industry from stem to stern, made him a top-notch negotiator. And his honesty at all times commanded the respect of management people, as well as his fellow unionists.

Those who really knew Jim Thomas marveled at the deep reservoir of strength within him and at the hidden drive that led him to take part in scores of outside activities aimed at helping people. He devoted many evening hours to such activities as the Community Fund, which he served as a board member in western Pennsylvania. He served on the Blue Cross Blue Shield Board upon which thousands of union members depend for protection under union insurance programs. He was active in dozens of fraternal organizations that hold an interest for steelworkers. He served for several years on the Pittsburgh Housing Authority.

All of this Jim managed to crowd into a busy life within the union itself, as he headed the most highly concentrated basic steel area in the world. District 15 stretches for 18 miles up the Monongahela River from Pittsburgh, boasting some 46 locals. It comprises such mill towns as Homestead, McKeesport, Braddock, Clairton, Irvin Works, Duquesne, and Rankin, where big basic United States Steel plants operate.

Jim was one of the top negotiators in contracts negotiated with Big Steel for many years. He served on most of the important committees within the union, including the pension and insurance committees.

Since the early 1940's he was a vice president of the Pennsylvania CIO Industrial Union Council. As such, he became involved in the problems of other unions and could always be counted upon to fulfill a duty as he saw it. He was one of the prime movers in the early, hectic days of the formation of the Steel City Industrial Union Council in Pittsburgh and one of his last appearances was on the platform, with President McDonald, at a special meeting called by that body to mark its anniversary.

Through international conventions and his many assignments to serve on special commissions in other districts, Jim became known and loved by steelworkers across the country.

Friends were received at the O'Toole & O'Connor Funeral Home, around the corner from his early home in Hazelwood and within the shadow of the J and L smokestacks. Solemn requiem high mass was offered in St. Teresa Church, Homestead, and burial was at Calvary Cemetery, Pittsburgh.

Mr. Thomas was survived by his widow, Mrs. Claudia Hetrick Thomas; a son, James R. Thomas, of Pittsburgh; a daughter, Mrs. Jo Ann Marino, of McCallen, Texas; 3 broth-

ers, Frank, Joseph and Howard; 3 sisters, Mrs. Kathryn Pearson, Mrs. Rose Shirey and Mrs. Virginia Fisher, and 2 grandchildren.

Instead of flowers, Mrs. Thomas had requested that donations be made to the Heart Fund. Members of the United Steelworkers international executive board were honorary pall bearers.

European Credit Unions

EXTENSION OF REMARKS OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1955

Mr. PATMAN. Mr. Speaker, the February 1955 issue of the Texas Credit Union League Bulletin carried an article by Mr. H. B. Yates, president of the Credit Union National Association, of Dallas, Tex., entitled "European Credit Unions," which I am inserting herewith.

Mr. Yates' comprehensive report of the tour of 8 European countries by himself and 11 other cooperative leaders is so interesting, it will be found worthwhile reading. It is as follows:

EUROPEAN CREDIT UNIONS

(By H. B. Yates, president, Credit Union National Association)

The tour of 12 cooperative leaders visited 8 countries in 3 weeks, spending from 2 to 3 days in each country. The time was spent principally in conferences with the leaders of the different countries and conducted tours to cooperative stores, farms, and factories. We did spend a small part of our time in sightseeing.

The credit union movement and the cooperative movement have separate origins and today are still separate movements in most of the countries visited. Only in Finland, and to some extent in Holland, did we find what might be called an integrated movement. As practically all of our time was spent with the cooperative leaders, I found it somewhat difficult to get complete information on credit unions in all of the countries visited.

One characteristic of all European credit unions is that they require security or co-makers. This general attitude is not different from that found in some American institutions; that one should be able to prove that he does not need a loan in order to secure one. Raiffeisen insisted that only members of good character be accepted in the credit union and that character loans be made. The only character loans that I heard of being used in Europe were in the credit unions in Finland, Holland, and Germany organized among people working for the same industry or on the same payroll and then loans were small. The development and extension of character credit is a contribution of American credit union to the movement.

The principle of a person borrowing money to improve his position in the world is not so prevalent in Europe as in America. European borrowing seems to be more for necessity. Europeans are naturally more conservative than Americans. In Europe, due to the crowded conditions in all countries and the relic of the class system found in some, the social and economic status of an individual is much more fixed than it is in America. One Englishman said to me: "We do not believe in encouraging our poor people to go into debt." Most European governments do more for the lower

classes than does the Government of the United States.

Raiffeisen's credit unions were organized primarily for farmers and the European credit union today is still primarily for farmers. The widespread organization of credit unions in the cities is another American contribution to the movement. In countries where the credit needs of the farmers have been provided for by the Government as in England and France, there is no credit-union movement. The credit unions in all countries visited, regardless of the name they operate under, are based on the Raiffeisen system except they have discarded the character-loan idea. Various names are used for credit unions in different countries as Raiffeisen bank, rural bank, village bank, credit cooperative or credit society. The best development of credit unions is probably found in Finland, Germany, and Holland. In all countries, they primarily serve the farmers, but in Germany, Finland, and Holland, the middle and working classes in the towns and cities are included to some extent. In all countries, these organizations have their own central banks, which have charge of the supervision and examination. This seems to be more effective than our supervision and examination by Government agencies as embezzlements are unheard of. The central bank is much closer to the credit union and more interested in the success of the credit union than a government agency would be as the central bank is dependent on a healthy credit union movement. As a rule, these credit unions are small, usually located in villages where everyone knows everyone else's business.

Finland, at the close of 1952, had 650 credit societies with 354 branch offices and 970,000 members. One person in four in Finland belongs to a credit society. These organizations had \$250 million in working capital, \$78 million of it borrowed. Fifty-four percent of all agricultural loans are made by the cooperative credit societies. Nineteen percent of all the deposits in Finnish financial institutions were made in the credit societies in 1953. The Finnish cooperatives, due to heavy agricultural loans, had the same difficulties during the depression that the country banks had in the United States, so the central bank reduced the number of organizations from 1414 in 1930 to 623 in 1952. The membership in the Finnish credit societies is divided as follows: 64 percent farmers, 20 percent city workers, 7 percent skilled workers and professional people. The Finnish movement has had much support from the Government. The funds for settling the displaced persons and for the reconstruction of north Finland at the close of the Second World War were handled by the credit societies. In Germany, there are 11,157 Raiffeisen banks with 3,317,000 members and \$354 million at the close of 1953. The German credit unions usually carry the accounts of the other cooperatives in the village. One person out of 14 in Germany belongs to a credit union. In Holland, there are 1,320 credit cooperatives with 300,000 members and \$500 million in assets at the close of 1952. One person in every 33 in Holland belongs to a credit cooperative. In Sweden, there are 631 credit societies with 142,000 members; in Denmark, there are 53 village banks with approximately 30,000 members; in Italy, there are 900 rural banks with approximately 200,000 members. According to recent issues of Cuna Briefs, there are 950 Raiffeisen banks in Switzerland with 100,000 members and 15 credit societies in Norway.

The work of Mr. Filene, Mr. Bergengren, and Mr. Dolg, can best be appreciated by studying the credit-union movement in Europe. There are more than 19,000 credit unions in North America with 9 million members and \$2½ billion in assets. Com-

pared to an outside number of 17,000 in Europe, with approximately 6 million members with possibly \$1½ billions in assets. Free western Europe has a population of about 200 million people.

Cooperatives are best developed in Britain and the Scandinavian countries. One person in four in Britain belongs to a cooperative. In the well-organized countries, the cooperatives usually control about 20 to 30 percent of the business, enough to set the prices. Some products, such as dairy products, in Denmark, are all controlled by the cooperatives. Consumer cooperatives have their own wholesale houses and factories. The consumer cooperatives have established their own banks in Britain, Denmark, and Germany. These banks handle the surplus of the cooperative societies as well as the savings of cooperative members. Savings banks are found in practically all countries which accept savings and make loans on security to the general public in the cities. Building societies comparable to our savings and loan institutions are found in most countries.

The last week of the 4-week trip was spent in Paris—most of it at the 19th Triennial Congress of the International Cooperative Alliance. The International Alliance is 59 years old and has 117 million members. Russia attempted to secure memberships for the co-ops of Poland, Hungary, Albania, and East Germany. This motion was voted down 671 to 366 on the grounds that a cooperative cannot determine its own policies in a dictator state. The theme of ICA Director, W. P. Watkins' paper was "Cooperative Development in Underdeveloped Countries." Several favorable speakers from different countries were heard on this paper, even a Russian delegate. I was glad to report that the Credit Union National Association had set aside \$50,000 to be spent in underdeveloped countries in 1954.

Red-Ink Post Office

EXTENSION OF REMARKS

OF

HON. JOHN J. RHODES

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1955

Mr. RHODES of Arizona. Mr. Speaker, under leave granted, I wish to insert in the RECORD the following editorial from the Washington Daily News of Friday, February 18, 1955, entitled "Red-Ink Post Office":

RED-INK POST OFFICE

Postmaster General Summerfield thinks he can hold the post-office deficit to about \$315 million this year.

That's about half the size of the postal deficit in 1952, the year before Mr. Summerfield took over.

The Postmaster General says most of this improvement has resulted from economies in the operations of the Department.

But you can go only so far in economies before you start impairing the service. Mr. Summerfield thinks he has gone almost that far.

To get the post office on a black-ink basis, then, he needs to raise his prices—4 cents for first-class mail and increases for other classes.

If the post office is to meet its purpose, the service should be A-1. But it ought to pay its way.

This estimated deficit of \$315 million for this year will come out of the pockets of the taxpayers. We think the people would prefer to pay directly for their postal service,

as they use it, instead of indirectly through taxation.

And since the whole Government keeps running up deficits, the people who are going to pay off most of this debt haven't even had a chance to use the postal service. They haven't been born.

Anniversary of the Birth of Thomas G. Masaryk

EXTENSION OF REMARKS

OF

HON. JOHN LESINSKI, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1955

Mr. LESINSKI. Mr. Speaker, March 7 marks the 105th anniversary of the birth of Thomas Garrigue Masaryk, the founder and first President of the Czechoslovak republic. He lived an extraordinarily productive life—1850-1937. He is acknowledged as one of the great democratic philosopher-statesmen of this century. A friend of Woodrow Wilson, and married to an American, Charlotte Garrigue, whose surname he adopted as his middle name, he was always an admirer of the United States. Thomas G. Masaryk was born in Moravia, the son of a Slovakian coachman. His unusual ability enabled him to study at the University of Vienna, where he became professor of philosophy. From 1882 to 1911, he taught at the University of Prague. From his youth, he was active in the political education of his people and took a leading part in the movement to liberate his country from Austrian rule. He was elected to the Austrian Parliament, but was forced to flee to Paris at the outbreak of World War I. There, he formed the Czechoslovak National Council, which was recognized by the Allies as the Government of Czechoslovak Republic, and was re-elected to the office in 1920, 1927, and 1934. In 1935, he resigned as President because of his advanced age.

It is very befitting that Gov. G. Mennen Williams, of the State of Michigan, issued the following proclamation on behalf of this great statesman:

PROCLAMATION—THOMAS GARRIGUE MASARYK DAY

This year on March 7 American citizens of Czechoslovakian descent, along with all the other freedom-loving peoples of the world, are celebrating the 105th anniversary of the birth of Thomas Garrigue Masaryk.

On October 28, 1918, Thomas Masaryk proclaimed from Washington the independence of the Czechoslovak Republic. Mr. Masaryk's great patriotism was equalled only by his belief in liberty and his magnificent intelligence. He contributed much to western culture and our peoples honor him equally for each of these contributions.

Therefore, I, G. Mennen Williams, Governor of the State of Michigan, do hereby proclaim March 7, 1955, as Thomas Garrigue Masaryk Day in Michigan, and urge all our people to join their fellow citizens of Czechoslovakian descent in paying homage and tribute to the memory of this great statesman of peace and independence.

Given under my hand and the great seal of the State of Michigan, this second day of

March in the year of our Lord 1955, and of the Commonwealth the 119th.

G. MENNEN WILLIAMS, Governor.

By the Governor:

JAMES M. HARR,
Secretary of State.

No Giveaway Scheme

EXTENSION OF REMARKS

OF

HON. STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1955

Mr. DEROUNIAN. Mr. Speaker, the following article by Edwin L. Dale, Jr., which appeared in the Sunday issue of the New York Herald Tribune, on March 6, will, I hope, counteract some of the many factless statements about the new Internal Revenue Code of 1954:

MILLIONAIRE SAVES \$600—DIVIDEND-TAX CUT PROVES NO GIVEAWAY BY UNITED STATES

(By Edwin L. Dale, Jr.)

WASHINGTON, March 5.—If a Democratic Congressman wants to risk his health, he need only go up to a holder of stock who has just gone through the agonizing process of filling out his tax return and tell him that the dividend relief in last year's big tax bill was a "steal," a "giveaway," and a "bonanza for the rich."

The stockholder, if he has any energy left after making out the return, will undoubtedly seriously consider pounding the Congressman with the nearest blunt instrument.

For he will have just discovered that some of the most intricate calculating he has ever been required to perform has saved him in taxes approximately enough money to spend one night with his wife at a medium-priced restaurant.

That is, unless he is so rich and has so much stock that he isn't worried about money anyway.

Take, for example, the fellow who has the substantial sum of \$10,000 invested in stocks. Let's suppose they are high-yielding stocks paying 6 percent dividends. And let's also suppose that half of those dividends were paid after August 1, 1954 (see col. B in special schedule I on p. 4 of form 1040)—both of them favorable assumptions to the taxpayer.

First, he pays no tax on the first \$50 of dividends. If he's in, say, a 25-percent bracket, that saves him the solid sum of \$12.50. Then he gets a 4-percent credit—subtraction from his tax—on the \$300 of dividends paid after August 1 (though he can't prove it until he has worked out first 2 percent of his taxable income and the amount of his total tax to see if they are bigger than the credit, which they invariably are). That's another \$12.

So the big steal has netted him the staggering sum of \$24.50—no doubt approximately equal to his hourly earnings for the time he spent figuring out the \$24.50.

According to Keith Funston, president of the New York Stock Exchange, in his testimony Thursday before the Senate Banking Committee, the average stockholder holds \$4,000 worth of stock. The great bonanza will yield this average individual about \$17.

And even the fellow who has the large nestegg of \$25,000 worth of stock would save only about \$42 in his taxes because of dividend relief.

Of course, the J. P. Morgan who has \$1 million worth of stock may find the whole thing worthwhile. If all his stocks yielded 6 percent, he would have \$30,000 worth of

dividends and his tax savings would be more than \$600. But one cannot escape the feeling that \$600 would hardly be visible to the fellow with that much stock salted away in his portfolio.

If you haven't worked out your taxes yet, in other words, don't lick your chops too eagerly when you start bravely through that haze on page 4. You'll be disappointed.

Remarks by William B. Murphy, President, Campbell's Soup Co., Before the Washington Board of Trade's General Membership Luncheon, Concurrent With the Business Outlook Conference, Shoreham Hotel, January 25, 1955

EXTENSION OF REMARKS

OF

HON. CLIFF CLEVINGER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1955

Mr. CLEVINGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including a speech of great significance to a great farming area and the effort over the years to get away from one- or two-crop farming. My district was blessed by nature, surely, with deep, strong soil that grows almost any crop well, but most of all it is blessed with thousands of growers who have conserved the soil, diversified the crops, and farmed with intelligence that has attracted the largest food packers in the Nation.

This great company is starting an addition to their plants at Napoleon, Ohio, costing millions of dollars. One main building covers 23 acres of floor space. To create this new Campbell soup plant—giving year round employment to thousands of local people—good shipping by great railroads, truck facilities, and Great Lakes shipping will make this a great outlet for farm products and poultry and add to the greatness of the area.

The above-mentioned speech follows:

Gentlemen, it is generous of you to let me be your guest today and to take a look at what the year 1955 may have in store for all of us. I should like to divide what I have to say into two parts.

The first part has to do with major economic questions, about which I know no more than the average businessman and certainly no more than you.

The second part has to do with questions with which I am more directly familiar—the outlook for tomatoes, for example.

Now, in regard to part 1.

It seems clear that for the long pull the general economic outlook for this country is most promising. When we get down to something specific, like tomatoes, it's not so easy. Anyone who can tell us in April what the tomato crop will be in August can count on a cordial welcome from us and no questions asked.

I would like to make a few observations on the prospects for 1955 as we see them, and then talk more about the long-term outlook.

The best phrase I have heard to describe 1955 is that it will be a year of competitive prosperity; in other words, a good year for those who recognize the need to compete for

business with all the ability at their command.

It seems likely that the year 1955 will nudge out 1954 from its position as our second best year and may turn out to be our No. 1 peacetime year.

The newspaper columns, the newscasters, and the trade papers have been full of prognostications as to 1955. I suppose everyone of you has read and reread the predictions.

We have all been informed that steel production is likely to be up this year.

It is predicted that retail sales will increase about 5 percent.

Automobile manufacturers expect to sell nearly 6 million cars.

The fairly heavy liquidation of inventories that took place in 1954 is not likely to be repeated in 1955.

Street and road construction will be at a high level.

There will be a record number of school-rooms, new water systems and sewerage facilities under construction.

These and other factors have led many leading economists to the opinion that 1955 will be a good year—moderately better than 1954.

Now, if I may, I would like to talk about a couple of major developments that seem to be behind today's healthy economic state. These are: (1) A high rate of technical development in our industry that is producing a kind of a revolution of products and processes, and (2) important shifts in home life, affecting particularly our urban areas, which we might call a kind of revolution in living.

Our technical development as it affects industrial products and processes stems from the research work which has gone on in the past and which is now going on at a higher rate than ever. This technical development has many effects:

It has increased industrial spending.

It has produced new products—products of better value.

It has helped to lower costs of production and permitted higher wages and salaries. Naturally enough it has opened up wholly new fields for future development.

This kind of a revolution in products and processes has been aided by new concepts of automatic controls and mechanized processes; new electrical, chemical, and atomic discoveries; and new concepts of management.

Not the least of all of these favorable developments is a growing understanding by all concerned that wage and salary increases must be hinged to productivity increases, if those wage and salary gains are to be real in terms of standard of living.

Another major factor that is prevalent this year has to do with development of the home—changes in our way of living. This is reflected in the fact that 1.2 million new homes were constructed in 1954. One of our best and most conservative exports in the field of home construction predicts a slightly higher number in 1955, possibly 1.25 million. He also predicts in excess of 1.1 million new homes per year through 1960.

Those of us who travel about the country see with our own eyes a tremendous movement to single-family units, each with a plot of ground.

About one-half of the new homes are for new families, and about one-half are accounted for by the movement from multi-family structures.

It is estimated that the cost to repair and fix up homes will be about equal to the cost of new home construction. In addition, there is a strong trend which has been labeled "do it yourself" and means much to the makers of tools and appliances and building materials.

Another trend affecting the homelife which has been going on for some time and which continues unabated, is the trend toward the use of more prepared foods. This

trend has the effect of enabling the housewife to have more time to spend on her home and with her family.

Tied in with the home development is a rising population. Last year there were approximately 4 million babies born (the greatest number in 1 year in our history). In this respect we seem to be going back to the old days when families were larger. It is reliably estimated that the population in the United States in 1970 will be 200 million. Whatever problems may be created by our rapidly accelerating population curve, we in the food business simply accept the fact that there are going to be many new mouths to feed.

So much for the general economic outlook. Now let me talk about that part of the economy I know a little more about, food, which happens to be one of the largest, if not the largest single industry in the United States, and an important one to each of us at least three times a day. Although Campbell's is a small part of the food industry, we have a fairly wide knowledge of foods, if only because we buy 130 different food ingredients and market 44 different food products. We are also, by the way, a fairly large producer of metal cans.

If I presume to mention my company occasionally, I hope you will understand that my purpose is to use its experience and status as typical of many companies in the very large food industry, an industry which is tied closely to the economy of the Nation and to the general conditions that will affect all of us in 1955.

Campbell Soup Co. today does over half of the soup business in this country. We have one competitor, however, who is very big—about as big as we are—a noncorporate competitor who is making us hustle. This competitor is the American housewife, who in her own kitchen makes approximately 40 percent of the soup consumed in this country today. We think that we can persuade a great many of these competitors of ours to save themselves time, trouble, and money by switching to our products. But this is very stiff competition and we have no reason, therefore, to feel complacent.

Furthermore, we are conscious that there are 21 meals in every week, and that our soup is served at the present time at only 1 or 2.

In quite a few homes soup is served once a day, but just think what it would mean to us if all homes served our product once a day instead of once or twice a week. Our business would be more than quadrupled. Now don't laugh over this. There are people, you know, who like soup for breakfast, and that is a trend we propose to encourage.

Our company had net sales of \$338 million in the fiscal year ending July 31, 1954, the highest to date. Our goal is \$500 million by 1960. Accordingly we are not looking to 1955 as a period in which we can doze comfortably by the fireside. Our competition would not let us and we would not want to anyway.

In the move toward our goal we are in the process of expanding our plant capacity—new buildings and new machinery—expected to cost us over \$60 million by 1960. Here, again, may I say that we are only typical of aggressive food manufacturers.

We Americans, naturally enough, talk with satisfaction and pride about the high standard of living we enjoy, about the many automobiles, the variety and quality of the many household appliances that have been produced by our industries. We look at our friends overseas and realize how well off we are by comparison. But isn't it a healthier outlook when someone—in General Electric, for example—observes that there are 54 varieties of standard electric appliances, but the average American household has only 9 of them, or notes that in this great electrified Nation of ours there is something like \$15 billion worth of work that needs to be

done simply to replace deficient electrical wiring.

The potentialities for progress in America seem greater than at any time in our history. As we learn more we also learn that the scope for future development is broader than we imagined.

Nowhere in the American economy is this observation more true than in agriculture and in farm yields. Consider that jewel of rural America, the Campbell tomato, for example. The average grower 15 years ago obtained 6 tons of tomatoes to the acre. In 1954 he was up to 10 tons per acre. Furthermore, future potentialities are reflected in the achievements of the most successful growers who last year produced over 20 tons per acre.

In the 1930's and 1940's we all thought that 10 tons of tomatoes per acre was a fine achievement and there were 10-ton clubs—with not very many members. Today 10 tons is only a fair crop. Actually, with what has been learned, and what we know can be learned, about new plant varieties, new soil treatments, new sprays, and new growing methods, it is not at all unrealistic to foresee an average of 20 tons per acre, and maybe more, of redder, more perfect tomatoes that taste better and have superior food values. When we reach the 20-ton average you can be sure ways will be found to push the yield even higher. Think what this will mean to the grower, the processor, the distributor, and the consumer. The changes taking place in tomato growing parallel those for other agricultural products.

What has happened in the past as to farm yields and what we believe is in store for us in the future tells something of the capability of the agricultural industry. I doubt that there is any cause to worry about feeding the population as far ahead as you and I can see, and a lot further.

Now, I would like to touch on another subject that will have a lot to do with the future welfare of the food industry. There is an accelerated development of better equipment for processing foods and making containers. This is certainly true for us and other food companies must be having similar experiences.

For many good reasons, there will always be a considerable amount of handwork in the food industry. We know that certain operations probably can never be done by machinery, but, as the ingenuity of machine designers has developed, we have found more ways to eliminate tedious handwork. Where this mechanization is possible, costs are usually lowered and quality improved. At least to us, this has not meant less employment. Because of the upward trend of our business, our employment actually has been growing.

It is our feeling that, for us, the chief opportunities for increased productivity come from improvements in machinery and plant methods and equally important from a better understanding and cooperativeness between our workers and our supervision.

I have spoken as if our business were exclusively soups. Of course this is not true. We make Franco-American prepared foods and V-8, and we recently expanded into the field of frozen soups. We are now experimenting with a number of other high quality prepared food specialties.

There is a strong trend today toward prepared foods which are designed to ease the work of the housewife and our business is being built on this trend. We hope to accelerate this trend by the good old American system of preparing such tantalizing products, advertised in such a tantalizing manner and offered at such tantalizing price that we will prove irresistible.

No one in the food business can be successful and ignore what is going on in the field of distribution and marketing. Food retailing—in fact, all retailing—is undergoing a kind of continuous evolution.

We feel that we have thus far only scratched the surface in our marketing research. There is a wide field for psychological and motivation studies having to do with consumer habits.

For example, we just don't know why one family has a food freezer and uses a great quantity of the new frozen foods, whereas another family of similar kind and circumstances ignores these conveniences. We feel sure this isn't caused by sunspots or the signs of the Zodiac, but a great deal of probing needs to be done to find the correct answers.

Technical improvements are constantly being made in the field of advertising media. Foods can be pictured more attractively today in magazines than ever before. Coverage of local markets by newspapers and radio is probably more widespread today than any time in our history. Meanwhile, television has added a whole new dimension to the selling equation, and color TV is obviously on its way.

Nutritional research and flavor research offer us some of the most fascinating possibilities for the years ahead of us. The Nutrition Foundation, an organization for research financed by many of the food manufacturers, is today studying a wide range of subjects of nutritional importance. The same is true of a good many of our colleges and universities and government agencies. And, of course, companies like ours are continually studying nutritional needs and the effect of foods in meeting these needs.

We can assume that most everyone enjoys food that is delicious, so it's a real consolation to know that enjoyment of food is important nutritionally. It is interesting that a good deal of attention is being given today to the basic nature of flavors and how to improve them.

As we look into the future we see exciting potentialities for growth in the food-processing industry—in the interests not only of the consumer but of the farmer. If Campbell's business expands as we expect it to, we will need new full-line production units at the rate of about 1 every 5 years—units similar to the one recently completed at Sacramento and the one now being built at Napoleon, Ohio. We expect that these new plants will be located adjacent to favorable agriculture sections in various parts of the country. Such a policy establishes plants close to the farm areas from which we draw many ingredients and provides the farmer a nearby stable market.

There are many advantages to this close relationship. Obviously, it is desirable to process fruits and vegetables as soon after they are picked as possible, but there is more to it than this. By decentralization we can encourage cooperation between the food processor and the producer and stimulate improvements in farm production methods as well as in food processing.

Now if I may summarize briefly the thoughts I have tried to express:

(1) For the economy as a whole, we are told that 1955 will be a good year—possibly our best peacetime year.

(2) So far as Campbell Soup Co. is concerned, we believe 1955 will be the biggest and best year in the history of our company.

(3) In spite of the tremendous technological progress which has occurred already in this country, it is possibly only a beginning. We have barely scratched the surface of progress. Certainly, this is true of the food-processing industry, despite the great gains that have been made since World War II.

(4) There are two ways of looking at our situation in this country. One is to recognize the strength of our position and the progress that we have been able to achieve in the development of a high standard of living. The other point of view is more interesting and certainly more constructive—

It is to recognize how much there is ahead of us—how much unfinished business there is to do. We at Campbell's are delighted at how much Campbell soup Americans consume today but perfectly appalled at how much they do not consume. They are missing so many opportunities—and so are we—it must be our fault.

I want to thank you again for inviting me to this luncheon and for the privilege of speaking to so distinguished an audience. No subject seems more important to us today than trade—the vigorous production, development, improvement, and marketing of food products and services that contribute to the health, comfort, and wealth of all of us.

Thank you.

**A Tribute to John T. Jones, by His Pastor,
Dr. Frederick Brown Harris, Foundry
Methodist Church, Chaplain, United
States Senate**

EXTENSION OF REMARKS

OF

HON. ELIZABETH KEE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1955

Mrs. KEE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following tribute to John T. Jones by his pastor, Dr. Frederick Brown Harris, Chaplain, United States Senate:

The brief working day of a valiant servant of God and of humanity, on this mortal stage, is ended. His sun has gone down down while it is yet day. Our eyes are staring, stunned, bewildered, and strangely moved at a vacant place against the sky of our choicest friendship, our church and our Nation.

By dint of his own energy and effort, John T. Jones, climbing from the penury and darkness of his childhood and youth, never forget the pit from which he was digged. The ruling passion of his life became to light that darkness for others who kept their backs to its heavy tasks.

His own spirit was as the candle of the Lord—not just to shine in places of plenty and comfort, to which his indefatigable toil, his devotion, and his ability lifted him, but to bring justice and safety and more abundant homelife to those hardy servants of the public good, his brother miners, whose contribution to the gadgets and glitter of an industrial day sentenced them to arduous labors, with light of day denied.

We are vividly conscious in this hour, now that his lips are silent, that with righteous indignation against selfish powers which sought to exploit those whom he always regarded as his comrades in toil he cried out again and again to exploiters in high places of privilege, "Let my people go."

We remember today the wistful appreciation with which in memory he turned often to that long-suffering, Christian mother, whose face and form were ever with him and who, amid conditions which might have stifled spiritual aspirations, lighted the candles of faith and reverence on the altar of his boyish heart, a flame that no winds of adversity could ever blow out.

As we survey the record of this useful life we are thankful, as was his own grateful heart, that when as a young man his face turned from across the sea to this land of hope and glory, our America, this "blessed

land of room enough" gave him his chance to unlock native talents for leadership and for wide service which struggled for expression in the heart of this Welsh lad whose life, until that emancipating day, had been so cabined and confined. In these latter years, as with disciplined powers he moved on levels of great influence, all his days were as a paean of devotion to the great Republic which had become so truly his as it molded life to ampler patterns of service to man and his Maker.

We think of the great causes which claimed his loyalty and the full measure of his devotion. We bear witness to his love for the church of the living God and his belief in her mission. John T. Jones was not just a hearer, but a doer of the Word. The message of the church and the kingdom to him was literally expressed in the program as announced by the Great Head of the Church: "I am come to preach the gospel to the poor, to heal the brokenhearted, to preach deliverance to the captives, and to set at liberty them that are bruised." In this triumphal hour we testify that here was a Christian, indeed, in whom there was no guile. In a time of sophisticated artificiality he loved and clung to the genuine and true. He hated sham and cant, and knew both when his honest eyes looked upon them with scorn in high places and low.

We rejoice in the heritage of the moving words he recently wrote, blazing with holy wrath against the sophistries of those who, in the titanic global struggle now raging, blaspheme the paramount dignity of the individual and the rights of the common man.

Our hearts are warmed as we remember his genius for friendship and how his life was bound as with bands of steel to the very souls of those he loved and trusted. As we think of his devotion to the Master of all good workmen, it will be to us evermore who ministered to him in holy things a blessed memory that on his last earthly Sabbath, listening, by his own earnest request, to the ancient words of contrition and consecration, his hands, so still now, reached out reverently for the bread and the wine in remembrance of the Lord and Master who was the strength of his life.

Ring in our ears will ever be his clear witness, just before the human skill of surgeons did their best, his confident words will light us to the end of our own way as we count the rosary of his assurance: "I am not afraid, if this is the end of this life for me, for I know that the next room is a place of beauty and brightness beyond compare." Inspired by his undimmed trust as he walked through the valley of the shadow and feared no evil, now that he has gone into the bliss of that larger room, our hearts cry out:

"Servant of God, well done.

Thy glorious warfare past;

The battle's fought, the race is won,
And thou art crowned at last."

And so we give thanks that there was a man sent from God whose name was John, and we give him back, with clean hands and pure heart, knowing where we shall find him again and in what company we shall see him when the long night is past and the eternal morning breaks.

"A friend has passed
Across the bay
So wide and vast
And put away
The mortal form
That held his breath;

But through the storm
That men call death,
Erect and straight,
Unstained by years,
At heaven's gate
A man appears."

The Government Security Program

EXTENSION OF REMARKS

OF

HON. STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1955

Mr. DEROUNIAN. Mr. Speaker, the following article by David Lawrence appeared in the Washington Evening Star on March 7, 1955, and brings into proper focus the whole employee security problem of the United States:

**PERSONAL RIGHTS AND UNITED STATES JOBS—
SUPREME COURT RULING DUE SOON ON
WHETHER ONE PERSON CAN FORCE A LEGAL
PROCEEDING ON REJECTION FOR POST**

(By David Lawrence)

Some press dispatches within the last few days, in reporting the news about a new brief filed in the Supreme Court by the Attorney General, have given a misleading impression to the American people by implying that President Eisenhower has been or is now at odds with the Department of Justice in the handling of security cases.

What has been quoted to support such an alleged divergence of view was a speech made by the President on November 23, 1953, in which he said something about "the right to meet your accuser face to face." While this comment—which obviously referred to court proceedings and not to the discretionary powers exercised by the Government in hiring and firing employees—was resurrected by some of the press associations, they neglected to point to the President's comments of a few days later explaining the real meaning of his speech.

At the press conference which occurred on December 2, 1953, Mr. Eisenhower, replying to a direct question about this same speech said there was one point which he must make clear, namely, that employment in the Federal Government is not a right of citizenship, but a privilege. He added that if there is real justifiable belief and conviction that a person is a security risk, you cannot keep him in a delicate position and in certain instances probably couldn't keep such persons at all. The President emphasized that there is a difference between determining whether or not a man should work for the Federal Government and charging anyone with a heinous crime of any kind.

It was clear that Mr. Eisenhower was differentiating in the traditional way between a criminal court proceeding and a personnel inquiry in which the Government decides whether to hire or fire an employee. The applicant or the employee does not have to be proved a security risk. It is necessary only for the Government to be convinced of his unreliability or unsuitability by reason of his background.

The issue as to the rights of the individual employee to convert a personnel inquiry into a court proceeding is coming up for a decision soon in the Supreme Court of the United States. Already extensive briefs have been filed by both sides in a test case involving a college professor who was not cleared for service as a consultant to the Government on account of alleged connections with Communists and was declared ineligible on security grounds. The case originated under the Truman loyalty program.

The Department of Justice has just filed a brief with the Supreme Court which points out that to grant to an individual a hearing within the Government is a privilege bestowed by the Government itself, that it really is under no legal obligation to furnish

any reason if it wants to fire an employee, and that the executive branch must determine for itself the scope of its personnel restrictions.

The Supreme Court of the United States ruled in the famous Myers case, involving a postmaster dismissed obviously for political reasons, that the Chief Executive could remove any employee at will in the executive departments unless Congress by law had enumerated specific causes for removal. The late President Franklin Roosevelt removed a member of the Federal Trade Commission because "your mind doesn't go along with mine," but the Supreme Court held that Congress, in creating the Commission, had specified grounds for removal and political incompatibility wasn't one of them.

So the absolute right of removal resides in the executive branch until and unless Congress qualifies it in some way by law.

An attempt has been made to argue that the Constitution requires that a person shall not be deprived of life, liberty, and property without due process, namely a trial. Is he guaranteed by the Constitution, however, the liberty to undermine his own Government from within? If so, it would mean that the Government departments would have to submit to a court trial if they wanted to get rid of an incompetent employee or an indiscreet employee or if they just wanted to give the job to somebody else.

The issue basically turns on whether the FBI should be required to bring into the hearings as witnesses for cross-examination the persons from whom it got its information originally about a suspected employee. The President has approved slight amendments in existing regulations so that the FBI will furnish to the accused a complete statement of the charges and as comprehensively as possible the nature of the information. But the new program does not provide that the identity of all informants be disclosed.

The FBI says the whole system of protecting national security would breakdown if the Communists were to be able to learn by one means or another who the informants are, so that they could either intimidate or liquidate them.

So again the Supreme Court is asked to decide an issue it has had up before in the so-called clear and present danger cases, whether or not to tell the Department of Justice and the Civil Service Commission, in effect, that they must wait until a conspiracy is actually fulfilled and the damage done before firing a suspected employee. In other words, must the Federal departments here get an affidavit from Moscow and corroborative testimony from the Russian secret service itself before anybody in America can be fired as a security risk?

Incorporation of Veterans of World War I of the United States

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1955

Mr. KEATING. Mr. Speaker, today I am introducing a bill which would grant a Federal charter to a new national organization known as the Veterans of World War I of the United States of America. This organization meets a need which has become more and more apparent in recent years—a need for separate recognition of the common in-

terests of those who served in our first great world conflict. It is not, of course, that these older veterans want in any sense to dissociate themselves from all the brave young men who carried on so splendidly in World War II and in Korea. But some of their memories and traditions are distinctive, and I can fully understand how there is a growing desire to band together for the purpose of keeping them alive.

Actually, this new group has been operating since 1949, when it was first established by a group of veterans who met in Cleveland, Ohio. In 1953 it held its first national convention, in Baltimore, which was attended by representatives from all over the country, and in 1954 it met again, in Buffalo, with a much larger attendance. It is now formally organized in 31 States and several Territories, including even a post in the Philippine Islands. It has a total of 186 units, some with as many as 400 individual members. There is also a ladies auxiliary which has organized 84 units to this date.

The organization is, of course, non-profit, and it has not aspirations which would bring it in conflict with the other large veterans groups. I hope it will be accorded the honor and privilege of a Federal charter.

Gen. Thaddeus Kosciuszko Day

EXTENSION OF REMARKS

OF

HON. THADDEUS M. MACHROWICZ

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mr. MACHROWICZ. Mr. Speaker, under leave to extend my remarks, I am including herewith the proclamation issued by Gov. G. Mennen Williams, of the State of Michigan, on the occasion of the anniversary of the birth of Gen. Thaddeus Kosciuszko:

PROCLAMATION: GEN. THADDEUS KOSCIUSKO DAY

STATE OF MICHIGAN,

Lansing.

February 12 is of special significance to Americans of Polish descent. To all Americans it, of course, symbolizes the birthday of the great Abraham Lincoln. In addition, however, it also marks the birth date of Gen. Thaddeus Kosciuszko.

This great general came to America in 1777 to fight in the American Revolutionary War. He built the fortifications at West Point and played a tremendous role in the Saratoga and Carolina campaigns. Upon his return to Poland, he became a champion of Polish independence, and led his countrymen in their uprisings against the Russian and Prussian monarchisms. Exiled by the Czar, he died in Switzerland. It is more than fitting that we remember the great contribution this man made to our American liberty.

Therefore, I, G. Mennen Williams, Governor of the State of Michigan, do hereby proclaim February 12, 1955, as Gen. Thaddeus Kosciuszko Day in Michigan, and urge all our citizens to join with the citizens of Polish descent in paying homage to the memory of Gen. Thaddeus Kosciuszko.

Given under my hand and the great seal of the State of Michigan, this 10th day of February 1955, and of the Commonwealth the 119th.

G. MENNEN WILLIAMS,
Governor.

Net Incomes of Farmers in Certain States

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 8, 1955

Mr. MARTIN of Pennsylvania. Mr. President, Col. Paul J. McGahan, who has been a writer for the Philadelphia Inquirer for more than 40 years, had a most interesting article in that newspaper of last Sunday on agriculture as it relates to the States of New Jersey, Delaware, and the Commonwealth of Pennsylvania.

Believing that it will be of great interest to my colleagues, I ask unanimous consent to have this article printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

ON THE FARM FRONT—NET INCOME DIPS 10 PERCENT IN 1954

(By Paul J. McGahan)

WASHINGTON, March 5.—Nationally the farmers' net income totaled \$12 billion in 1954, 10 percent less than in 1953, the Agricultural Marketing Service of the Department of Agriculture disclosed today.

Cash receipts were below those of 1953 in 44 States. These included Pennsylvania, New Jersey, and Delaware, a fact well realized by the agriculturists of Delaware Valley, United States of America.

In 1954 cash receipts from farm marketings in Pennsylvania were 7 percent lower than the 1953 figures; in New Jersey they were 8 percent lower, and in Delaware they were 9 percent lower. The largest percentage decline was 21 percent in Mississippi, and the largest gain was 3 percent in Florida.

Cash receipts for the Nation's farmers from marketings in 1954 totaled \$30 billion, 5 percent less than in 1953.

Delaware Valley, U. S. A., farmers shared in the drop which was general over the North Atlantic region, which was the hardest hit over the Nation. Total receipts were 7 percent below 1953, with livestock and products down 8 percent and crops down 6 percent.

Receipts from dairy products and poultry were lower by reason of lower prices. In Delaware the livestock prices were 12 percent below 1953, and in that State there were also lower receipts from broilers.

The statistics just released are as of February 15 and the estimates are preliminary. It will be another 6 months before sufficient new information is available to justify revision of the estimates.

With farm production costs remaining high as gross income declined, farmers retained as net income in 1954 only 35 percent of their realized gross farm income, the smallest percentage in 22 years. Expenses for purchased feed and livestock were up slightly, and farm-property taxes and farm-mortgage interest charges continued upward.

It is interesting to note that the number of persons living on farms declined 3.5 percent to 21,900,000 in 1954, compared with

the decline of 3 percent in the total income of the farm population. As a result the per capita farm income increased slightly to \$918. On the other hand, the nonfarm population continued its upward trend, while the total income of nonfarm population remained almost the same, so per capita nonfarm income dropped 3 percent to \$1,836.

Compared with the post-Korea high in 1951, farmers' total realized net income was down 18 percent, but with 3 percent fewer farms the realized net income per farm was down 15 percent. On a per-farm basis, realized net income in 1954 remained slightly higher than in 1950, the low point of the postwar period.

Statistics on the cash receipts from farm marketings by States disclosed that Pennsylvania farmers received \$748,860,000 in the year. In New Jersey, farm marketings amounted to \$336,826,000. In Delaware the cash receipts were \$93,708,000.

July was the high month for receipts in two of the States, New Jersey farmers getting \$39,772,000, and those in Delaware \$12,923,000. The high month for Pennsylvania was August, with cash receipts of \$72,583,000. Low month for Pennsylvania receipts was June, for Delaware it was December, and for New Jersey it was February.

Livestock and livestock products proved to be the principal source of cash receipts for farmers in the tri-State area, Pennsylvania farmers received \$73,445,000 from this field in 1954; those in New Jersey got \$216,726,000, and those in Delaware \$70,179,000. High month in Pennsylvania was October, with receipts of \$50,915; in New Jersey, March with \$19,619,000; and in Delaware, July with \$6,912,000.

In Pennsylvania last year farmers received cash receipts of \$175,365,000 from crops. In New Jersey the figure was \$120,100,000, and for Delaware, \$23,529,000. August receipts in Pennsylvania were highest and those of December the lowest. In New Jersey the high receipt month was July, with the low ebb in February. In Delaware the high month was July and the low month was February, with only \$802,000 accruing from crop cash receipts.

Government payments under various programs brought Pennsylvania farmers \$4,002,000, those in New Jersey \$872,000, and in Delaware a total of \$390,000.

The House this week by voice vote passed H. R. 1573, to repeal section 348 of the Agricultural Adjustment Act, effective with respect to 1955 and subsequent crops, relating to restrictions on agricultural conservation payments. The bill is now before the Senate Committee on Agriculture and Forestry, and hearings are scheduled. This bill would eliminate the provision of law that farmers who plant in excess of farm-acreage allotment in certain commodities shall not be eligible for conservation benefits. It is aimed to help the small farmer.

The House Agricultural Committee, under the chairmanship of Representative HAROLD D. COOLEY, Democrat, of North Carolina, on Friday concluded hearings on bills proposing a return to rigid price supports for certain basic commodities at 90 percent of parity. The committee is scheduled to hold an executive session on Tuesday. It's anticipated that, by a lopsided vote, the committee will order the measure favorably reported to the House for action there.

This will be a field day for the farm bloc Members of the House, who last year opposed the Eisenhower-Benson plan for flexible price supports which carried Congress. Because of recent rifts between Democrats and Republicans over administration domestic policies, the debate is expected to be quite vigorous. The measure may pass the House, but is expected to become stymied for the remainder of this session in the Senate.

Politics and Taxes

EXTENSION OF REMARKS

OF

HON. ARTHUR V. WATKINS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Tuesday, March 8, 1955

Mr. WATKINS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Politics and Taxes," published in the New York Times of March 8, 1955.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

POLITICS AND TAXES

When the Senate begins debate this week on the Democratic proposal to cut income taxes by \$20 a person next year's Presidential campaign will loom in the background perhaps even more importantly than this year's state of the budget. For the handout thought up at the last minute by the Democratic leaders of the House, and pushed through by a five-vote margin, is political in conception and political in purpose. It is thought to be a good issue on which to garner votes in 1956, irrespective of how much it will increase the existing Federal deficit.

An example of this kind of political thinking is implicit in recent statements of Paul M. Butler, chairman of the Democratic National Committee. On the one hand, Mr. Butler claims—presumably with a straight face—that this tax reduction was soundly conceived so far as the fiscal policy of the Government goes, which is about as broad a stretch of the political imagination as we have seen in many moons. On the other hand, and much more to the point, is his further statement that the Democrats will fasten on the President personally the responsibility for its defeat, if it is defeated. This is the real key to the proposal.

If it goes through, the Democratic Party hopes to take whatever political credit there may be in removing 5 million persons, including many voters, from the Federal tax rolls. If it doesn't go through, the Democratic Party will attempt to picture the President as interested only in the welfare of big corporations and not at all in the welfare of the little individual. This fiction will be maintained despite the fact that the present bill continues the existing high level of corporation taxes, despite the fact that in 1953 the President had fought for and obtained a 6-month extension of the excess-profits tax, despite the fact that a 10-percent personal income-tax reduction took effect a year ago, despite the fact that last year's monumental tax revision bill included many features aimed directly at helping the individual, and despite the fact that is most important of all to the small taxpayer: The price level has been stabilized, inflation ended and savings once again have some meaning.

Senator CLEMENTS, of Kentucky, acting majority leader, has said that the Democratic Senate leadership would make a party fight for the \$20 reduction. But fortunately there are Democrats in the Senate who refuse to be maneuvered into pushing the Government into a ruinous financial position just to make some political hay. It appears at this writing that there will be enough such Democrats to prevent passage of the \$20 handout. The more there are, the less this can be made the party matter that the Democratic leadership—or most of the leadership—is trying to make it. And the more

there are, the better the chances of defeating the proposal in conference.

We have never said that the Republicans are above playing politics in this crucial game of national financial stability; but in the present case the onus does lie with the Democrats. They have asked for the responsibility and they must have it. But the hope is that they may yet be saved from themselves and the National Treasury saved from a politically inspired annual loss of over \$2 billion.

A New Look at Civil Defense

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1955

Mr. RODINO. Mr. Speaker, the press has recently told of this year's A-bomb tests at the Nevada proving grounds of the Atomic Energy Commission. I was privileged to witness one of the previous tests. It is an awesome and unforgettable experience. I dread the day that we are faced with atomic warfare. Though we will be prepared due to the work of the AEC and the Department of Defense, nevertheless it is a terrible thing to contemplate. Worse still is radioactive fallout which according to the AEC report of February 15 had added a new dimension to atomic warfare.

What is radioactive fallout—and how is it brought about? Here is what happens: When an H-bomb goes off, the explosive force is so great and the fireball so huge—sometimes 4 miles in diameter—that great quantities of pulverized material are scooped up in the tremendous blast. They become impregnated with deadly radioactivity. This dust then is carried downwind from the explosion and is deposited over a cigar-shaped area which in last year's Pacific test extended 220 miles and was 40 miles wide.

As my constituents know, Adm. Lewis Strauss, Chairman of the Atomic Energy Commission, stated that the radioactive fallout of bombs such as were used in the Pacific tests last year will extend over an area as large as New Jersey—more than 7,000 square miles. If no preventive measures are taken or if the people do not know what to do to protect themselves, casualties would be inflicted upon more than 90 percent of the population and some 45 percent of these casualties would probably be fatal. The situation is not hopeless because there is much that we can do. If we take cover either in a building or in a shelter, preferably covered by 3 feet of earth, we have a good chance of surviving. Radioactive substance also can be washed off. The difficult task is to determine where the radioactivity is because it is invisible and odorless. To meet this problem the Federal Government and our States and cities will have to provide monitoring instruments—Geiger counters—to civil-defense workers, fire and police stations, and probably to high-school science instructors. On the encouraging side, New

Jersey has been in the forefront of the States that have had a good civil-defense organization. Gov. Robert B. Meyner has been briefed by the top people in the Government including the Chairman of the Atomic Energy Commission and the FCDA Administrator on the importance of the civil-defense program. Newark has budgeted \$157,409 for civil defense, including approximately \$84,000 which is matched by Federal funds for the purchase of equipment for warning systems and for stockpiling emergency supplies. By July 1 of this year over \$130 million worth of medical supplies and other equipment will be stockpiled for civil defense use. Some of these medical supplies and other equipment is available for use in case of attack in the FCDA warehouse at Somerville, N. J.

In concluding these remarks I call your attention to the following words of Gov. Val Peterson, FCDA Administrator, before the Kefauver Subcommittee on Civil Defense during its present hearings:

As I see it, the need for civil defense will continue until one of these two conditions prevails: until we are satisfied that man has been able to develop a permanent, secure peace; or until our Military Establishment is able to guarantee that no enemy can make an attack on this country. I am afraid that neither of these two conditions will be fulfilled for many, many years to come. Consequently, as long as there are weapons of mass destruction and the means of delivering them—in other words, as long as we need a military defense—we will need a civil defense.

Lest there be any misunderstanding, I should like to make it clear that the military efforts to build strength to deter attack, or if it comes to defend our homeland, are most important contributions to civil defense. The successful military defense of a city is the best type of civil defense—and I am convinced that our military leaders are doing everything humanly possible to build the required strength. But since we are assured that no defense can be perfect that enough bombers may be expected to penetrate our defenses to pose staggering problems of destruction, we in turn must spare no effort to build a strong civil defense.

They Are Building a Better America

EXTENSION OF REMARKS

OF

HON. LEO E. ALLEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1955

Mr. ALLEN of Illinois. Mr. Speaker, under leave to extend my remarks I include some pertinent facts about an outstanding American girl: 16-year-old Janet Hammer, of Scales Mound, Ill., of the 16th Illinois Congressional District. The following statement appeared in This Week magazine, under date of February 27, 1955, on the subject of We're Raising a Great Crop of Kids, and reads as follows:

Look at Janet Hammer, 16, of Scales Mound, Ill. She gets up before sunrise to tend her own herd of cattle. After breakfast, she is off to school, 6 miles away, driving

the family car. She can't come home on the school bus; she's too busy with after-school activities. She comes home in time to help cook dinner and wash up. After dinner she studies—she is a good student. Then she sits down at her sewing machine (which the cattle paid for) and really goes to work. She will tackle anything from an evening gown to a bathing suit. She sews all her own clothes and takes in plenty of orders from schoolmates. She has just finished her biggest job to date—costumes for the school's cheerleaders.

Inadequacy of Program for Schools

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, March 8, 1955

Mr. NEUBERGER. Mr. President, Oregon Education, which is the official periodical of our Oregon State Education Association, published a very effective editorial in its recent March issue showing the inadequacy of the recent administration plan for our schools. It is important to note that this editorial points out that "for Oregon schools, we doubt that the \$1 billion program would have any appreciable significance."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AT FIRST GLANCE ONLY

Take a look at \$1 billion and what it might do for the Nation's hard-pressed schools. Take a second look at the conditions appended; then reconsider the known facts and authoritative estimates.

President Eisenhower recommended, in a special education message to Congress last week, that the Congress allocate \$1,120,000,000 to help alleviate the Nation's desperate school-building needs. He noted that the Nation was short some 300,000 classrooms now, and, of course, we in education know that additional thousands of classrooms will have to be built in the next few years to accommodate pupil upsurge.

The President's \$1 billion-plus recommendation sounds like a lot of money, but it isn't in light of current school needs. And by comparison with the President's proposed \$100 billion highway-building program, it dwindles to relative insignificance.

At a very conservative cost of \$10,000 per classroom, just to catch up with present shortages would cost \$3 billion. And additional classrooms are needed every day—and will be needed daily until well into the 1960's. The National Citizens' Commission for the Public Schools, in 2 recent reports (Financing Public Education in the Decade Ahead and How Do We Pay for Our Schools) estimates that all the schools needed by 1965 could be built at a budget of \$2 billion a year if State authorities financed them, amortizing over 30 to 50 years. That's \$20 billion over the next 10 years for construction alone and does not take into consideration rapidly mounting operational costs as enrollments expand.

Of the President's recommended allocations, \$900 million would be in loans, repayable with interest to the Federal Treasury. Only \$220 million would be in grants, and not all of this directly applicable to school construction.

For Oregon schools, we doubt that the \$1 billion program would have any appreciable significance. We know of no schools in the

State which have been unable to negotiate satisfactory loans for building purposes. Yet high interest rates are one of the requirements anticipated for receiving Federal loans. And our school districts currently have bonded debt limits beyond which they legally may not go, despite need and the availability of Federal loan funds.

But if circumstances were different, if all of the \$1,120 million were directly available for school construction, and if Oregon as a State received one forty-eighth part of the contemplated funds, the amount so allocated would come to only \$23 million. That would be roughly enough to take care of our current school building needs for 1 year's time. Between now and 1960, it is authoritatively estimated that Oregon will have to spend over \$100 million for school capital outlay.

The President's proposal is no panacea for the Nation's school ills. At best it can bring substantial aid only to a relatively few districts. It should not divert our efforts to find effective solution to our school finance problems.

A billion dollars seems like a lot of money, but at first glance only.

The American Red Cross and Dr. Schweitzer

EXTENSION OF REMARKS

OF

HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Tuesday, March 8, 1955

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "American Red Cross Campaign," published in the New Beacon, of Provincetown, Mass., of March 2, 1955. It eulogizes Dr. Albert Schweitzer and his work in relation to the Red Cross.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AMERICAN RED CROSS CAMPAIGN

During the month of March the American Red Cross will conduct its annual campaign for members and funds in our town and throughout the country. At the same time, in an African jungle, one of the great men of our time will begin his 42d year in a project of selfless devotion to mankind. Between these two seemingly unrelated events there is a connection, a strong one.

The man is Dr. Albert Schweitzer, physician, philosopher, writer, and Nobel Prize winner, who has devoted most of his 80 years to running a hospital for the inhabitants of a remote jungle community.

Doctor Schweitzer has developed a principle called Reverence for Life, a subject on which he was interviewed recently.

It is not enough, he said, to do one's daily job, support one's family, abide by the laws. "That's all very well," he said, "but you must do something more."

"You must give some time to your fellow man. Even if it's a little thing, do something for those who have need of help, something for which you get no pay but the privilege of doing it."

So great was Doctor Schweitzer's belief in this principle that he left his native Alsace to live out his life in a jungle. That principle brings us back to the Red Cross.

The Red Cross, in its essence, is merely the means by which we all can give some help to those of our fellow men who need it, who

must have it. Through the Red Cross we can lighten the load of a tornado victim, help brighten the hours of a hospital patient, even save a life. In helping them, our own lives become more meaningful.

The Red Cross has long realized that fact and on it has been built the enduring, world-wide organization which serves us in so many ways. We can serve it, in turn, by joining during its March campaign for members and funds.

Capitol Cloakroom Discussion

EXTENSION OF REMARKS

OF

HON. ROBERT S. KERR

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 8, 1955

Mr. KERR. Mr. President, the junior Senator from Louisiana [Mr. LONG] appeared on the CBS radio program Capitol Cloakroom on March 6, discussing various issues before the Congress and the Nation at this time. Inasmuch as the Senator's statements shed considerable light upon several of these issues, I ask unanimous consent that the transcript of the program Capitol Cloakroom be printed in the Appendix to the RECORD.

There being no objection, the transcript was ordered to be printed in the RECORD, as follows:

CAPITOL CLOAKROOM

Guest: The Honorable RUSSELL B. LONG, Democratic Senator from Louisiana.

CBS correspondents: Griffing Bancroft, Wells Church, Paul Niven.

Mr. BANCROFT. Senator LONG, will this Congress reduce income taxes?

Mr. CHURCH. Can tariffs be lowered any more without hurting American industry?

Mr. NIVEN. Senator LONG, will the South go Democratic in 1956?

Mr. BANCROFT. Senator LONG, welcome to Capitol Cloakroom. A lawyer, and youngest man in the United States Senate, you have been here now for 5 years, where you are a member of the Senate Finance Committee which this week has been busy with taxes and tariffs.

Let's start with the first: Will this Congress reduce personal income taxes?

Senator LONG. Mr. Bancroft, it is impossible to give you an answer for that. All I can tell you is that we will make a very strong effort to do it on the Democratic side of the aisle.

Right now I suspect we are a few votes shy of what we need in the United States Senate to put through the kind of amendment that the House adopted. I hope that we can gain more votes there, as the fight develops. I believe we have a good case to make for income-tax relief for the average individual. And, of course, I am going to support the kind of relief that the House voted for that the average man would have \$20 tax relief, \$20 more for his wife and \$20 more for each child. For example, a family of 5 would have tax relief of \$100 on their income tax.

Mr. BANCROFT. I know, Senator LONG, you were one of those who supported that in the Finance Committee, and were outvoted. Do you think there is a possibility that you can get it through the Senate when it comes up on the floor?

Senator LONG. I do not believe in giving up a fight before you have tried. I believe that we have a good case to make.

This type of tax relief would help to relieve unemployment. At the present time we have 3,350,000 people unemployed, and, incidentally, the press has not noticed particularly that unemployment increased 500,000 from December until January of this year. Those figures are too high in terms of unemployment, and I believe we are losing a tremendous amount of wealth in terms of national production by failure to give some tax relief in the ways of increasing purchasing power among the great masses of our people.

Mr. BANCROFT. Senator LONG, I would like to ask this:

In view of the fact that there are stories and reports going along that you supporters of this \$20 tax cut are engaged in stalling the bill—we do not know for sure, it is apparently not coming up on the floor of the Senate until late next week at the earliest; when will that bill come up on the floor, and is there any deliberate stalling on the part of you supporters of it?

Senator LONG. Mr. Bancroft, there is no deliberate stalling as far as those of us supporting the tax cut are concerned. But we do want some time to get together the facts and figures upon which we buttress our case.

Now, I have been just today consulting with other minority members on that committee. I say minority, we are part of the majority, we are a majority of the Democratic majority, but the two Democrats voting with the Republicans give them a majority on that committee because Republicans vote solidly against this tax cut. We want that bill to come up. We want to make our fight just as we did last year to see to it that the average individual gets some tax relief because we believe it is in the overall interest of this Nation.

I would like to point this out in connection with this tax relief. We supported last year efforts to reduce taxes in the low-income bracket, and we were defeated by the Republican majority at that time both in the House and in the United States Senate. Now there was some income tax relief. However, it did not reflect itself where it was needed the most, because the increase in social security tax was even greater than the reduction in personal income tax as far as anybody making \$3,500 or less was concerned. That meant that more than 50 percent of the people of this Nation really had no tax relief at all because the increase in social security more than offset what the reduction was in their personal income tax.

Mr. CHURCH. But, Senator, what about the Republican charge, as I understand it, that this tax cut will be just enough to cause sufficient inflation to more than wipe it out in some instances, the value of the dollar?

Senator LONG. Mr. Church, a man ought to be ashamed to make argument if he knows what the real facts are.

Last year against a previous budget deficit of \$9 billion and a budget deficit of last year that turned out to be \$4.5 billion, the administration was willing to go along with \$7 billion of tax relief.

Now, for this coming year, we are told that the budget deficit would be only half much, about \$2.5 billion. So, without as much budget deficit, we are now told that it would be inflation to give just \$2 billion of tax relief, or one-third as much.

Mr. CHURCH. But the Republicans say that is predicated on the Congress cutting expenditures in this next year.

Senator LONG. The point was that we had a deficit last year twice as big as we will have for this coming year and in spite of that \$7 billion of tax relief did not produce any inflation at all.

The \$7 billion, however, for the most part, went to the corporations and those who were better fixed financially. Now we want to give about one-third that much tax relief to the people, and there is no reason to think

that would be any more inflationary than it was when the \$7 billion was given to those who are better fixed economically.

Mr. NIVEN. Senator, I presume you have been getting some mail on those proposals. Do your constituents seem interested in this \$20? Do they regard it as a political maneuver or are they just bored by it?

Senator LONG. Mr. Niven, the press has made great effort to convince the people that the Democrats are just playing politics by trying to give the average individual \$20 tax relief, per person. However, the average person feels that both Democrats and Republicans play politics, and I believe that if you want to be fair and you ask the man on the street—I do not mean the businessman, I mean the average little fellow who is working for a living by the sweat of his brow—he will probably tell you it was Republican politics when the Republicans gave tax relief to the corporations, and perhaps Democratic politics, when the Democrats tried to give tax relief to the average man.

Mr. BANCROFT. Senator LONG, you mentioned having gotten licked last year, and last year you had, I think we will all concede, a pretty big asset on tax matters over here in the Senate on your side, in the person of Senator GEORGE, and Senator GEORGE is against you this year. Do you still think with that opposition that you are going to get this bill through the Senate?

Senator LONG. Fortunately, after the people got through hearing the argument about the taxes last year, they elected more Democrats and, therefore, our hand is somewhat strengthened in that regard.

Mr. BANCROFT. Senator GEORGE—to come back to him for a moment—while he said he opposed this, has talked about the possibility of a compromise if the House stands firm in its insistence on the \$20 cut. Do you look for some possible compromise to come out of this thing, assuming you may get licked on the floor of the Senate?

Senator LONG. It is certainly my hope that the House conferees will stand their ground to the very last. If they will, I believe that there should be some sort of compromise.

For my part, I am ready to agree with the President, or anyone else, that there is no reason why we should reduce the corporation tax at this time. The corporations got relief last year on their dividends from taxation, and they got all sorts of handouts that are too complicated and too lengthy to explain here. But, if you read that 875-page bill, it was almost like an Easter egg hunt for golden nuggets, as far as a corporation executive was concerned.

Now, looking into this next year, it is only fair to say that their corporation stock is now at an all-time high. It has never been that high, even in 1929. Particularly, large corporations are concerned. They are not entitled at this time to expect any further tax relief, and we should extend that corporation tax for a while longer.

The Democrats will go along with the Republicans on that part of it.

Mr. BANCROFT. Senator LONG, suppose it comes to a question of choosing one or the other, and I have in mind there the possibility of the President vetoing a bill which might combine the two of them. Would you then go along for an extension of the corporation and the excise taxes alone, as he has asked?

Senator LONG. I suppose if we are successful in getting a bill to the President that would reduce taxes for the average individual, that we would stand our ground if the President vetoed the bill. I do not think he would veto it. I do not think he could afford to do it, for many reasons: politically, morally, and many others.

Mr. NIVEN. But you surely could not get two-thirds of the votes to override the veto, could you?

Senator LONG. No; we could not get two-thirds of the votes to override the veto; that would be correct.

Mr. BANCROFT. Senator LONG, I know in your Finance Committee you are involved in another problem now, this week, and this was the question that Mr. Church has asked you about the tariff bill:

What do you think is going to happen to that over here in the Senate?

Senator LONG. I believe we will report out substantially the bill that was sent to us by the House of Representatives. I suspect that there will be some amendments adopted in the Senate committee. I cannot predict just what those amendments will be, but I see that there are quite a few Senators who are receptive to one suggestion or another on that committee, and I would expect that there would be a few amendments drafted over in the Senate committee, in addition to those that were adopted in the House.

Mr. BANCROFT. Do you think those amendments would take the form of broadening the so-called escape clause, to make it easier for certain industries to get out of tax reductions or tariff reductions?

Senator LONG. I would not be surprised to see an amendment offered that would gain substantial support, along the line of saying that the President could not reverse the judgment of the Tariff Commission if the Tariff Commission recommended protection for domestic industry.

As you know, the President has reversed the Tariff Commission more often than he has upheld the Tariff Commission, when the Tariff Commission has recommended that the escape clause be invoked to protect some domestic industry.

I see substantial support for that, and I just cannot predict what the result will be when that amendment comes to a vote.

Mr. CHURCH. If I follow you correctly, Senator LONG, it sounds to me as though there might be an equally close shave in the Senate as in the House.

Senator LONG. It might very well be that way. As a matter of fact, on the floor of the House of Representatives the rule was that Members could not offer amendments. They could only offer one proposal to recommit the bill to consider one particular amendment.

Now in the United States Senate no one would ever agree to such a thing. As you know, we have this rule of unlimited debate. As long as someone wants to continue to fight, he has the right to stand there and be heard.

We have some Senators, I won't call any names right here, but I have some in mind, who very well might stand and talk at great length about that bill and offer an untold number of amendments. Some of those amendments may be adopted.

Mr. CHURCH. Is there chance for enough amendments to ruin the bill, that is, ruin it in the eyes of the President in what appears to be a Democratic majority in favor of the bill?

Senator LONG. I think that as far as the administration is concerned, they will have a good chance to regain whatever ground they lost in the Senate in conference because the conferees, for the most part, are either Republicans who have pretty well stayed with the President on most issues, or Democrats who believe in expanding trade. If you look at the senior Democrats and senior Republicans on the Finance Committee, so it is possible that the President may gain coming back from conference what he might lose on the Senate floor if a substantial number of amendments were agreed to there.

It is sort of like the man being chased by the bear. He jumps for a limb on a tree. A friend said, "Did you catch the limb?" He said, "I missed it on the way up, but I caught it on the way down."

Mr. NIVEN. Senator, once you start accepting amendments, surely the meat would be knocked out of it completely in a very short time, would it not?

Senator LONG. I do not believe that the committee will recommend accepting any amendments. I think the committee, for the most part, will stay together in trying to beat off amendments that are offered on the floor. Usually the Finance Committee has done that in the past. As a matter of fact, the Senate Finance Committee has a rather good record under Democratic leadership of defeating amendments. I recall on more than one occasion when Senator George was the chairman of the Finance Committee in which he was successful in getting the committee to stick together and beat off as many as 200 amendments without a single one being adopted. I would not be surprised to see that sort of thing work out again if the committee sticks together.

Mr. NIVEN. Will the committee stick together even in the case of amendments designed to help industries in their home States?

Senator LONG. There will be more difficulty in that case.

Mr. CHURCH. There were some 75 Members of the House, as I recall it, who had industries in their own State which caused them to go against the bill. How about your own State. Do you have anything down there that would make you worry about this bill?

Senator LONG. I have some individuals in my State who are interested in amendments to the bill. I do not expect to support many such amendments because I believe that most of those industries are getting along reasonably well and, after all, although this bill gives the President the authority to reduce tariff 5 percent each year or to reduce tariff on items where there is only a negligible amount being imported at the present time by as much as 50 percent, that is not mandatory upon the President. It is only anticipated that he would reduce the tariffs in the cases where he finds that American industries would not be too adversely affected.

Many of the industries that complain the most bitterly about this matter really cannot show that they are badly hurt or that they would be badly hurt by expanding foreign trade and permitting a few more imports to come into this Nation.

Mr. BANCROFT. Senator LONG, I would like to ask this if it has any bearing on the support of you southerners for this tariff-reduction bill, and that is the matter of the textile industry. As you know, the New England textile Senators are mostly lining up in opposition to this on the ground that it will definitely hurt their textile industry. But I have heard some of you southerners say that a little reduction in tariff might encourage even more movement of the textile industry from New England down South and, therefore, might help your industry. Is there anything to that?

Senator LONG. Mr. Bancroft, looking at the whole picture, we cannot expect everything to be in our favor in this foreign trade picture. You cannot expect to get everything from others without giving something in return.

Now in good years we can sell as much as 50 percent of our cotton to other countries, and they consume that cotton within those countries and I suppose they process most of it there.

We do have some textile imports coming back into this country, but the last figure that I saw on it indicated that we are actually shipping out more manufactured textile products than we are importing. So, what are we complaining about? I cannot see that there is any great reason to feel that the textile industry is being very badly injured.

Now, there has been some reduction in employment in textile industries but, for the most part, that has been because of the improvement in their machinery and increased productivity of their working people.

I think I receive about as much mail from textile workers in my State as almost any other one thing. But I believe that if we are efficient, as you suggest, and we continue to improve our ways of doing business, that we should be able to meet a slightly stiffened competition from abroad, and we should try to expand our textile market just as others try to expand their export to us.

Mr. NIVEN. Senator LONG, is anyone in your party contemplating plans for Federal aid to communities which might face severe distress because of foreign competition, conceivably, for instance, a one-industry town which was going to be injured by foreign competition to take a loan from the Government in order to retool its factories, switch to another field?

Senator LONG. I do not know of any such proposal as that that is being advanced with much support at the present time, Mr. NIVEN. As a matter of fact, I do not know of any proposal of that sort pending at the moment. There might be.

I have, myself, thought that we should try to work out some way to compensate some of those who are genuinely injured as a result of tariff reductions. I particularly have that in mind when the President reverses the recommendation of the Tariff Commission for relief. Nevertheless, it is so difficult to work out a practicable plan to protect all those who are injured or to help those who are injured in so many different connections. For example, you might help the man who owns the plant, but then the laborers lose their jobs, and how are you going to compensate them? The best thing you can do for them is to help them find a job somewhere else. The result is that no one really has anything worked out, that I know of, to help those who might be injured as a result of increased foreign competition.

Mr. BANCROFT. Senator LONG, there are some other points in the President's overall program, as I understand it, to increase world trade. One of them is stepping up the so-called point 4 program, and another to grant some sort of tax relief for American business investments overseas. Are you in favor of those things in addition to the tariff relief?

Senator LONG. For the most part, Congress is getting rather weary of these foreign give-away programs. I believe the tendency will be to reduce them, rather than give more in the future.

This economic aid has been going on for so long now that a lot of people would like to get out of the business. Congress, for the most part, will vote to reduce those things.

Insofar as the tax reductions for those doing business overseas are concerned, I would prefer to be selective and try to determine where we want to encourage additional investments or who we want to help and perhaps write into trade agreements if those people have a general increase in their living standards, that we would be willing to reduce our own tariff to help them to continue to sell on the American market. I have that in mind, especially in Central American countries, where many people are only making about 5 cents an hour for their labor. I think that just tends to encourage communism and things of that sort. However, I do not know whether you can attract much support for that sort of proposal.

Mr. NIVEN. Senator LONG, you supported the Stevenson ticket in 1952, but the South was anything but solid. Is it going to go Democratic again in 1956?

Senator LONG. Yes; I believe the prospects are very good for the South going solidly Democratic the next time. I would not be

surprised to see every Southern State go Democratic. I said that some time ago, and I see nothing in what has happened during the past 2 years to change my mind about it. I would be inclined to think that you will see the South go together. We have been able to resolve many of these party fights during the last 2 years. We have had very good leadership; we have not fought nearly as bitterly. We have divided on some issues, but it has not been nearly as pronounced or bitter as it has been in years gone by. For that reason, I think the South will be inclined to go back solidly for the Democratic ticket next time.

Mr. BANCROFT. Senator LONG, is this prediction of the South going Democratic based on the assumption that President Eisenhower will be the candidate for the Republicans in 1956?

Senator LONG. Yes; that is based on that assumption. As a matter of fact, I have seen various polls that have been made in my own State that would indicate that there is far stronger sentiment today for the Democrats than there was at the last election, even assuming that Eisenhower would be the candidate.

Mr. BANCROFT. Well, of course, your State of Louisiana went against Eisenhower in 1952.

Senator LONG. We carried it, with difficulty. We carried it by about 40,000 votes, which is not a safe majority when you are polling about 750,000.

Mr. BANCROFT. In other words, you think President Eisenhower is less popular in the South now than he was in 1952?

Senator LONG. That is correct. It is not so much a matter of Eisenhower being less popular; it is a matter of the Democrats as a party, being more popular.

We had many burdens to carry at that time. It was difficult to explain a lot of things that were complicated. A lot of people tried to blame the Democrats for the various burdens that we had to carry during the Korean war, and things of that sort. I think that the next go-around, not having been in power for 4 years, we will be in better shape than we were, having been in power for 20 years.

Mr. NIVEN. Senator LONG, you said a moment ago that your party has avoided a fight in the last couple of years. Perhaps you made a distinction as to other parties. But, do you have reason to believe that the Northern liberals are going to let the race issue and the civil-rights issue lie dormant between now and the election?

Senator LONG. I do not know precisely what moves may be made by our Northern liberal friends, but I believe, on the whole, that they have been willing to join with us on those things that Democrats can unitedly support. And as long as we continue that trend, I believe there is every reason to believe why the South should be more happy with the Democratic Party and more anxious to support it.

Mr. NIVEN. Then you do not expect a strong civil rights plan in the 1956 platform in your party?

Senator LONG. I expect a civil rights platform similar to the one we had last time. I do think the Southern Democrats will be somewhat helped in keeping their States in the Democratic column, however, because of the fact it is now clear that the Republican Party is not for the Southern position on civil rights. They are just as much opposed to our position, perhaps, as the Northern Democrats. But that always took a lot of explaining down South and kept some of us very much on the defensive when we were urging some of the people to vote Democratic before.

Mr. BANCROFT. Senator LONG, this prediction of yours about the South was based on the assumption that President Eisenhower would be the Republican candidate. I would

like to ask you if we could take the other assumption that Adlai Stevenson will be the Democratic candidate?

Senator LONG. It is possible that Adlai Stevenson would be, and he would be a good candidate. But at this time I would not be at all prepared to concede Adlai Stevenson would be the Democratic candidate. I think he would run a very good race and stand a very good chance of winning if he were the candidate. However, I think there are other possibilities who might run just as strongly and perhaps a stronger race.

Mr. CHURCH. Could you name some of them?

Senator LONG. I would rather not do it. I have some in mind, but I do not want to suggest any of them. I would rather let them put themselves forth rather than me advance their candidacies.

Mr. CHURCH. You do agree that the President will run again?

Senator LONG. I do not agree he will run again. I do not know. I cannot speak for him.

Mr. CHURCH. That is what I understood you to say a moment ago.

Senator LONG. Well, I believe if he runs the South will go solidly Democratic, and I believe the Democrats will have a—

Mr. NIVEN. Is there likely to be a southerner in the race for the Democratic nomination?

Senator LONG. I would certainly hope so, being a southerner myself. I am rather proud of our representation from the South. I would certainly hope that we would have some good southerners offer themselves.

Mr. BANCROFT. Do you think Senator Russell would run again?

Senator LONG. He said he would not. He is a man of his word, and if he said it, he means it.

Mr. BANCROFT. Let me ask you this about yourself: Your term is coming up in 1956. Are you a candidate for the United States Senate next year?

Senator LONG. Well, there is quite a bit of local politics in Louisiana at the present time. I have indicated that I might be a candidate for governor. I have not at all decided that. I think we had better let first things be decided first, and I cannot tell you whether or not I will run for Governor of Louisiana at the present time. Therefore, I could not tell you whether I would be a candidate for the Senate as yet.

Mr. BANCROFT. Could you say that you would be a candidate for one or the other?

Senator LONG. I would rather not answer that question quite that way. I would prefer to decide a little bit later on what my position will be, as far as offering myself for office is concerned.

Mr. NIVEN. Would you exclude retirement from your plan?

Senator LONG. I do not necessarily exclude it, but I would rather leave that to the public to decide.

Mr. CHURCH. You do enjoy being in the United States Senate?

Senator LONG. I have enjoyed it very much, Mr. Church.

Mr. BANCROFT. Coming back to some of the problems in the United States Senate, we have mentioned some of your problems on the Finance Committee. You are also a member of the Committee on Interior and Insular Affairs which has this problem of statehood for Hawaii and Alaska.

What is going to happen to that in this session of Congress?

Senator LONG. I wish I could predict. I was one of those who supported the President's position that Hawaii should become a State because it had been ready for some time, and Alaska was not ready for statehood. Last year the Democrats were successful in adding an amendment that would put the Alaskan statehood bill in with the Hawaiian statehood bill. You had to vote

for both of them or none. Therefore, I voted for statehood for both Alaska and Hawaii.

It looks as though there is not much chance for separating those bills, and so I suppose we will pass such a bill through the Senate again, if we get a chance to consider it.

Mr. CHURCH. Both of them?

Senator LONG. There are some machinations about this legislative bill. For example, there is the Rules Committee over there on the House side. If there are any differences of opinion between the leaders on the House side, sometimes they won't let the House vote on it. That is what happened to the statehood bill last time. It might be the fate this time.

Mr. NIVEN. Why are most southerners opposed to the admission of Hawaii and Alaska?

Senator LONG. They can make many arguments, and I would prefer to believe that they are 100 percent sincere in saying that they believe that we shouldn't broaden the representation of this Nation, and that we would be a stronger Nation if we limited ourselves to the continental United States and did not take in outlying areas.

Personally, I believe that we would be a greater country if we did take those areas in.

Mr. NIVEN. Other motives are sometimes ascribed to them, aren't they?

Senator LONG. Oh, yes; there are some that say southerners feel it would be two more votes for FEPC or two more votes to make southerners quit talking when you try to reduce States rights.

I do not think that necessarily would be the case. I am inclined to think that the new States would be even more jealous of their States' rights than existing States.

Mr. BANCROFT. Senator LONG, I know one matter you have taken considerable interest around here in is the matter of civil defense. What do you think Congress ought to do about civil defense?

Senator LONG. About 10 times what we have done. A tremendous number of lives could be saved if we would make some plans to alert the people to the kind of measures that could be taken to save their lives in the event of an atomic attack. Just to give you an example, if you had an atom bomb, let's take a hydrogen bomb, the huge kind that could explode on one of our cities, while that might kill everyone within 5 or 6 miles of the explosion, most people beyond that point would live if they had just a good, deep basement to go into and stay there until the radioactivity of the so-called fallout, the dust that is created by these explosions, had settled and dissipated itself into the atmosphere. But most people would not know that unless you do a better job of educating them. The result is most of them would leave their homes to try to get away, and many of them would be killed as a result of the radioactivity.

Then, too, when those type bombs explode, these clouds of radioactive dust might go as much as three or four hundred miles, dropping the cinders all along the way. A person could be safe from that if he had himself a small cellar, or if he had prepared a little bomb shelter with as much as two feet of dirt over the top of it to protect himself against the radioactivity that would be involved there.

Mr. BANCROFT. Do you think the Federal Government should put up some money to help him do that construction?

Senator LONG. The first thing we ought to do is to tell him what sort of shelter he ought to build. Then I believe it would be good to pass some sort of legislation to make a housing loan to a person, just as you have a title I, FHA, where a person can borrow money to put venetian blinds or a thing of that sort in his home. Perhaps we ought to make them a longer term loan to install a properly speci-

fled bomb shelter in their own homes that might save their lives in the event of an atomic disaster. I believe you might save as many as 40 million lives that way if you had the proper type protection from just the radioactivity.

Mr. BANCROFT. I am afraid that is all the time we have. Thank you very much, Senator LONG.

Senator LONG. You are very welcome.

Vice President Nixon's Caribbean Trip

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Tuesday, March 8, 1955

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter written by Robert C. Hill, the distinguished American Ambassador to El Salvador, relative to the tremendously beneficial effect to the United States of Vice President Nixon's recent trip through the Caribbean area.

There being no objection, the latter was ordered to be printed in the RECORD, as follows:

AMERICAN EMBASSY,
San Salvador, El Salvador,
February 21, 1955.

To the EDITOR.

Because of your constructive policy in conveying news to the people of the United States, I am sure you will be interested in comments regarding the current trip of Vice President Nixon and his wife through Central America.

This trip is exerting a tremendous influence toward achieving the hemispheric solidarity which is vital to the future of the United States and Latin America.

In the 48 hours that the Vice President and his party were in El Salvador, the growth of warm friendship for the United States and its citizens was a tangible, active experience.

Perhaps the original announcement of the proposed visit by Mr. Nixon to Central America was received by the public with an understandable lack of enthusiasm. The people of Central America are our friends, but they are also our neighbors. Here, as at home, neighbors have a way of being critical, of developing a dislike for mischievous children and of being annoyed when the other fellow's radio is too loud. Central America also has memories of times gone by when, rightly or wrongly, they considered Uncle Sam the neighborhood bully. It has been a long time since there was a basis for such recollections, but neighbors have long memories.

These are the agricultural countries with great masses of workers that the Communists cultivate. And they succeeded, for a time, in Guatemala until the people rose up against them and reestablished democracy.

These are the countries which depend for their livelihood on the purchase by the people of the United States of their agricultural products—mainly coffee and bananas. These are the countries which buy more than 80 percent of their manufactured articles from the United States.

And these are the countries which—just because they are considered to be our solid friends—we have largely ignored in our international efforts to win friends and influence people on the side of democracy.

Now, in a matter of days, public opinion here has changed. I have talked with Government officials, with newspapermen, and with men on the street. They say: "Mr. Nixon's visit proves you really are interested in us—it is not just words."

Mrs. Nixon, too, is showing the same sympathetic understanding of Latin Americans. Here she visited hospitals, the nurses' home, and the wonderful orphanage called Ciudad de los Niños which is modeled on Boys Town, Nebr.

The effect of the trip on El Salvador is best summed up in the editorial which appeared today in La Prensa Grafica, the newspaper of widest circulation in this country. Its concluding paragraphs state:

"Bolívar wanted Latin America united. He fought until he died to achieve that union. Today, Bolívar's ideal is enlarged to include the union of all America as the only means of survival.

"The significance of Mr. NIXON's visit—which makes us very grateful—is that the great nation to the north has understood also that its destiny is the same as that of Latin America."

The Vice President and his party deserve our gratitude for the contribution they are making to the free world.

ROBERT C. HILL,
Ambassador of the United States
of America to El Salvador.

Century of Progress

EXTENSION OF REMARKS

OF

HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Tuesday, March 8, 1955

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Century of Progress," published in the Washington Post and Times Herald of March 7, 1955. I am particularly pleased to call attention to the editorial because St. Elizabeths Hospital was created through the unceasing work of a Massachusetts lady 100 years ago.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CENTURY OF PROGRESS

The centennial of St. Elizabeths Hospital, which was observed last week, is significant for something more than 100 years of growth in an institution. It brings to the fore a totally different concept of mental and emotional illness. The story of St. Elizabeths is the story of 100 years of evolution in the practice of psychiatry. It is a matter of good fortune for the people of Washington and many others who make use of this institution that Dr. Winfred Overholser and the other four eminent superintendents who have served it have kept abreast of modern methods of treatment as well as the heavy demands upon its facilities.

Some concept of the progress that has been made in this century may be had by remembering that it was the spectacle of mentally ill persons incarcerated in a Massachusetts jail which drove Dorothea Lynde Dix to work unceasingly for the creation of a special hospital for mental patients in the Nation's Capital. Over the years the inhuman practice of treating these unfortunate as criminals was changed. Special institutions were built for them, but in some

instances these became worse than jails, and the prevailing use of mental hospitals was for segregating the insane from the sane. For many long decades these hospitals were little more than prisons for mentally disturbed persons.

Today all the leading mental hospitals have become in fact scientific treatment centers. Of course, they care for many patients who are not curable by any methods now known to medical science. But the great majority of patients go to a mental hospital for treatment and return to society in precisely the same way that they enter and are discharged from other hospitals. The emphasis is in finding the cause of a patient's disturbance and supplying a remedy through psychotherapy or other means.

St. Elizabeths has contributed much to this evolution. In addition it has trained a great number of psychiatrists, psychologists and others engaged in the care and treatment of the mentally ill and is the only public mental hospital which has been approved by the American Medical Association for general internship. It is everywhere recognized, however, that this century of progress is only a beginning in the development of this highly specialized branch of medicine. Many types of emotional and mental illness are still not adequately understood and the techniques of treatment can be vastly improved. Indeed, the gulf between the treatment applied in the best of the mental hospitals and in the poorest is still discouragingly wide. We must recognize also that the strains and tensions of life today are causing an appalling volume of emotional and mental disturbance. It is a challenge to society in general as well as to the medical profession—a challenge which calls for more of the foresight, courage and spirit of experimentation that led to the creation of St. Elizabeths.

Irrigation in Northwestern Lake County

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, March 8, 1955

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by John L. Denny in the Portland Oregonian of February 28, 1955, describing the irrigation of 30,000 once arid acres on the upland desert of south-central Oregon.

Cheap electricity provided by the Midstate rural-electric cooperative, with headquarters at Lapine, Oreg., is making possible the pumping of water to create a new agricultural civilization amidst Oregon's high desert. This is a tangible demonstration of what low-cost water power means in terms of development and economic progress in the Pacific Northwest.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IRRIGATION PUMPS BRING NEW LAND RUSH TO NORTHWESTERN LAKE COUNTY

(By John L. Denny)

A new land boom is in the making in the Fort Rock area, a high-desert basin in northwestern Lake County ringed by the shattered remnants of long-dead volcanoes.

This is a new boom, because the first land rush was in the 1890's, when homesteaders

by the hundreds settled the country, and towns sprang up, flourished and died.

The homesteaders went broke, and only their abandoned buildings remain to remind of the first boom. Their exodus was aptly described by E. R. Jackman, range crops specialist at Oregon State College, in a recent issue of the Oregon Farmer:

"The homesteaders left without benefit of FHA, PMA, SCS, REA, or crop-disaster loans. When their cash ran out, so goods no longer came COD, they left PDQ. Their deserted homestead buildings still dot the landscape, though some were torn down for some vague reason when the Government decided the land thereabouts was pretty marginal and bought it up in the heyday of the New Deal.

This time irrigation is the magic word triggering the new land rush. It might better be called a pump rush, because pump companies are getting set for an Eldorado, selling pumps to the settlers. One company is talking of sending salesmen with sleeping bags and order books, to be in on the ground floor.

The water to irrigate this thirsty hunk of desert will come from a vast underground lake, and the juice to pump it will come from a new 191-mile line the Lapine Rural Electric cooperative is building into the basin with a \$1 million loan from Uncle Sam.

Enthusiastic boosters of the project say irrigation will convert the basin into a garden spot, growing grain, potatoes, and sugar beets.

Skeptics assert that settlers who hope to get rich growing with irrigated cash-crop farming are going to wake up some frosty morning singing "Yes, we have no bonanza."

George Larimer, manager of the Lapine REA, is one of the backers of the project who believes it has a rosy future in row crop and grain farming. He says the 100-day growing season gives plenty of time for crops that grow in the ground, such as sugar beets and potatoes, and cites sagebrush 6 to 8 feet tall as proof of the deep and fertile soil, just waiting for the water.

LIVESTOCK SEEN ANSWER

Larimer said contracts for construction of 43 miles of transmission line and 148 miles of distribution line will be awarded by the REA co-op Monday night. He said 80 customers on the line have signed up to put in pumps the first year.

Larimer said some 30,000 acres will be developed in the first phase of the project. Shallow wells will provide low-cost water, he believes, because the water level averages only 29 feet down.

A different view of the prospects for farming in the project is taken by most farm authorities and some of the livestock ranchers now in the basin.

Jackman, for example, believes the short and undependable growing season will rule out cash crops. The growing season might be 100 days one year, all right, but the next year it might be only 30 days.

Jackman believes prospects are good in the area for livestock farming. Irrigated pastures and alfalfa will produce about 400 pounds of beef to the acre a year. At present cattle prices, ranchers would do all right. With cattle at 15 cents a pound, roughly, this would yield \$60 an acre a year, or \$10,000 on a quarter section, with production costs of around \$5,000.

Only trouble with this picture is that no one knows how long cattle prices will stay where they are.

It will cost about \$100 an acre to convert the sagebrush into irrigated farms, and financing may be a stumbling block that will hold back the boom. As Jackman put it:

"A lot of folks with small holdings can't get a well drilled until they get the money, and they can't get the money until they get the well drilled. It's like the Irishman who couldn't get his new shoes on until he had worn them a couple of days."

The United States Geological Survey report says the water supply in the basin is adequate for irrigating 30,000 acres of land. Others say 100,000 acres is the limit.

Part of the land is in private ownership, some of it in livestock ranches which owners will subdivide. And Larimer reports that heirs of some of those 1890 homesteaders are showing up to claim their property.

Approximately 100,000 acres of the basin is land acquired by the Government under the resettlement project in the 1930's. Unlike other regular public domain lands, this land utilization project is not under the Homestead Act. It cannot be transferred to private ownership unless Congress passes special legislation.

SOILS FIT FOR WATER

Soil Conservation Service technicians who have been doing some soils surveying in the basin say they have delineated five broad areas suitable for irrigation. But unfortunately about half of the suitable land is in the Government land utilization project, closed to homesteaders. This area is being used as grazing land, under supervision of the Bureau of Land Management.

All of these and other pros and cons of the incipient boom are due for an airing Tuesday at Fort Rock Grange Hall, at the annual meeting of the Fort Rock soil conservation district. Promoters of the project, pump company representatives, and a panel of State and Federal soils and irrigation experts will be on hand. The meeting starts at 10 a. m.

The Robinson-Patman Act and Food Distribution

EXTENSION OF REMARKS OF HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES
Tuesday, March 8, 1955

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Mrs. Marie Kiefer, secretary-manager of the National Association of Retail Grocers, at the annual convention of National Food Brokers Association in Chicago, on February 19, 1955.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE ROBINSON-PATMAN ACT AND FOOD DISTRIBUTION

(Address by Mrs. Marie Kiefer)

It is a pleasure, indeed, to be here today and have the opportunity of discussing with you the Robinson-Patman Act, and more pointedly the evil of price discrimination which it was intended to prevent.

Insofar as the basic issues of the evils of price discrimination, and the need for strong enforcement of the statute are concerned, there is no difference in our respective positions.

But before getting to the heart of that matter, I want you to know that we recognize how important brokers are in the pattern of food distribution today. Please don't misinterpret this, my purpose is not to flatter you by making a pretty speech complimenting you in a dozen different ways, but actually I have a far different purpose in calling attention to your importance.

All of us know that the food distribution industry has experienced sweeping changes in its method of operation in recent years. The self-service market, modern packaging,

and new methods of processing are frequently cited and discussed as an index to the progress made in bringing better foods to the American consumer at lower costs. But the food broker needs recognition in this picture, too, for he plays a very vital part.

I know, without the use of statistics, that more and more food processors and manufacturers are turning to brokers to help sell their products. Everyone in the industry is aware of the fact that the growth of sales through food brokers has been substantial, and is continuing to climb. Why is it? What is responsible for this growth? In my judgment, the answer can be stated in one word—competition. The food industry, from manufacturer and processor right through to the retailer, is one of the most fiercely competitive in the entire country. This also means that a high degree of efficiency prevails in the industry, and the overall result is that within the last 20 or 30 years the cost of food distribution has been cut in half.

Food brokers have succeeded because they offer to both small and large manufacturers and processors an economical method of promoting and selling their products. That is not all—for food brokers also stimulate competition by providing an outlet for small sellers and those just getting started who cannot afford to hire a salaried sales force. Food brokers also reduce the cost of merchandise by expanding the market for products they handle through personal visits with distributors. This extra service of brokers calling on retailers has resulted in a much closer relationship between retailers and brokers than ever before.

Mentioning this close relationship brings to my mind a suggestion we would like to offer for the interchange of views to strengthen the relationship. For some years, NARGUS has had a very active merchandising committee, made up of successful, enterprising, and progressive retailers. We are proud of the work the committee has done in solving some common problems with similar groups in other segments in the industry. The same beneficial accomplishments can be attained if our committee could meet together with representatives of your group and lay a foundation for working together in selected areas of mutual interest. We would like very much to become better acquainted with your views, and to let you know those of the retailers, not only for ourselves but for the welfare of the industry and consumers generally. I surely hope you will give this suggestion serious consideration, and that before too long your representatives and ours can sit down around the table to discuss mutual interests and problems.

As I mentioned earlier, we believe food brokers serve a most useful and necessary purpose. It will not come as any surprise to you, I am sure, that not everyone in the industry feels this way about brokers. You will recall the recent effort to destroy the section of the Robinson-Patman Act dealing with brokerage payments. "Please note I said 'destroy,'" because that is the ultimate effect the proposed legislation would have.

NARGUS opposed this legislation vigorously, after careful consideration of the entire problem by our executive officers. For example, supporters of that proposed legislation requested our officers to review the measure with them. This was done, not once but several times. The secretaries of our affiliated associations reviewed the proposed measure, too, at their meeting in Kansas City last year. All of them, unanimously, determined to oppose the measure aimed at amending the brokerage section of the Robinson-Patman Act. After the bill was introduced, a congressional hearing was held during which we were subjected to a flagrantly abusive attack, simply because we did not go along with the bill. Had it not been for our long and impartial consideration of the measure before it was intro-

duced, we might not have been in a position to meet and disprove the vituperative and defamatory things said against us before a committee of Congress. This is the last time I shall refer to this unhappy experience for, as they say, to err is human, to forgive divine.

NARGUS opposed the bill to amend the brokerage section for one reason, namely, it was adverse to the best interests of the independent retail grocers, regardless of what buying practices or arrangements they may follow. It was this reason, and this reason alone, that led us to the position we took. There were two parts to our reasoning on why we felt the proposal to open up the brokerage section was one we could not support. First, brokerage payments from sellers to buyers were, prior to the Robinson-Patman Act, the chief and most disastrous form of price discrimination against independent retail grocers. The Federal Trade Commission, in the investigation that started in 1928 found, after 6 years of study, that phony brokerage payments was the rotten thread which ran completely through the fabric woven for the purpose of hiding special preferences to mass buyers. Listen to what the House Judiciary Committee had to say in its report on the Robinson-Patman bill:

"Among the prevalent modes of discrimination at which this bill is directed is the practice of certain large buyers to demand the allowance of brokerage direct to them upon their purchases, or its payment to an employee, agent, or corporate subsidiary whom they set up in the guise of a broker, and through whom they demanded that sales to them be made."

The practice of buyers setting up dummy brokerage houses was so thoroughly corrupt that one very large retail distributor not only received phony brokerage payments on its own purchases, but also shared in those paid on products sold by its competitors. I could stand here for hours and cite to you case after case from the public record showing how brokerage payments paid to huge buyers and their intermediaries became a monopolistic endeavor at work in the food distribution industry. A few of you in this audience managed to live through those days. Those of us who saw the destruction, dishonesty, and discrimination that prevailed will never forget it.

The second reason that we, in the retail field, vigorously opposed efforts to open up the brokerage section of the act was because we believe the proposed bill violated the antidiscrimination policy of the act itself, as well as the principles of our Constitution. The bill was framed in such a way as to purport to allow a few specially defined wholesale headquarters houses to collect brokerage. It was deceptively designed to create the impression that only independent distributors would share in the benefits derived from payments received. Actually, what this bill proposed was to write a special discriminatory preference into an act which condemns discrimination on principle. In other words, the bill would encourage the very practice the act was intended to prevent. As our spokesman said to the Senate Judiciary Committee at the time: "We view this with alarm, because we see the act doomed if it is to become a vehicle for granting special privilege to any class of buyers. 'Equal justice under the law' is an essential part of the Robinson-Patman Act, without which it loses both its meaning and its purpose."

Now let me pass to the broader subject of injurious price discriminations. Senator KEFAUVER has discussed the public interest that is served by the Robinson-Patman Act. He has also described the urgent necessity for legislation closing the loophole now in the act. I shall not attempt to elaborate on what he has said, but I do want to tell you that the rank and file of NARGUS members across this country are alert to the

fact that price discriminations in the food distribution industry are on the march again. Hardly a week goes by that we do not hear reports of some special concessions or arrangements that favor a select group of retailers over their competitors. I feel sure that most of you, too, are aware of this kind of vicious price discrimination now going on.

There is a case now pending before the Federal Trade Commission charging a canning company on the west coast with selling fruit cocktail to a large buyer at \$1.75 per dozen while charging smaller competing purchasers \$1.80 per dozen. The Commission also charges that this canner sells its commodities through brokers and sales agents to some of its buyers at approximately 2½ percent to 7½ percent higher than it sells the same commodities of like grade and quality to some of its direct buyers.

If this canner, is, in fact, giving discriminations as charged—it's a safe bet his competitors are now or will likely follow this same practice.

Many discriminations today are not direct price preferences. There is the frozen-food manufacturer who pays the salary of the frozen-food buyer for a local chain in the east, the dairy which pays cash to get exclusive distribution in a food store, the individual arrangements which permit large numbers of representatives of a supplier to work on a full-time basis throughout some special featured event in one or several large retail establishments. There are all types of promotion schemes which give one group of stores preference in both allowances and facilities over competing retailers. Free goods for store openings, manpower for stocking shelves, consignment sales, and so on, are very frequently offered on a preferential basis to buyers who have no scruples about making illegal demands on suppliers.

Sometimes these discriminations are carried on by representatives of a firm which has a headquarters policy against the practice. The trouble is that the sales staff disregard the policy or perhaps do not even know it, but we believe it is up to the manufacturer to see that their representatives observe a law as important to the entire industry as the Robinson-Patman Act.

I am sure you know that the act prohibits discriminations in allowances and facilities, as well as in price. You know that a seller cannot evade the terms of the act simply by giving these indirect forms of price discrimination, but it is quite evident there are a number of people in the industry who either do not know this or else they choose to ignore it. Let's not underestimate the amount of money involved in discriminations of all kinds. The public record shows that in 1 year a large buyer received, in what the court termed "headquarters allowances," \$6.4 million—which constituted 24.59 percent of their total profits from all operations in that year. These headquarters allowances were the largest single source of profit for that organization.

Of course, it isn't always the largest buyer who gets the most, but legitimate operators today in the retail field have good reason to wonder why some suppliers seem to feel the Robinson-Patman Act is dead, and that no one need pay attention to it any more. Let's not kid ourselves into believing that some of the evil practices condemned in the early thirties which gave birth to the Robinson-Patman Act don't exist or will pass away of themselves. They won't, and if something isn't done to correct the situation, it will get worse.

The overwhelming majority of business people do not desire to stoop to injurious discriminatory and unfair practices, but if the willful few, who choose this way of doing business, are allowed to pursue their evil conduct then many will feel they must adopt similar tactics to meet unfair and unethical competition. If this is permitted, the ethi-

cal standards of the industry will sink to the lowest level followed by the most unscrupulous. Two decades of effort to wipe out discriminations and to preserve equality of opportunity for all are now threatened by a resurgence of this old enemy.

We recognize the difficulty in overcoming this dangerous situation. In the first place, the Robinson-Patman Act is structurally weaker now than ever before in its history. This is why we join with you and other groups in supporting efforts to strengthen the act. This effort must go forward with all the vigor and determination at our command. Happily, our two organizations are joined together in this great crusade to save equality of opportunity in America. On behalf of our entire organization I want to commend your association and its officers and members for the spirit and zeal you have always shown in fighting to preserve the act and the principles it stands for. No organization has given greater and more unselfish service to this important cause than yours, and I am thankful for the opportunity to state this fact publicly for the record.

At this point I cannot overcome the irresistible impulse to pay tribute to your president, Watson Rogers. I have known Watson a long time, probably longer than most of you, and it may be for that reason I feel a little embarrassed in acclaiming him because I am just as sure as anything I won't do justice to the man. In all sincerity you have as your president one who combines all the rare qualities of mind, character, and personality that make him an exceptional, outstanding leader. He is a fighter and by that I mean he has the courage to fight for what he believes. Such men have made this industry a great productive force. I shall not say more for surely neither he nor you need my voice to add to his laurels.

Both your organization and ours have a unity of purpose in preserving equality of opportunity in America. But I wonder sometimes if either of us realize how desperate is the need to make more effective the rules against systematic and injurious price discrimination. Oh, sure, most of us know how seriously the Robinson-Patman Act has been weakened. We know that in many instances it is not being enforced and that in some instances the act has been weakened by judicial and administrative opinions. But do we know how far this dryrot has progressed?

The most recent example was given at the trade practice conference for the frozen food industry recently held by the Federal Trade Commission. Representatives of the Commission inserted into a draft of these rules the following as their explanation of the provision allowing discriminations given to meet competition:

"This," it said, "is to be understood as permitting an industry member to meet in good faith a lower price at which like goods are being sold or offered for sale to the same customer by a competitor, though such price be lower than the industry member's price to other buyers competing with such customer, when the industry member is able to show that his lower price was granted under circumstances which would lead a reasonable and prudent person to believe that it would in fact meet the equally low price of a competitor, unless the industry member knew or should have known that the competitor's offer of price was unlawful."

This is the law as presently seen through the eyes of the Commission. I do not pretend to know all it means, but one would have to be totally blind not to see how this new interpretation weakens the original intent of Congress and leaves a loophole which any coercive buyer can take full advantage of. This is the main reason why the equality-of-opportunity bill, which Senator KEFAUVER discussed is so necessary to effectual prevention of harmful price discriminations.

And there is another side to this problem that needs to be stressed. It is the individual responsibility each of us has to foster fair competitive opportunities by refusing to countenance harmful practices we know are taking place. And here I am talking to each one of you as an individual and not just to food brokers as a group.

Each of you is in a unique position in this respect. As sales agents of manufacturers, dealing with buyers of every size and description, you are in a strategic position to learn of violations almost from the moment of their inception.

As an example, one of your principals might send you a notice not to bother contacting a particular buyer because this account is to be handled directly. The principal offers no explanation, but you don't need one. The probabilities are this buyer has succeeded in arranging a special deal where he buys at a discount in lieu of brokerage. Not only you, but this favored buyer's competitors, are the victims of this practice. They cannot compete with such a disadvantage. The trouble is that other buyers do not know the supplier is cutting their throat.

Though you may be willing to accept this loss of brokerage philosophically, you must also consider each one of the nonfavored buyers who is being hurt.

Take even a worse example. You may be told by a principal that a certain large buyer is to get a preferential price not known or available to competing buyers. Perhaps the special preference may not be so blatant, for it may take the form of selling at a discount kept secret from others. There are all kinds of possibilities, and I dare say many in the audience here today could expand tenfold these few examples through your alert observations of daily events.

Now, I would like to get personal. I want to ask you as a legitimate and honest food broker what you do when you find unfair or illegal practices being used? You disapprove of them, of course, but that is not enough. Your duty doesn't stop there.

Suppose you are in your office some day and witness a bank being held up across the street. You stand there observing the event and notice the robbers are getting away in a car. You jot down the license number and make a note of the description of the car and the robbers. Now what do you do about it? Do you shrug your shoulders, comment on how terrible it is, and go back to work? Is that what you do, or do you immediately call the police and tell them all you know, offering your services in apprehending the criminals?

The analogy fits well because discriminations of the kind we are talking about are robbery and are more serious than a bank holdup. The bank is covered by insurance, but the food retailer has no insurance to compensate him for being denied the right of equality of opportunity to succeed in his business.

Can you, in good conscience, become a party to a discriminatory practice that leaves so much harm and destruction in its path? You may not be asked to become a participant in the perpetration of the wrong doing, but in many cases your acquiescence will be necessary to its success. In some instances all that is required of you is to look the other way, to remain silent and unconcerned. But is this all you would be doing? Obviously not. For each violation you overlook is another nail in the coffin of the Robinson-Patman Act. Have not the enemies of that act done enough damage without getting indirect support from its friends? Abraham Lincoln once said: "To sin by silence when they should protest makes cowards of men."

If you are interested in this law—and I know you are—you will do your part in seeing that it is properly and fairly enforced. You will see to it that all violations familiar to you are reported to the Federal Trade Com-

mission regardless of who is involved. As a citizen whose duty it is to uphold the law you have the right to do this without discussing it with anyone. A letter, signed by you, containing a short and simple statement of the facts, with the name and address of the violator, is all that is needed. Send it direct to the Federal Trade Commission in Washington. Correspondence of this nature coming to the Commission is classed as confidential, and the law provides that unauthorized divulgence of information by an employee of the Commission is punishable by a fine, imprisonment, or both.

Even if passive acceptance is all you, as a broker, may be properly charged with, I cannot find anything that relieves you of your duty as a citizen to report the facts to the proper authorities. If you will do at least this much, you, as a part of the fraternity of food brokers, will be a part of a great moral force for good in the industry. Not only that, you will be admired and respected by the great majority.

All this requires is living up to the principles of fairness to all, privilege for none. On this basis the greatness of America is built. Let all of us, therefore, think and act in terms of our individual responsibility to preserve freedom of opportunity so all will have a fair and equal chance.

I do not wish to imply that most of the discriminations are carried on in lines handled by food brokers, for such is not the case. Generally, there is less discrimination in sales handled through brokers. In fact, without brokers and the great advances they have made in expanding their sales volume, the situation in the industry today would be much worse. Credit for this goes to you and your association, but I know and you know that the chiselers in this industry fear the brokerage section of the Robinson-Patman Act more than any other part of it. It is not conditioned by a lot of "ifs," "ands," and "buts" like some other sections.

If you will help lead a crusade to recapture the lost territory, your supporters and followers will be legion. The issue is yours to face because of the position of trust you hold. Food brokers can become the greatest constructive force for fair play there is in the industry.

And right here and now—during this convention—is a wonderful opportunity for you to begin the campaign. Following this session you will meet with principles in many conferences. The Robinson-Patman Act affects the sales policies of each of them, and every manufacturer and processor should be just as interested in strengthening and enforcing the Robinson-Patman Act as "we" are.

You have an obligation to tell your principals how necessary it is that they vigorously and religiously observe the law and not look for loopholes by which to grant price discriminations. If they do not yet realize how important this act is to them, show them what it means to their own survival. You and I know that if they grant unfair discriminations it will boomerang, in time, and they will destroy themselves.

I cannot believe manufacturers and processors are completely unaware of the grave dangers to themselves from such discriminations. Surely they do not have to be told that it is the same large distributors who are granted discriminations that are putting in their own processing plants, and developing their own brands of merchandise. It is no secret that many of these large distributors are using the money they get from these illegal kickbacks to promote and advertise their own brands, which they pack in competition with the manufacturers and processors who are stupidly granting the discriminations. For these suppliers there is more at stake than saving equality of opportunity. Their own future is at stake. Unfortunately some of them do not see this

clearly, and here is where you can render them a great service.

Have you pointed this out to your principals recently? It is your job to get over to them that at best price discriminations provide them with only temporary gains. Before the manufacturer knows it he is being sucked in deeper and deeper until there is no escape. No matter how large a manufacturer or processor may be, he cannot afford to disregard this dangerous threat—the food industry cannot afford it—the Nation cannot afford it. You can—and must—help prevent this growing cancer from destroying the food industry.

Thank you most sincerely for giving me this opportunity to speak to you.

Estonian Independence Day

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, March 8, 1955

Mr. LEHMAN. Mr. President, February 24 was celebrated in the United States as Estonian Independence Day. Those valiant people have suffered under the yoke of the Communist tyranny since 1940, but the hope for their eventual liberation has been kept alive both in their homeland and throughout the free world.

I ask unanimous consent that a resolution adopted by the Estonian National Committee in the United States at a patriotic meeting held on the occasion of Estonian Independence Day be printed in the Appendix of the Record.

There being no objection, the resolution was ordered to be printed in the Record, as follows:

NEW YORK,
February 27, 1955.

We, Americans of Estonian descent and Estonian refugees, assembled on occasion of the 37th anniversary of the proclamation of independence of the Republic of Estonia, are deeply concerned about the growing attitudes of complacency in the free world against the menace of Communist aggression.

Most of us have directly experienced the naked face of the Soviet quest for world domination which actually involves not only grasping rule over free nations, but is bound to result in the extinction of substantial parts of the subjugated populations. Therefore, it is not only our wish, but our duty, to point out the true extent of the ruthlessness of the Communist conquistadores, if they would succeed in their world domination, after having lulled the free nations, the American Nation among them, by their peace and coexistence propaganda or paralyzed them into concessions by threats about their alleged hydrogenic superiority.

The Special Report No. 3 by the Select Committee on Communist Aggression of the House of Representatives, titled "Communist Takeover and Occupation of Estonia," describes succinctly what went on in Estonia after the seizure of power by the Soviets.

"About 10,000 men, women, and children were arrested during one night (June 14, 1941) and sent in cattle cars to Siberia and northern Russia. This was to be only the beginning. . . . The biggest roundup of the population, however, occurred in March 1949. At least 30,000 to 40,000 persons were sent to slave-labor camps in remote regions. . . . It has been estimated by witnesses before the committee that during the 2 occupations

up to date, about 120,000 to 150,000 Estonians have been deported to the Soviet Union. . . . Thousands of people were plainly murdered and thrown into mass graves, often after tortures."

The population of Estonia before the Soviet conquest was roughly 1.2 million, and the first years of Soviet domination in other conquered countries have resulted in about the same percentage of victims (10-12.5 percent of population). In terms of the total population of the United States, it means that no less than 16 to 20 million persons would be practically annihilated here during the respective period of time.

These simple facts and figures are a grave warning. The question arises: Which requires more victims: the red terror or nuclear warfare?

In 1940 the Estonian Government and Parliament decided to meet the Soviet ultimatum demanding occupation of Estonian territory by the Red army in order to avoid war and unnecessary bloodshed. The result was worse than anticipated: More people were killed or deported by the Communists than the whole armed forces of Estonia taken together, and most of the statesmen themselves who made this decision were among the victims.

The forces of the Communist empire are growing daily, the development of heavy industry and war potential is going on at a much faster pace than in the free West, and is being accelerated. In order to align their forces, the Soviet grip over satellized nations is being consolidated through continuing extinction of population and through indoctrination of youth. The day may come, when our nation who now is longing for liberation will be turned against the West as a part of the "monolithic" Soviet structure. Our experience tells us that as soon as the balance of power will become favorable to the Soviets, they will not hesitate to apply military forces against the West, if necessary.

Therefore we regard as our duty to recall, again and again, that a mere containment of Communist expansionism will not avert a final disaster for the free world, and that a more active policy against them should be pursued. Liberation of the Estonian as well as other Baltic and satellized peoples, which they are unable to achieve by themselves without outside help, is just one, but an integral part of such a more forceful policy against the successful buildup of Communist power in general, an integral part of a policy which we regard to be also of vital interest to this country.

COMMITTEES CAN CHANGE THEIR RULES, BUT RED WITNESSES ARE ALWAYS THE SAME

Sometimes it is said that we ought to create some tribunal as lofty and unassailable as a British Royal Commission to replace congressional committees as probers of Red infiltration. The comrades show less enthusiasm for this idea than they once did, since the Canadian Royal Commission rooted out the Dominion's Reds with no more compunction than a gardener trapping moles.

Australia now has a Royal Commission investigating Soviet espionage and its connection with domestic Communists as an aftermath of the Petrov case. The distinguished commissioners are making a noble effort to carry on in the Liberal tradition, with public hearings. How are they making out? The London Times reported this passage from the testimony of W. H. Bird, Victoria, secretary of a seamen's union:

"Mr. BRD. I have come here to tell you what I know, without this boy (indicating Mr. Pape, junior counsel to the Royal Commission) interrupting me all the time. . . .

"Mr. Pape. You are here to answer questions, not to talk.

"Mr. BRD. Dry up. I know what I have to say without you telling me.

"Seamen in the gallery began to applaud, calling out, 'Good on you, Bill.' The commissioners retired to allow the gallery to be cleared, amid calls of 'This is a free country.' 'You can't take it,' 'You're a lot of cowards.'"

If it all sounds familiar, it is because the method used by the party to disrupt social institutions is the same in every case and every country.

They've been doing it for years. In November 1928, at Zagreb, Yugoslavia, one Josip Broz went on trial for Communist agitation and propaganda, contrary to the law of the realm. The defendant told the presiding judge arrogantly: "I do not recognize the bourgeois court of justice, because I consider myself responsible only to my Communist Party."

When he was sentenced to 5 years and led away by the guards, there was the standard shouting match, joined by supporters in the packed audience. Broz, of course, is now better known as Marshal Tito, and the interesting fact is that his official biography cites this as one of the glorious episodes in his career.

There isn't much you can do with Communists except let them yell. But it would be a mistake to amend our procedures to make their obstructive tactics easier.

be of interest to all persons concerned in that type of a national defense designed to meet any type of aggression that may concern our national security. Secretary Thomas' statement follows:

STATEMENT OF THE HONORABLE CHARLES S. THOMAS, SECRETARY OF THE NAVY, BEFORE THE HOUSE ARMED SERVICES COMMITTEE, REGARDING H. R. 4393

Mr. Chairman and members of the committee, Admiral Duncan, Admiral Leggett, and I are here today to outline the Navy's fiscal year 1956 shipbuilding program and to give your committee reasons and justifications for it.

At the outset, I wish to note, as indicated in section 2 of H. R. 4393, that the proposed legislation does not grant increased shipbuilding or ship conversion authority to the Navy beyond that already authorized by law. This bill would simply indicate the approval of the committee and the Congress for this specific program. In this bill, the committee would give us a bill of particulars.

On the occasion of my recent appearance before your committee, I stated that President Eisenhower had indicated that the fundamental policy of the Department of Defense (which Admiral Carney, General Shepherd, and I fully and unequivocally support) is to prepare a military program which is adequate, balanced, and long ranged. A program which will prevent war if possible, which will meet a variety of military contingencies and, at the same time, a program which our national economy can support indefinitely.

The naval part of this 1956 program, I feel, meets these demanding requirements, and provides for a strong and balanced Navy and Marine Corps that will have the highest degree of combat readiness and flexibility for discharging our peacetime missions and worldwide commitments, and for carrying out our important tasks if war should occur.

In any size or type of war which can now be foreseen, the need of a strong and adequate United States Navy is more essential than it has ever been before. We must have command of the seas so that we can consolidate our strengths with those of our friends and allies. We must always be able to cross the seas to supply our industrial machine—still the free world's arsenal—with the many critical raw materials we need. We must have a Navy for transporting our armies overseas and for keeping them supplied. We must control the oceans in order to operate and supply our worldwide network of bases. And most important, we must be able to exploit the seas to keep the conflict away from our shores, and to carry the fight into the enemy's own territory.

One of the major and vital parts of that naval program is the procurement and conversion of combat ships. In these days of rapid progress in fields such as atomic propulsion, guided missiles, metallurgy, plastics, and shipbuilding techniques, ordering a combat ship demands much foresight on the part of the planners to insure that the vessels which they design are superior and advanced in the technical, naval, and engineering fields. To provide this superiority, our planners must not only anticipate the period of the ship's construction, as much as 3 or 4 years, but must also calculate the adaptability and potential of each type vessel during its life span of about 20 years.

Moreover, the naval needs of a quarter century in advance must also be foreseen with as much vision and wisdom as we can command. For this difficult task, the best—perhaps the only—parameters are experience, logic, and ingenuity. Careful weighing of the many diverse factors of national strategy,

Congressional Committee Rules and Red Witnesses

EXTENSION OF REMARKS OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES
Tuesday, March 8, 1955

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Committees Can Change Their Rules, but Red Witnesses Are Always the Same," published in the Saturday Evening Post of recent date.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

Why the Navy Needs the "Forrestal" Type Aircraft Carrier

EXTENSION OF REMARKS OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 8, 1955

Mr. VAN ZANDT. Mr. Speaker, Secretary of the Navy Charles E. Thomas when appearing before the House Armed Services Committee March 7, made the following statement concerning the Navy's fiscal year 1956 shipbuilding program.

While his statement covers the shipbuilding program in general, his reasons as to why the Navy needs additional Forrestal type aircraft carriers should

probable naval requirements, technical advancements, budgetary limitations, relationship to other military programs must be taken into account in arriving at a decision.

I assure you that all such factors have been most thoroughly and carefully reviewed by Admiral Carney, Admiral Duncan, and myself, and others in authority, in the presentation of this shipbuilding and conversion program for your consideration. I consider it a vital, sound, and well conceived one. This program also carries the President's approval.

The shipbuilding program for fiscal 1956 can be summarized by reference to four types of ships—the carrier, the cruiser, the destroyer, and the submarine. I will take each one of these in turn.

The Navy is requesting a fifth aircraft carrier of the *Forrestal* type; we are also requesting authority to improve six of our older carriers by conversion.

This carrier program is essential for several reasons. First of all, new carriers are needed as replacements for World War II carriers which are now 13 and 14 years old. A ship has a life of about 20 years, so beginning in 1960 until 1965, we will be reaching the economical limit of their service. This carrier-construction program is a plan to gradually replace our older ships over an extended period.

Secondly, the fleets are now beginning to receive several types of new and larger jet aircraft whose full performance and potential can only be achieved from these modern carrier bases. The new *Forrestals* will have the stronger and larger landing areas, including the angled deck, increased hangar-deck heights, improved steam catapults and faster elevators, stronger arresting gear, and many other new features such as better fire-fighting and damage-control ability. The new families of jet aircraft, such as the A3D, a very advanced attack aircraft weighing 70,000 pounds, the A4D, an equally advanced but light attack aircraft, and several excellent fighter aircraft, such as the F4D and the F9F9, go hand in glove with our newest model carriers which have been specifically designed to operate and accommodate such modern, high performance planes. We are reaching the point, so to speak, where the suit of clothes we bought some 12-15 years ago is getting to be a tight fit for the growing young man of jet naval aviation.

But the most important reason is that our aircraft carriers—which are the key units of our naval task forces—are absolutely essential to the successful execution of our naval missions, and to the security of the country, either in cold war, fringe war, or nuclear war.

In this present period of prolonged tension, the value of having a potent offensive navy, built around our carrier forces, was recently seen in the Tachens operation. In the troubled waters around Formosa—far removed from our normal naval bases, in an area where our fixed air bases are also limited, and 7,000 miles from our homeland—the importance of having our mobile carrier forces move into the threatened area to reinforce our national policy and to prevent trouble was, I am sure, readily apparent to all. I am confident that the continued presence of our naval task forces in the Formosa area is an effective brake and a great deterrent to the outbreak of general war, giving us time to work diligently for a real peace in the Far East.

The importance of carrier forces during a fringe or local war is best illustrated by the recent Korean war. I will not dwell on this, for I am sure the gentlemen of this committee are very familiar with the 3 years of unremitting and invaluable work which our naval task forces accomplished there. The Navy and Marine Corps flew approximately 183,000 sorties in Korea, totaling 412,000 flying hours from carrier decks.

As for having carriers during an all-out nuclear war, their value and capabilities are even greater. As a matter of fact, I am firmly convinced that a nuclear war would make our carrier forces even more indispensable than they have ever been before.

In a nuclear war, the first task of any air force will be to destroy the opponent's air power at its sources. It is logical to assume that our retaliation system—our planes, our weapon sites, and our bases—would receive the enemy's initial onslaught.

Therefore the integrity and security of our airbase system, from whence our reprisal originates, assume the very highest priority in our defense planning. Ideally our base system should be a combination of both fixed air bases, continental and overseas, and moving air bases. The fixed air bases of the Air Force are designed, and properly so, to carry out the primary mission of strategic air warfare. The moving air bases of the Navy, which are the modern aircraft carriers, serve to carry out the Navy's vital tasks and to complement the fixed bases in order to make our reprisal system varied, versatile, and invulnerable.

Our moving carrier bases make it impossible for any enemy to completely destroy or neutralize our reprisal system in a sneak attack because he can never be sure of their locations. A balanced system of our primary fixed bases, complemented by our moving carrier bases, makes an aggressor uncertain that a blitz attack would succeed. No matter how powerful or pervasive his attack upon it, there will still be a sufficient punch left to devastate him. A partially successful enemy blitz of our retaliation system is tantamount to his suicide.

I am sometimes asked, usually by members of the press, 3 questions about the *Forrestal* carriers concerning their (1) vulnerability, their (2) state of development, and their (3) ultimate use which I think are fair ones, which are pertinent to this shipbuilding program, and which may be in the minds of some of the members of this committee.

Are not the *Forrestals* so vulnerable, I am asked, as to make it infeasible to build them? My answer is "no," because they are extremely difficult to destroy, even with an atomic bomb. Yes, a *Forrestal* can be hit. Any target can be hit under the right conditions. But it is patently obvious that a target moving at speeds up to 40 miles per hour, which can change its location 500 miles in a day, is a harder one to find, to hit, and to destroy than one which cannot move. Finding a carrier task force in the great wastes of an ocean is not an easy task even in these days of electronic magic. Even when it is found, attacking it would be very hazardous. Enemy planes would have to penetrate concentric circles of electronic warning curtains, overcome formidable jet fighter protection, and survive a guided missile and antiaircraft barrage before reaching their release point.

Moreover, the fast moving task force would be operating under dispersal conditions so that even a mass destruction weapon could neutralize but a small part of the force. Individual ships of the fleet might be neutralized, but it is highly unlikely that the task force could be kept from doing its job. Furthermore, the presence of our carriers in proximity to an aggressor's land will force him to divert his own offensive strength to defend against their power (which might otherwise be used against our homeland or fixed bases) and will also dilute his defenses; for he must anticipate attack from every direction from the seas which surround him.

The next question raised regarding the *Forrestals* concerns their state of development. Shouldn't a moratorium be called while these new ships are tested and evaluated? This question presumes that the carrier is an untested vessel, a new type which

should be evaluated. My reply is that the aircraft carrier weapons system is a fully tested, repeatedly evaluated, and an oft-proven weapons system, that the new *Forrestals* are simply a logical and progressive step in the Navy's art of building aircraft carriers. We firmly know what they are capable of doing, and we must have them if we are to keep our fleets modern and capable of handling advanced aircraft essential to the fulfillment of the Navy's mission.

And finally, the question is asked, How does the Navy plan to use these ships which will be able to carry large attack and fighter planes capable of transporting nuclear weapons to targets more than 1,000 miles from their flight deck? The answer to that is that the Navy has many legitimate naval targets for which we need such a weapons system—such targets as submarine pens, shipping concentrations, shipbuilding activities, airfield bases, and other targets which jeopardize our command of the seas. Moreover, in the NATO theater, the Navy has been given certain collateral tasks to further prosecute the air battle and assigned certain specific tasks to support the land battle. In no sense does the Navy compete or infringe upon the field of strategic air warfare which is properly the primary responsibility of the United States Air Force.

In summary, then, a fifth *Forrestal* will add to our potent carrier weapons system which is the very foundation of our naval striking power. Without this carrier weapons system, it would be impossible to carry out the Navy's last mission to control the seas. The best military and civilian talent in the Department of Defense, and the President, have approved the building of a carrier this fiscal year as a proper requirement, and I strongly urge your approval.

Turning briefly now to the other types of ships, we are requesting the conversion of one light cruiser and one destroyer to equip them with guided missile capabilities in order to make effective our guided missile progress. We are also requesting one non-atomic submarine with a guided missile capability. As you know, two guided missile cruisers—the *Boston* and *Canberra*—are virtually complete and will be joining the fleets this year. All of these ships, which are fundamentally prototypes, are indicative of the Navy of tomorrow. In the guided missile field, the Navy is just now crossing the threshold into a field which promises to revolutionize navies as much as did the discovery of gunpowder.

We are also requesting 13 destroyer types—7 destroyers and 6 frigates. The frigate is a destroyer type, somewhat larger, with better sea-keeping qualities, and with heavier antisubmarine and antiaircraft defenses. These 13 destroyer types being requested are replacements for the hardworking, versatile, and indispensable workhorses of our Navy.

And finally, the submarines. As you know, the modern submarine is a very potent offensive weapon as well as an effective defensive weapon. We foresee that as a guided missile platform, the nuclear submarine with its almost unlimited range, can appear over the horizon or emerge from the depths of the ocean, and send missiles of great destruction great distances with deadly accuracy. Eight submarines are included in the program, 3 nuclear powered ones, 4 conventional ones, and the one I mentioned earlier which will have a guided missile capability. We have been encouraged by the excellent progress of the atomic-powered *Nautilus*, and we are progressing as rapidly as is practicable in this very promising field. However, we do not feel justified in waiting for final completion of this development to request these submarine replacements. The requested four conventional submarines, we feel, with their improved power plants, armament and hull structures, will not become obsolescent during their normal life span.

In summary, I believe the naval program for fiscal 1956 is sound. Throughout our country's history, naval power has always been an indispensable factor in carrying out United States policy in peacetime and in achieving victory in wartime. It is no less important and vital today. In the nuclear era now upon us, I am convinced that the talents of a Navy are even more necessary than ever before.

Scott McLeod Replies to AVC Refugees Resolution

EXTENSION OF REMARKS OF

HON. ARTHUR V. WATKINS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Tuesday, March 8, 1955

Mr. WATKINS. Mr. President, the February issue of the American Veterans Committee bulletin carried an article under the heading "Scott McLeod Replies to AVC Refugees Resolution." This seems to be the other side of the story previously inserted in the CONGRESSIONAL RECORD by the senior Senator from New York [Mr. LEHMAN]. In order that the RECORD may be complete, I ask unanimous consent to have the article published in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SCOTT McLEOD REPLIES TO AVC REFUGEES RESOLUTION

(NOTE.—On February 9, Senator HERBERT LEHMAN, of New York, introduced into the CONGRESSIONAL RECORD the resolution adopted by AVC's 8th national convention condemning the State Department for its failure to effectively implement the Refugee Act of 1953. In immediate response, AVC received a letter from Scott McLeod, the act's administrator, excerpts from which appear below.)

When the resolution was adopted the Refugee Relief Act had been passed some 15 to 16 months, yet the reference in the resolution was to the "first 10 months." The first 10 months of the program were admittedly difficult. We took off from a standing start, since this Bureau had no previous experience in such work. The act is very involved legislation. It required international agreement before we could start in any of the countries. There were problems of staffing and of working accommodations overseas. In providing for safeguards in the national interest, the Congress wrote into the act requirements that resulted in administrative hurdles. These could be reduced only after a period of operating experience.

The tooling-up process was not an easy one. But experience was a good teacher, as usual, and we have now put behind us the major difficulties. . . .

I have been well aware that a speed-up has been needed in issuance of visas under the act, and I can assure you it is now being attained.

INCREASE IN VISAS

Illustrating this is the fact that of the more than 25,000-visa cases that have been processed, 20,000 visas have been issued in the program to date, and 38 percent of these have been issued in the last 90 days. In addition, 51,000 applications are now in some stage of processing, which is an increase of 10,000 within a 30-day period.

This is not exactly a minute total, the word used in the committee statement. Nor does the current tempo of the program indicate failure in attaining the objectives of the law if United States citizen assurances for refugees are forthcoming. We are not yet at the halfway point in the 40-month life of the program. There are still 22 months ahead of us within the statutory limits of the program.

So, you see, with some 75,000 persons having entered the "pipeline"—applicants notified of documents required—there is marked progress toward the numerical halfway mark in the program, considering the 209,000 total admissions set by the act. . . .

ADMINISTRATOR'S JOB

As Administrator of the Refugee Relief Act I consider my job, and the job of my staff, to be that of assisting intelligent, hard-working, healthy aliens, who are free of criminal and subversive taints, to migrate to this country. All of us in the program, as citizens and taxpayers, have the common duty to make certain that the best interests of the United States are safeguarded. Within the limits of administrative discretion we are bound to act not upon personal inclination but upon the broader concepts of humanitarianism and patriotism.

This operating policy of mine, I trust, will ease the concern of those, who, in the language of your resolution, have felt there is a disregard for the expressed will of the Congress and the President of the United States.

Resolution of Lithuanian-Americans of the City of Kenosha, Wis.

EXTENSION OF REMARKS OF

HON. JOSEPH R. McCARTHY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, March 8, 1955

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD resolutions adopted at a mass meeting of the Lithuanian Americans of the city of Kenosha, Wis., commemorating the 37th anniversary of the Declaration of Independence of Lithuania.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

These following resolutions are for adoption at a mass meeting of the Lithuanian Americans of the city of Kenosha, Wis., gathered for the purpose of commemorating the 37th anniversary of the Declaration of Independence of Lithuania:

"Whereas Lithuania with her 700-year-old history, tradition, language, and religious customs; and

"Whereas the people of Lithuania during these 700 historical years, have time and again fought aggressors to defend her freedom, have shed their blood to prove to the world that Lithuania as a nation is worthy of self-government; and

"Whereas Lithuania, together with her neighbors, Latvia and Estonia, make up a population of 6 million people, have wholeheartedly and sincerely defended the principles of western democracy; and

"Whereas the Baltic Democratic Republics, these past 15 years, enslaved by Hitler and Stalin, have been subjected to torture and death; and

"Whereas the citizens of Lithuania, placing their faith in the Atlantic Charter and in world peace, today face tragedy, and wholesale massacre by the thousands, and also deportation to the slave camps of Siberia; and

"Whereas Lithuanian freedom being dissolved by the Communists, her religious beliefs persecuted, and tens of thousands of her loyal subjects scattered throughout the world, homeless; Therefore be it

"Resolved, That loyal Americans of Lithuanian descent of Kenosha, Wis., having carefully reviewed the events and being well aware of the graveness of the present international situation and concerned over the fate of the Lithuanian nation, pledge all possible support to the Government of these United States in its effort to achieve the principles of justice and freedom for all the nations, great or small; be it further

"Resolved, That the Lithuanian Americans of Kenosha, Wis., pledge the Government of the United States:

"1. That the servitude of the Baltic States be further held as an act of aggression, and to accept and recognize only the democratic diplomats in this country.

"2. To support this country's resistance movement by information and organization.

"3. To help carry on and conclude the testimonies of the Committee on Communist Aggression.

"4. To make known to the United States the Baltic States Aggression Act.

"5. To recognize the Genocide Convention, thereby concluding defenseless people wholesale massacres.

"6. To accept Kersten's committee findings as a sharp weapon against Communistic propaganda; to propagate the enslaved people's plea through the press, so that political leaders throughout the world would awaken and realize the dangers of communism, and act by liberating these people from their aggressors. Silence only urges Communists on to more barbarous acts by subjugating other nations and by tearing down democratic principles.

"Resolved, That this meeting of the Lithuanian Americans of Kenosha, Wis., express their deepest gratitude to the Federal Government and both Houses of Congress of the United States for their support constantly extended to the cause of independence of Lithuania."

California Fights Crime

EXTENSION OF REMARKS OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Tuesday, March 8, 1955

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD some recent correspondence I have had with the Honorable Edmund G. Brown, attorney general of California, whose continuous efforts to combat crime, especially as it exists in California, are highly commendable. His proposed legislation, as detailed in the following correspondence, if adopted, will provide, I believe, thorough and effective weapons against organized crime, and should make the State of California one of the progressive leaders in our war against crime.

Without hesitation, I would commend to law-enforcement agencies in other States all of Attorney General Brown's

proposed legislation, particularly that portion which recommends the coordination of State crime activities with local law-enforcement agencies, crime commissions, State and Federal officials, and agencies, as well as the proposed mutual exchange of information concerning activities of reported criminals, racketeers, and their associates.

There being no objection, the correspondence was ordered to be printed in the RECORD, as follows:

STATE OF CALIFORNIA,
DEPARTMENT OF JUSTICE,
San Francisco, February 21, 1955.
HON. ESTES KEFAUVER,
United States Senator,
Senate Office Building,
Washington, D. C.

DEAR SENATOR KEFAUVER: Your recent letter addressed to H. G. Robinson has been called to my attention.

I appreciate receiving your comments on the legislation which has been proposed to amend the California Penal Code to provide for surveys of local enforcement and for the establishment and operation of intelligence files.

After the lengthy and detailed studies which have been made of the matter by the United States Senate Crime Committee, the American Bar Association committee on organized crime and the California Crime Study Commission on Organized Crime and the unanimity of the recommendations made by these groups it is appropriate that those recommendations be implemented by appropriate legislation at State level. California, as you have found in investigations by the Senate Crime Committee, has been in the forefront in the matter of crime control and, as attorney general of this State, being charged with maintaining uniform law enforcement, it is requisite that everything be done to keep enforcement in this State at the highest attainable standard.

In further explanation it can be stated that during the past 3 years the work of our Bureau of Criminal Statistics has been strengthened and expanded. The results of this work have been published in two reports, Crime in California 1952 and Crime in California 1953, copies of which are being forwarded under separate cover. Further improvement in our statistical reporting has been programed during the coming year.

A good system of statistical reporting can measure and define the nature and scope of the crime problem but as worth while and necessary as this function is, it requires a further step to explore the factors giving rise to the statistics tabulated. Manpower, equipment, and training deficiencies resulting from unrealistic and budget conscious city administrators all have a material bearing on the general crime picture despite the common practice on the part of the public to relate crime trends to spiritual, moral, or economic factors. Until further survey functions make it possible to probe the underlying factors, there is no realistic way of completely interpreting or evaluating even the most accurate statistics on crime.

Your interest in this legislation and your valued comments are appreciated. Considering your leadership in the field of crime prevention and your continuing interest in this vitally important field, you will perhaps agree that the following acrostic suggests a more objective spelling out of the crime picture:

C-ongressional
R-ecommendations
I-mplemented by State legislation to
M-odernize and strengthen
E-nforcement efforts.

Sincerely yours,

EDMUND G. BROWN,
Attorney General.

FEBRUARY 15, 1955.

Mr. H. G. ROBINSON, Esq.,
Deputy Director, Division of Criminal Law Enforcement, San Francisco, Calif.

DEAR ROBBIE: I have read with great interest your letter of February 9, 1955, containing the proposed legislation to be introduced by Attorney General Brown, which I feel should make effective, the recommendations approved by the United States Senate Crime Committee, the American Bar Association Committee on Organized Crime, and the suggestions contained in the attorney general's two proposed amendments to the California Penal Code, appeal to me, particularly those that recommend the coordination of your State crime activities with local law enforcement agencies, crime commissions, State and Federal officials and agencies, as well as the proposed mutual exchange of information concerning activities of reported criminals, racketeers and their associates.

Your proposed legislation, if adopted without any crippling amendments, should very materially strengthen your law-enforcement machinery, and I am hopeful that other States may emulate the splendid steps that California is taking to combat crime.

With kindest personal regards to Attorney General Brown, yourself, and all other friends in California, I am,

Sincerely yours,

ESTES KEFAUVER,
United States Senator.

The \$20 Handout

EXTENSION OF REMARKS

OF

HON. FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mr. BOW. Mr. Speaker, recently an editorial appeared in the New York Times which clearly sets forth the issues of the proposed \$20 tax cut. Under leave to extend my remarks, I include it in the RECORD:

THE \$20 HANDOUT

The refusal of the Senate Finance Committee to accept the \$20-a-person tax handout pushed through last week by the Democrats of the House is a victory for responsible fiscal policy; but it is a victory that is still a long way from being clinched. The administration, and those Democrats and Republicans who also believe in a realistic and equitable tax policy conforming to the actual financial position of the Government, will have to stand firm and fight hard on this dangerous political issue.

The \$20 tax handout is thoroughly bad for a number of reasons. It would result in a major loss of revenue at a time when the budget is still unbalanced. But, say its Democratic proponents, this is an unfair and partisan argument because the Republican administration itself takes credit for a reduction of \$7.4 billions in taxes last year, when the budget was also unbalanced. The answer is twofold: (1) Those cuts came at a time when the economy seemed to be faltering, and they were, except for the excise reductions, part of an orderly tax plan designed to stimulate business activity in conjunction with a shrinking Federal deficit; (2) the cuts in excise taxes, amounting to about \$1 billion, were not asked for and were in fact opposed, though ultimately accepted by the administration.

The tax handout is also bad because it is a blatant effort to purchase the political goodwill of the estimated 5 million persons

whom it would remove altogether from the Federal income-tax rolls. While obviously the rich can, should and do pay more income tax than the poor, it is still true that as broadly based an income tax as possible is sound public policy from the standpoint both of obtaining revenue and of reminding all of us that we have a direct financial as well as political stake in the economic stability of our Government. Furthermore, this particular handout is bad because it was not adequately considered by the House that approved it; it formed part of no coherent tax proposal; it was, on the contrary, thrown in by Speaker RAYBURN at almost the last minute as a transparent effort to anticipate a potential—though by no means assured—Republican-sponsored tax cut next year.

The tax handout is bad because it lends itself so easily to promoting the demagogic claim that last year's reductions were all for "the big fellow" while this one is for "the little fellow." The very first tax cut last year was the approximate 10 percent slash in income taxes of some 50 million individuals. It is perfectly true that the corporation excess profits tax also expired at the same time, but this law had been extended, and at the President's urgent request, 6 months beyond its original expiration date. Many features of the general tax revision of 1954 were directed toward improving the lot of the individual taxpayer. In addition, the present tax bill calls for a continuation of existing high corporate tax rates as well as some excise taxes; so that it is simply a distortion of the fact to say that in its tax philosophy the administration has looked out only for the "big fellow." Most important of all to the "little fellow," the price level is stable. Absence of inflation is infinitely more beneficial to the "little fellow's" pocketbook than absence of taxes.

We do not say that the administration's tax policy is perfect. Such matters, for example, as the very large depletion allowances so dear to the hearts of certain Texas Democrats bear much sharper examination. Nor do we say that politics has been absent from the Republican side of the fence, for it certainly has not. But the \$20 deduction is politics pure and simple, it has no place in the present revenue-raising (or any other) bill, and it happens to be a Democratic measure backed by the official Democratic leadership of both Houses. We do not see how anyone of either party who believes in fiscal responsibility can continue to support it.

Weekly Radio Program of Dean Clarence E. Manion

EXTENSION OF REMARKS

OF

HON. JOSEPH R. McCARTHY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, March 8, 1955

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a copy of the weekly radio program of Dean Clarence E. Manion, broadcast No. 21, of February 20, 1955.

There being no objection, the program was ordered to be printed in the RECORD, as follows:

WANTED: A PRESIDENTIAL PROCLAMATION TO THE RUSSIAN PEOPLE

Behind the Iron Curtain the Communist world is in convulsions. Mao Tse-tung is dying of cancer. A struggle is on for his job as No. 1 man of the Chinese Communist

Party. Chou En-lai, the odds-on favorite to succeed to the top spot, has formidable and ruthless opposition. Thus Chou has much more important work on his hands these days than that which shapes up for him in the Formosa Straits. Chinese Red Army generals, sensing a shift in the direction of the political wind, are showing warlord symptoms. This is the old Chinese military ambition to boss and squeeze tribute from their own local provinces and let it go at that. Once this symptom becomes a contagious disease, the Chinese Communist conspiracy is finished.

Basic in this political turmoil is the Chinese food situation. Rice rations in Communist China were recently cut one-third. As the food supply diminishes, Communist brutality is proportionately increased. The one old-fashioned way to weld all this interior disintegration into disciplined unity is to incite fear of destruction from without. To this end Chinese Communist propagandists are busy reviving memories of Hiroshima and Nagasaki, where uncounted thousands of brown men were cooked to a crisp by two small bombs dropped on them by white men from the United States. Such disturbance as Chou En-lai can create and exploit over Formosa and the fear of American hydrogen bombs will be used to restore disciplined unity to his wavering generals and force fearful docility upon the starving, terrorized Chinese people. Across Manchuria and on into Communist Russia it is the same critical story, but with much more open evidence to support it.

In Moscow, a Foreign Minister is not now recalled nor is a mere chief of police arrested for subsequent trial and liquidation. For this sort of thing there is a long list of Communist precedents. For what has actually happened in Moscow there is no precedent. Like a bolt out of the blue, the King himself announces that "the King is dead," and by his own hand. King Malenkov says he is unworthy to reign any longer because he has miserably failed. In what field? Foreign relations? Military management? No. He has failed to properly organize Russian agricultural production. Failure of agricultural production means food shortage. There is hunger in Russia and it is going to get worse.

Could that ominous fact have been more graphically demonstrated than it was in Malenkov's resignation? The commissars can successfully deceive the Russian people on the subject of Communist foreign policy, or about the strength of the Red army, or the quality and quantity of their hydrogen bomb, but on the subject of available food, no deception is possible. When food rations are cut, every Russian learns about it the hard way. When the people's stomachs are empty they can't be filled by Communist propaganda in the United Nations, or by Red parades around the Kremlin. Many times during the past 35 years the Russian people have been hungry, very hungry. But never before has the famine been serious enough to make the commissars cook up and serve their Premier to the people. This has happened now.

Malenkov is a fat goat certainly for the fires of popular discontent, but he is an extremely dangerous sacrifice for the commissars to offer. Remember that the hard core of world-wide Communist discipline is the fixation that the king can do no wrong; that the dictator cannot make a mistake; that the Communist Party line as it flows out of his dictatorial power and wisdom is supreme over the order of reason, experience, or the plain evidence supplied by the physical senses. This hypnotic spell of blind Communist obedience is brilliantly portrayed in Arthur Koestler's book *Darkness at Noon*. (Random House, 1951.) Malenkov's sensational announcement has shattered this thesis for all time.

Some years ago, under orders from Moscow, Earl Browder publicly confessed error and expelled himself as the commander of the Communist Party in the United States. Even that tiny piece of revelation was hard for some American fellow-travelers to swallow. Beria's liquidation was released to the public 1 inch at a time, and thus, however hypocritical, was nevertheless capable of containment within the iron mould of Communist discipline. Malenkov's suicidal announcement has cracked this iron mould to its very center. Communist discipline, inside and outside of Russia, will never be the same again.

Like Chou En-lai, first Molotov, then Konev promptly screamed about impending American aggression upon the Russian Motherland. Said these commissars in substance: "We may have failed to produce food but we are your only hope against otherwise certain destruction by American bombs. Better to starve slowly than to be blown to bits any minute. Forget your bourgeois appetites. Tighten your belts with Russian patriotism." Then concludes Konev: "Our army represents a mighty force. If the Imperialists dare to attack our Motherland, the Soviet armed forces have at their disposal all kinds of weapons for the complete defeat of the aggressors."

To whom is Konev speaking? Is any outside listener so naive as to believe that this balderdash was spoken to deter a military attack upon Russia by the United States? Soviet agriculture may have broken down, but the Soviet American-based spy system is as good as ever. From it Konev knows as well as we do that the United States will never attack Russia until Russia has attacked us. But the Russian people do not know that, and Konev and Molotov were talking to the same Russian people to whom Malenkov made his suicidal confession. Malenkov, Molotov, and Konev were all speaking to the same audience and for exactly the same purpose. The one purpose of all three speeches was to quiet the hungry, rebellious Russian people, and control them with deliberately manufactured fear—fear of the United States. For this purpose Konev accused what he called American imperialists of surrounding Russia with bases for atomic warfare.

This latest Moscow show is the most transparent exhibition that the Soviet gangsters have ever staged. Through this hypocritical bombast the truth is clearly and officially revealed to the world. The truth is this: The Soviet governors are literally scared to death of the Russian people. In his time, that flint-hearted old bandit, Joe Stalin, took care of similar situations with mass murder and systematic starvation. His uncertain successors lack the nerve and perhaps the facilities to follow his example. In the current Communist command nobody can trust anybody any more—even to carry out an order of execution.

The Soviet gangsters are panic stricken. Make no mistake about it, if they decide that war is the only way to whip their rebellious subjects into line, behind the faltering Communist command, they will provoke war. Meanwhile, they will continue to wash the brains of their hungry, bedeviled slaves with the repeated assertion that American bombs and worldwide military bases are designed to destroy the Russian people, and that the hour of their planned destruction is close at hand.

What have we done to counteract the effect of this propaganda? Precisely nothing. Officially, we ignore the conflict between the Soviet Government and the Russian people; a conflict that is now openly disclosed by the Soviet Government itself. Unfortunately, our professed hope now seems to be that President Eisenhower's one-time friendship for General Zhukov will give us a few more years of unheated cold war.

This is the hypocritical nonsense of co-existence magnified a thousand times. Through 10 years of cold—and sometimes not so cold—war with the Soviet Government, we have refused to express one official word of sympathy for the more than 15 million Russians who are continuously subjected to slow and painful death in Soviet slave-labor camps. Officially, we have not deplored the fact that the Russians, throughout their history a devoutly religious people, are now deprived of the right to worship God by their viciously materialistic Communist masters. The natural rights which dignify all mankind and which American government recognizes as unalienable and God-given, have been torn from the Russian people by a ruthless dictatorship forced upon them against their will.

This is the same Soviet Government which for 15 years the United States refused to recognize as lawful and respectable. Then, just when it was ready to collapse, we took this gangster apparatus to our bosom and hold it there even now, while it tries in every way to stab us in the back. We have outlawed communism in the United States and we have spent billions in relatively fruitless efforts to prevent the spread of its contagion around the world, but we have not expressed one official word of concern for the 800 million human victims of communism, in spite of our serious official responsibility for their plight.

Let us not forget that it was our recognition of the Soviet Government and our subsequent concessions to that monstrous clique of cutthroats at Yalta, Teheran, and Potsdam, that sold most of these same people into this diabolical system of slavery. To date, we have never had the decency to ask their forgiveness nor have we repudiated the agreements that sealed their doom. At this point it is no longer a mere matter of human decency; it is a matter of American self-preservation. Unless we get the truth to the Iron Curtain people immediately, their panic-stricken, power-mad dictators may soon pull the trigger that will end our world. The time has come to prove our good intentions, not to the criminal Communist governments, but to the millions of bruised and bleeding human beings now held in unlawful bondage by Chou En-lai, Khrushchev, and company.

We have heard from Messrs. Molotov, Konev, and Malenkov. Now let us hear again from Nikolai Kokhlov, for years a captain of the Russian secret police. Kokhlov, you will remember, was sent from Russia by the Soviet Government to supervise the killing of Georgel Okolovich, the leader of the anti-Communist Russian underground in West Germany. Instead of carrying out his mission, Kokhlov exposed the plot, deserted the Communists, joined the revolutionary forces, and is now working for them in the United States. Interviewed by the Brooklyn Tablet last February 5, Kokhlov said: "It is my firm belief that if the Christian world would strongly and openly support the fight for freedom of the Russian people, a war could be prevented. Let the Russian people know that the free world does not hate them. Let them know that the free world is aware of and sympathizes with their sufferings and that it would welcome their becoming free from their tyrannical regime."

It is just as serious and yet just as simple as that. The ice was broken a few weeks ago, when the Texas House and Senate passed a stirring resolution of sympathy and hope for the suffering Russian people. Hurrah for Texas. Every State legislature now in session should do the same, but the die will not be definitely cast until Congress calls upon the President to set aside an official day of prayer and sympathetic sacrifice dedicated to all the hungry people behind the Iron Curtain whom we have so grievously offended. Let us offer—not to their gangster

governments—but to these hungry, suffering people directly the surplus grains with which our Federal granaries are now bulging. Only such a congressional resolution and a subsequent Presidential proclamation can break the curtain of silence that the Communists have thrown about their now rebellious slaves.

This is that precise "tide in the affairs of men which, taken at the flood, leads to fortune," but which, if ignored, will drown civilization in war and endless misery. We have made every mistake in the book. Let us now do right for a change.

The Historical Development of the Conference Committee

EXTENSION OF REMARKS OF

HON. EVERETT M. DIRKSEN

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Tuesday, March 8, 1955

Mr. DIRKSEN. Mr. President, conference committees of the two branches of Congress have often been referred to as the "Third House" of Congress. This designation arises from the fact that when the House and Senate have worked their will on a legislative proposal, particularly of a controversial nature, conference committees have often reshaped such legislation and thereby developed a very substantial influence on the whole course of legislation.

It has often occurred to me that the historical development of the conference committee and its powers would be of special interest to all members of the House and Senate, and accordingly some time ago I requested the Library of Congress to make a documented study of this matter. This deserves consideration not only in government but by students of political science throughout the country.

I ask unanimous consent that it be printed in the Appendix of the RECORD because I am confident it will be useful to students of political science, useful in science courses, and useful to Members of Congress and others.

There being no objection, the document was ordered to be printed in the RECORD, as follows:

THE THIRD HOUSE OF CONGRESS

Now that the Federal Government has come to have an intimate impact upon the life and work of all of us, it is important for us to understand how the laws are made which influence our daily lives. Books have been written to describe the process of lawmaking. All I can do here is to hit the high spots of the legislative process as I have observed it work in Congress.

STAGES IN LEGISLATIVE PROCESS

From the introduction of a bill in the Senate or House of Representatives to its proclamation as the law of the land, there are 28 stages in the process of lawmaking. These steps are described in detail by Congressman CLARENCE CANNON in his authoritative manual of parliamentary procedure. The process begins when a Member drops a bill in a basket or "hopper" on the Clerk's desk on the floor of the House. Senate bills may be jointly sponsored by several Senators, but House bills may not be introduced jointly.

After its introduction, the bill is referred by the Parliamentarian to the committee which has jurisdiction over its major subject matter. There are 15 standing committees in the Senate and 19 in the House, set up along roughly parallel lines. The jurisdiction of these committees is defined in the rules to cover every conceivable subject of legislation. The clerk of the committee receiving the bill enters it on his committee calendar which is a schedule or docket showing the number of the bill, by whom presented, date of reference, title, subcommittee to which referred, and any action thereon.

The first major stage in the legislative process is the committee stage. Some committees have regular meeting days; others meet only at the call of the chairman. When the committee meets, the calendar is called by the clerk and a particular bill taken up for consideration. If the bill is important, it may be referred to a subcommittee, appointed by the chairman, for study. Where a matter is deemed to be of sufficient importance, and the committee or subcommittee desires information on the subject, hearings are held and witnesses are called, or may ask to be heard, to give testimony. A day is fixed for the hearings and interested persons are notified. The hearings may last for 1 day or several weeks, depending upon the importance of the bill under consideration. After the hearings, the committee meets in executive session and votes either to report the bill favorably to the Senate (or House) or to lay the bill on the table. This is commonly known as pigeon-holing a bill. If the bill is reported favorably, with or without amendment, the committee staff prepare a report explaining the bill which is then referred to the Senate (or House) Calendar. The House has 5 different calendars, whereas the Senate has but 1.

Subject to various limitations, the committees of Congress have come to play a dominant role in lawmaking. Each composed of a few members, each acting independently of the others, they now determine the agenda of both Houses, which have surrendered to their standing committees the power to determine what matters shall be considered on the floor and to control the proceedings there, subject in the lower Chamber to the terms of its Rules Committee. Committees can amend or rewrite bills to suit themselves. They can report bills or pigeonhole them. They can initiate measures they desire and bury or emasculate those they dislike. They can proceed with dispatch or stall indefinitely. In short, congressional government is still government by the standing committees of Congress, as Woodrow Wilson wrote in 1885.

The second major stage in the legislative process is the floor stage. Numerous ways are provided by the House and Senate rules for taking up a bill once it is on a calendar. In the Senate a bill is taken up either by unanimous consent or on the call of the calendar. In the House there are five routes by which a bill may reach the floor. Admission to the House floor of important, controversial bills usually depends upon getting a special order or green light from its Committee on Rules which has acquired power to prescribe the terms of admission, including a time limit on debate, the conditions of amendment, etc.

When a bill has finally reached the floor, it may be debated, amended, passed, or rejected. Debate is strictly limited in the House under various rules and rarely lasts more than 1 or 2 days per bill. In the Senate debate is unlimited, except by unanimous consent, and may continue for several weeks. Bills strongly opposed by a few Senators may be filibustered indefinitely, i. e., talked to death. The Senate adopted a cloture rule in 1917, but it has been successfully invoked only four times in 35 years, and never since

1927. A majority vote of those present and voting is required to pass an ordinary bill. A two-thirds vote is needed to suspend the rules and for certain measures specified in the Constitution, such as a resolution to amend that document.

After a bill has gone through its several stages in the House where introduced, it is engrossed and transmitted to the other house where the same steps are repeated. If the bill finally survives all the possible pitfalls in its path—pigeon-hole, filibuster, Rules Committee blockade, irrelevant debate, dilatory tactics, a single objection on the call of the Senate Calendar—and passes both Houses in other than identical form, it is referred to a conference committee. This is the final major stage in the legislative process. A conference committee is a joint committee composed of Representatives and Senators, appointed by the Speaker and the Vice President, respectively, which is charged with the duty of compromising the differences between the House and Senate versions of the bill. The conference committee which has been called a third house of Congress, nearly always reaches an agreement, and then resubmits the revised bill to each House for a majority vote. The report of the conference committee is almost invariably approved by the vote of both Houses, although the House surprised the country in October 1951 by rejecting the first report of a conference committee on a tax bill.

ORIGIN AND DEVELOPMENT OF CONFERENCE COMMITTEE

Ada McCown, historian of the origin and evolution of the conference committee, traces its origin back to 14th century England.¹ In that century the English Parliament became a bicameral body, with the lords and prelates sitting in one house and the knights and burgesses in the other. Contemporaneously the custom arose for members of both houses to confer together on the answer to be given to the king's request for funds. According to the historian, William Stubbs, a real conference committee system existed in England before 1378.² The first conference recorded in the Journals of the House of Commons was held in 1554. We learn from these early Journals that parliamentary conferences were usually held in the Painted Chamber, that twice as many Commoners as Lords attended them, that the upper chamber fixed the time and place of meeting, and that "the Lords came in a body, expecting the Commoners to await them. They sat with their hats on while the Commoners stood with their hats off. While a conference was in session all other proceedings in both houses were suspended."³

Conferences became especially significant during the 17th century in England when they were used in a series of parliamentary crises. But with the development of the cabinet system in the 18th century they declined in importance; and by the middle of the 19th century they had disappeared. The conference device has been obsolete in England for a hundred years.

While the conference committee was dying out in the mother country with the rise of the cabinet system, colonial records indicate that it was widely used in the American Colonies as a means of reconciling differences between the two houses of the Colonial legislatures, and it continued to be used in the State legislatures after the Revolution. In New York State the Constitution of 1777 provided for conferences between the Assembly and the Senate which were held in public and sometimes excited great public interest, as in the differences between the two houses over the State's support of the Federal Government in the War of 1812.

McCown reports that "from the very beginning of our congressional history, the

Footnotes at end of speech.

conference committee was the accepted method of adjusting differences between the House of Representatives and the Senate. At the beginning of the 1st session of the 1st Congress, on April 7, 1789 . . . the Senate charged a committee with the duty of preparing rules for the government of the two houses in the case of conference."⁴ The House chose a similar committee of 5 members and the result of their report was a joint rule which read as follows: "

"Resolved, That in every case of an amendment to a bill agreed to in one House and dissented to in the other, if either House shall request a conference, and appoint a committee for that purpose, and the other House shall also appoint a committee to confer, such committees shall, at a convenient time, to be agreed on by their chairmen, meet in the conference chamber, and state to each other verbally, or in writing, as either shall choose, the reasons of their respective Houses for and against the amendment and confer freely thereon."

According to McCown, several conferences were held during the 1st Congress on such subjects as the impost bill, Members' salaries, the amendments to the Constitution, judicial procedure, the Treasury and Post Office bills, trade with the Indians, and other matters.

Inherited from England, the conference committee system is an evolutionary product whose principal threads were woven on the loom of congressional practice into a unified pattern by the middle of the 19th century. "By 1852," writes Ada McCown, "the customs of presenting identical reports from the committees of conference in both Houses, of granting high privilege to these conference reports, of voting upon the conference report as a whole and permitting no amendment of it, of keeping secret the discussions carried on in the meetings of the conference committee, had become established in American parliamentary practice."⁵

CONFERENCE PROCEDURE

A large body of law and practice has developed over the years governing conference procedure and reports. They operate under the limitations of a code of rules which occupy 16 pages of the Senate Manual, 14 pages of the House Manual, and 22 pages of Cannon's Procedure. The essential features of conference procedure under the modern practice have been succinctly described by Gilbert Steiner as follows: "

"The conference stage is reached in congressional action when disagreement is formally stated by one House or the other. Usually, this will occur when the second House has amended a bill and returned it to the House of origin which refuses to accept the amendment(s). Not infrequently, however, the second House assumes that the House of origin will refuse to accept a change, and consequently votes to insist, and requests a conference without returning the bill to the House of origin. In either case, the Presiding Officer does not dispose of the conference request on his own initiative, some Member will address the Chair; he may ask unanimous consent that the bill be taken from the table with the amendments of the second Chamber, that the amendments be disagreed with (or insisted on), and that a conference be agreed to (or requested). When unanimous consent is not obtained in the House, a special rule may be brought in by the Rules Committee providing for a conference. In the Senate it is, of course, always theoretically possible to filibuster against the appointment of a conference committee. Actually, no cases of real opposition to agreeing to a conference have been found. The reason for this is obvious—the bill has already been passed by the Chamber involved, and presumably sufficient votes to agree to a conference should there-

fore be garnered. In addition, opponents of a measure may well prefer to wait for the conference report, before taking obstructive action; since the report may result in a modified bill more to the liking of disaffected elements.

"Under House rule X, clause 2, dating back to 1890, the Speaker appoints House managers. By tradition, Senate managers are named by the Vice President or President pro tempore of the Senate. The range of free choice is strictly limited, however, in that the customary practice in both Chambers is for the chairman of the committee having charge of a bill to send to the desk a "little pink slip" bearing the names of his nominees for appointment. The chairman and ranking majority and minority members of the committee are usually named conferees, although as is noted subsequently, there has been something of a problem in determining the membership of conference committees with the growth of the subcommittee device. A tradition has not yet developed as to whether subcommittee members deserve a preferred place on the conference committee over ranking members of the full committee originally involved. Indeed, the seniority principle itself has sometimes been ignored, and this has led to charges of "packing" the conference with proponents of a point of view supported by the standing committee chairman and the presiding officer of the House involved. The number of managers appointed is also determined by the standing committee chairman with the approval of the Presiding Officer, but by precedent it is three, five, seven, or nine. There does not seem to be any correlation between the number of managers and the importance of the legislation. Nor does the number of managers appointed by one House determine the number appointed by the second Chamber.

"A fairly elaborate process governs the possession of conference papers; the original engrossed copy of the bill attested by the Clerk of the House or the Secretary of the Senate; the engrossed amendments; any special acts concurring in amendments with amendments, and the messages transmitting them between the two Houses, all similarly attested; and later, the conference report signed by the managers. The House agreeing to the conference sends the papers to the House asking for a conference. The managers on the part of the House asking the conference bring the papers to the conference room. At the close of a successful conference, the papers change hands; the managers on the part of the House agreeing to the conference receive them and take them to their House, which is first to consider the conference report. If the managers on the part of the House agreeing to the conference fail to take possession of the papers, by agreement or otherwise, from the managers on the part of the House asking conference, the report may be received first by that House. A conference report may not be considered when the original papers are not before the House considering the report. If the conference is not successful in reaching agreement, the papers are not surrendered, but remain with the managers of the requesting House, and that Chamber first receives the report of disagreement and takes action. If a conference report is recommended to the conference committee, the papers are no longer before the House ordering recommitment, and no motion regarding the amendments in disagreement is in order.

"Instructions to conference managers must be given before managers are named, but after the House has agreed to a conference. Once instructions are given, no further motions to that effect are in order. Whether instructed or not, managers may disregard all instructions, and the conference report is not subject to the point of order that it is in violation of instructions. Insertion of

new matter, and alteration of agreed matter, is cause for a point of order since the rules of both Houses have presumably outlawed these practices. However, a technique which Miss McCown dates back to the 1860's and 1870's has developed whereby one House may strike out all after the enacting clause of a bill passed in the other Chamber. The second House then substitutes its own bill as a single overall amendment, retaining only the number and the enacting clause of the bill passed by the first House. Under such conditions, it has been successfully argued that everything in the legislation was in technical disagreement, and that the conferees were legally empowered to write a completely new bill eliminating matters agreed on by both Houses or inserting legislation never approved by either Chamber. Section 135 of the Reorganization Act was designed specifically to eliminate this practice. An evaluation of its efficacy is made in this study.

"The operation of the conference itself is very informal. Meetings are usually held on the Senate side of the Capitol, and by tradition, the first named Senate manager is nominal chairman of the committee. Voting is by the unit rule, and a majority of the managers of each Chamber sign the conference report. The minority has no authority to file a separate report, but may do so under unanimous consent.

"A conference committee may secure whatever expert opinion it thinks desirable. Members may bring aides to conference with them so long as no objection is raised by managers of the second House. In at least one instance, the managers on the part of the House of Representatives prevailed upon the House to pass a resolution requesting that Senate aides be asked to depart from a conference. Invariably, House and Senate legislative counsel will be present at a conference to aid in the actual drafting of the report. This is particularly necessary when the conference committee recommends a third bill as a substitute for two bills committed to it. A conference report may not be called up for consideration until the conferees have formally reported the matter back to their respective Houses.

"Under the rules of the House of Representatives, if a conference fails to yield a report within 20 calendar days, it is a matter of high privilege for any Member of the House to move to discharge its conferees from further consideration of the measure assigned to them and appoint new managers. During the last 6 days of a session, the limitation is reduced from 20 days to 36 hours. A conference report may not be called up in the House until 1 day after it is filed, except by unanimous consent or during the final week of the session.

"It should be noted that the motion to send to conference is certainly not the only possible disposition of a bill amended in the second Chamber. Indeed, six other motions are possible, each of which takes precedence over a motion to disagree and ask for a conference. These are a motion to lay on the table, a motion to postpone indefinitely, a motion to postpone to a certain date, a motion to refer to a standing or special committee, a motion to amend, and a motion to agree. As has been stated, however, in the case of important legislation, the motion to disagree and ask for a conference is nearly always made.

"There are no minutes or formal records kept of the sessions of conference committees. On the contrary, members seem to feel that the conference is a confidential matter, and explanations of conference activity made on the floor of House or Senate are sometimes preceded by the comment that the speaker does not wish to violate the confidence of the conference. Usually, influential members of the conference will make a statement to the press on the day-to-

⁴Footnotes at end of speech.

day progress at a conference, but only the formal conference report embodying the recommendations of the committee becomes a part of the official record. The rationale for this practice is that publication of debates and votes would subject the managers to external pressure and would hamper the give and take necessary for a successful conference. The process may be compared to international diplomacy; great powers deem it unwise to make public detailed progress reports, out of fear of giving a strategic advantage to the other powers. The process may also be analogous to collective bargaining in labor agreements, since detailed interim statements may adversely affect the results for one group or the other.

"Because the formal conference report is often very little more than a recommendation that each Chamber recede on certain numbered amendments, the House of Representatives has adopted a rule requiring that every report be accompanied by a statement. This statement must be sufficiently detailed and explicit to inform the House what effect suggested amendments or propositions will have on the measure to which they relate. In practice, this statement has been used to make clear to the Members of the House the differences between a bill as originally passed by the House and as it would be if the recommendations of the conference were approved. The statement must be in writing and must be signed by a majority of the House managers. A conference report may not be received in the House without the accompanying statement. There is no requirement in the Senate of any comparable nature.

"Conference reports are considered matters of high privilege in both House and Senate. In general, they are in order except when the body is dividing or when the Journal is being read. The Senate rules specify that when received, the question of proceeding to the consideration of a conference report, if raised, shall be put immediately, and shall be determined without debate. In the House, the previous question may be ordered to decide the question of proceeding to consider a conference report if a challenge is raised.

"A conference report may not be referred to a standing committee, and, in the House, may not be referred to the Committee of the Whole. A conference report may be withdrawn in the Senate by leave of the Senate, and in the House by unanimous consent. It is not in order to amend a conference report, and it must be accepted or rejected as an entirety. This last requirement, of course, greatly enhances the potential power of conferees. This is particularly true near the close of a session when rejection of a conference report, because of dissatisfaction with a single portion of it, may well cause the loss of the entire bill, time being too short to permit a new report to be drawn. Rejection of a report is usually followed by the ordering of another conference, if there is adequate time, and in accordance with custom, the same conferees are appointed to the second committee as served on the first. The only method whereby conference reports may be amended is by concurrent resolution or order, and this is usually reserved for technical corrections.

"Finally, partial reports from a committee of conference will be accepted in both Chambers. In such a case, approval is given to that portion of the report on which agreement has been reached in conference, and the respective Houses indicate whether they desire their managers to insist further, whether they are willing to recede, or whether they wish to propose a further compromise."

EXTENT OF PRACTICE

The conference committee has been a medium of continuous struggle for legisla-

tive supremacy between the Senate and House of Representatives. Here behind the legislative scenes many decisive battles of congressional history have been waged. For 2 weeks during the 79th Congress, for example, the conferees on the full-employment bill locked horns.⁸ In the 81st Congress the civil-functions appropriations bill was tied up in conference for 4 months—a period longer than any within the memory of living Members. According to Representative CANNON: "The delay was due to the unanimous objection of the managers on the part of the House to agreeing to exorbitant and unwarranted expenditure of public funds proposed by the other body."⁹ In the first session of the 82d Congress the House, in a surprise move, rejected a conference report on a tax bill by the combined action of Republicans and Democrats who voted against it for different reasons.

This device has been used extensively by every Congress since 1789. Of the 217 public laws enacted by the 2d session of the 82d Congress, 90, or 41 percent, went through conference and, of these, 13 were appropriation bills. Most important legislation goes through the conference closet and is there revised, sometimes beyond recognition, by the all-powerful conferees or managers.

RECENT DEVELOPMENTS

During the 1945 hearings before the Joint Committee on the Organization of Congress, considerable testimony was presented regarding the introduction by conferees of new material into conference reports, and the elimination or substantial change of legislation agreed to by both Houses. While the standing rules are clear regarding the limitation of conferees to the disagreements between the two Houses, parliamentary procedures make it possible for conferees completely to rewrite legislation substantially agreed upon in both Chambers. This is done by one House striking everything after the enacting clause, substituting one overall amendment, and thus technically placing everything in the bill in disagreement and making it subject to complete revision by the conferees.

To meet this situation, the La Follette-Monroney committee recommended in its final report "that conferees of the two Houses be limited to adjustment only of actual differences in fact between the two Houses and that matters on which both Houses are in agreement be not subject to change in conference."¹⁰ This recommendation was followed by the inclusion in the Legislative Reorganization Act of 1946 of the following section:

"Sec. 135. (a) In any case in which a disagreement to an amendment in the nature of a substitute has been referred to conferees, it shall be in order for the conferees to report a substitute on the same subject matter; but they may not include in the report matter not committed to them by either House. They may, however, include in their report in any such case matter which is a germane modification of subjects in disagreement.

"(b) In any case in which the conferees violate subsection (a), the conference report shall be subject to a point of order."

Thus, the act restated the old rule that the authority of conference committees is limited to matters which are in disagreement between the two Houses, while recognizing their right to report a substitute on the same subject matter.

Few points of order against conference reports under this rule have been made or sustained in recent years. On June 4, 1947, Mr. HOFFMAN of Michigan made a point of order against the conference report on the bill (H. R. 3020) to prescribe fair and equitable rules of conduct to be observed by labor and management in their relations

with one another which affect commerce, etc., on the ground (1) that the conferees had changed the text theretofore agreed to by both Houses, and (2) had inserted additional matter which, even though germane, they had no authority to insert. "The House is considering an entirely new bill," said Mr. HOFFMAN, "that was written in conference by seven men * * *." After discussion, the Speaker was "convinced that the conferees had followed well-established precedents" and overruled the point of order.¹¹

On October 5, 1951, Mr. SPENCE, of Kentucky, made a point of order against the conference report on the Mutual Security Act of 1951 on the ground that it contained matter not committed to the conferees by either House in a section providing for making the Mutual Security Director a member of the board of the Export-Import Bank. After discussion, the Speaker sustained the point of order.¹²

On October 1, 1951, Senator DWORSHAK, of Idaho, made a point of order against the same conference report on the ground that the conferees had changed identical sections in both the House and Senate bills by changing the percentage of funds which the President could transfer between military and economic aid. After spirited debate, the Chair overruled the point of order and held that the change was a germane modification of the original language. Upon appeal, the Senate sustained the decision of the Chair by a vote of 41 to 38, with 19 absentees. This vote seemed to strengthen the powers of the conferees and to weaken control of legislative action by the Senate.¹³

The ensuing Senate debate on the powers of conferees revealed a loophole in the conference rules which Senator Ferguson, of Michigan, sought to plug by offering a resolution (S. Res. 221, 82d Cong., 1st sess.) to amend paragraph 3 of rule XXVII of the Standing Rules of the Senate by prohibiting conferees from striking out matter passed in identical form by both Houses or from modifying any such matter. The Ferguson resolution was referred to the Committee on Rules and Administration which took no action upon it. The effect of the Ferguson amendment would be to restore language in the rule which was approved by the Senate when it passed the legislative reorganization bill in June 1946, but which was deleted from that bill after it had passed the Senate and while it was on the Speaker's table.

On September 15, 1950, and again on April 11, 1951, the Senate agreed to a concurrent resolution (S. Con. Res. 79) providing that every conference report shall be accompanied by a statement explaining the effect of the action agreed on by the conference committee. Seventy years earlier the House of Representatives had adopted a similar rule on February 27, 1880 (rule XXVIII-1b). Compared with the strict code of the House, the rules of the Senate have advanced at a snail's pace.

In this connection, it is interesting to note that in the House the chairman of the House conferees usually asks and obtains unanimous consent that the statement of the managers on the part of the House be read in lieu of the conference report. Then, after the statement explaining the conference report has been partially read, the chairman usually requests that the further reading of the statement be dispensed with. Since neither the conference report nor the explanatory statement has yet been printed in the Record during the last 6 days of a session, Members have little knowledge of the contents of conference reports, of the changes that have been made by the conferees, or of whether or not the rules regulating confer-

ences have been compiled with. In the absence of such knowledge, they can hardly make points of order against conference reports.¹⁴

EVALUATION OF DEVICE

Comparatively unknown except to the few who are familiar with the mysteries of the legislative process, the conference committee is today perhaps the most unique and powerful legislative institution in America, the least dramatic, and one that has received all too little attention.¹⁵ It is a notable fact that American legislatures stand alone among modern bicameral legislative bodies in providing a formal method for adjusting differences between them. Since few, if any, important bills ever pass both Houses of Congress in precisely identical form, and since the final shape of differing measures must be determined in conference, the strategic role and importance of the ad hoc conference committees will readily be appreciated.

Commenting upon the powers of conferees, Willoughby writes:¹⁶

"In cases such as these [substitute bill situations] the committee has before it the whole subject and has practically full discretion with respect to the drafting of a new measure for submission to the two Houses. Even where resort has not been had to this form of amendment, conditions are often such as to permit of a wide range of action by the committee in seeking to formulate provisions that will be mutually acceptable. Except, therefore, where the matters in dispute are very specific, these committees have large powers in the determination of the provisions of many important bills that will come before the two Houses for final action. To such an extent is this true that the statement is often made that the real character of the legislation actually had it determined by these bodies . . ."

In general, writers on Congress regard the conference committee as an admirable device for achieving its purpose. The advantages claimed for the system are that it settles differences between the two Houses in most cases, that it serves to expedite legislative business and prevent deadlocks, and that it facilitates majority party control of legislation. Some mechanism for reconciling differences under a bicameral system is obviously essential.

Yet the disadvantages of the system have also been recognized. In her authoritative history of the subject, Ada McCown writes:¹⁷

"The evils and dangers of this conference committee system are perhaps apparent. It gives too much power into the hands of a few men who are not really held to answer for what they do. In the privacy of the conference mutual concessions may be made which involve provisions which would never pass if considered openly in the House or the Senate. The conference committee has much power of independent action, but it is not held responsible in any such manner as is a ministry under a cabinet system. No conference committee of either House is forced to resign because it has gone counter to the wishes of the House which it represents. Its Members still retain their positions on the regular standing committees and they will be members of the next conference committee which is chosen to settle differences on a bill coming within their province."

Writing in 1946, George B. Galloway remarked that serious evils have attended the development of the conference committee system.¹⁸

"Suffice it to say here that serious evils have marked the development of the conference committee system. In the first place, it is highly prodigal of members' time. McCona-chie calculated that the average time consumed in conference was 33 days per bill. (He made this estimate by comparing the dates upon which the appropriation bills

passed the Senate in the 54th Cong., 1st sess., with the dates when they became laws.) Bills are sent to conference without reading the amendments of the other Chamber. Despite rules to the contrary, conferees do not confine themselves to matters in dispute, but often initiate entirely new legislation and even strike out identical provisions previously approved by both Houses. This happened during the 78th Congress, for instance, when an important amendment to the surplus property bill, which had been approved by both Houses, was deleted in conference.

"Conference committees, moreover, suffer like other committees from the seniority rule. The senior members of the committees concerned, who are customarily appointed as managers on the part of the House and Senate, are not always the best informed on the questions at issue, nor do they always reflect the majority sentiment of their Houses. Furthermore, conference reports must be accepted or rejected in toto without amendment and they are often so complex and obscure that they are voted upon without knowledge of their contents. What happens in practice is that Congress surrenders its legislative function to irresponsible committees of conference. The standing rules against including new and extraneous matter in conference reports have been gradually whittled away in recent years by the decisions of presiding officers. Senate riders attached to appropriation bills enable conference committees to legislate and the House usually accepts them rather than withhold supply, thus putting it, as Senator Hoar once declared, under a degrading duress.

"It is also alleged that under this secret system lobbyists are able to kill legislation they dislike and that 'jokers' designed to defeat the will of Congress can be inserted without detection. Senator George W. Norris once characterized the conference committee as a third house of Congress. 'The members of this house,' he said, 'are not elected by the people. The people have no voice as to who these members shall be. . . . This conference committee is many times, in very important matters of legislation, the most important branch of our legislature. There is no record kept of the workings of the conference committee. Its work is performed, in the main, in secret. No constituent has any definite knowledge as to how members of this conference committee vote, and there is no record to prove the attitude of any member of the conference committee. . . . As a practical proposition we have legislation, then, not by the voice of the Members of the Senate, not by the Members of the House of Representatives, but we have legislation by the voice of 5 or 6 men. And for practical purposes, in most cases, it is impossible to defeat the legislation proposed by this conference committee. Every experienced legislator knows that it is the hardest thing in the world to defeat a conference report.'"¹⁹

One Senator's opinion of the power of conferees was reflected in a satirical speech a few years ago by Senator FULBRIGHT, who congratulated the conferees on a national defense appropriation bill "for so forthrightly disregarding the wishes of the common lay Members of the Senate and the House." Said he:²⁰

"I submit, Mr. President, in all sincerity that there is no need whatever for the ordinary lay Member of Congress to come back to Washington for a special session. It is clearly evident, Mr. President, that to save the world and the people of this country from disaster, all that is needed is to reconvene, preferably in secret, only those incomparable sages, the conferees of the Appropriations Committee. From their deliberations the same results would be achieved and without the expense and trouble to everyone

that is involved in going through the archaic ritual of pretended legislation. It is quite clear that regardless of what the common Members of this body may wish, the conferees make the decisions."

The chief criticisms made of this device over the years have been that: (1) bills are sent to conference without reading the amendments of the other house; (2) much legislation has been forced through Congress in the form of Senate riders on House appropriation bills late in the session; (3) conference reports are voted upon blindly without knowledge of their contents, especially during the end-of-the-session log jams; and (4) Congress has docilely surrendered its legislative powers to irresponsible committees of conference.

PROBLEM OF CONTROL

The central problem connected with the conference committee system is that of controlling it. Various rules and rulings of the Chair have been made to this end during the past century. In 1918 the Senate adopted the Curtis rule which makes it possible to challenge a conference report on the point of order that it contains new matter not committed to the conference committee, whether germane or not, even under a substitute bill situation. This appears in clause 2 of rule XXVII of the standing rules of the Senate which has been strictly construed and which reads as follows:

"2. Conferees shall not insert in their report matter not committed to them by either House, nor shall they strike from the bill matter agreed to by both Houses. If new matter is inserted in the report, or if matter which was agreed to by both Houses is stricken from the bill, a point of order may be made against the report, and if the point of order is sustained, the report shall be recommitted to the committee of conference."

In the House a rule of 1920 (rule XX, clause 2) forbids House managers to agree in conference to a large class of Senate amendments to appropriation bills without a separate vote on each amendment by the House. This rule has been generally observed and is regarded by McCown as "probably the most effective means yet devised of controlling the evils of the conference committee system."²¹

In 1946, as noted above, the Legislative Reorganization Act, in section 135 applicable to both Houses, authorized conferees to report a new bill where one house strikes out all after the enacting clause of the bill of the other House and inserts new language. The defect of this amendment, as noted above, is that it does not forbid conferees to delete or modify matter passed in identical form by both houses.

In the House of Representatives the Speaker may rule out a conference report if it be shown that the managers have exceeded their authority; and points of order may be made against conference reports in the House before the reading of the explanatory statement. The House adopted a rule (rule XXVIII, clause 2) in 1902 which provides that "it shall not be in order to consider the report of a committee of conference until such report and the accompanying statement shall have been printed in the Record, except on either of the 6 days preceding the end of a session."

This rule may be evaded, however, by the granting of unanimous consent for the immediate consideration of a conference report; and by its own terms it is inoperative during the last 6 days of a session when many conference reports are made.

In practice, the rules governing conferees, like all rules, depend for their effectiveness upon their enforcement. Writing in 1927, McCown reports that the rule forbidding the insertion of new matter in conference re-

Footnotes at end of speech.

Footnotes at end of speech.

Footnotes at end of speech.

ports has been "flagrantly violated in recent times."²² Points of order against infraction of the conference rules are, in fact, seldom made. Committees of conference enjoy largely uncontrolled powers to write new legislation in substitute bill situations where the rules allow them to report any bill germane to the bills under consideration. Sometimes conference reports are brought up in the House of Representatives under a special rule granted by the Committee on Rules waiving points of order against them. Under all these circumstances, it is obviously difficult to control committees of conference, which have long exercised a determining influence upon the shape of much important congressional legislation.

CONCLUSIONS

However, it would appear that effective control of conference committees is possible under existing rules, if they are enforced. McCown concluded "that under the House and Senate rules of the present time a fair degree of control is maintained over the managers * * * since the additions of the Senate rule of 1918 and the House rule of 1920, control of the managers has been increased so that there is much less conference committee legislation than there was at one time. Certainly there is now [1927] more control over the conference committee by the two Houses than there ever has been in the past. It would seem, then, that conference committee legislation is bad," concludes McCown, "but that there is not enough of it that eludes the rules and practice of the two Houses to cause despair."²³

"The truth is that the conference committee system is a necessary part of the congressional government system. It must, however, be kept under the control of the two Houses. The managers must not be allowed to include in their report any matter not committed to them by either House nor must they be allowed to eliminate items which have been agreed upon by both Houses. On the other hand, the peculiar composition of a conference committee makes it particularly fitted to offer constructive suggestions in regard to a bill that may have been altered several times in the course of its progress through the two Houses * * *"

Similar conclusions were reached by Dr. Gilbert Steiner, of the University of Illinois, in his 1951 study. Steiner made an intensive analysis of 56 pieces of the most significant legislation enacted between the 70th and 80th Congresses, inclusive, which went through conference. He concludes that "the conference committee has not been a consistently irresponsible 'third house' of Congress. Conference committees have sometimes been reckless, and sometimes have flouted the will of a congressional majority, but the number of such instances is small, too small to justify a damning generalization. Conference committees may be and have been controlled by effective rules and precedents. It would not appear, however, that the institution of the conference committee is such as to require closer oversight than is given any other congressional committee."²⁴ Steiner concludes that "the conference committee is both a practical and satisfactory device" of accommodation and that no new method of adjustment is needed.

In the 56 cases studied by Dr. Steiner in the period 1928-48, he found only 3 outstanding instances in which conference committees had deleted matter agreed to by both Houses or had included new matter. These involved the Agricultural Adjustment Act of 1938, the Transportation Act of 1940, and the Surplus Property Act of 1944.

Of special interest is Dr. Steiner's conclusion that the House has been more influential in conference than the Senate. For the period and cases studied, he reports that

"the House achieved 57 percent of the victories, the Senate 27 percent, and 16 percent of the cases showed joint influence." House influence was predominant in all cases of revenue and appropriation acts studied, while the Senate dominated in broad fiscal policy legislation.

PROPOSED REFORMS

Thus, we see that the conference committee is a little known institution which operates secretly behind the legislative scenes and exercises large influence over the final form of much important legislation. It takes the handiwork of the two Houses and, in the interests of compromise, can modify the actions of either branch no matter how preponderant the vote therein may have been on the original bills, and submit a conference report which almost always becomes law.

Several suggestions have been made from time to time for changes in the congressional conference committee system. Mention has already been made of Senator Ferguson's resolution to amend paragraph 3 of Senate rule XXVII so as to plug an apparent loophole in it, making it crystal clear that it is the intent of Congress to limit the power of conferees in dealing with a substitute bill. To the same end, Senator Vandenberg sought in 1938 to add the following sentence to the rule:

"It is hereby expressly provided that this paragraph shall be deemed to include reports on measures where one House has struck out all after the enacting or resolving clause and inserted a substitute."

Adoption of this proposal by both Houses would eliminate the loophole still provided by permission to "include in their report in any such case matter which is a germane modification of subjects in disagreement." The problem in the substitute bill situation has been less that of inclusion of new matter than that of deletion of matter agreed to by both Houses, and section 135 of the Legislative Reorganization Act does not meet this squarely.

Another recurring suggestion is to permit conferees to report new matter separately for separate consideration in each House. This requires unanimous consent and has occasionally been done. It has been the practice in the House under the 1920 rule in the case of certain Senate amendments to appropriation bills.²⁵

As a remedy for secrecy it has been suggested that conference meetings be open to Members of either House. Open conferences were prescribed by the New York State Constitution of 1777 and the first congressional conference ever held over a legislative disagreement—the conference on the impost and tonnage bills on June 26, 1789—was an open one attended by several Members of both Houses. The annals of Congress record no other such open conference from 1789 until 1911 when a tariff conference opened its meetings to representatives of the press under the influence of Senator La Follette who was strongly in favor of publicity.²⁶

In order to avoid inadequate consideration of conference reports during the crowded closing days of a session, the elder La Follette also suggested that a deadline be fixed by rule upon the receipt of bills from the other House. No action was ever taken on this proposal which is probably impractical.²⁷

Another abortive suggestion was that made by Representative McRae in 1902 that conference reports be printed in bill form, with changes in italics so that they can be readily recognized and any "jokers" discovered. But Congress has been content to rely upon the explanatory statements for

knowledge of the changes made in conference.

Others argue that the real remedy for the defects of the device is to keep it under congressional control by enforcing the conference rules so as to make theory and practice coincide. Congress makes its own rules and only Congress can compel compliance with them.

Several alternatives to the conference device are conceivable. Conference committees are not used in the Legislature of New York State. Amendments made to a bill in one chamber at Albany are returned to the house of origin for acceptance or rejection. And agreement is apparently achieved under the leadership of the Governor.

Under the parliamentary form of government used in England and many other countries, deadlocks between the houses are avoided by the cabinet which originates all important legislation, keeps harmony between the two chambers, and replaces the conference committee as the instrument for adjusting interchameral differences. Under the Cabinet system disputes between the chambers are conciliated by the Government whose ministers move freely between the two Houses, consult with their committees, and defend Government measures on both floors. But adoption of the Cabinet system in the United States would be a herculean remedy for the evils of the conference committee system.

Within the bicameral framework perhaps the most promising remedy is to make more use of joint standing committees in the formulation of important bills. It is easier through such committees to prevent differences from arising in the initial stages of the legislative process than it is to compose them after measures have passed both Houses. Persuasive testimony on this point was presented to the La Follette-McRoney committee by Representative Hale, of Maine. "A committee of conference," he said, "is not nearly as well adapted to framing legislation as a joint standing committee. A joint standing committee having agreed upon a bill can generally procure its passage with minor amendments through both bodies. But a committee of conference finds it much harder to get the coordinate branches of the legislature to recede from a position previously taken and concur with the other branch. All sorts of factors of pride and prestige are involved on the presentation of conference reports which are not involved in the report of a joint standing committee."²⁸

Increased executive influence, perhaps in the form of a joint executive-legislative cabinet, has also been suggested as a potential method of minimizing House and Senate differences. This suggestion was made by Thomas K. Finletter in 1945 in chapter XI of his well-known little book *Can Representative Government Do the Job?* It was also proposed by the La Follette-McRoney committee in its final report which recommended "that the majority policy committees of the Senate and House serve as a formal council to meet regularly with the Executive, to facilitate the formulation and carrying out of national policy, and to improve relationships between the executive and legislative branches of the Government."²⁹

The taking of steps to strengthen party government in Congress might be expected to reduce the need of conference committees, except when opposing political parties control the two houses. Several proposals to this end have been made in recent years. Most noteworthy among them are the suggestions to revive the party caucus as an instrument of policymaking, to create single responsible leadership committees for each party in each house, and to abandon the seniority custom in committee appointments and the selection of chairman.³⁰

Footnotes at end of speech.

Footnotes at end of speech.

A drastic remedy for the alleged shortcomings of the congressional conference committee would be to allow the example of Nebraska and adopt a unicameral legislature, thus eliminating the need of conferences. There are those who believe that the United States Senate no longer performs any unique or indispensable functions in the American system of government.¹ Its tolerance of unlimited and irrelevant debate and its frequent absenteeism have been severely criticized by its own members.² The decay of second chambers and the trend toward unicameralism in the democratic constitutions of the postwar world are widespread phenomena.³ Twenty-nine nations have unicameral national legislatures today. And in several others the role of the second chamber has been reduced to a mere suspensive veto. The British House of Lords was finally emasculated by the Parliament Act of 1949. Some students of representative government believe that under the new order of affairs there is less justification for the bicameral system than it has had in the past. As Walter Shepard wrote in 1935, "The Senate . . . may lose its *raison d'être*. A single chamber . . . might constitute a better instrument to do the work which seems to lie ahead of Congress."⁴ But unicameralism is probably merely an academic suggestion, for neither House of Congress would sign its own death warrant by submitting such a constitutional amendment to the States.

The Blessings of Liberty

EXTENSION OF REMARKS OF

HON. THOMAS H. KUCHEL

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 8, 1955

Mr. KUCHEL. Mr. President, several days ago at the second century convocation of Washington University, St. Louis, Mo., the Chief Justice of the United States, the Honorable Earl Warren, delivered a thought-provoking address entitled "The Blessings of Liberty."

I commend its reading to my brethren in the Senate and in the House of Representatives, and I now ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE BLESSINGS OF LIBERTY

(Address of Earl Warren, Chief Justice of the United States, at the second century convocation of Washington University, St. Louis, Mo., February 19, 1955)

It is a thrilling experience to participate in the opening session of this second century convocation of Washington University. The time, the place, and the cause to which the convocation is dedicated make it an occasion of major importance. The campus of Washington University enriched by a hundred years of devotion to the highest ideals of education and by the contribution of its thousands of alumni to the good life in America provides an ideal place to reflect upon "the blessings of liberty." To do so at a centennial celebration where the experience of the past, the events of the present and aims for the future can so appropriately be brought into balance adds greatly to the content of the occasion.

The times in which we are living are not normal times. Powerful forces are at work in the world—both to preserve liberty and to extinguish it. The interplay of hope and fear, belief and doubt, determination and frustration keeps the affairs of mankind and the minds of people in a state of turbulence—a turbulence that destroys perspective and clouds the vision. Such times call for constant reflection and reappraisal. In the atmosphere of these surroundings where

men and women have devoted their lives to the pursuit of truth throughout an entire century, we can more effectively detach ourselves for the moment from the complexities of everyday life in order to determine what our heritage of liberty is and what we are doing today to preserve it for our children and for those who come after them.

It is imperative that we do this. Notwithstanding the contributions of patriots through the centuries, the farsighted wisdom of the Founding Fathers or the written guarantees of the Constitution, liberty is not necessarily our permanent possession. Both external and internal pressures constantly assail it. It is axiomatic that every generation, to keep its freedom, must earn it through understanding of the past, vigilance in the present and determination for the future.

It is easier to know how to combat a foreign enemy who challenges our right to these freedoms and thus prevent a sudden collapse of the things we hold dear than it is to subject ourselves to daily analysis and discipline for the purpose of preventing the erosion that can with equal effectiveness destroy them. I say "easier" because Americans have never hesitated to make the choice between liberty and death. Normally we can rely upon our representatives in government to keep our defenses sufficiently strong to enable us to ward off outside attack, but we cannot delegate to any or all of our governmental representatives the full responsibility for protection of our freedoms from the processes of erosion. Such protection can be had only through an understanding on the part of individual citizens of what these freedoms are, how they came into being and whether their spirit dominates our institutions and the life of our country. The protection I speak of is that sense of strength and comradeship which flows from national unity, buttressed by freedom of thought, of expression, of mobility, and of participation by all in the life and Government of the Nation.

I have no doubt it seems strange to some people that we take time to discuss such things almost 2 centuries after the adoption of the Constitution and its Bill of Rights. There are some who regard our freedoms merely as their birthright which they may simply take for granted. There are others who would never shrink from the loss of little freedoms—by the other fellow of course. And there are also those who would procrastinate until the deluge. The fact remains, however, we do have a battle today to keep our freedoms from eroding just as Americans in every past age were obliged to struggle for theirs. Many thoughtful people are of the opinion that the danger of erosion is greater than that of direct attack. I do not mean to suggest—nor do they, I am sure—that outside of the totalitarian menace any substantial group of our citizens would wilfully destroy our freedoms. But the emotional influences of the times coupled with the latent suspicion and prejudice, inherent in human nature, are capable of threatening the basic rights of everyone, unless those emotions are controlled by self-discipline, community spirit, and governmental action.

A few days ago I read in the newspaper that a group of State employees—not in Missouri—charged with responsibility for determining what announcements could be posted on the employees' bulletin board refused to permit the Bill of Rights to be posted on the ground that it was a controversial document. It was reported that the altercation became intense, and that only after the governor in writing vouched for its non-controversial character was the Bill of Rights permitted to occupy a place along with routine items of interest to the State employees. And this happened in the United States of America on the 15th day of December 1954, the 163d anniversary of our Bill of Rights, declared by proclamation of

President Eisenhower to be Bill of Rights Day.

It is straws in the wind like this which cause some thoughtful people to ask the question whether ratification of the Bill of Rights could be obtained today if we were faced squarely with the issue. They inquire whether we are as united today in defending our traditional freedoms as were the American people in asserting them during the first years of Constitutional government in the United States.

My faith in the sober second thought of the American people makes me confident that it would now be ratified. On the other hand I am not prepared to dispute with those who believe the issue would provoke great controversy.

Have we not had enough controversy over teaching in and the conduct of our colleges and schools, both public and private, to warrant the inference that an effort would be made to curb freedom of speech and thought in that important segment of American life?

Have not sufficient doubts been expressed concerning the rights of individuals to invoke their constitutional privilege against self-incrimination to justify the belief that the proposed adoption of this safeguard against tyranny might provoke heated discussion?

Does not the suspicion that has attached to lawyers who represent unpopular defendants indicate some departure from the constitutional principle that every person charged with crime is entitled to be effectively represented by counsel?

Are there not enough shortcuts advocated, and too often practiced, in our time-honored legal procedures resulting in what we called a denial of due process of law?

Have there not been enough invasions of the freedom of the press to justify a concern about the inviolability of that great right?

Departures from the letter and spirit of our constitutional principles are not the product of any one person or any one group of persons. They are more properly chargeable to the entire body politic; to the suspicion, hatred, intolerance, and irresponsibility that stalk the world today; and also to a lack of appreciation of the age-old struggle of mankind to achieve our present-day blessings of liberty. Government, whether national, state or local, is not the sole culprit in this matter. For it does not operate in a vacuum. In the last analysis it only reflects the mores, the attitudes, the state of mind of the dominant groups of society.

How do we come to have a Bill of Rights, and what is its significance in the history of this Nation?

The Bill of Rights, which became part of our fundamental law in December 1791 does not by any means define all our rights. Many of our rights are to be found in the original Constitution, and others are formulated in later amendments.

The Bill of Rights did not originate the rights which it guarantees; there was at the time of its adoption not a single novel idea in it. It did summarize in a striking and effective manner the personal and public liberties which Americans 164 years ago regarded as their due, and as being properly beyond the reach of any government, old or new.

The men of our First Congress knew, as we may be in danger of forgetting, that each element in the Bill of Rights was a painfully won acquisition. They knew that government must be neither too strong nor too weak; that whatever form it may assume, government is potentially as dangerous a thing as it is a necessary one. They knew that power must be lodged somewhere to prevent anarchy within and conquest from without, but that this power could be abused to the detriment of their liberties. Confronted by this paradox, they turned to the experience of their forebears for counsel.

The English people, in their long struggle to control the monarchy founded by William the Conqueror, hit upon a happy solution: government should remain strong for its proper ends, but its strength should be kept within clearly defined limits. It became the consensus of the English people that certain acts should be clearly understood by all to be beyond power of government, and illegal if committed by any of its agents. Here we have the basis of the Anglo-Saxon legal and constitutional tradition.

The first great document in this tradition was the Magna Carta of 1215. There was little new in Magna Carta. It merely recorded the rights which had been asserted, with varying success, against the Norman monarchy during the previous century and a half, and needless to say, there were reactions and backslidings in the five centuries that followed. But in the main the movement was forward, toward the accumulation of a body of well-established liberties and immunities enjoyed by the true-born Englishman.

The century or so during which the British colonized America was especially important in the development of British constitutional rights. A full century before Madison rose in the First Congress and proposed our American Bill of Rights, the British Bill of Rights had already come into being. It was the culmination of generations of struggle against the arbitrary government of the Stuart dynasty in England.

In the course of the 18th century, the question arose whether the residents of Thirteen American Colonies were true-born Englishmen, and as such entitled to the traditional liberties and immunities enjoyed in the homeland. Since the King and Parliament of Great Britain were resolved upon giving a negative answer to this question, the colonies decided, in the year 1776, that the time had come to make a fresh start, and to adopt a Declaration of Independence.

In one sense, the Declaration is a lineal descendant of Magna Carta. But in another sense, it is a very different sort of document, a characteristic product of the Age of Reason. Instead of appealing to royal concessions and traditional immunities, it takes its stand upon self-evident truths, the laws of nature, and unalienable rights. It was a new turn in human history. It was an experiment which had never been attempted. It is still on trial.

Our Revolutionary forefathers had had their fill of royal governors, and of George III and his ministers, and so they forgot for a time one of the great lessons of constitutional history: that government must be strong for its proper ends. Many of the new State constitutions set up a hobbled and ineffectual executive branch. Our first attempt to create a national Government, the Articles of Confederation, provided for no executive at all. Our attempt to operate under a weak government barely got us through the Revolutionary War. The return of peace began a drift which, all clear minds perceived, was toward anarchy. The inevitable and timely reaction brought about the Federal Convention of 1787, by which our present Constitution was submitted to the American people.

To the American people, the Constitution was a new and permanent legal basis for their Government. They wanted nothing left to conjecture. They insisted upon concrete rights being set down in black and white. If government was to be strengthened, the more apparent became the need to delimit its proper powers, and to itemize the immunities which its citizens ought to enjoy. And so, directly upon the establishment of Government under the Constitution, the first Congress submitted the Bill of Rights to the States.

Such, in the most general kind of way, is the process by which we acquired our Bill of

Rights. If you have not read its provisions recently, I urge that you read and reread them. They were never more important. The Bill of Rights contains only 462 words and can be read in only a few moments, but from the American viewpoint it embraces the wisdom of the ages as divined from man's struggle for freedom throughout civilization.

The liberties thus written into our fundamental law have not gone unassailed in the course of our national history, for men in office are still men. Whether men derive their authority from hereditary right or from popular election, they remain prone to overstep constitutional limitations and invade legal immunities. Periods of domestic dissension and of foreign war are especially liable to produce tendencies to disregard established rights in the name of national safety. Often the tendency persists after the danger which provoked it has passed away, and at such times Americans who cherish these rights have had to fight to vindicate them. The French Revolution, and the deep cleft of opinion which it brought about in our country, led to the notorious Alien and Sedition Acts of 1798. When Thomas Jefferson succeeded to the Presidency 3 years later, he set free all those who had been imprisoned under what he regarded as an unconstitutional statute. Our Civil War saw the tendency to substitute military for civil tribunals which the Supreme Court rebuked in the famous case of *Ex parte Milligan* in 1866. World War I was followed by a wave of repressive measures, such as mass arrests without benefit of habeas corpus, which were strenuously opposed by the libertarians of that day. In our time, we have seen the greatest of wars give way to a decade of chronic tension and crisis, in which it is to be expected that new encroachments upon traditional liberties may have to be countered.

I have suggested that if there has been damage done to our traditional rights it has been accomplished by a process of erosion. Are the privileges and immunities summed up in our Bill of Rights in danger of loss through subtle changes in our climate of opinion? Is distrust of our fellow countrymen wearing away our traditional concept of the innate dignity of man?

These questions call for constant and intense exploration far beyond the limits of this discussion, but because we are here on the campus of a great university, I would remind myself and you that if our other rights are to be of value to us we must first have the untrammelled right to search for the truth in institutions such as this, and then to teach it in accordance with the dictates of conscience. If that right should ever fail, so will our other blessings of liberty. That is precisely what has happened to people in other parts of the world, and in our time.

But I do not wish to end on a mournful note. Nor do I wish to suggest that our liberties are about to be lost. Erosion may have begun in some respects but the fabric of our liberties is still far from undermined.

Surely the America that sent 12 million men into a world war to preserve freedom everywhere will not allow its own freedoms to be frittered away. Surely the America that has poured out its substance to rehabilitate the free world, and even our former enemies, so that they can resist tyranny, will not willingly pass on to its children less freedom than it has itself enjoyed.

It has been sagely remarked that men more frequently require to be reminded than informed, and I hope that we may all join in the good work of reminding each other of how much we have to lose, and how heedless we would be to lose it.

With a strong belief in the wholeness of our objectives and the courage to

defend our freedoms, I have no doubt we shall preserve our heritage.

Faith, the apostle tells us, is the substance of things hoped for, the evidence of things not seen. Faith in America confirms the hope that we shall preserve for our children all that our fathers, by the way of clear thinking, firm resolution, patient endurance, and willing sacrifice secured for us; that our heritage of liberty will not dwindle but increase; and that we will prove worthy of what we have so abundantly received.

It is such faith, I believe, that brings all of us together today to consider the blessings of liberty.

Atomic Dawn or Twilight?

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1955

Mrs. ST. GEORGE. Mr. Speaker, the following article entitled "Atomic Dawn or Twilight?", by Michael Amrine, appearing in the Progressive for March is worthy of our thoughtful attention. There is no doubt, Mr. Speaker, that we have come to one of the great crossroads in world history, one of the great hours of decision.

If we—and this means humanity—make the wrong decision, our civilization may well be doomed forever. It will matter very little, if we make the wrong decision and use the atom for our own destruction and that of the universe, whether we vote to put taxes up or down, or whether pay and fringe benefits are increased or curtailed. These things will be nothing but forgotten sound and fury if this planet joins those that go rolling on through space with no life upon them, giving out a cold silver light, or reduced to particles flying like meteors through space.

The article follows:

ATOMIC DAWN OR TWILIGHT?

(By Michael Amrine)

(This is the first of a series of articles exploring the peril and promise of atomic power. Other articles in the series will examine in detail the impact of atomic power in the fields of medicine, agriculture, public power, and foreign affairs. Michael Amrine, one of the Nation's foremost interpreters of modern science, has worked closely with Harold Urey and Albert Einstein. Formerly editor of the Bulletin of Atomic Scientists, he recently won Variety's award for the "best public-service program of the year" with his television series, Atomic Report.—THE EDITORS.)

When sunlight falls upon your hand, the warmth you feel is heat energy radiating from a hydrogen-helium reaction. The star we call our sun is really a kind of hydrogen bomb, slowly running through a complicated atomic-fusion process.

A sunrise is thus an atomic event, and atomic activity is part of our daily lives. All earthly life depends on the atomic energy of sunlight, which falls steadily upon the earth in enormous amounts—a quadrillion kilowatt hours of energy each day.

But the atom is closer to you than the sunlight through your window.

In the length of time it takes you to read this article, the chances are that 1 or

2 stray atomic missiles, traveling with an impetus gained in outer space, will pass through your body. The earth's surface is under constant bombardment from these "cosmic rays," and the odds are that every few minutes a "ray" will go through the average-sized human being. But the ray is so small and travels so fast that it is most unlikely to collide with any atoms of your body. When a cosmic ray does hit an atom, its energy of billions of electron volts may split an earthly atom into a score of separate fragments, themselves scattering at tremendous energies.

Atoms and particles fragmented by man may also be shooting through you.

This is the season for growing giant mushrooms at their testing grounds. If you are reading this in the long shadow of an atomic explosion in Nevada—that is, if you are reading this a few days after such an explosion, and if you are east of Nevada, even by hundreds of miles—this spring you will probably bump into a stray radioactive particle somewhere in the rounds of daily life.

The odds are overwhelming that this chance encounter will not do any harm to you or to your descendants. But what about the ultimate chances that the human race will kill itself through the accumulation of this radiation? The prospect is most real, as we shall examine in detail later. The hot cloud from the mushroom may go three times around the world and remain an entity detectable to our Geigers and those of the Russians. Its radiation will persist for centuries, long after it is too diffuse for measurement.

The most overwhelming questions of all asked by the atomic age are the basic ones of war and peace. What are the odds that you and millions of others will die from atomic blast, from heat, from shock, from fire, from radiation?

No statement on the atom is realistic if it does not make some assessment of the basic danger in which it places all of us.

Albert Einstein, with his customary lucidity, has put the central fact of atomic danger as simply as anyone: "Atomic bombs kill cities as bullets kill men."

This fact, however simple to say, however easy to demonstrate, has proved exceptionally difficult to communicate to peoples or to society or to the rulers of nations, including our own.

One could even say that the human mind and emotions are not organically capable of continuously living with this fact in our everyday world. There is no observable tendency for atomic scientists to live any further from the center of cities than their fellowmen live; interest in civil defense is as lacking at Los Alamos, N. Mex., the bomb-making center, as it is in less informed cities.

Truly understood, the fact that A-bombs can kill cities and H-bombs devastate whole regions, leads to some other basic conclusions.

One is that there will be no effective military defense against the atom. Bombs which can kill cities add up to total attacks which could virtually kill countries overnight (leaving aside the long-term menace of radiation). No amount of money—some want to spend \$20 billion on an antiaircraft net—can now make cities safe. We may disperse cities—we can never put walls around them.

Those who talk of defenses, like perfecting radar and fighter plane networks are deluded by the notion that our vulnerable neck can be protected by some superchromium collar. It can't be; militarily, the battleship *New York* is obsolete; militarily so is the city of New York.

II

We can build better Maginot lines; they will never be good enough. H-bombs may arrive by planes. They may come in merchant ships or in submarines. They may be

fired in guided missiles from ships offshore. The present range of guided missiles is 300 miles, but our planners now expect that both we and the Russians will have the 3,000-mile range missile within a few years. Traveling thousands of miles per hour, this missile could not be efficiently shot down by any device science can now imagine.

But a bomb to destroy New York can be brought in entire in a station wagon, or in pieces in suitcases carried by ordinary men.

Try to communicate this to yourself: Recently publicized scares about planted bombs had some foundation in conceivable fact; Soviet bombs may already be planted in our principal cities. And our bombs may be sleeping, awaiting a nightmare awakening in the shadow of the Kremlin. We or they can fire or hire a million Ladejinskys or Berias but we will not turn our times into an age of security. This is an age of total insecurity.

Congenital optimists that we Americans are, we forget this; when we forget it we become unafraid, so that the deaths of a few Japanese fishermen do not seem to us any great misadventure. Perhaps the fatal flaw in our foreign policy is that we thus seem heartless and heedless to those people outside our borders who can better appreciate war's destruction.

You should not be expected to keep this fact by your bedside any more than you should contemplate the fact that sooner or later, bomb or no bomb, you will one day die.

But whenever you undertake to think of foreign policy or military posture, of our educational programs abroad, or any basic national and international issue, you are playing Hamlet without Hamlet if you do not remember that H-bombs can kill cities as bullets kill men.

This is the real specter which truly haunts the world. It lies behind the fact that Coventry, England, and Chicago, Illinois, alike have no heart for civil defense. It sits at Adenauer's shoulder and it inspires and depresses Nehru. It redoubles the fanaticism of Red China and it disturbs the serenity of Schweitzer in Lambarene.

We can be tired of the bomb, frustrated by it, sick of it. But we cannot, like Pandora, seek to forget it by shutting it back in the box. Nor will science find a "miracle drug" to make this specter go away.

All this need not produce in rational men a depression or hysteria which says that there is no use, the game is over. In this atomic jungle, if we are accustomed to dressing for dinner, it would seem we should continue to dress. And if we have any ability to think, at dinner or at our jobs, we should by all means continue to think. This enormous danger gives all mankind a common fear and a common need. It is not fantasy to say this may well yet lead to common hope and community action.

Fortunately, the fantastic power of the atom also promises and has begun to deliver real benefits of value to all mankind.

The terror and the beauty of the physical world as now revealed lend support to the concept that mankind has not reached its maturity but its adolescence. Like a youth who has begun to discover the mystery of sex, mankind can be both frightened and ecstatically excited by this startling atomic force. Like the vital powers of the life-urge itself, our atomic powers can be directed to be playthings or to be instruments of domination; distorted, they can sharply limit our future and narrow our lives instead of broadening them. But if understood and respected, they can help illuminate the mystery and beauty of man's life.

When Enrico Fermi in 1942 led the first experiment which sustained a chain reaction in the atom, the code message flashed to Washington said, "Italian navigator has landed in a new world."

The atom could build a new world.

As Fermi was dying this winter, the first practical use of atomic power was being successfully tested. The first atomic ship, the submarine *Nautilus*, was starting what could be the longest voyage man has ever taken. The *Nautilus* could sail all of Columbus' seas, and in fact could go around the world like Magellan, without stopping once to refuel.

There are other far more useful and hopeful promises in atomic power than such dramatic endurance contests. In fact, even atomic power will probably not be the greatest benefit to flow from atomic energy. Six months after the first chain reaction Fermi argued that the great achievement would not be a new fuel but a new tool for learning more about the world.

The kinds of new atomic knowledge proving of benefit in agriculture, medicine, industry, and other fields will be discussed in detail later, but it might be useful here to list some examples in shorthand form:

The application of radiation is uncovering new information every day about the life processes of crops and animals. Radiation directed at the genes, the cells which carry hereditary characteristics, can cause variations of species. Within the last 2 years, for the first time, radiation has been used not just to cause harmful changes, but to point the way to better and stronger plants and animals.

Within the past 3 months reports have been received of the use of radiation to help understand the basic life process of photosynthesis. This may seem a forbidding word, but we should learn now to respect it, for it has enormous importance for the human race. "Photo" in this instance stands for light, and "synthesis" stands for the system by which plants take energy from units of light falling on them, and use that energy to process chemicals from the soil. Their chemical activity—their growth—far exceeds in measure and complexity all of man's works.

Man is completely dependent on this process, for we mainly eat plants or we eat the meat of animals that eat plants.

Moreover, coal is fossilized plant-stuff, and so are oil and gasoline. The log or the coal represent solar energy which plants have put through photo-synthesis and stored where we could use it. Thus the warmth of a fireplace, like the warmth of the sunlight in the yard, traces back to the hydrogen-helium reaction in the sun.

Should we solve the mystery of the process of photo-synthesis, we would solve the food problems of the world. The population growth today, matched against potential food shortages, will threaten the world within 50 to 75 years as ominously as the H-bomb does now.

Hundreds of medical scientists today are using radiation to study and treat disease. Fermi, like the late Senator Brien McMahon, who headed the first Joint Congressional Committee on Atomic Energy, died of cancer; the bitter irony of their untimely deaths underlines the great hope that through radiation man may abolish this scourge.

Scientists are uneasy about making promises, however vague and however tied to the future, which say that any amount of money or any of the revolutionary new knowledge is sure to place cancer, like typhoid and yellow fever, in the category of problems man has solved. But it can be stated definitely that knowledge based on radiation research is bound to extend and to save thousands and millions of human lives in the future. It is claimed today that radiation, including the long history of radium therapy, already has saved more lives than were wiped out in Hiroshima and Nagasaki. This sort of simple balance is a little childish, but it may help us to get away from the kind of atomic age thinking which if applied to electricity would make us think of electric power only as the force which operates the electric chair.

Articles in this series will discuss these and other prospects in detail. This one attempts to introduce them by taking a look at the atom itself, to provide some simplified answers to these questions: What is an atom? What is radiation? Why do scientists believe our new knowledge can, if used properly, be more important to the human race than either atomic bombs or atomic power?

To begin with, one of the things we know about the atom which the Greeks did not know is how very small atoms are—so small that a teaspoonful of water contains a million billion billion atoms. The period at the end of this sentence contains perhaps a half dozen billion, give or take a billion. Combinations of atoms are called molecules and may include 2 to 2,000 atoms. Hydrogen and oxygen make a good combination adding up to molecules that form the common compound, water. Most atoms exist in compounds, and chemists constantly invent new ones. In the dot of ink at the end of a sentence would be many kinds of atoms in several compounds—hydrogen, oxygen as water, a lot of carbon, and intermixed with the dot of ink individual atoms and group-molecules from the cellulose of the wood-pulp which made the paper you now hold in your hand.

The very smallness of the atom has made it incredibly difficult to study. Much of the research, however fine the calculations, has been done simply by throwing atoms at each other—the so-called bombardment which is done by cyclotrons and other nuclear instruments. From the way in which atoms collide, or bounce off each other, or the way in which the atom-bullets slide through the atoms in their target, physicists have gradually been able to put together a picture which is useful, although at present so incomplete as to be basically unsatisfying.

III

But from the minute size of the atom flows the wonderful precision of measurement now applied by thousands of researchers to the physical world. You can do more precise work with bricks than with boulders.

Man has measured the diameter of the hydrogen atom's nucleus. It is 15/100,000,000,000,000 of a centimeter. Man now can use the hydrogen atom as a probe in the form of a bullet, to explore matter, leading to more precise knowledge than if he were poking into matter with a relatively rough scalpel, razor blade, or the finest point one could get on a needle.

Then we have learned that even the infinitesimally tiny atom is composed of still smaller parts, arranged in a very airy fashion, perhaps something like the solar system.

The outer shell of the atom is the electrons. Cartoonists always picture them somewhat like solid ping-pong balls and draw lines to indicate that they whirl in regular orbits. For many reasons the cartoonists' pictures inaccurately represent what physicists think the atom possibly looks like. Electrons actually have no mass or weight; they may be called particles for convenience, but are only particles of electric charge or energy.

Another major correction of the atom drawing which has become the atom's trademark is that in the heavier elements there are many rings of electrons. Hydrogen has one electron circling around, and one proton in the center. Uranium has 92 electrons, arranged as if in layers, around 92 protons and 146 neutrons.

The cartoonists' picture is off for still another reason—because small as the atom is, it is mostly empty. The cartoonist makes it cozy. It isn't. The electrons whirl so rapidly that they make the atom appear to be a solid sphere. This quality and the electrical forces operating which repel the "bullets" physicists shoot at them go a long way towards establishing atoms as the hard indivisible balls the Greeks dreamed about

as atoms. But they are not homogenous, nor tightly put together.

The nucleus, as the sun of this tiny solar system, is far from the outside rings of electrons. If a nucleus were enlarged to about the size of a baseball, the outermost electrons would be half a mile away. The nucleus of the next nearest atom would thus be a mile away from our first nucleus.

The mass of the atom—and the mass of all matter—is the center of these tiny whirligigs; the really solid stuff is a very small part indeed of what we call matter.

This vast emptiness of the atom gives rise to such dramatic illustrations as those written by George W. Gray, that if we could strip off all the weightless electrons, and concentrate nuclei together, the whole of Mount Everest might be packed into a cigarette case. The earth itself could shrink from its present diameter of 8,000 miles to about a thousand feet. Without the electrons, it would weigh the same. It would be an incredibly hard ball, though not indivisible.

The "vast spaces" between our constituent atoms explain why cosmic rays can pass through our subatomic latticework more easily than a boy can throw a baseball through a rose trellis on a summer's day.

But the key thing that we know which the Greeks did not know at all is the fundamental concept elaborated by Einstein: matter and energy are interchangeable. When the once invincible nucleus is penetrated, and is split into fragments, some of its elements may become parts of other atoms, or some of the nuclear stuff may do a quick change and come off as energy, or as particles traveling with enormous power.

Let's say that we have an atom composed of 100 protons and neutrons and electrons, as a dollar might be composed of pennies, dimes, and quarters. As such it exists and has its being as a dollar atom. Somehow we smash it and its elements reform themselves again into atoms which are harmonious, legitimate currency. However, there is always considerable loose change—charges which might be electrons but with no place to go, neutrons which escape at tremendous velocities—thousands of miles a second—and are not captured in another system. These homeless ones may do a lightning change to become pure energy, or may collide with and impart energy to other atoms.

Some elements—radium and uranium 235 are among them—are naturally unstable. They seem almost to be one of nature's mistakes. Their inner arrangement does not add up to a harmonious total—their particles are not at peace with themselves. Every so often one of their atoms disintegrates. That particular atom sends out some particles or energy and becomes stable. The atoms in a gram of radium will disintegrate at the rate of millions every second, but this is a small number compared with the sextillions of atoms in that gram.

Such unstable elements are called radioactive, and now we know that with modern instruments we can make an atom of almost any element radioactive. The carbon in a dot of ink, for example, can be made so radioactive that some of its atoms will still be disintegrating 20,000 years from now. This is done essentially by throwing into the normal harmonious atom a particle which it cannot digest, and which eventually it throws off.

If carbon atoms are radioactive, their presence anywhere can be detected by a Geiger counter. And it is from this fact that much research with radiation flows.

If we want to know just what a certain organ of the body is doing with the carbon it receives from the outside world, we could "tag" some of the incoming carbon by making it radioactive. Much work has been done in just this way with radioactive iodine, in study of the thyroid gland. There are literally thousands of research projects using this basic tool underway in the world today.

Wiretapping

EXTENSION OF REMARKS
OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Tuesday, March 8, 1955

Mr. MAGNUSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a most interesting yet terrifying article captioned "Rise in Wiretapping Brings State Inquiry," written by Charles Grutzner and published in the New York Times on Sunday, February 27, 1955. I commend this article to the attention of my colleagues in the Congress.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RISE IN WIRETAPPING BRINGS STATE INQUIRY—
EAVESDROPPING, LEGAL AND ILLEGAL, IS NOW
A WIDESPREAD PRACTICE

(By Charles Grutzner)

One of the liveliest shows at the New York World's Fair of 1939-40 ran continuously at the telephone company exhibit, where visitors from all over the country could call the folks back home toll free. The only strings to the deal were the wires leading to 200 earphones to which other fairgoers glued themselves for blissful sanctioned eavesdropping. The operator who got the hinterlands numbers invariably greeted the person who answered with the warning: "People are listening in."

The way wiretapping has spread in the last few years the phone company could do its subscribers and dime-droppers a service by substituting for the dial tone a recording that would say: "Someone may be listening in."

No one has been able to measure accurately, or make even an informed guess at, the odds that the average telephone conversation will be eavesdropped or recorded. That is because so much tapping is done illegally and no public record is made of it.

MOST IN NEW YORK

In only about half a dozen States is it legal for law-enforcement officers to tap phones, and then under varying restrictions. New York, which permits such eavesdropping by law officers only under court order, has without doubt more of it than any other part of the Nation, although Washington, D. C., probably has more per capita.

In New York City, police have been cutting in on phone company wires since 1895. Many policemen, who have mastered the simpler techniques or who work with former phone-company employees, listen in on phones regularly without bothering to get a court order until they come upon a lead they may want to use in court.

Some Federal agencies engage in widespread wiretapping, although strictly speaking it is a Federal offense (section 605, Federal Communications Act), punishable by 2 years in prison, \$10,000 fine, or both.

District attorneys' men are frequent telephone eavesdroppers, usually with court orders.

PRIVATE DETECTIVES

Most of the illegal wiretapping is done by private investigators, hired by business concerns to steal trade secrets or to keep tabs on competitors by management to spy on employees; by some union leaders; by jealous husbands and wives; by persons fearing prosecution, and all sorts of other mortals who want either to eavesdrop or to protect themselves against it.

Many private eyes work it both ways. For a price they will tap someone's wire for you or try to find out if someone is tapping yours. The latter assignment is far more difficult to carry out successfully.

It is impossible to determine the full extent of wiretapping. Even sales records of special equipment, if available, would be meaningless because some technicians operate with little more than a \$1 set of war surplus earphones and 25 cents' worth of wire. Otherwise use induction devices requiring no physical contact with the telephone wires. Almost every month brings forth new gadgets, some quite Buck Rogers. Some wiretap technicians carry equipment valued at thousands of dollars.

LISTENING POST RAIDED

A clue to the mushrooming of the wiretap practice came within the last 2 weeks when the New York City Anticrime Committee, in asking for a legislative study of the whole situation, broke the news of a secret police raid on a wiretap listening post on midtown Manhattan's East Side.

Police who made the raid on February 11 kept it a secret even from District Attorney Frank S. Hogan. The first the district attorney, who is charged with enforcing the anti-wiretap law, knew of the raid was after John O'Mara, executive director of the Anticrime Committee, informed the legislature 6 days later. The police have never explained how it was that a large amount of electronic equipment in the apartment vanished between those dates. Mayor Wagner called in Police Commissioner Francis W. H. Adams, in an attempt to clear up the mystery.

The legislature has ordered an investigation of wiretapping in all its ramifications. A joint committee will hold public hearings and report by March 31 whether new legislation is needed. That is exactly what the Anticrime Committee wanted. The committee, privately financed, feels that there is too much ambiguity, too much hypocrisy, too much legal grayness, instead of clear-cut black-and-whiteness about the whole situation.

NEW LAWS NEEDED

The fast-spreading use of eavesdropping and recording devices that require no direct contact with the wires has raised some doubts as to the applicability of existing laws. Perhaps new definitions are in order, as well as straightforward Federal and State laws that will be enforced by the officials.

In the 21 years since Congress passed section 605 only one person has been convicted under the Federal wiretap ban. The lone luckless wight was Jacob Gruber, a lawyer, who went to jail for inducing a switchboard girl in the Securities and Exchange Commission to cut him in on phone conversations involving investigation of one of his clients. Ironically, Mr. Gruber was not even a wire-and-pier man. He was convicted under that part of the law which makes it a crime to intercept and divulge a telephone communication.

JUSTICE UNIT'S ATTITUDE

The Department of Justice position on wiretapping is one of the most interesting aspects of the overall problem. The Department has frankly declined to prosecute other wiretappers because its own men tap wires illegally. Former Attorney General Robert H. Jackson admitted as much publicly in 1940.

Federal law not only makes a crime of wiretapping but forbids use in court of evidence so obtained. The FBI and other agencies have resorted to wiretapping nonetheless, because this was the only way they could obtain leads in some investigations. After getting information from tapped wires, they then substantiated it by other means and went into court with evidence which, although stemming from an original illegal

practice, did not require the wiretap evidence in court.

It was this particular tactic by the Department of Justice that led to one of the reversals of the conviction of Judith Coplon, charged with giving Justice Department secrets to a Russian spy. The Coplon appeal was based, in part, on a 1939 precedent in which Justice Felix Frankfurter, writing the Supreme Court's majority opinion, referred to any evidence stemming from an original wiretap, no matter how well substantiated by other means, as "the fruit of the poisoned tree."

Wiretapping by Federal agencies won powerful support, although it was not legalized, when President Roosevelt in 1940 sent a secret memorandum to the Department of Justice approving of its use in certain specific cases of suspected espionage. Although not so intended, this was interpreted as a green light for much more wiretapping than the FBI had originally indulged in.

FEDERAL ACTION MINOR

But the Federal wiretapping is nothing compared to that of local police and private investigators across the country.

A former law-enforcement officer told this writer a few days ago:

"Detectives use wiretaps on maybe half of all the important police cases in New York, and many use wiretaps as a routine thing to pick up leads on bookmaking, prostitution, and other crimes without bothering to get court orders or even to let their captains know they're tapping."

One reason for shortcutting the legal order, which can be obtained in New York State from a Supreme Court, county court or general sessions judge, is the unwillingness some judges are showing now to sign such orders. Supreme Court Justice Samuel H. Hofstadter, in denying the applications for three policemen to tap wires in a bookmaking case only last month, said a tapped wire was "far more devastating—to civil rights—than a search warrant." His decision was hailed by the Civil Liberties Union as a "major victory to preserve the constitutional right of privacy."

INNOCENT PARTIES

It must be remembered that whenever a law enforcement officer—or anyone else—taps a wire he hears the conversations not only of the suspected parties but also of innocent persons who may use the tapped lines. In the case of taps on public telephones, which is widespread in bookmaking and some other cases, thousands of personal secrets, confidences and other conversations of innocent persons may be eavesdropped—and possibly played back in court on the same disk with a bookie's or prostitute's talk which preceded or followed it on the public phone.

Not all police, and certainly not all private investigators, limit their use of eavesdropped talks to those conversations they set out to hear. Blackmail and sale of business secrets, though incidental, have been found lucrative to crooked operators. A policeman who will share a prostitute's earnings or shake down bookmakers—neither of which is an unheard-of occurrence in police circles—will not hesitate to sell secret information he has stumbled upon.

FOR THE POLICE

Among the wiretap technicians a favorite story is that of the former signal corps GI, who tinkered with radios and electronics when he got out of the Army. The local police captain asked him one day if he could tap the wires of neighborhood bookmakers. The ex-soldier complied, glad to oblige the law, even if illegally. He was surprised when the captain later gave him a fat fee. After that he was less surprised to learn that the captain was using the taps to check on the bookies' business to make sure they gave him an honest deal in the protection payoff.

New York State law, while providing penalties of 2 years and \$1,000 for wiretapping, does not make it an offense for a man to put a device on his own phone to protect his business interests or the sanctity of his home.

Speech of Dr. Harold D. Fasnacht, President of La Verne College

EXTENSION OF REMARKS OF

HON. PATRICK J. HILLINGS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1955

Mr. HILLINGS. Mr. Speaker, last January, President Fasnacht, of La Verne College, which is located in my district, visited Washington and conferred with a number of Government officials. When he returned to California he discussed some of his observations of Washington in a speech before the Kiwanis Club. Mr. Lee Aldrich, editor of the San Dimas Press, printed the entire text of Dr. Fasnacht's speech in his newspaper on March 3, 1955. The speech follows:

FASNACHT SEES NATIONAL OFFICIALS AS SINCERE, EARNEST, AND DEDICATED

(By Dr. Harold D. Fasnacht)

(EDITOR'S NOTE.—Dr. Harold D. Fasnacht, president of La Verne College, made some remarks at a recent Kiwanis Club meeting about his impressions of our national officials in the Nation's Capital which the Press editor felt should have much wider circulation. Upon request he gladly consented to write those impressions for publication. He has done so and they follow:)

In January I had the privilege of attending the Association of American Colleges Convention in Washington, D. C. It was one of the greatest educational experiences of my life—not only because of the conference itself, but because of related opportunities in Washington and en route.

Each time I go to Washington, I return home with a new appreciation of our National Capital. My sensitivities to the work of our leaders in Washington are awakened and whetted. One cannot be long in Washington without being aware that the hub of the Nation, perhaps the world, revolves there. Indeed, people—important people—are there from all over the world. They have reason to be there, and that reason makes them busy and important people.

But, in spite of the fact that Washington is a busy place, and by its very nature a large and impersonal metropolis, I feel a sense of belonging while there. There are reasons for it.

I had the unique privilege, with several hundred other college presidents, of seeing and hearing President Eisenhower in person. He addressed the conference luncheon briefly, in person. Intensive preparation had been made. Each of us had to have our credentials approved to be admitted to the luncheon. The Secret Service and Washington police were in evidence literally everywhere. The President's personal flags and banners were draped along the platform. There was spontaneous applause and enthusiasm when he entered. I sat at a luncheon table not over 30 feet from where he stood to speak. I could study his features, the depth of his reflections, his sincerity.

He spoke without notes, but obviously from a well-thought-out sequence of ideas. He told us presidents that he had one thing

on his mind at this moment, above others. It was that he wanted us to challenge our faculties to find the answer to the greatest need of the day—that of how to get along with ourselves and with other nations. It is the problem of human relations, he insisted. He said that no one else had so vital a stake in it as the liberal arts colleges, and he said further that at center, it is a religious matter and based upon religious values. He was in dead earnest about the peace of the world. Everyone was easily aware of how it weighted on him—this problem of dealing with the other nations of the world.

Mrs. Peter Marshall and Dr. Edward L. R. Elson (the President's pastor) addressed our convention. The admonitions of the Sermon on the Mount and the imperative of Christianity were lifted. One could feel that the influence of such great souls was an outreach for good from the Nation's Capital.

I visited several Government offices. On the way eastward, I had business at the office of the Regional Housing Administrator in San Francisco. I spent an hour in Congressman PAT HILLING's office. I wanted to share viewpoints regarding United Nations, selective service, social security, and the postal rates. From his office I went to see Senator GORDON ALLOTT, newly-elected Senator from Colorado, whom I have known since boyhood, for we grew up in the same community. We talked of some of the same problems. Although both of them were extremely busy, for it was the week of the organization of congressional committees, they had time to listen to my viewpoints, and to express their concerns.

It was almost by chance that I heard that Col. Merlyn McLaughlin, a former teaching associate in Denver, was in the Pentagon as a high official in the Air Force. I phoned to say hello. He would have it no other way than for me to catch a taxi and come out. He met me at the entrance, showed me through a part of the labyrinth of winding corridors in the Pentagon and to his office. Long distance calls and personal interviews awaited but he had time to introduce me to his friendly associates.

My convictions about Washington were deepened as I left the city. Whatever one's political viewpoints, whatever your attitude toward particular personalities, theories, or policies, one must admit that the men and women who go there to direct and coordinate the affairs of our Government are trying to do a terrific job. They are busy and overburdened. They are human, and they do err; they have widely varying viewpoints toward the methods of achieving aims, but I believe that the overwhelming majority want to go the same direction. They are sincere, earnest, dedicated, and unselfish.

Postal Increase Needed

EXTENSION OF REMARKS OF

HON. WALTER NORBLAD

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks, I include herewith an editorial written by Mr. Robert Ingalls and published in the Corvallis (Oreg.) Gazette-Times:

POSTAL INCREASE NEEDED

Almost all Congressmen are leary of doing anything about the constantly increasing deficit operation of the United States Post Office. They feel a boost in rates would make people unhappy—and we presume it would.

However, most people are reasonable and when the facts are explained to them they are usually willing to go along.

Here is the situation faced by the Post Office Department:

Right now this business-type enterprise within the Government is being operated on a prewar price level and a postwar cost level. Consequently, it is now losing money at the rate of at least a million dollars every working day. Since World War II, during a period of unprecedented national prosperity, the Post Office Department has operated at a total loss of more than \$4 billion. The interest alone on this portion of the national debt is costing American taxpayers more than \$100 million a year.

In spite of the fact the Department lost \$399.5 million in the fiscal year of 1954, pending wage increases and other employee benefits that will cost at least \$166 million more per year are being considered. Most of these benefits are deserved and necessary.

The question is, Should we go on deceiving ourselves by keeping postal rates artificially low and taxing ourselves additionally to pay the deficit and the interest thereon?

Somehow, this just doesn't make sense. In the first place it costs everyone more money and in the second place everyone pays proportionately regardless of how much they use the mails. It would seem more intelligent and fair for those who use the mails to pay the costs.

Watson Wooddy, Corvallis postmaster, has given us some interesting facts on the mail-rate situation and we pass them on to you.

The 3-cent first-class mail rate was established back in 1932. Since that time Post Office expenses have doubled and the mail user's ability to pay has increased doubly as well. The cost of almost everything else has also doubled (actually about 97 percent).

In 1954 the cost of handling the average first-class letter was 0.0312 cent and it will be higher in 1955. So it costs you in additional taxes a percentage of .0012 cent every time someone drops a letter in the box. The cost of handling the same letter in 1932 with the same postage rate was .0189. Quite a difference.

To make the recommended 1-cent increase on first-class mail easier to digest it should be pointed out that at least three-fourths of all letter mail originates with commercial users and that an increase of 1 cent on the first ounce of first-class family mail would cost the average United States family about 10 cents per month.

Additional rates in proportion have been recommended for all the other mail classifications. It is estimated that if all the increases were approved by Congress the Post Office Department would be able to operate on close to a pay-as-you-go basis. It would seem intelligent to have the actual users of the mails paying a larger share of the costs instead of ultimately transferring them to the shoulders of the American taxpayers.

Congress should muster up its courage and push the increases of postal rates.

Ethics in Politics

EXTENSION OF REMARKS OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 8, 1955

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very

thoughtful and provocative address by our former colleague, the Honorable William Benton. The address on Ethics and Politics was delivered before the Harvard Law School Forum on February 18, 1955.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ETHICS AND POLITICS

As a part-time politician, I thank Harvard for the chance to share this platform with two professionals. I also feel honored because politics is a noble calling—one of the noblest—and I am proud to be part of it, even part time.

Just 20 years ago I sold out my interest in my first creative business enterprise—the New York advertising agency of Benton & Bowles, which I founded. I dedicated 6½ years of my life to Benton & Bowles, big full-time years, when I thought only of business and of financial risks, uncertainties, and profits; but of the 20 years since I've devoted myself, in about equal parts, to 3 fields of action: first, to higher education, as an administrative officer of a university and as a college and university trustee; secondly, to the 3 businesses which I control and own—in publishing, motion pictures, and music; and, thirdly, to politics, including service as Assistant Secretary of State, and later as a United States Senator.

Thus, I've had an opportunity to compare the ethics of practitioners in three major fields. If we here tonight were to ask Dr. Gallup or Mr. Roper to get us a rating scale of public opinion on the relative virtue—or perhaps the word is respectability—of the three groups, I'm sure the professors would come in first—almost with haloes; the businessmen would rate second, because, as President Coolidge said, "the business of America is business"; and the politicians would come last, and many would label them as mendacious and corrupt.

My own rating scale, based on my observations of the 20 years, and taking into account the pressures to which each group is subjected, would reverse that order. I would put the politicians first—and remember, please, I am speaking of ethics—and the professors last.

I hasten to assure you that my veneration for scholarship and the life of learning is not diminished by my discovery of its ethical deficiencies as ethics are understood by practitioners of business and politics. The professor does not apply his high code of scholarship to one significant facet in any code of ethics, the realm of private and personal relationships.

Early in 1949, after I had served in the State Department as a high administrative officer working closely with the Congress, but before I had any notion I'd ever serve in the United States Senate, I gave a talk to the Sales Executive Club of New York. I may have startled some of the members with this paragraph:

"The truth is that the Members of Congress—the five-hundred-odd Members of Congress—are the finest group of men that I have ever met anywhere; and on integrity, intelligence, hard work, they rank above any group of men with whom I've ever worked and, believe me, I know the business community well. I know the board of trustees of the committee for economic development, and I am not without friends in the chamber of commerce and the National Association of Manufacturers. I would trust our United States destiny overwhelmingly to the Members of Congress, judged by intelligence, integrity, competence, and hard work, far ahead of trusting our country's future to the top business leaders as represented in these business associations. That is as great a tribute as I know how to pay to a group of men who are so frequently kicked around,

and abused, misunderstood, and unappreciated."

Today I still hold with that view—and with far greater emphasis after my 3 years in the United States Senate—I hold with it even after 3 years' exposure in the Senate to the condemned man from Wisconsin. The ethical practices of politicians are greatly underrated in contrast to other groups in our American community; and it is by such contrast that they must in part be judged.

The notion that all politics is dirty is one cause of the cynicism and apathy that keeps nearly half of all our eligible voters away from the polls, even in presidential years—a disgraceful record compared with the democracies of Europe. I pause here to pay high praise to my State of Connecticut where 93½ percent of the eligible voters went to the polls in 1952, the highest percentage ever achieved in any State in any election. I praise this percentage even though it was the Eisenhower vote which accounted for my own defeat.

This idea that politics is dirty is also one reason why otherwise estimable citizens avoid any personal involvement in politics. The truth is that only some politics is dirty.

We are not here to minimize the ethical problems of politics. Many of these problems are very old indeed. From the Old Testament on, a high proportion of the great books of our Western World have debated the virtues that are required of political leaders, and the vices associated with political power and with the struggle for power. Plato and Aristotle had much to say about this; Plutarch very much. So did Machiavelli and later the 18th century philosophers.

As my approach to the problem before us tonight, I shall seek to identify some major ethical problems of politics as they exhibit themselves in our day; and secondly I shall discuss some steps we might consider in our effort to resolve them, at least in part, for our generation—more precisely, how we might pursue those steps which may reduce the powerful pressures toward mendacity and corruption which our society inflicts on our politicians.

What are some of those pressures? And what are some of the easier things we can do to relieve them? In these two questions I pose a long series of discussions and debates before this forum. We cannot undertake tonight to develop a catalog. I shall only try to identify for you four major areas of acute ethical discomfort in politics, and briefly suggest approaches to relieving them.

I shall not invoke for you that great tried and true remedy of the orators and reformers, the only true, permanent, and sovereign cure, that of an ardent and informed citizenry. I shall not invoke it if only because from my efforts to sell encyclopedias and other books I know some of the difficulties in achieving this goal. This is a true goal, a great one, but it is very long range, indeed.

Two of my four areas concern election campaigns. The other two concern the conduct of an officeholder, specifically a Member of Congress, once he has achieved election.

There are really three kinds of politicians. There's the candidate who's running and any good candidate must run hard. Then there's the same man after he's been elected, the officeholder. Finally, there's the man in the back room, the professional, the manipulator and compromiser whose power is often absolute and whose word must be better than other men's bond.

My comments tonight deal with the first two species of homo political and ignore the third, who is often the most important of all.

As the first of my four areas, let's look at the financing of campaigns. This is the single most ticklish ethical question in the whole field of elective politics. Every candidate is now a panhandler, first among his

friends, and then among people he hopes to make his friends. (Of course, I'm talking about Democratic candidates—we Democrats realize that a bottomless cornucopia flows automatically into the Republican coffers.)

The school of thought which holds that all politics is dirty of course believes that candidates and their campaigns are bought and paid for by the so-called vested interests. The truth is at least cousinly to this belief: It is that nearly every candidate, at least for Federal office, must violate the spirit if not the letter of corrupt practices legislation. The limitations set forth in the corrupt practices legislation are unrealistic for our day. Since these acts were passed, campaign costs have increased 400 percent to 500 percent and they will increase further with the greater use of television. The Congressional Quarterly records that candidates for Congress are now reporting a national total of \$10 million in expenses per election, and the Congressional Quarterly adds: "The reported spending is actually far below what it cost to elect many candidates for contested seats." Ten million is by no means an excessive total. The truth far exceeds this. Ten million is far too small to underwrite and pay for the campaigns which must be waged. All the professionals know this. Ask Mr. DeSapio. If you don't believe him, ask Mr. Javits.

Further, in defense of these higher and ever higher expenditures, may I suggest that our political campaigns are our principal instrument for education in public issues, as our elections are our principal instrument for determining the public will. On that alleged \$10 million rides the decisions we shall make about many tens of billions and, potentially, hundreds of thousands of lives. The ten million by current standards is a pittance. It's the old nickel subway ride.

Unhappily for the morals of our generation, the present pattern of our corrupt practices laws, Federal and State, is such a sieve that any Harvard undergraduate can drive a bulldozer through the holes. What is now needed is a realistic revision of existing corrupt practices laws, and then rigid enforcement of the new legislation.

Among reforms required is new legislation to provide high penalties on corporation officials who reimburse themselves, in one way or another, from their companies, for their campaign gifts. Another urgently needed reform is a greatly improved system of reporting campaign contributions. A contribution made in the open loses much of the sinister character of a hidden gift. I would insist also that this reporting take place not only immediately after the election but shortly before it, and again at stated intervals following the election, to disclose how a campaign deficit, if there is one—and there frequently is—is met. I think all of us should know about the Nixon funds, even before the recipient becomes a candidate for Vice President.

Fifty years ago Theodore Roosevelt felt so strongly about the ethical hazards in campaign financing that he recommended that Congress provide "an appropriation for the proper and legitimate expenses of each of the great national parties." I'm not sure I'd go quite as far, but I'm not sure I wouldn't. Here's a good study for some willing doctor of philosophy candidate. But before I embrace President Theodore Roosevelt, I'd like to examine possible ways to broaden the base of political giving. As a people we haven't yet learned to give for politics. Our political fund raisers—and many of my best friends do it—are almost all of them part-time amateurs. Philanthropic money raising is developing as a science and an art. The political parties and partisans have yet to learn the techniques of the Red Cross, the Community Chest, the March of Dimes, the

Harvard Alumni Association, to which you are about to become subject subjects.

I'm merely opening the door into this first dark and murky area, that of the financing of political campaigns. I'm giving you a peek, but with little light. I haven't even touched the high spots.

I move hastily into my second area of danger—the character of the campaign itself.

I hasten to assure you I have no hope of overcoming the current excessive flamboyance of campaigns. I refer to the kind of exaggeration for which we Americans have developed a high tolerance.

But can we not concern ourselves with a moral peril point which is reached when a campaign becomes vilification and defamation—an attempt to political assassination? As a high example, I place in this category Governor Dewey's speech in Hartford, the capital of my State, when he told his audience that "Whenever anybody mentions the words 'Truman' and 'Democrat' to you, for the rest of your lives remember that these words are synonymous with Americans dying thousands of miles from home because they did not have the ammunition to defend themselves. Remember that the words 'Truman' and 'Democrat' mean bungling our country into war and the lack of courage or the capacity to win the war or to win a truce."

I take this as my example because this comes from no irresponsible political campaigner but from the 8-year titular head of one of our two great parties—a far more responsible role than that of any governor or United States Senator.

I take this as an example because I am here at the Harvard Law School talking to young men who could not be blamed if they wished to emulate Governor Dewey's present role, as a senior partner, in nomenclature at least, in a firm not unknown even in my community of Fairfield, Conn.

In this, my second area, I ask 2 questions, though I am not applying these 2 questions to my reference to Tom Dewey, who is perhaps an understandable idol for any young Harvard Law School student, even though a dubious one by the ethical standards which is our subject tonight. I ask these questions of those who seek to teach you. First, I ask whether our laws of libel and slander, applied to political campaigns, should be strengthened. In practice we have made it almost impossible for a complainant to recover damages for statements made about him in a political campaign. We have taken the position that "all's fair in love and politics." Perhaps a change is in the offing: A few weeks ago a New York court assessed \$25,000 damages against a candidate for Congress who described 2 of his opponent's workers as Communist fellow travelers. In my own second campaign advertisements were run all over Connecticut attacking me in eight points as a Communist.

Is there not a question here of legitimate interest to your forum and to the Harvard Law School?

Even more valuable than strengthened libel and slander laws could be the creation of a permanent Citizens Elections Practices Commission, a national body which could serve as a model for similar State commissions. I urged the creation of such a Commission when I served in the Senate. Such a nonpartisan Commission of distinguished private citizens could be called upon, among other responsibilities, to issue reports each 2 years after elections—a kind of referee to report on low blows delivered during the heat of campaigns and to admonish against them, and then to recommend criteria of responsibility. Such a Commission could sponsor an era of public enlightenment which our politics desperately needs.

My last two areas of moral hazard, for officeholders, are characteristically pitfalls of office as they are traps for campaigners.

The first of these involves the familiar old dilemma of compromise. George Bernard Shaw once described a political situation as "smirched with compromise, rotted with opportunism, mildewed by expedience, stretched out of shape with wirepulling, and putrified with permeation." But politics has also been defined as the art of the possible. It has been defined even more precisely for the politician by T. V. Smith as "the art of compromising an issue without compromising yourself."

Compromise is necessary and inevitable in politics. But exactly where, in the necessary and inevitable compromising, exactly where lies the question of ethics? A good compromise is the best practicable solution of a problem, possible at a given time, in the interest of one's constituency, and of one's nation.

A bad compromise is a politician's decision to support the proposals of a special interest group, even though they may conflict with the general interest. A classical example is pork-barrel legislation. Personal financial gain is rarely the consideration of the politician in such compromises. What is at stake is votes the politician seeks to own or control. Rarely is outright cynicism involved, but rather what might be called gymnastic rationalization. That is why I prefer to speak of relieving pressure on the politicians, rather than of redeeming sinners.

The root of the pork-barrel problem, and by any other name it smells the same, is that the special pleaders control a bloc of votes—or successfully create the illusion that they do—and the politician is not convinced that he opposes the bloc, no matter how small it may be, he will gain an off-setting support in the general citizenry, by virtue of his opposition.

Here is the great potential role for the voters' league, the citizens' council, the women who prefer politics to poetry. Here is the answer to the familiar question, "Does it do any good to write to your Congressman?"

Now let me move to my fourth area of acute ethical discomfort in the field of politics. This springs from the politician's need for publicity. Of all the crafts and professions, politics, and the theater are the two for which publicity seems indispensable. This is no mere matter of ego satisfaction for the performers. A good press translates into tickets at the box office, and into votes at the polls.

Applied to the politician, this urgent need for publicity is consistent with democratic theory. The ethical dilemma feeds upon the fact that what is interesting, what is newsworthy, has no necessary relation to what is important.

Congressman who knocks himself out trying to master tax measures, appropriations bills, tariff problems, water resource issues, or any key problem, may find his lazy colleague, or his opponent, grabbing the headlines with a quick denunciation of the latest shakeup in the Politbureau.

When I was a very junior Senator—in fact No. 96 in seniority—a batch of Hoover Commission proposals, for the improvement and reorganization of the Federal Government came before the Committee on Expenditures, of which I was the junior member. To my surprise, many of these worthy proposals had no Senate champion. Perhaps because of my business background these proposals to save money and achieve efficiency appealed to me powerfully. I leaped into the breach, not, I like to believe, without some success. One columnist said of me he couldn't decide whether I was a Sir Galahad or just naïve. I never was a Galahad; I happen to think my heart is reasonably pure, but it never gave me the strength of 10, or even one and a half in the Senate. But I was puzzled. The Senate has many able and dedicated men. Why had they not stepped forward?

Senator Wherry helped me gain understanding. After my speech in support of the Hoover Commission proposal to reorganize certain aspects of the Treasury Department's relationship to the banks, and I was the only Senator to speak for this proposal which was opposed by the banks and finally mustered only 7 votes, Senator Wherry left his front row seat as Republican leader and walked back to my back row No. 98. We were friends from my State Department days. He said, "Bill, your speech reminds me of my first as a Senator; I prepared it carefully; as I spoke I saw the old and distinguished heads nodding in approval; I thought I was doing fine; but when the vote came, I wasn't there; I didn't have them; and I remember that as I walked off the floor Senator Reynolds came up to me and put a consoling arm around my shoulder."

At this point, Senator Wherry put his arm around me.

"Kenny," Senator Reynolds said to me, "Kenny, we was with you as long as you was talkin'."

I learned that, older and wiser than I, the old hands of the Senate knew there was no political sex appeal in reorganization. There was little publicity, almost no incentive in terms of popular support, meaning votes in the next election, and there were some real and terrible penalties in terms of organized opposition of those who think they stand to lose, whether they be bankers or postoffice workers.

In this my fourth area there is a great opportunity for creative ideas and I have one suggestion I'll give you tonight. Can we develop a system of recognition which is independent of newsworthiness? A month or so ago, when Harold Lasswell of the Yale Law School was visiting me, I suggested an idea to him. He is to be president of the American Political Science Association next year. I suggested that the association each year designate the 10 Members of Congress who had done the most valuable unpublished work of the year. If no member could be named twice in 5 years, that would mean that every 5 years 50 members would receive such recognition. I do not believe it would be difficult to make the selections. Such matters are common knowledge to the staffs on Capitol Hill. And I would not underestimate the value of such recognition even in a campaign. I believe Senator DOUGLAS would acknowledge other value to him in last fall's election in Illinois of the fact he had been named the No. 1 Senator in a poll of Capital news correspondents.

My suggestion here is trivial, however, in contrast to the problem in this area. I give it to you because it's quick and easy. This problem well warrants a full evening by your forum.

Many of you young men here tonight in this historic hall will find yourselves within a few years deep in politics. I say, strength to your arms. The risks and hazards and pressures of politics are great. But the rewards outweigh them all. All your capabilities, all your experience will be called into play. And when other desires and ambitions have been satisfied, or blunted by the years, your desire to serve the public interest will sustain you.

I have outlined some of the pressure that operate against morality in politics. I have suggested a few possible ways of helping to relieve such pressures. But I have not mentioned the best solution of all. That solution is everywhere in this hall tonight. It is in yourselves, and in what you can and will and must do, for yourselves and for your country and for all of us, as you of the Harvard Law School move into politics. As your generation moves in and takes over American politics, in line with the great history of this hall and university, to which your presence here tonight shows you chose to con-

form, you will bring to politics all the truth and earnestness and honor that is in you. This is the best solution, the great solution, and to it I hope that some of you may dedicate yourselves here—in this hall—tonight.

Results of Russia's 5-Year Plans

EXTENSION OF REMARKS

OF

HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 8, 1955

Mr. MONRONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by R. H. Shackford, a Scripps-Howard staff writer, which is entitled "Promises Galore—Five 5-Year Plans Net Nothing."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Daily News of March 4, 1955]

PROMISES GALORE—FIVE 5-YEAR PLANS NET NOTHING

(By R. H. Shackford)

Scene: Moscow hotel lobby.

Time: During 1947 Foreign Ministers Conference.

Characters: Old lady cloakroom attendant; stenographer for United States delegation.

Old lady (looking closely at girl's handsome hairdress, well-tailored dress, sheer nylons, and attractive shoes): Americanski? Stenographer: Yes.

Old lady: Ah, you have everything. We got nothing. They promise us everything. But we get nothing.

The Russian people still are getting nothing but promises.

The Soviet's own statistics prove how great is the Russian need for butter over guns.

Former Premier Malenkov produced some revealing facts about the Soviet planned economy during his brief stay at the top.

Stalin started his forced industrialization plan for Russia with the first 5-year plan in 1928.

Almost five 5-year plans later—in the 25 years between 1928 and Stalin's death in early 1953—the Soviet state invested more than 1 trillion rubles for industrialization. By the Soviet's official phony rate of exchange that is \$40 billion but actually closer to \$100 billion in terms of real purchasing power.

STILL NOTHING

But as the little old lady in the Moscow hotel cloakroom remarked, the average Russian got nothing from that huge investment.

Malenkov himself gave the breakdown of the 25-year expenditure of that 1 trillion rubles as follows:

Heavy industry: 683 billion rubles—65.5 percent.

Transportation: 193 billion rubles—18.5 percent.

Agriculture: 94 billion rubles—9 percent.

Light industry (consumers' goods): 72 billion rubles—7 percent.

Thus 84 percent of the 25-year investment went for heavy industry and transportation, while only about 16 percent was aimed at the Russian consumer. No other nation in the world has ever attained industrialization by so grinding its people. The United States, Britain, and Germany became industrial nations by parallel development of heavy and consumer industries.

Latest figures on Soviet industrial output and Kremlin plans for this year—the last

year of the fifth 5-year plan—show a decrease for consumer goods for both 1954 and 1955. Here are the figures based on official Soviet indexes showing the industrial trend toward less and less for the Russian people:

[In billions of rubles]

Year	Total output	Heavy industry	Consumer goods	Percent consumer goods
1940	139	85	54	38.8
1950	240	174	66	27.5
1952	309	223	86	27.8
1954	390	288	102	26.2
1955 (plan)	431	319	112	25.8

The School-Lunch Program

EXTENSION OF REMARKS

OF

HON. ROBERT C. BYRD

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1955

Mr. BYRD. Mr. Speaker, under leave to extend my remarks, I wish to include a statement I have today submitted to the Appropriations Subcommittee on Agriculture in opposition to the proposed cut in moneys for the school-lunch program. The statement follows:

Mr. Chairman and members of the committee, I am grateful for this opportunity to express my opposition to the proposed reduction in appropriations for the school-lunch program. Budget recommendations, if followed, would mean a reduction of approximately \$15 million worth of section 6 foods, and such action would seriously affect the school-lunch program in my State. With an increasing number of children participating, we need these section 6 foods along with the donated commodities received each year to keep our children's meals up to standard. If the \$15 million were cut off, it would mean less adequate meals, fewer free meals, and the closing of several schools.

Section 6 foods are of value to the school-lunch program because children throughout the country need more vitamin C than they receive at home. Canned fruits and vegetables are very necessary for an adequate and well-balanced diet, a diet that is delectable, interesting, and colorful. Peanut butter is accepted and enjoyed by practically all children, and this product supplies the additional proteins needed by youngsters.

An increasing number of meals are being served under this program in West Virginia, and this might be expected as a result of any normal population growth. Even though our Federal appropriations should continue at \$83,236,197, one can see how thinly it has to be distributed when figures from the biennial report of 1947-48 are compared with those of the 1953-54 report.

	1947-48	1953-54
Number of schools participating	1,278	1,478
Number of meals served	13,406,002	21,394,925
Number of free meals served	2,215,750	3,334,503
Average daily participation	86,828	123,862
Total expenditure	\$3,097,484.35	\$5,149,117.77
Amount paid by children	\$1,782,611.87	\$3,551,219.87

West Virginia's population, however, is not increasing. Rather, it has been decreasing over the past several months as a result of

conditions in the coal industry which have seriously and adversely affected the State's economy. Notwithstanding the fact that there has been a decrease in population, there is an accelerated increase in school lunches served. In December of 1954, we had an average daily participation of 143,474 children, or almost 20,000 more children per day than we had last year.

Gentlemen, these facts are enough to convince anyone that it would be a serious mistake to curtail this humanitarian program. Many children never receive a well-balanced and appetizing meal other than that which is provided under the school-lunch program. Over 225,000 people in West Virginia are dependent upon surplus food commodities at the present time. In such a distressed area, anyone who is willing to look a fact in the eye can see that children are being deprived of adequate diets in the home, and must depend upon meals such as those served at school for additional fruits and vegetables so necessary to proper health and growth.

Gentlemen, if this Government must retrench and curtail its spending, let it not be miserly in a program like this, a program which, in my opinion, is one of the best ever to be devised.

A nation's wealth is not to be found only in natural resources; its greatest wealth is in its human resources, its people, and these must be healthy in mind and in body if America is to be strong. Let us not be penny-wise and pound foolish in our attempts to economize. I am in favor of economizing wherever and whenever it is practicably possible to do so, but I submit that funds for the school-lunch program cannot be and should not be cut in the name of economy. I urge you, therefore, as members of this committee, not to sustain the reduction that has been recommended. I beseech and implore you to restore the amount to the extent that it will equal or surpass the figure within which the States are presently operating. The health and welfare of children cannot be measured in dollars and cents, and the strength of this Nation lies not in its gold and silver but in its boys and girls, the men and women of the future.

A Tribute to Thomas Masaryk

EXTENSION OF REMARKS

OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1955

Mr. O'HARA of Illinois. Mr. Speaker, next Monday, March 7, marks the 105th anniversary of the birth of the founder and liberator of the Czech Republic. I am extending my remarks to pay tribute to this great man.

America has always had a warm place in her heart for Thomas Masaryk. Many thousands of Americans either came themselves or are descendants of men and women who came to us from the land of Thomas Masaryk, Czechoslovakia.

Furthermore, Thomas Masaryk had spent some time in the United States, where he had worked toward the final achievement of his goal, the establishment of the Czechoslovak Republic. Here in Washington, he was a close friend of our great wartime President, Woodrow Wilson. And like Wilson, he

was a scholar, a statesman, and a great leader of democracy.

Most of all, however, it was in America that Thomas Masaryk saw embodied many of the ideals of democracy which inspired his drive toward the achievement of national independence for Czechoslovakia. It was, therefore, partly upon the same principles which motivate American democracy that Masaryk constructed the Czechoslovak Republic.

On the anniversary of the birthday of Thomas Masaryk, it is fitting that all Americans pause to pay tribute to the memory of this great Czech patriot. In our tributes let us not forget the homeland of Masaryk, a nation which now lies downtrodden beneath the yoke of the Communist aggressor. The Communists destroyed the Republic of Thomas Masaryk, but they can never destroy the ideals for which he dedicated his life. It is our prayer, as it once was Thomas Masaryk's, that Czechoslovakia will once again be free and independent.

The New Rules, The Old Game

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1955

Mr. MULTER. Mr. Speaker, the following editorial which appeared in the New York Post of March 7, 1955, is deserving of our attention:

THE NEW RULES, THE OLD GAME

Attorney General Brownell's heralded reorganization of the Federal security program is a hoax. It embodies no basic changes in the unjust, oppressive system which has brought demoralization to the Government service and dishonor to the country.

In four basic respects the allegedly revised setup bears deadly resemblance to the plan Herblock has called the United States internal insecurity program.

1. No attempt is made to reduce the scope of the screening process. Now, as before, all Federal employees will be subjected to investigation, reinvestigation, and re-reinvestigation, whether they hold strategic posts in sensitive agencies or they serve as minor flunkies to assistants to assistant bureaucrats in public relations.

2. No revision is proposed in the loose, sweeping definitions of "security risk" which have resulted in so many unwarranted dismissals. It was the fantastic vagueness of the criteria which enabled two different Government agencies to reach utterly divergent conclusions in the monstrous Ladejnsky affair.

3. No machinery is set up to allow dismissed employees to appeal to any agency outside the department from which they have been fired. Ezra Benson, for example, will remain the final arbiter of the fate of Agriculture employees despite the know-nothingism he exhibited in dealing with Ladejnsky; there is no court of appeal within the Government.

4. Finally, perhaps most serious, accused employees will still be denied the right to confront their accusers whenever the Justice Department and the FBI deem it in the in-

terest of national security to shield an informant. In a brief filed in the Supreme Court Friday in a loyalty case, Brownell made it plain that "undercover agents, paid informers, and casual informers" must be "guaranteed anonymity" in most instances. (It may be of major future significance that Simon Sobeloff, the Solicitor General, declined to sign it.)

In short, the dirty business of anonymous attack will go on as usual despite President Eisenhower's assertion that "the right to meet your accuser face to face" is a treasured American principle.

Undoubtedly there are exceptional cases in which the identity of a trained intelligence operative must be guarded. But the exception has become the rule; secrecy has become the refuge for a wide variety of professional character assassins, volunteer scoundrels, and irresponsible gossips.

What the Brownell formula amounts to is nothing more than a pious promise to behave better, to be more careful, to produce accusers once in a while, when it seems entirely convenient, and to avoid the embarrassing confusion created by the Benson-Stassen dispute over Ladejnsky.

No doubt Brownell hopes his rhetorical flourish will end the debate. But we believe the argument has just begun.

Americans have too long tacitly accepted abuses and wrongs and follies committed in the name of national security. Now, almost concurrent with the Ladejnsky debacle, other things have happened to force an agonizing reappraisal of the whole security panic. The recantations of Harvey Matusow, mingled with the revelations of false testimony by 2 witnesses in an FCC case, have thrown new and painful light on the business of accusation in America.

The disclosures have shaken many men and institutions. Currently the Senate Internal Security Committee is engaged in a frantic attempt to prove that Matusow is a low character in bad company. Such hearings are hardly necessary; Matusow boasts of his incorrigible unreliability. The question is why he was able to fool so many respectable men while he was playing the anti-Communist side of the street. Who protected him? How did so many super-sleuths in Government, on congressional committees and in McCarthyite journalism—fall for him?

Nothing in the new Brownell program offers any real assurance that another Matusow will not be permitted to destroy innocent men while their backs are turned. That is the issue Brownell—like so many of Matusow's old playmates—is trying to evade. But the issue haunts Washington.

John Marshall Harlan

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 8, 1955

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial entitled "An Evasive Witness," which appeared in the Standard-Times, of New Bedford, Mass., on March 4, 1955.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AN EVASIVE WITNESS

John Marshall Harlan, the Federal judge from New York who has been nominated to

the United States Supreme Court, assumed a decidedly defensive attitude when questioned by the Senate Judiciary Committee which is now weighing his appointment. Although he was afforded several excellent opportunities to do so, Mr. Harlan did not state clearly and unequivocally his views on such vitally important topics as world government and the relationship between the United States Constitution and treaties.

Judge Harlan was nominated last November by President Eisenhower to be an Associate Justice of the Nation's highest Court, to succeed the late Justice Robert H. Jackson. The Senate Judiciary Committee has completed its hearings on the Harlan nomination but has not yet reported on it to the Senate.

At the hearings Senator EASTLAND, of Mississippi, a Judiciary Committee member, asked Harlan if he thought a treaty could override the Constitution. Harlan said he felt it would be inappropriate for him to comment, since the scope of the treaty-making power as set forth in the Constitution had been an issue before the courts many times in the past and would be again.

"Can a treaty take power from the States and give it to an international body?" Senator EASTLAND persisted. Harlan held it would be indiscreet and inappropriate for him to comment.

Senator EASTLAND then asked: "Would you approve a treaty that would deprive the people of rights guaranteed them by the Constitution?"

Replied Harlan: "That is a question that has not arisen for the last time. I should not be asked to forecast how I would decide cases."

Thus, a man who has been a judge of a United States circuit court of appeals for approximately a year and is a nominee for the highest court in the country, declined to tell a Senate committee whether he would uphold rights of the people guaranteed them by the Constitution.

Several members of the Judiciary Committee questioned Mr. Harlan about the proposed Bricker amendment, which would clarify the treaty-making provisions of the United States Constitution. Harlan said he knew nothing about the amendment, a startling admission since it was the subject of major debate in the United States Senate last year and failed to win approval of that chamber by a narrow margin.

Mr. Harlan told the committee he had joined the advisory committee of the Atlantic Union in 1952. When Senator Jenner of Indiana pointed out the Atlantic Union favors common citizenship and laws for North Atlantic nations and eventual world government, Harlan said he had not heard of those aims before and did not know the organization had any objectives which would threaten the sovereignty of the United States.

It is almost incredible that Mr. Harlan would join a committee fostering principles of which he remained unaware even after joining.

Judge Harlan told the Senate committee he would disassociate himself from the Atlantic Union committee if he is confirmed as a Supreme Court Justice, but apparently he sees no reason to separate himself from the Atlantic Union while he wears the mantle of a United States Court of Appeals judge. This is an amazing display of inconsistency, since some cases considered by the Supreme Court also are handled by Courts of Appeals.

Appearing before the Senate committee in his own behalf, Judge Harlan said little to enhance his prestige. In view of his reluctance to speak out on fundamental questions and his general evasiveness during the committee hearings, it is doubtful that Mr. Harlan possesses the qualifications of a Supreme Court justice.

Wiretapping**EXTENSION OF REMARKS**

OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Tuesday, March 8, 1955

Mr. MAGNUSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record two editorials dealing with the problem of wiretapping. One is from the Washington Daily News of February 21, 1955. The other is from the New York Times of February 21, 1955.

There being no objection, the editorials were ordered to be printed in the Record, as follows:

[From the Washington Daily News of February 21, 1955]

THE WIRETAPPERS

In New York a raid a few days ago disclosed an array of equipment capable of tapping every telephone line on six East Side exchanges. And it is more than incidental, no doubt, that many of the prominent and successful people who live in Manhattan happen to reside in the areas involved.

There has been enormous growth in the private investigating profession, to whose members tapping a free citizen's telephone is as simple as picking a lock.

The fact that reputable private detectives have ethics is cold comfort in view of the ease with which any scoundrel can learn the rudiments of the business. What does it matter to a crook whether he has a license, if he doesn't get caught?

Wiretapping by law enforcement officers is a delicate business, which the public has tolerated largely because of its usefulness in catching subversives. Even where evidence so obtained is admissible in other types of cases, there are restrictions on wiretapping and public distaste for it.

Those who invade privacy by wiretapping, for any reason less than the Nation's security, deserve little consideration.

If we have not enough laws to punish them, let's pass them. If the telephone companies and the police have tolerated them or cooperated with them, let them too feel the effect of an honest public's righteous anger.

[From the New York Times of February 21, 1955]

THE WIRETAP MENACE

Current revelations in this city of what appears to have been wiretapping on a wholesale scale for private gain must disturb any thinking citizen. Such wiretapping is not only illegal under section 605 of the Federal Communications Act of 1934, but it violates every citizen's basic right of privacy. More than 2 years ago a pioneering survey by the Reporter magazine charged that wiretapping by governmental and private agencies was widespread. The latest revelations certainly support the latter half of this charge.

Wiretapping by police agencies goes back at least to 1895. The possibilities for private gain through such surreptitious acquisition of information are so obvious that it must be assumed that wiretapping by private persons has a long history. The basic equipment required is simple if one knows where the pair of wires required to tap a particular phone is located. To gain that knowledge, however, requires some specialized training or knowledge of telephone company procedure and practices. More re-

cently there have been hints of advanced electronic devices which do not have to be even connected to the wires that are tapped. One such device the Reporter has stated, is a recording machine capable of picking up audible speech at a distance of 40 feet and so small as to be easily hidden.

The rich rewards—from would-be blackmailers, from those seeking divorce evidence, from unscrupulous businessmen or labor leaders seeking economically useful information—available to expert wiretappers have apparently created a specialist group in this field. These rewards also make possible the corruption of telephone company employees.

There has been much controversy about the desirability of wiretapping by Government agencies. There can be no such controversy about the complete undesirability of private wiretapping, yet the record does not suggest that our law enforcement agencies have fought this evil as energetically as it needs to be fought. If the laws are inadequate to deal with this menace, then stronger laws should be passed. Certainly the citizen who picks up his phone is entitled to every protection in keeping his affairs private between himself and whom-ever he is addressing. The fact that many persons already make a practice of not discussing sensitive matters over the phone suggests the widespread fear of wiretappers that exists, and apparently not without justification.

Judge Weiss Sets Record on Murder Cases**EXTENSION OF REMARKS**

OF

HON. HERMAN P. EBERHARTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mr. EBERHARTER. Mr. Speaker, I am sure many of the older Members of the House will remember the genial, energetic and likeable Samuel A. Weiss, of Glassport, Pa., who voluntarily retired from Congress in 1946 to become judge of the court of common pleas of Allegheny County, Pa.; a court with unlimited jurisdiction in every type of litigation—civil, equity, and criminal.

I am certain the Members will be pleased to know that Judge Weiss is making an extremely excellent reputation as a jurist. With his extraordinary sense of American fair play and his judicial temperament he is exercising the same sound judgment and dynamic energy he displayed to all of us here while serving as a Member of this body. In other words he is in every respect a most commendable jurist.

Recently he made an alltime record in western Pennsylvania in the hearing of successive trials of murder indictment which was noted in the Pittsburgh newspapers.

Under unanimous consent heretofore granted, I ask that the article appearing in the Pittsburgh Sun Telegraph of January 29, 1955, reporting this accomplishment, be inserted in the Appendix of the Record. The article follows:

JUDGE WEISS SETS RECORD ON MURDER CASES

Despite a serious throat ailment which necessitated the use of a microphone while on the bench, Judge Samuel A. Weiss has established an all-time record for hearing successive homicide cases in criminal court.

The murder marathon set by Judge Weiss started last December 6, when William Cole was found guilty of a homicide charge. Cole is in jail awaiting sentence. The hard-working jurist heard his last murder trial Thursday. William Mobley was the defendant. He has been sentenced to prison after being found guilty of a manslaughter charge.

Between December 6 and last Thursday, Judge Weiss was the trial judge in the trials of Eddie Foster, now serving life in Western Penitentiary; Albert W. Goff, in jail awaiting a court decision on whether he is to be given a new trial; James Parnell, sentenced to prison; Otera Holmes in prison, and Oscar Brewster, awaiting sentence.

SIX IN ONE MONTH

The remarkable thing about Judge Weiss' record fete is that six of the murder trials were held this month.

The nearest any judge has ever come to the new record was the late Jurist Joseph M. Swearingen, who in 1915 presided over four consecutive murder trials.

Although Judge Weiss was aware that he had presided over an unusual number of murder trials this month, he had no idea he had set a record until yesterday when Court Crier John (Jack) McIlvany, visited Judge Weiss' chambers and told him.

KEEPS OWN RECORDS

McIlvany keeps his own records, and for more than a quarter of a century he has recorded every homicide trial held in criminal court.

The court crier checking over his little black book realized the jurist had heard more successive murder cases than any other judge in the history of criminal court.

One of the first persons to congratulate Judge Weiss on his record was Assistant District Attorney William V. Swearingen, son of the late Judge Swearingen, whose record Judge Weiss had broken.

The Engineer's Role in America**EXTENSION OF REMARKS**

OF

HON. CARL HAYDEN

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 8, 1955

Mr. HAYDEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an address delivered by William A. Dexheimer, Commissioner of Reclamation, before the Arizona Society of Professional Engineers at the Hotel Westward Ho, at Phoenix, Ariz., on February 24, 1955.

There being no objection, the address was ordered to be printed in the Record, as follows:

THE ENGINEER'S ROLE IN AMERICA

(Address by Commissioner of Reclamation W. A. Dexheimer before the Arizona Society of Professional Engineers at the Hotel Westward Ho, Phoenix, Ariz., Thursday, February 24, 1955)

It is a particular honor and a pleasure to be invited to participate in your observance of National Engineer's Week.

It is a pleasure because it is always a delight for me to come back to Arizona. There is a lot of beautiful and spectacular scenery in the United States and elsewhere in the world, but I have never found anything to quite equal the thrill of sitting down in this Valley of the Sun on a warm winter day after a flight across the snowy and windswept miles between here and Washington.

It is an honor to be here because I am proud of the engineering profession and of my association with it. I am proud of our accomplishments—and when I say "our" I am not referring alone to my own sphere of operations in reclamation but to the whole broad field of engineering.

The contributions of the entire engineering profession to the advancement of civilization have been such that it is difficult to visualize progress in the world without a man with a slipstick in his pocket up somewhere near the front.

Mr. Raviola, in his letter of invitation, wrote that the primary purpose of National Engineer's Week is to convey to the American people an understanding of the function, the work, and the responsibility of the engineering profession and of its rapidly growing importance in our national life.

That shouldn't be too difficult to demonstrate. If anything, I would say the profession has already grown to major importance in our national life. Any kind of an analysis will show that engineers have been inextricably linked with the whole dynamic history of our country almost from its beginning.

As a matter of fact, the course of civilization has been pretty well charted by individuals who would be identified as engineers today. There is that unnamed genius of the stone age who chiseled out the first wheel from a block of stone to set us all in motion. Or the deep thinker, possibly from the era of the Neanderthal man, who discovered that by leverage he could move boulders twice as big as those his neighbor was pushing around by brute force.

These men were brothers under the skin with our profession today, just as were the great builders of Biblical and medieval times. Some of the great ruins of the past which have been found in various parts of the world are monuments to these early builders in our civilization. They all figured out how to do something and then went ahead and did it.

Nevertheless, engineering as a profession did not obtain real recognition until the middle of the 18th century, when civil engineering became clearly distinguished from military engineering. The earliest professional engineering society, the Institution of Civil Engineers of London, was not chartered until 1828, a half century after this Nation had launched itself as the free and independent United States. Thus, I believe we can safely associate the growth and stature the engineering profession has attained in the last two centuries with similar growth and world leadership of our Nation.

The United States has attained world leadership as a Nation on its reputation for freedom, vision, and the ability to do things. The American way is more than a political slogan. It is a beacon light offering to the world a future of peace, prosperity, and freedom. This American way we talk about has, as one of its foundation stones, progressive economy, an ability to get things done. And no one has been in the vanguard of this parade of progress more than the engineer.

To compare our lives in America today with those of a few generations back, even to the turn of the century, offers a startling contrast and story of progress in fields in which engineers are particularly involved.

One example might well be automobile transportation. It was hardly more than 50 years ago that the first few horseless carriages were chugging and sputtering along on city streets and country lanes that were either quagmires of mud or choked with dust. Constantly improved design and construction methods, which were worked out by research engineers, have transformed those rickety cars into the sleek vehicles we are now producing at the rate of 6 to 8 million per year. Some of you may remember the auto shows of 1910 or 1911 when the model T advertisement was a record repeating, "It gets you there and brings you back."

Production engineers designed the marvels of the assembly line and the latest production magic, automation, that have brought automobiles within the price range of millions. Then, don't forget the construction engineers who laid out the smooth ribbons of concrete and asphalt which compose our highway system for these millions of cars. Of course, any Sunday driver will tell you there aren't enough roads, but the engineers are doing something about that too, just as fast as they can get the necessary funds.

The same favorable comparison can be made in other fields of transportation. Who would have dared forecast, 50 years ago, that an individual would have been able to leave Washington in the morning to attend a dinner meeting out here at night? Or that there would be regularly scheduled nonstop commercial airline flights across the Nation, and across the oceans. I remember watching the altitude and speed records for airplanes being broken at Belmont Park, N. Y., in 1910. The speed record was 65 miles per hour on a closed course, and the altitude record was 9,700 feet. Engineers have brought us a long way since then.

The contrast is equally startling in the field of communications. In the last two decades, electronic engineers have transformed television from an impractical dream to a virtual household necessity. You can punch a teletype here to operate a linotype in a newspaper office two or three thousand miles away. It won't be long until you can dial not only your neighbor on the telephone but your former neighbor who now lives in another State or a continent away.

Another important aspect of our national progress, in which I am proud to say the engineers have had a major role, is the development of our natural resources. Our country is blessed with the richest supply of natural resources of any nation on earth.

Geologists have tracked down untold wealth in underground deposits of ore, oil, and water. It has remained for the engineers to devise ways and means of bringing that wealth to the surface and using it. Engineers also have designed marvels of machinery to improve the planting, cultivation, and harvesting of agricultural produce. Production engineers are constantly at work improving the processing machinery for foodstuffs, fibers, and hard goods. The result is a constantly improved product, a better diet and better standard of living for the consumer, and usually at a lower price.

No one needs to tell you here in Arizona that water is the most essential commodity in our life. You have a thriving economy here, but it is almost totally dependent upon your water resources. And once more, the engineer is right in the center of the picture.

The story of reclamation development in Arizona is almost the story of reclamation engineering. The Roosevelt Dam on the Salt River was considered one of the major structures of its day. It has set the pattern for the great multipurpose structures which have accomplished so much in harnessing our rivers and turning their waters to a beneficial use. It remains, today, one of reclamation's proudest structures. Subsequent construction additions to the Salt River project reflect the changing and improved methods engineers have devised for utilizing our water resources.

When the engineers moved into Black Canyon to initiate construction of Hoover Dam, a whole new horizon of possibilities for western expansion and development began to unfold. Oldtimers and some of you who are not so old will recall that there were many doubters about the construction of Hoover Dam. It was a bold undertaking which was even questioned by some engineers.

How in the world, they asked, could anyone build a dam that big? Besides, the Colorado will probably go on another rampage and rip it all out. But the engineers knew. They knew from past experience on similar

but smaller structures, and from their surveys on the river, that they could build a concrete dam in Black Canyon which would create the world's largest artificial lake and subdue the mighty Colorado forever.

The hardheaded businessmen in six big construction companies thought enough of the engineers' opinion to contract to build the job, and the rest is history. Hoover Dam stands today, still the world's highest, one of the engineering wonders of the world and a tribute to the profession.

The same might be said of Bartlett Dam on the Verde River, the world's highest multiple-arch dam, Grand Coulee Dam, up in Washington State, or Shasta, or the other great multiple-purpose structures which have been completed in recent decades.

Arizona has not only these monuments to the skill and importance of proper reclamation engineering in the control and development of its water resources. It also has evidences of what occurs when a Nation or a people do not or cannot take proper care of their water resources.

The first modern irrigation in the Western Hemisphere is popularly and correctly attributed to the Mormon pioneers who settled in the Salt Lake Valley in 1847. But there are remnants here in Arizona and other parts of the Southwest of crude irrigation canals which the primitive Indians scooped out in an effort to eke out a living.

These early peoples of the Pacific Southwest could not cope with the sharp fluctuations in annual rainfall and the long summers without precipitation which we, today, consider one of Arizona's great advantages. They had no conception of storing up water for a single season, let alone planning ahead to save the surplus water in years of plenty to use in years of drought. Thus, their primitive irrigation ditches ran dry and their civilization faded out.

There is no danger of that occurring today. Thanks to the skill of the reclamation engineer—and here I am not alluding only to Bureau of Reclamation engineers, for we have had plenty of outside help—the Salt and Gila Rivers and the Lower Colorado are among the most efficiently used of any in the country.

Five more storage reservoirs have been added to the original Roosevelt Dam. Diversion works and canal systems have also been improved. This work must continue until practically the last drop of water for consumptive use, hydroelectric power production, and the other multiple purposes has been squeezed from the Salt and Gila and their tributaries.

When water allocations in the lower basin are determined in the action now pending before the Supreme Court, some additional major facilities may be contemplated. Again, the engineers will be called on to determine how best to keep the water supply ahead of the demand in the Southwest. For here, probably more than in any section of the United States, there is an awareness of the need for proper conservation and use of water. That is probably why this has been the starting place for the concept of multiple-use reclamation facilities.

For example, I don't have to tell anyone in this audience that Hoover Dam was built not just because there was a good damsite in Black Canyon and a bunch of engineers saw an opportunity to build the highest dam in the world. You and I know that Hoover Dam was built to control and put to work a fluctuating and unruly river.

There is ample evidence of the success of this function in the current cycle of dry years which has brought Lake Mead to its lowest level since the reservoir was filled back in the thirties. Even though the runoff has been such that the normal flow of the river would have been little more than a soupy trickle by late summer, a steady and consistent year-round flow has been maintained downstream by operation of Hoover Dam and

its downstream partners, Davis and Parker. This year, we are reducing power output to further conserve the river for its primary consumptive purposes of irrigation, domestic, and industrial use.

But there are too many people who either do not know or else blindly ignore the reasons for construction of these reclamation facilities, and class them as a giant boondoggle or pork-barrel operation. Believe it or not, we are getting some of the same arguments against presently proposed reclamation work that were used 2 and 3 decades ago against projects that have since proved their worth many times over.

Just listen to what one columnist wrote about reclamation a few weeks ago: "If ever an object of Government expense needed an airing, it is what is loosely and inaccurately called reclamation."

The columnist goes on to mention the investigations by the Hoover Commission and the President's Cabinet Committees on Water Policy, and then asserts:

"It is to be hoped that one of the other of these reports will really tell the story, for there is a whole of a story to tell—a story of failure, of frustrated hopes, of political pork, of bureaucratic misrepresentation, and of widespread ignorance of what has been done with taxpayers' money over a period of more than half a century since T. R. pushed through his Reclamation Act of 1902."

Well, I join in hoping that the story of reclamation is fully aired. I hope that the successful operation of the Salt River project here in Arizona, the Boise and Minidoka projects in Idaho, the Yakima and Columbia Basin projects in Washington can be described. I hope the story may be told of how the Colorado-Big Thompson project in its first year of full operation this past summer prevented a drought disaster on 500,000 acres of land in north-central Colorado.

I hope the story may be told of the Central Valley project in California and how it has turned flood disaster on the Sacramento River, in the north part of the valley, into a combination rescue and agricultural expansion effort in the far southern end.

I hope, too, that the story may be told of the needs for the future. The West generally, and the Southwest in particular, are experiencing the most rapid population growth of any section of our country. These new frontiers of expansion and opportunity were, to a large degree, provided by reclamation projects. These areas are providing a tremendous market for American industrial products.

The future holds more opportunities for progress. Various Western-State groups have several new reclamation projects ready for Congress to consider for authorization and initiation of construction. They have been worked out by States and local groups in close collaboration with the planning engineers of the Bureau of Reclamation. None of them would have been feasible by the standards of 50 years ago.

But then there weren't 35 million people in the Western States in 1900 as there are today either. An acre-foot of water today is worth infinitely more than the farmer on the Salt River project could have paid 30 or 40 years ago. And conversely, the contribution that a farmer can make to the American economy by the successful operation of his farm is much greater today than it was a half century ago.

That is why I urge the engineering profession, particularly in these Western States, to keep in mind not the bigness of the reclamation structure, the number of yards of concrete that go into the dam, or the intricate design of the outlet works, but the end result. Keep in mind what these reclamation facilities are designed to accomplish, what they are accomplishing, and what those planned in the future can do to lift the ceiling of economic opportunity.

And be prepared to be vocal about it. We in the West, whether we be engineer, merchant, or farmer, are faced with a challenge to demonstrate the worth of reclamation to the Nation. We should do some talking about it. We should be fully armed to cite chapter and verse of the benefits Roosevelt Dam has contributed to the Salt River Valley—and by the same token, of the benefits the Salt River Valley has contributed to the economic stability and welfare of the Nation.

We should be able to tell, for instance, that retail sales in Maricopa County in a recent year, totaled \$168 million, that bank clearings were \$3,229,000,000 and that Federal taxes were estimated at \$69 million a year. All this from an area which has been built around a reclamation project in which the Federal Government invested the grand total of \$23 million. I suspect that in another half century, the projects now being completed at costs of several hundred million dollars will have the same outstanding ratio of returns to investment that the Salt River project boasts.

Our challenge to the future then, as I see it, is not alone to accept the engineering responsibility of designing and constructing the structures we need to put our remaining unused water resources to work. It is to join in the common cause of preserving and strengthening the case for reclamation wherever and whenever it is challenged.

By acting promptly and vigorously, we can keep the way opening up for additional growth and opportunity in the arid West.

No one questions the engineers' competency today as we use roads, bridges, elevators, automobiles, airplanes, ships, and innumerable other creations of sound engineering. These things were developed and improved by engineers of broad vision and with keen realization of the future needs.

We have not yet found, nor does anyone expect to find, a substitute for water. Our very lives depend on it. Industrial and agricultural need for water is tremendous and expanding. The entire economic growth of the country is keyed directly to adequate water supply.

There are many challenges to engineers today in many fields, but the greatest of these is, I believe, the need to provide adequate, usable water, and to convince the doubters of the necessity for planning and building for the future.

"Butter Over Guns" Disarmament Plan

EXTENSION OF REMARKS OF

HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 8, 1955

Mr. MONRONEY. Mr. President, the campaign which is being conducted by the Scripps-Howard newspapers known as the "butter over guns" disarmament plan, is attracting wide attention. It is certainly a campaign worth bringing to the attention of the people of the United States as proposed by the resolution which has been coauthored by a great number of Members of the Senate.

I ask unanimous consent to have printed in the Appendix of the RECORD several articles and editorials on this subject.

There being no objection, the articles and editorials were ordered to be printed in the RECORD, as follows:

[From the Cincinnati Post of March 3, 1955]

THE CROSS OF IRON

It was President Eisenhower, as he himself recalled at his press conference yesterday, who first suggested the "butter over guns" disarmament plan. He did it in a speech in Washington April 16, 1953, and in that speech he said:

"The peace we seek . . . can be fortified, not by weapons of war, but by wheat and by cotton, by milk and wool, by meat, timber and rice."

Because the rearmament race, as he said, is not a way of life at all, but "humanity hanging from a cross of iron."

Now the "butter over guns" idea at last is getting a concrete use. The Senate Foreign Relations committee will take it up, under the urging of a Democrat, Senator Symington, and enjoined by a Republican, Minority Leader Knowland, to explore and debate it.

In this way, Russia's rulers can be challenged on the good faith of their vaunted peace intentions. Will they divert the resources of their land to the betterment of their people? Or will they stolidly drive on with their feverish production of war weapons, while their people continue to hang from a "cross of iron"?

Good faith, the President said, is essential to any disarmament plan, essential to a peaceful world. Do Russia's rulers have it?

And if they do, they can show it in another way by sending us some of their men of the soil.

We salute the Des Moines Register for bringing forth an idea with great propaganda punch. New Kremlin Bossman Khrushchev said one thing wrong with Russia was that the peasants needed to learn how to grow better corn and hogs.

The Des Moines paper promptly suggested that some Russian farmers be sent to Iowa where corn grows tall and hogs grow fat. They have no secrets to hide.

It's a marvelous idea! In fact, any idea which will permit the Russian people and other people to compare our way of life with theirs is to our advantage.

We have only one suggestion. If any Russian farmers are to be brought over here to learn how Iowans grow corn and hogs, let them be real farmers. They ought to be men our Iowa farmers can understand. Send us no bureaucrats, no men with soft palms!

[From the Washington Daily News of March 3, 1955]

KNOWLAND ASKS HEARING FOR "BUTTER OVER GUNS"

(By R. H. Shackford)

Republican and Democratic Senators today urged full debate and exploration of the "butter over guns" economic disarmament plan.

Senate Republican Leader WILLIAM F. KNOWLAND of California, called for early hearings by the Senate Foreign Relations Committee to examine the proposal for limiting the proportion of a nation's resources that could be used for military purposes.

Senator KNOWLAND is a member of the Foreign Relations Committee. He asked that committee to study the proposal and discuss it with the State Department and other appropriate Government agencies.

The merits and demerits of the plan should be debated, he told the Senate, adding that there might be demerits as well as merits. His emphasis was on getting the subject discussed, and on trying to devise some kind of formula to get the world directed toward more peaceful pursuits.

Senator KNOWLAND spoke on the Senate floor and inserted the full plan, as published last week by the News and other Scripps-Howard newspapers, in the CONGRESSIONAL RECORD after these other developments:

Senator STUART SYMINGTON (Democrat, Missouri), formally introduced a resolution,

embodying the "butter over guns" plan, and urged other Senators to join him in sponsoring it. His resolution asks the President to present the plan to the United Nations, which would try to find a formula for increasing living standards by putting a ceiling on resources that a nation could use on armaments.

President Eisenhower told his press conference that the United States was devoted to the idea of using the world's production for human welfare rather than human destruction.

"We believe in it (the idea) thoroughly," the President said, but warned that any disarmament plan must include implicit assurance that everyone was acting in good faith. The "butter over guns" plan provides for inspection and control.

Mr. Eisenhower said that on April 16, 1953, he had embraced the same general idea in a speech to the American Society of Newspaper Editors. He had deplored the fact that the cold war and defense programs were not a way of life at all, but "humanity hanging from a cross of iron."

"The peace we seek," the President said then, "... can be fortified—not by weapons of war—but by wheat and by cotton, by milk and by wool; by meat, timber and rice."

The President's 1953 suggestion has remained dormant and never was studied or debated in the Senate.

The "butter over guns" plan would challenge the Soviets to devote more of their resources to food, clothing and housing for the oppressed Russian people. If the Kremlin refused and continued to put most of its resources into war industries, its aggressive aims would be unmasked before world opinion.

At the heart of the plan, as now sponsored by Senator SYMINGTON, is the principle that the peaceful or aggressive intentions of a nation can be determined by the way a nation divides its resources. The Soviets allocate only 25 percent to consumers, while about three-fourths of the United States massive production is for consumers' goods.

The Symington resolution points out that Russia, which never disarmed after World War II, "recently announced an increase in its armaments budget and has proclaimed as policy the expansion of arms production and war-supporting industries at the sacrifice of civilian production."

"Low living standards are one of the primary causes for war and improved living standards promote peace," the preamble says.

Aggressive wars, it follows, cannot be undertaken by nations who devote most of their production to promoting the welfare of their people.

[From the Washington Daily News of March 4, 1955]

TWO HUNDRED MILLION IVANS

President Eisenhower and Sir Winston Churchill have given the world a timely reminder—that our quarrel is not with the Russian people but with their Communist masters.

"I think the Russian people, as such, don't want war any more than we do," the President told his press conference. "They want opportunities to advance themselves economically, culturally and, of course, traditionally Russians are very devoted to all the arts."

Sir Winston urged the House of Commons to make a distinction between the Soviet regime and the Russian people—to refer to Soviet rather than Russian threats, to Soviet rather than Russian aggression.

"I have a strong admiration for the Russian people—for their bravery, their many gifts and their kindly nature," Sir Winston said.

"It is the Communist dictatorship and the declared ambition of the Communist Party and their proselytizing activities which we are bound to resist."

Wise words, these. Because our sympathies and hopes are with the Russian people.

If the day ever comes when the Communist conspiracy ceases to rule Russia, let us pray that the Russian people will look on us as friends.

One of the valuable possibilities in a Senate debate on the butter-over-guns disarmament plan is the chance to show the world that the American people would like nothing better than an end of the raw deal the millions of Ivans in Russia have been getting for 37 years.

Such a debate could—

Compare the life of an average American and an average Russian;

Show that our free society spends huge sums to defend itself against communism but still provides a high standard of living;

Dramatize how a slave Communist society disregards human welfare for the sake of piling armed might on armed might;

Disclose that the Soviets have the resources to raise the living standards of their people if they desired;

Challenge the men in the Kremlin to put up or shut up about their professed peaceful motives and concern for mankind.

There are 210 million people in the Soviet Union. But only about 6,800,000 are members of the Communist Party.

That leaves more than 200 million Russians who are the real victims of communism. We in the West are threatened by communism; those 200 million are already in its grasp. They are the people President Eisenhower says "don't want war"—they are those Sir Winston calls brave, gifted and kindly people.

The butter-over-guns disarmament plan offers a way for the Soviets to reverse their economy in favor of the common people—to give them something besides promises.

Senate debate on the plan offers the chance to show that our major interest is more food, more clothing, more houses, more of all the amenities of life for Russia's Ivans—things the Soviet rulers cannot give them if the Kremlin persists in its mad policy of building only war potential.

[From the Washington Daily News of March 7, 1955]

RUSSIA'S PROBLEMS ARE SAME OLD ONES—EXPERT CALLS SOVIET WAR ECONOMY A REAL THREAT

(By R. H. Shackford)

Soviet Russia is a poverty-stricken land—but the Soviet economy is a war economy and has been so since 1928. Soviet concentration on basic economic and military might is without parallel in human history.

That is why the Soviet war economy is a very real threat to us—as big if not a bigger long-range threat than the huge Soviet military establishment.

Those are the conclusions of the State Department's top intelligence expert on the Soviet Union—Mose L. Harvey. They were given in a speech before the fall of Georgi Malenkov, when many were indulging in a dreamy, wishful-thinking disregard of the cold, hard facts.

Those same conclusions are at the heart of the butter-over-guns economic disarmament plan, as published in the Scripps-Howard Newspapers and supported in a Senate resolution by Senator STUART SYMINGTON, Democrat, Missouri, former chairman of the National Security Resources Board.

CHALLENGE

The butter-over-guns plan would challenge the Communist rulers to shift to a peaceful economy after almost 25 years of war economy. All nations would agree to limit the proportion of key, war-vital re-

sources devoted to military purposes and to increase production of consumers goods.

The plan will be discussed on the Senate floor this week when the Symington resolution is referred to the Senate Foreign Relations Committee.

It may be a delightful emotional experience to think that the Soviet regime is cracking because of an internal economic crisis, says Mr. Harvey.

But all the Kremlin's current problems—agriculture, low standard of living, housing shortage, and so forth—are old and chronic ones—as old as the Soviet Union itself.

"In spite of them," the Russian expert told the National Industrial Conference Board "the Soviet system satisfies the requirements of the people on a level to which they are accustomed. . . ."

"(But) if you consider the masses available for employment in the military forces of the Soviet Union and its empire, and allow the possibility of the Soviet government's using the economy of the country almost exclusively to arm these masses . . . we do indeed face a very real Soviet threat."

SINGLE PURPOSE

The Soviet economy is relatively weak—a pigmy compared with a giant—when matched against the United States. But the important fact is that the Soviets use almost all of their economy for war or war preparation.

Mr. Harvey concludes that it is extremely dangerous to believe that Russia's relatively limited economic capabilities could prevent a Kremlin challenge to the United States.

Eighty-four percent of Soviet investments from 1928 to 1953 was for expansion of heavy industry and transportation, the sinews of war. In 1953, 70 percent of all Soviet industrial workers were employed in heavy industry which also accounted for over 70 percent of total industrial production.

The Soviet Union only produces thirty-eight to forty million tons of steel a year compared with our 100 million tons. But the Kremlin can use all but a couple million tons of their steel each year for potential or immediate war purpose—without denying the Russian people anything that they are now getting.

Mr. Harvey cites this most important reason why the United States cannot afford to be complacent about American economic superiority over the Soviet Union.

OUT OF PROPORTION

"The economic base of Soviet military power is far greater than the general economic capabilities of the U. S. S. R. would suggest. This derives from the simple circumstance that the Soviet Government controls production completely and is able to channel it where it will. It invariably has willed to channel it where it would contribute most to military potential."

The Symington "butter-over-guns" resolution urges the United States to take the initiative in economic disarmament, as well as in nuclear and conventional weapon disarmament. A limit on guns doesn't mean much if a nation remains on a war economy.

[From the Washington Daily News of March 5, 1953]

SOVIET POWER STRUGGLE IS IN FOURTH PHASE
(By R. H. Shackford)

Josef Stalin died 2 years ago today, but the struggle for his Kremlin throne still goes on.

The debate and speculation in the West, touched off by his death, still goes on too—did or did not March 5, 1953, mark the end of an era and open a more hopeful one?

It is far too soon for anyone to know. Among the certainties are these:

The power struggle is now in its fourth phase.

The internal debate over heavy industry versus consumers' goods has just zigged again in favor of heavy industry.

The agriculture situation is critical, but Russia is still selling grain abroad for political reasons.

The Kremlin got a lot of credit for more than a year with its peaceful coexistence campaign which is now being permitted to die a natural death. It also won important diplomatic victories in the Far East with this aged propaganda device.

By using weasel words, the Kremlin also fooled part of the West for a while by pretending to shift its economic emphasis away from heavy industry and armaments toward consumers' goods and agriculture. That fraud now has been unmasked.

NO CHANGE

But along with this zigging and zagging at home and abroad, 2 years after Stalin's death finds the Communist conspiracy about where it was in fundamental aims: Ultimate world domination.

Guns over butter, with the Russian people living in a perpetual war economy.

SAME OLD LINE

Meanwhile, Soviet Foreign Minister V. M. Molotov still peddles the same foreign policy line he has trumpeted since 1939.

Molotov is the only man in the Kremlin hierarchy who seems to have weathered the post-Stalin palace revolts.

Beria is gone. Malenkov is deposed. Krushchev and Bulganin are in the saddle today. But for how long?

MALENKOV MYTH

Short as was the Malenkov era, it was long enough for myths to be built around the man.

He was supposed to have a softer approach to the cold war. Yet it was Malenkov who first boasted of the Soviet hydrogen bomb in August 1953.

He was supposed to have a softer approach to Soviet economy. He got an unwarranted reputation for wanting to shift industry from a war to a peaceful basis.

OVERSIGHT

It generally was overlooked that in the same speech in which he urged more consumer goods he also warned the Russian people that heavy industry was the basis of Soviet economy and must have priority.

Malenkov had his chance at Berlin and at Geneva to prove whether his peaceful coexistence words were more than propaganda. They were not. There is no sign that the new rulers are any more sincere.

[From the Washington Daily News of March 8, 1955]

"BUTTER OVER GUNS" GETS ROLLING—THIRTY SENATORS BACK SYMINGTON PLAN
(By R. H. Shackford)

Senator STUART SYMINGTON, Democrat, Missouri—supported by 30 other Senators—today urged the Government to consider the "butter over guns" economic disarmament plan as a new means of proving America's primary interest in peace and human welfare.

Senator SYMINGTON is sponsor of a resolution appealing to the President of the United Nations to explore possibilities of getting all nations to agree to limit the proportion of key resources, such as steel, it uses for military purposes.

The plan, authored by Samuel Lubell, an associate of Bernard M. Baruch, was published in the News and other Scripps-Howard newspapers.

As of the close of business last night, Senator SYMINGTON had 30 bipartisan co-sponsors for the plan, representing all wings of both parties. More signatures were expected on the resolution today before it is

referred to the Senate Foreign Relations Committee.

CHALLENGE TO KREMLIN

In a speech prepared for delivery in the Senate this afternoon, Senator SYMINGTON pointed out that the plan would challenge the Kremlin, which deliberately keeps the Russian people on a poverty level, to devote more resources to butter and less to guns.

"Much of the continuing search for peace and freedom," he said, "lies in lifting the living standards of all people toward those which have been attained in America, instead of having them dragged down to the armed misery of a totalitarian fortress."

NO ILLUSIONS

Neither Senator SYMINGTON nor anyone else has any illusions about the Soviet leaders being willing even to discuss a plan which would turn the Soviet economy back to a peaceful one after 25 years of war economy.

"Rejection of the plan could only mean that sacrifices now being exacted from the Russian people are being exacted in order someday to be able to carry out the carefully planned long-term aggressive intentions and commitments of the rulers in the Kremlin," Senator SYMINGTON said.

Even before today's discussion in the Senate, the Kremlin reacted—as expected. In a Moscow radio broadcast, it laughed at the proposal and denounced it as "eloquent nonsense" and an attempt to hamstring Soviet development.

Senator SYMINGTON pointed out today that the most important step in such a plan would be agreement to limit the use of steel for military purposes—steel being the most important element in a war machine.

In 1950, he said, 1,260 pounds of steel were produced in the United States for each person.

If it could be agreed that no less than X percent of a nation's steel should be allocated to civilian economy, the Senator said, we would be on our way to effective disarmament.

INSPECTIONS

The Symington resolution provides for adequate inspection and control, to avoid cheating. It is based on the principles that low living standards are a primary cause of war, improved living standards promote peace, and that such improved living standards can be reached only if world resources are devoted increasingly to peaceful purposes.

"Since the same resources cannot be used simultaneously for both peaceful and warlike purposes," Senator SYMINGTON said, "a rapid increase in the standard of living in Communist countries would tend to curb their potential aggressive power."

SOVIETS LIKE LUBELL PLAN BUT SHIFT THE BLAME TO US

Moscow Radio conceded today that a government's peaceful or aggressive intentions can be determined by how it apportions its resources.

But it rejected, and laughed off, the butter-over-guns disarmament plan with the usual charge that it was the United States—not Russia—that was using most of its resources for war purposes.

The broadcast ignored the suggestion that the Soviets put more emphasis on better living standards as well as the recently announced increase in the Soviet military budget and the return to Stalin's primary emphasis on heavy military industry.

Soviet Commentator Nikolai Andreyev, however, devoted more than 1,000 words to the butter-over-guns proposal which was published by the News and other Scripps-Howard newspapers and is sponsored in a Senate resolution by Senator STUART SYMINGTON, Democrat, of Missouri.

Referring to irresponsible commentators in the United States, the Soviet commentator said, "One can even get a real laugh out of them. As, for instance, the recent story of Samuel Lubell in the New York World-Telegram and Sun."

Senator SYMINGTON, the commentator continued, decided to make political capital out of Lubell's flight of fancy and is skating on thin ice.

The Soviet commentator not only distorted the plan but twisted statistics to charge that the United States military effort was more than three times greater than Russia's. The facts are that the U. S. S. R.'s direct military budget is about 15 percent of the gross national product compared with 9 percent in the United States. The Soviet budget is going up while the United States budget goes down.

Federal Appropriations for Forest-Fire Control

EXTENSION OF REMARKS OF

HON. ROBERT C. BYRD

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1955

Mr. BYRD. Mr. Speaker, under leave to extend my remarks, I wish to include a statement which I submitted last week to the Appropriations Subcommittee on the Interior. My remarks are in opposition to the proposed reduction of Federal funds for the forest fire suppression and control program. The statement follows:

Mr. Chairman and members of the committee, I am deeply appreciative of this opportunity to express my opposition to any reduction in moneys for the Federal forest fire control fund. It is my understanding that the President's budget would cut the appropriation by \$1,083,690, and I believe that it would be a great mistake to follow this course.

I am not in a position to speak for the Nation as a whole concerning this subject, but I do know something about the problem as it pertains to my State of West Virginia.

West Virginia, being situated in the heart of the Appalachian Mountains, has an extremely rugged terrain that provides numerous watersheds and produces many streams. These meandering streams are the source of the navigable rivers that serve West Virginia and many other States. Most of the slopes are covered with an indispensable form of plant life—trees. These trees produce a sponge on the forest floor that creates a continuous flow of small streams. Other types of vegetation are not consistent to proper land use of these rugged slopes.

Today we are faced with the tremendous problem of fire that is threatening to destroy this vital natural resource and West Virginia, I am sure, is only one of many States that are confronted with this enemy. Progress has been made in recent years in combating this serious enemy to our forests, but not sufficiently to bring the problem under control. Recently, we have experienced serious droughts that have added to the severity of the problem. In 1952 and 1953, West Virginia suffered a forest fire loss of more than one million acres. During the fall of 1952, the southern part of West Virginia was riding on the brink of disaster and, had high winds prevailed during this period,

there is every reason to believe that a loss of human lives and homes would have resulted. Presently, if West Virginia were to experience a severe outbreak of fires, we would be without adequate funds due to heavy expenditures in 1952 and 1953.

United States Weather Bureau records cause some experts to believe that there are more dry years just ahead. Should this be true, we would not be financially equipped to control forest fires.

In view of the fact that more States are increasing their areas of protection and the fact that all of West Virginia's forests are under protection, the Federal appropriations for West Virginia have been on the decline, as shown in the following table:

Federal allotments and State budgets

Fiscal year	Federal allotment	State budget
1955.....	\$136,431	\$200,538
1954.....	136,431	259,974
1953.....	141,379	283,343
1952.....	152,918	325,000
1951.....	163,462	349,023
1950.....	163,462	344,001
1949.....	175,766	232,169
1948.....	193,329	187,180

¹ Estimated.

Mr. Chairman, it would be a serious mistake to follow a pennywise and pound-foolish policy in reducing funds for combating this great enemy of our natural resources. It is imperative that, during the critical days and years ahead, years which will spell the destiny of our Nation in world history, we exert every precaution for the protection of our forests which, in turn, preserve the watersheds and conserve the soil of America. I, therefore, urge the Committee not to reduce this important item, but, rather, that it be increased by \$2 million in order to provide an equitable Federal distribution of funds for the forest fire suppression and control program.

Government Participation in American Shipping

EXTENSION OF REMARKS OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Tuesday, March 8, 1955

Mr. MAGNUSON. Mr. President, residents of inland States who may be inclined at times to question the need for Government participation in American shipping as something in which they have no immediate interest, may be interested to learn of certain facts developed by the research division of the committee of American steamship lines concerning the importance of the American merchant marine to the American farmer and to workers in industry as well.

I ask unanimous consent to have inserted in the Appendix of the RECORD some excerpts from articles in the February 1955 issue of Maritime Affairs, a publication of the committee of American Steamship Lines, with regard to how the farmers and employees of Illinois, Wisconsin, and Missouri industries profit from the services of vessels flying the United States flag.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

FARMERS, SHIPS SUPPLY GLOBAL, OCEAN BREADLINE

American farmers and ocean shipping became partners in the greatest movement of foodstuffs of all times when the international demand for wheat reached its peak during the postwar years, 1945-1953. One-third of the Nation's wheat production left United States farmlands to cross ocean highways bound for Europe, Japan, India and Pakistan during this period.

Farmers in Illinois and Missouri received \$40 million per year for the annual shipments of 20 million bushels they exported during this wheat heyday.

This eight-year overseas breadline bought annual revenues of \$821 million into the United States. This income meant jobs to thousands of farmers, their families and communities. All of this was made possible by ocean shipping.

United States farmers and American-flag merchant ships have teamed up to bring a new leading cash-crop to Illinois and Missouri within the past 20 years.

Soybeans, a product used for centuries in the Far East to do everything from making waterproof varnish for Chinese junks to baking oriental pastries, was almost unknown to the American farmer in the early 1930's.

More money is now earned by Missouri farmers from soybeans than any other crop and Illinois farmers find it their second best revenue producer. Between them, the two States account for from 40 to 45 percent of total United States soybean production. Their 1952 earnings from this crop were \$342 million.

Each year ships carry overseas about \$25 million worth of Illinois and Missouri soybeans. American flagships make an important contribution to farm income.

FORTY MILLION ACRES OF FARMLAND NEEDED FOR FOREIGN BUYERS

Imagine the entire State of Illinois, including cities and towns, being plowed under and converted into one gigantic farm. It would not be large enough to raise the crops and other farm products carried to overseas markets by oceangoing ships in 1953.

It would require 40 million acres of farmland, or 62,500 square miles, to produce the United States exports of farm products in 1953, according to the United States Department of Agriculture. This is an area 4,224,000 acres larger than Illinois.

More than \$11 million in processed milk left Wisconsin, Illinois, and Missouri farms, across ocean trade routes to foreign ports in 1952, it is estimated. Cuba and the far-away Philippines, both ocean islands, imported the bulk of this amount, buying almost all of the evaporated and condensed milk shipped abroad by United States farmers in 1952. Venezuela bought 75 percent of their dried milk exports.

Wisconsin, Illinois, and Missouri produce 20 percent of the Nation's dairy products, with Wisconsin—the leading United States dairy State—alone accounting for half of this combined percentage. Wisconsin's principal industry is processing dairy products. The 3 States combined employ 103,000 men and women in factories producing dairy foods, or 20 percent of the total United States dairy-processing work force.

ILLINOIS STEEL PLANTS GET VITAL METALS FROM WORLD BY UNITED STATES SHIPS

Jobs for 71,000 men and women are created by Illinois' steel industry, where 10 percent of the national output is produced.

Vital to these workers and their families is American shipping. Fifteen essential raw materials must be brought into Illinois by ship from five continents of the globe to operate its steel plants.

Manganese, for example, which goes into every pound of steel produced, comes to this country from ports in India, South Africa, the African Gold Coast, Cuba, and Brazil.

United States needs alloys

America is deficient in more than half of the 20 alloying elements required to produce steel. About a half-dozen imported materials go into the 160 types of steel required by the automobile industry.

Meanwhile, Illinois, Wisconsin, and Missouri all benefit from the steel commodities shipped abroad on American-flag vessels.

LOCAL LEATHER PLANTS NEED GLOBAL NETWORK OF SHIPS TO OPERATE

It takes a global network of ocean-going supply lines to equip the Illinois-Missouri-Wisconsin leather goods industry with the raw materials it needs to meet the demands of the domestic market.

America boasts the most highly developed leather industry in the world, but leather goods manufacturers could not supply United States residents with their yearly 3.15 pair per-capita-consumption of shoes without imports from the 4 corners of the globe.

Two hundred and twenty-two million dollar payroll

Eighty thousand workers in Illinois, Wisconsin and Missouri are earning \$222 million per year in tanneries and leather goods plants, and are therefore directly dependent upon the existence of American-flag vessels bringing in hides, skins, kips and tanning materials from diverse, world-wide sources.

The Illinois-Missouri-Wisconsin area is the home of more than 22 percent of the Nation's leather goods industry. Leather goods plants in these 3 States import over 99 percent of their goat and kid skins from distant sources like India, Pakistan, Nigeria, and South and Central America.

About 55 percent of the sheep and lamb skins they use come mostly from Brazil and Africa.

Twenty-five percent of their calf skins and kips are shipped from India, Pakistan, Canada, France, and Poland. Kangaroo and Wallaby skins are found only in Australia and New Zealand.

Need tanning materials

Domestic sources of tanning materials are almost nonexistent. Chestnut, 1 of the 3 principal sources of tanning fluids, is imported mostly from Italy. Quebracho, the second most popular tanner, is only found in Argentina and Paraguay. Wattle, the third principal source, comes from the mimosa tree and is imported from British Africa, where harvesting labor is cheap.

Leather is a dramatic example of how American-flag merchant vessels serve to bring the world to the doorstep of United States industry.

WHY GOVERNMENT AIDS UNITED STATES SHIPPING

Illinois, Wisconsin, and Missouri residents have a direct stake in the Government parity payment program to shipping because so much of the three State agricultural and industrial output is exported abroad. Imports are as vital to these three States as they are to other sections of our Nation.

To help maintain a modern, strong American fleet so essential to this export and import trade, our Government assists United States shipbuilders and shipowners by sharing with them a portion of building and operating costs under the American flag.

Without this Government assistance, in the form of shipping subsidies, American

ships could not compete with low-cost foreign operators.

The biggest item in ship operation is wages. In 1952, for example, for every \$245 spent by an American operator of a C-2 cargo vessel, a foreign competitor paid from \$41 to \$69 for the same services.

Do not guarantee profit

Government operating payments help to make up this difference and to place American steamship lines on a parity basis with foreign lines. Government payments in no way guarantee an American shipowner a profit. In fact, if earnings permit, the owner is required to repay to the Government a part or all of what he received in subsidy payments.

As history has shown, if American shipowners do not receive Government assistance, American shipping disappears from the seas.

Important Change for Indians

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 8, 1955

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Important Change for Indians," printed in the Devils Lake (N. Dak.) Journal on February 15, 1955, together with a letter signed by John B. Hart, executive director of the North Dakota Indian Affairs Commission.

There being no objection, the editorial and letter were ordered to be printed in the RECORD, as follows:

[From the Devils Lake (N. Dak.) Journal of February 15, 1955]

IMPORTANT CHANGE FOR INDIANS

In June an important transfer will take place that will affect persons on our Indian reservations.

At that time the Bureau of Indian Affairs will relinquish its operation of medical and health services for Indians to the United States Public Health Service, which is under the Department of Health, Education, and Welfare.

It would be difficult to know, at this time, how the new arrangement will work, but it could hardly be worse than the operations of the Bureau of Indian Affairs, which has a record of irresponsibility in practically every field of operation.

It is hard to believe how the public Health Service could be more niggardly in the use of its funds for medical purposes than the Bureau of Indian Affairs.

The Bureau does operate a clinic for the Indians at Fort Totten with a nurse to look after minor medical needs. Reluctantly, it would seem, the bureau picks up the bill for operation of the clinic, under an arrangement with the Public Health Service.

To the Bureau must go the credit for closing the Fort Totten hospital over the objections of the Indians. The action was taken despite the fact that local medical facilities are particularly overcrowded now that the city has but one hospital.

Cases have been reported, in addition, where Indians in need of emergency treatment have found it difficult or impossible to get the Bureau to accept financial responsibility. Hagglng has resulted between the Indian agency and the welfare

agencies of the State, who naturally have no jurisdiction in Indian matters.

Humanitarianisms on the part of the hospital and medical profession has prevented loss of life in at least one case. There can be no justification for such a state of affairs in a country where people place great value on even one human life.

Congress, which has many precedents for conducting investigations, should probe the operation of the Bureau of Indian Affairs in an attempt to find out who actually is benefiting from its operations.

Perhaps the Bureau, in an attempt to show the inadequacy of Federal jurisdiction over the Indians, believes that apathetic administration of its duties will convince the public that it would be better for the States to take over.

In many other fields, however, where the Federal Government has no particular business, it is ever willing to encroach on the rights of the States. Operation of the Bureau of Indian Affairs would seem to indicate the Federal agency wants to drop the reservations and their residents like a hot potato.

Let the Bureau come forth with a construction program for making the Indians self-supporting, in order that the States will not be left with the welfare bills, and it will come in for less criticism. You just don't solve a problem in the traditional Army pattern of "passing the buck."

NORTH DAKOTA INDIAN

AFFAIRS COMMISSION,

Rolla, N. Dak., March 1, 1955.

HON. WILLIAM LANGER,

Senator from the State of North Dakota, Senate Office Building, Washington, D. C.

DEAR SENATOR LANGER: Attached herewith you will find an editorial from the Devils Lake Journal under date of February 15, 1955 entitled "Important Change for Indians."

The thought occurs to me that it might be worth your while to insert this editorial in the CONGRESSIONAL RECORD. It would certainly please the publisher of the Devils Lake newspaper and it would be adding a little heat to this entire medical care program. It might also add a little heat on this law enforcement program. If not, it might be a good idea for you to send the editorial to Mr. Emmons, Commissioner of Indian Affairs, asking him for his comments on the subject. I would certainly appreciate any correspondence you would have on the subject.

Sincerely,

JOHN B. HART.

Egypt-Israel Relations

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 28, 1955

Mr. MULTER. Mr. Speaker, I direct the attention of our colleagues to the following bulletin of the Israel Office of Information. In view of the current situation, I believe it to be of vital interest to our colleagues.

EGYPT-ISRAEL RELATIONS

A. INTRODUCTION

1. Egypt's attitude toward Israel has taken a sharp turn for the worse in the course of recent months. Tension has risen to new heights. The lives and property of

Israel's citizens have been attacked with increasing frequency. Egypt has persisted in its attitude of contempt for the resolution of the U. N. Security Council of September 1, 1951, and stubbornly refuses to release the Israel freighter, *Bat Galim*, and allow it to proceed through the Suez Canal. Threats by Egyptian leaders against Israel have continued with growing violence. The execution of two Jewish defendants in the Cairo trial, in spite of pleas for clemency from all over the world, has further exacerbated the situation. The latest instance of Egyptian recklessness took the form of a raid into Israel territory at the end of February 1955. The raiding party penetrated as far as the town of Rehovot, 18 miles inside Israel territory, where on February 25 they murdered an Israel civilian from ambush. The same band operated in the vicinity of Rehovot for a few days. Its tracks were found clearly leading back to the Egyptian-controlled Gaza territory.

2. When the regime of King Farouk was overturned in the summer of 1952 by the revolutionary council led by General Naguib, the then Israel Prime Minister David Ben-Gurion, publicly expressed Israel's readiness to cooperate with the new regime. In a public statement on August 18, 1952, Mr. Ben-Gurion declared:

"Israel wishes to see Egypt free, independent, progressive. There were no grounds, nor are there now, for any quarrel between Egypt and Israel. There is no cause for territorial disputes, nor any reason for political or economic problems. We have no enmity against Egypt for what was done to us 4 years ago. We have never sought to exploit Egypt's political difficulties with a great power by attacking her or taking revenge upon her, as she did upon the establishment of our state."

3. These friendly overtures which have been frequently repeated, have brought no response. Indeed, the record of recent months indicates a growth in Egyptian hostility and a deliberate rejection of a policy of reconciliation.

B. BORDER UNREST GROWS

4. Between September 1954 and February 1, 1955, Egypt has been condemned on no fewer than 27 occasions for violations of the Israel-Egypt Armistice Agreement, including armed attack, murder, and sabotage. Repeated warnings by the Mixed Armistice Commission to Egypt to put a halt to these acts of aggression have had no effect.

5. In the period between August 1954 and February 1955 the Egyptians were responsible for 9 cases of sabotage and 34 armed clashes in Israel territory, in addition to numerous cases of illegal border crossings and plunder. The main targets of sabotage were the pipelines bringing water to the southern part of Israel on which all the settlements in the area depend for their very existence. The pipelines were blown up on four occasions causing considerable damage.

6. On January 21 an Egyptian army unit drove up to the armistice line and took up firing positions. Part of this unit crossed the frontier and attacked an Israel military post. Of the 3 Israel soldiers on duty, 1 was killed and 2 wounded. The Egyptians retreated only on the approach of Israel reinforcements. On January 24 the Israel-Egypt Mixed Armistice Commission condemned Egypt for this attack. The Commission's resolution was worded as follows:

"Decides that this aggressive action carried out by a unit of the Egyptian army is in flagrant violation of article II, paragraph 2 of the General Armistice Agreement with Egypt;

"Notes with extremely grave concern this aggressive action and calls upon the Egyptian authorities to terminate these aggressive acts against Israel."

7. Only a few hours after this resolution was passed, on the night of January 24, an armed band crossed the frontier into Israel from the Gaza strip and penetrated 4 miles into Israel territory, attacking the settlement of Ein Hashlosha. Two of the settlement's plowmen were ambushed, one killed and the other wounded. Three days later, Egypt was again condemned by the Mixed Armistice Commission for this act of aggression and the Commission passed the following resolution:

"Notes with grave concern the serious situation prevailing along the Gaza strip, resulting from these repeated attacks;

"Notes once again with extremely grave concern, that despite obligations imposed upon Egypt by the General Armistice Agreement and a number of Mixed Armistice Commission resolutions, these penetrations and killings of Israel citizens have not been terminated;

"Calls upon the Egyptian authorities to put an immediate end to such aggressive acts."

8. The incidents in January were the continuation of a long series of incidents which had been increasing in number and gravity in the latter part of 1954. As early as October 2, 1954 the Mixed Armistice Commission, in condemning Egypt for the murder of two Israel farmers on September 20 near Migdal Ashkelon, had called upon Egypt "immediately and finally" to put an end to these acts of aggression. Since January 1955 the incidents have continued despite the demands of the Mixed Armistice Commission that Egypt refrain from continued aggression. On February 1, 1955 fire was directed from Egyptian positions against an Israel patrol, and once again, Egypt was condemned by the Mixed Armistice Commission. The following day Egyptian soldiers fired at a member of an Israel border settlement at work in the fields. Later in February, an armed band was intercepted by an Israel patrol at Yad Mordecai in Israel territory. On February 25 two Israel police cars were fired at in Israel territory near Yavne. The same day, an armed band from the Gaza strip killed an Israel citizen near Rehovot, deep inside Israel's territory. Throughout this period illegal border crossings for the purpose of theft, espionage and illegal harvesting continued unabated.

C. ESPIONAGE, SABOTAGE BY INFILTRATORS

9. Egyptian Army Intelligence officers have been systematically organizing marauders who are sent into Israel, apparently from the Gaza strip, for purposes of espionage and sabotage. At the end of September 1954 a group sent to commit sabotage was caught after it had sniped at farmers and blown up houses in a border settlement. In December 1954 four youths were caught trying to gather military information in Israel. They admitted they had been trained and sent by Egyptian officers in Gaza.

10. Despite condemnations by the Mixed Armistice Commission, repeated well-organized military operations have taken place against the vital water pipeline to the Negev, Israel's arid southern area. For the second time within a month, the main pipeline near Nir Am was blown up with TNT on September 7 by a group of trained saboteurs. On October 25 a similar attack on the pipeline near Mefalsim took place.

11. Noting the serious damage incurred, the Mixed Armistice Commission on the latter occasion emphasized its "great concern over the repeated acts of planned demolition on main water pipelines in Israel by well-trained, organized, and armed groups coming from Egyptian-controlled territory."

12. Attacks on the Negev pipeline have not ceased. In December 1954 the pipeline near Uza was blown up. The Egyptian authorities

have taken no steps to prevent the continuation of these planned attacks.

D. THE CASE OF THE "BAT GALIM"

13. On September 28, 1954 the Israel freighter *Bat Galim*, carrying a cargo of tinned beef, hides and plywood en route from Eritrea to Israel, was detained by the Egyptian authorities at Port Tewfik at the entrance to the Suez Canal. In an attempt to justify this illegal action, the Egyptian Government charged the crew of the *Bat Galim* with having committed various crimes in Egyptian territorial waters, ranging from trespassing to the killing of Egyptian fishermen.

These allegations were put forward not only to explain the detention of the vessel, but also to justify the detention of its ten crew members in a military prison under inhumane conditions, and the confiscation of the ship's treasury and cargo.

14. Investigations by United Nations Military Observers of the Egyptian-Israeli Mixed Armistice Commission, carried out at the request of the Security Council of the United Nations, proved the complete falsehood of these allegations, and, as a result, the Egyptian Government was forced to withdraw the charges, even from its own courts, and to release the crew. The *Bat Galim* and its cargo are still held by Egypt.

15. At meetings of the Security Council of the United Nations held on January 4 and January 13, 1955, Egypt's attitude was severely criticized by the majority of representatives. Ambassador Henry Cabot Lodge, on behalf of the United States, said: "we cannot fail to state our view that Egyptian restrictions on ships passing through the Suez Canal whether bound to or from Israel, or whether flying the Israeli or some other flag, are inconsistent with the spirit and intent of the Egyptian-Israeli General Armistice Agreement, contrary to the Security Council resolution of September 1, 1951, and a retrogression from the stated objectives to which both sides committed themselves in signing the armistice agreement."

16. Under the Charter of the United Nations, decisions of the Security Council, as distinct from recommendations of the General Assembly, are binding upon all members. Egypt, by flouting the Security Council decision of September 1, 1951, which called upon her to terminate the restrictions on the passage of international shipping and goods through the Suez Canal wherever bound, and to cease all interference with such shipping has consistently and deliberately violated the charter which she signed in 1945. The records of the United Nations contain no parallel to this willful and persistent defiance of the Security Council.

17. On January 13, 1955, the President of the Security Council, Sir Leslie Munro of New Zealand, summed up the wish of that body to see the *Bat Galim* released through the Suez Canal within the context of the 1951 resolution. Egypt has to this day ignored this expression of international opinion.

E. CAIRO SENTENCES SHOCK WORLD OPINION

18. While assaults increased against Israeli citizens, and Egypt persisted in her defiance of United Nations' wishes concerning the *Bat Galim*, 12 Jews were charged with espionage on behalf of Israel before a military court in Cairo. During the trial, the defendants testified that torture had been used to extract confessions from them. One defendant, Elias Cremona, died under torture before coming to trial; another, Max Bennett, committed suicide during the trial; a third, Victorine Nino, threw herself from a window during pretrial interrogation, but survived; the French Consul-General in Cairo, who attended all sessions of the trial, reported that the body of one of the defendants, Moshe Marzouk, a French citizen, bore

the marks of the brutal treatment he had received during the interrogation.

The crimes of which these people were accused were described in the London Times as "too amateurish to be taken seriously." Mr. Roger Baldwin, chairman of the International League for the Rights of Man, who was in Cairo during the trial, described the charges of espionage and sabotage as "childish and irrational."

19. On January 27, 1955, 2 of the defendants, Moshe Marzouk, a physician, and Shmuel Azar, a schoolteacher, were sentenced to hang; 2 defendants were given life terms, and 4 others long sentences. The death sentences, which were confirmed by Colonel Nasser, the Egyptian Prime Minister, were carried out on January 31 despite pleas for clemency from all over the world and from all quarters, including the Secretary General of the United Nations, the Governments of the United States and France, the Latin American delegations to the United Nations, and prominent individuals the world over.

20. Condemnation of the brutality of these sentences was worldwide. The Washington Post (February 4) called the hangings judicial lynching and described them as representing the lengths to which the Egyptian Government would go in its desperate effort to retain the seniority of the Arab bloc. The New York Herald Tribune of February 1 said: "The hasty executions stemmed as much from political conditions as from the demands of justice." Mr. Baldwin stated that "the conclusion is inescapable that the executions were ordered for political reasons, despite prior private official assurances of leniency."

F. CAIRO THREATS CONTINUE UNABATED

21. In this recent period marked by growing border unrest, Egyptian defiance of the U. N., and disregard of world opinion in regard to the mock trial in Cairo, Egyptian leaders and official publications have maintained their anti-Israel propaganda offensive. Not only is all prospect of peace rejected, but threats against the very existence of Israel are made.

22. An editorial in *Al Gomhouria*, official mouthpiece of the regime, stated recently: "Egypt and the Arabs must turn in the name of humanity and its culture to all nations of the world who will aid in wiping Israel off the face of the map because of its barbarism" (October 15, 1954).

The following statement was made on Saut El-Arab (Voice of the Arabs), the official broadcasting station:

"Egypt sees Israel as a cancer endangering the Arab people. Egypt is the physician who can uproot this cancer. Egypt does not forget that it is her obligation to take revenge, and she is mobilizing all her forces in anticipation of the hoped-for day" (November 16, 1954).

23. Recent statements by Maj. Saleh Saleh, Egyptian Minister of National Guidance, stress the refusal to make peace under any circumstances. Speaking to visiting Syrian journalists in connection with Egyptian armament plans, Saleh said:

"Egypt's policy has not ceased to rest on the principle of 'no peace with Israel' in any form and at any time. Egypt will not make peace with Israel even if Israel were to implement the U. N. resolutions on Palestine" (December 27, 1954).

Again, in similar vein, Major Saleh stated to another group of visitors on January 9:

"Egypt will strive to erase the shame of the Palestine war even if Israel should fulfill the U. N. resolutions. It will not sign a peace with her. Even if Israel should consist only of Tel Aviv, we should never put up with that" (as quoted in the Manchester Guardian, January 28, 1955).

Appendix

Fort Dix

EXTENSION OF REMARKS

OF

HON. T. MILLET HAND

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. HAND. Mr. Speaker, Mr. Anthony J. Volpe, who had distinguished combat service in World War II, and was severely disabled therein, is presently the county service officer of the Cape May County (N. J.) Veterans Bureau. He recently made a very thorough inspection trip at Fort Dix and his extremely interesting report on that visit is herewith included for the information of the Congress.

The report follows:

CAPE MAY COUNTY VETERANS' BUREAU,
Cape May, N. J., February 21, 1955.

HON. T. MILLET HAND,
Second Congressional District,
State of New Jersey,

Washington, D. C.

DEAR MR. HAND: Sometime ago I communicated with the Public Information Office at Fort Dix, N. J., requesting an invitation to conduct an impartial objective survey among the troops regarding questions of military pay, military housing, legislation which is before the 84th Congress, how the average GI in all grades felt about our international circumstances, what they thought of the army generally, etc. Also this survey was made by the undersigned to determine or evaluate and observe physical fitness, discipline, tactical teaching, quality of weapons, and usage, morale of troops, alertness of troops, psychological adaptability to army life, instructors and quality of instruction, food, special services, etc. The PIO Office at Fort Dix graciously granted my request and invited me up to Fort Dix to conduct this survey as a public relation and liaison. On February 14, 1955, I arrived at Fort Dix and reported to the PIO Office, and arrangements were made for me to be quartered in the officer's guest house, and a copy of training program for the 14th and 15th of February was placed at my disposal. Further Capt. Hamrick, PIO officer, assigned Lieutenant Young of his office as my guide around the training areas of Fort Dix including observation of housing, kitchens, hospital, service facilities, and religious facilities. The cooperation I received from the PIO Office, gave me a proud feeling of respect for that particular office and allowed me to observe the excellent ability and functions of Captain Hamrick, Lieutenant Young, and their staff.

It is my request and desire that you make the following report a part of the CONGRESSIONAL RECORD so that your colleagues and others concerned may have the benefit of the contents of this report.

Lieutenant Young and I proceeded to one of the training regiments in the field on one of the rifle ranges. With 8-week recruits, I began my objective survey and the following questions and answers on remarks made:

1. "What do you feel to be a sufficient military pay raise?" Ninety percent of the men questioned during this entire day on this question answered, "We think a 10-percent raise in military pay to be fair and adequate." Others replied, "We'd be glad to get whatever we can."

2. Question asked, "Do you go to religious service more since being in the service than you did in the civilian life?" Eighty-five percent of the men questioned said "Yes." On this score official records in the P. I. O. office show that the 13 chapels at Fort Dix show an attendance of 324,069 worshipers during 1954. This is an amazing attendance record and a definite credit to the chaplains and to the commanding general of Fort Dix. This in itself should show the parents and the average civilian that men in the service are more religiously inclined than in civilian life. I would like to add that during 1954 the troops of Fort Dix voluntarily contributed \$40,000 to charitable civilian purposes.

3. Question asked of noncommissioned officers and field grade commissioned officers, "Do you feel that the new army of these recruits show a tendency toward sufficient and proper discipline?" The majority replied that "discipline is nowhere near to what it should be." I then asked what they thought some of the reasons for this lax in discipline might be. Some remarked, "It is difficult to discipline a young man entering the service today when discipline in civilian life had been lax and also that the new trainee has too many avenues of redress," a great many of which are abused by the serviceman. For example, a new man in his first 8 weeks of basic training must undergo an entirely different change of environment and adaptation which is admittedly somewhat difficult. These factors are considered by troop commanders and field instructors. However, the men themselves feel the restrictions and are too prone to write aggravated letters home, and as a result of these letters the parents immediately wish to contact their Congressman or the commanding general of the base. Upon this question my survey finds that many noncommissioned officers and field grade officers have been embarrassed by such intervention by parents and congressional inquiries. The consensus of opinion among the line grade noncommissioned officers and troop commanders is that they feel that their primary mission in training new troops is to teach and discipline them so that these men will remain alive in combat and participate in the success of any military mission. Unless the ideology of rugged training and discipline and fair and adequate authority to noncommissioned officers and troop commanders is reinstated, we shall suffer not only a greater amount of casualties on a potential battlefield but we shall have an army with manpower but without discipline. I thought that this was an important matter to bring to the attention of the readers of this report.

Another question asked was: "Do you think that servicemen should have free postal or mailing benefits restored?" All personnel questioned answered "Yes." This free or postal mailing benefits represents one of several fringe benefits that Army or Armed Forces personnel have lost since World War II.

4. Question asked, "Do you believe that wartime veteran benefits should be retained so long as an international crisis such as we

face in the Far East is apparent?" Sixty percent of the men questioned answered, "Yes," 40 percent answered, "No."

5. Question asked, "Are you a high school graduate?" Approximately 75 percent indicated that they either had 3 years of completed high school or a high school diploma. Those that were not high school graduates expressed the fact that they did have an opportunity to continue or complete high school in the military service.

6. Question asked, "Do you think the civilians generally show sufficient or proper respect to members of the Armed Forces?" Seventy percent of the men questioned answered "No." 30 percent answered "Yes." Those that answered "No" were asked why they felt this way. Some of the remarks were as follows: "We are basically a non-military country. The average civilian is not basically interested in servicemen or legislation for servicemen unless they as individuals have a member of their family in the military service."

7. Question asked of both enlisted men with dependents, NCO's, and commissioned officers, "Do you think that service housing for dependents is adequate?" The answer was over 95 percent "No." After asking this question I then requested my PIO officer guide to take me to some of the NCO quarters, officer's quarters, guest homes, and dependents' housing. Without any reservation it is very obvious that these quarters are very poor, inadequate, poorly heated and ventilated, and most of them consist of old World War II temporary barracks. One large housing area for officer personnel and their families is a former old original station hospital of Fort Dix. This would be a very interesting and enlightening factor to witness by members of the House Armed Forces Committee and Members of Congress, and I am sure that after they saw these conditions they would readily understand why veteran NCO's and field grade officers are leaving the military service on a greater scale every year. The housing situation outside of post in and around Fort Dix is almost ridiculous. However, on a lighter side of this picture, in 1954 there were 55 modern steel and masonry buildings built by civilian contractors at Fort Dix. Twenty-three of these buildings were company-sized barracks which house an entire infantry company with modern heating and ventilating, kitchen and recreation facilities. One of these new buildings was built for a regimental headquarters. Twelve were made into regimental classrooms. One new building was built as a firehouse; 5 as maintenance shops, and 1 as a boiler central control house. There is a joke amongst the regiments still housed in the old ramshackled World War II temporary buildings that the one regiment housed in these modern barracks were known as the "Hollywood Regiment." These 55 new buildings represent a step in the right direction. However, the allocation of funds for Fort Dix for more of these new barracks is very limited and there should be some study made for the purpose of increasing the funds for Fort Dix. We must remember that Fort Dix has approximately 40,000 troops. A considerable number of these troops are married personnel. We should also consider the fact that Fort Dix is a permanent military installation with very few permanent-type buildings. We should consider too, that Fort Dix maintains a training division status.

The new inductees receive their very first impression of the military service while at Fort Dix. Certainly this impression of military facilities cannot be considered by these men as favorable. A very important fact to consider is that the commanding officer and his staff, the personnel of the public information services, the chaplain services, the special services office, and primarily the NCO's, the field grade officers, who must care and train these men, are doing an excellent and commendable job in spite of the fact that they themselves are not properly or adequately taken care of. It was amazing for me, as an observer, to note and to listen to and sense the feeling of pride that the NCO's and troop commanders have in their particular positions. They show a valid desire to do such an effective job to save men's lives and ready them for war that all of us concerned can feel justly proud and privileged to have such men in the military service. The entire staff, from the commanding general, down to the NCO in the field, have a feeling and a desire to express and recommend to the parents of these young men that they, in order to do a job to their young sons properly and to insure that these young men will survive combat, that they honestly and objectively feel that too many ties and too much interference is detrimental to their own sons and daughters. It must be appreciated that these men must be converted from ordinary civilians to fighting men in a short space of time. The value of discipline here in training camps spells the difference of life and death or success or failure in a combat military situation.

Emphasis is being reinstated on physical fitness and stamina of these troops in training. The tactical training being given at Fort Dix is excellent. Fort Dix has a program, nighttime combat operation training, which will ready our young men to fight offensively during the dark hours. We saw with much misgivings and casualties in the Asiatic theater, in both World War II and Korea, that the Asiatic was more adept at night fighting than we were. I was especially glad to see at Fort Dix that night combat operational training is a must factor there and that it is proving to be some of the best training our men are receiving.

Psychological training: The command at Fort Dix has instructed a phase of psychological training which will certainly help the combat soldier to combat the ideology and the propaganda of potential enemies.

SUMMARY

In summation, my observations at Fort Dix resulted in the following:

1. That as a retired ex-infantryman and as a taxpayer I am extremely proud of the entire command of Fort Dix and I can objectively say that from the commanding general on down to the line officer and NCO, these men are doing an excellent job in spite of hardships and poor facilities as outlined and remarked above. Fort Dix should be considered a great asset to the Department of the Army.

2. There should be an objective survey by Department of Army officials and congressional officials into the need of better housing and facilities at Fort Dix. A movement should be initiated at Fort Dix to make a reality of its permanent base status by eliminating as many of these temporary old World War II units as possible. This can be accomplished by increasing the amount of funds for buildings and facilities for Fort Dix.

3. That there should be some type of educational program whereby the Department of the Army can impress upon the parents and taxpayers of our country that their primary mission is to train men in order to survive. This factor can be assisted by returning the authority and prestige to the line grade NCO's, and field grade commissioned officers.

4. The House Armed Forces Committee or any other congressional committee may indicate by their favorable action on service-men's legislation that they do care and are interested in the welfare of service personnel and their dependents, to a greater extent.

5. Letters of appreciation or any other commendable communication should be forwarded to troop commanders and others of their staff for the fine work that they do.

In conclusion may I add that I have in this survey, compared my World War II training and discipline with the so-called new army and I honestly find that the only reason that I survived combat and many subsequent surgical operations was because I had had good training, good stamina, and a profound pride of military service. If this can be incorporated into the new men of our present army, we should have nothing whatsoever to fear.

Respectfully submitted,

ANTHONY J. VOLPE,
County Service Officer.

Tenth Anniversary of Capture of Remagen Bridge

EXTENSION OF REMARKS OF

HON. BROOKS HAYS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1955

Mr. HAYS of Arkansas. Mr. Speaker, I wish to comment briefly on the significance of the 10th anniversary of the capture of the Remagen Bridge on March 7, 1945. This was one of the heroic acts which turned the tide of battle during World War II. I quote from the Washington News of March 9, 1945, the report sent by C. R. Cunningham, United Press war correspondent:

Victory is in the air on this side of the Rhine, where American troops hit the pay dirt of Germany.

It can't be told yet how the Americans crossed the Rhine, but it took only 15 minutes to get at least one company of infantry to the eastern side yesterday afternoon.

The crossing was a case of spotting an opportunity and grabbing it. Maj. Murray Deevers, of Hagarville, Ark., ordered his men across and the company swept into inner Germany.

An earlier dispatch from Cunningham had reported that a Second Lieutenant Burroughs and 1st Lt. Carl Timmerman, of West Point, Nebr., spotted the opportunity and flashed the word to battalion headquarters where Lt. Col. Leonard Engemann, of Minnesota, made the historic decision.

It is with understandable pride that I mention the outstanding contribution made in this historic advance by the late Maj. Murray Deevers, of Hagarville, Johnson County, Ark., at that time within the Fifth Congressional District which I have the honor to represent. Johnson County is now a part of the district represented by our able colleague Mr. TRIMBLE.

I am sure that the Members share my feeling of deep appreciation for the service of Major Deevers, and those associated with him who contributed so much to the defense of our country.

Civil-Service Retirement Fund

EXTENSION OF REMARKS OF

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

January 25, 1955

Mr. REUSS. Mr. Speaker, a recent publication of the National Planning Association called the Budget in Transition, contains important material bearing on the civil-service retirement fund.

HANDLING THE GOVERNMENT'S SHARE OF THE COST OF THE CIVIL-SERVICE RETIREMENT FUND

For many years Federal Government employees and the United States Government have shared the cost of a retirement and disability plan operated through the civil-service retirement fund. From 1929 through 1953 the budget included an allowance for the Government's contribution to the cost of the system; appropriations were made, and the amounts involved were recorded as a Government expenditure. They were added to the total deficit as reported on the administrative basis.

The amount appropriated for many years was a compromise figure—below true actuarial cost and above the cost of current benefits and payments and for this reason and others, the liability of the Government not represented by appropriations has grown to a figure in excess of \$10 billion. This led to proposals for a reconsideration of the policy of financing the retirement fund, and studies of various possibilities have been going on for some time.

Because a policy had not been worked out, Congress has refused to make appropriations for the fiscal years 1954 and 1955 in line with the pattern established during the previous 30 years of the system's life. The appropriation would have been \$368 million in fiscal 1954 (President's budget message for 1954, p. M52) and a somewhat greater amount in fiscal 1955, roughly about \$390 million.

For fiscal year 1956, on the old basis, the figure would have been still greater, roughly about \$416 million, but the President suggested (message for 1956, p. M82) only \$216 million. These figures exclude certain cost-of-living increases for workers who have already retired, which have continued to be appropriated each year.

The failure of Congress to appropriate the amounts involved reduced the accounting totals of expenditures and the deficit. It has no effect on payments to retired employees but it allows the Government's unfunded liability figure to grow faster than would otherwise have been the case.

Highlights of changing policy with regard to the appropriation for the civil service retirement fund appear in the budget messages sent by the President to the Congress during the past few years. In the message on the 1953 budget, the President said (p. M75):

"The cost of civilian employee's retirement benefits is financed by contributions from the employees and the Government. By law, Federal employees covered under the system are required to contribute to a trust fund 6 percent of their salaries, and the Government is required to contribute an amount sufficient to cover the remaining cost of benefits.

"The Government contribution for the fiscal year 1953 consists of a normal contribution of 2.78 percent of payroll to pay currently accruing costs, and a deficiency contribution to pay interest on and provide for amortization of the Government's accrued liability to the fund.

"This liability results from employees' services rendered prior to the effective date of the system, credits for military service, and insufficient appropriations for the Government contribution in some years. This budget includes \$458 million for the annual contribution to the Government for the fiscal year 1953 to the civil-service retirement and disability trust fund, \$148 million more than in the current fiscal year.

"This estimate takes into account the higher benefits for future annuitants which will result from a recent advance in the pay rates for Government employees.

"It also provides for the first of 30 annual payments to amortize the Government's accrued liability to the fund so that the retirement system eventually will be financed on a full reserve basis, as is contemplated by the Retirement Act."

Congress questioned the program suggested by the President and established a committee to report on the problem. It appropriated \$324 million for 1953, however, which represented a continuation of past Government policy.

In the message on the 1954 budget, the President said (p. M52):

"I am recommending appropriations of \$427 million to cover the Government's obligations to the civil service retirement and disability fund and \$3 million to pay annuities under special laws.

"The Government's obligations to the civil service retirement and disability fund include \$59 million to cover the cost for 1953 and 1954 of the temporary increase in benefits voted last summer for persons then receiving annuities from the civil-service retirement system, and \$368 million for its contribution as employed for the fiscal year 1954.

"The amounts I am recommending do not provide for payments on the Government's outstanding liability to the fund, since this is one of the problems to be studied by the Committee on Retirement Policy for Federal Personnel recently established by the Congress."

Congress failed to appropriate the amount requested by the President, waiting instead for the report of the committee that it had established.

In the message on the 1955 budget, the President said (p. M101):

"An appropriation of \$30 million is recommended to permit the continued payment to retired Federal workers of temporary cost-of-living increases as authorized by the Congress in 1952. The budget also includes \$2 million to pay annuities under special laws.

"The civil-service retirement system is financed jointly by employee contributions and appropriations by the Government. The Congress, at its last session, however, did not appropriate for the Government's payments to the fund. The resumption of these payments is not included in this budget.

"Recommendations for financing this system as well as other retirement programs for Federal personnel will be determined after the Committee on Retirement Policy for Federal Personnel completes its study and reports to the Congress on or before June 30, 1954."

No appropriation was requested for the fiscal year 1955, and none was made.

In the message on the 1956 budget, the President said (p. M82):

"The civil-service retirement and disability system should be financed on a more satisfactory basis. Employees now contribute 6 percent of pay, covering about one-half the currently accruing cost, and the Government is responsible for the rest of the cost.

"In the past the Government's share of payments to this fund has not been provided on a consistent basis and in the last 2 years appropriations have been deferred

pending the report of the Committee on Retirement Policy for Federal Personnel.

"The Committee's report to the 83d Congress establishes the necessity for a sound and lasting financial basis for the civil-service retirement system. Financing of the civil-service system is a problem requiring careful consideration because of its importance to the Federal career service.

"For 1956 I am recommending a Government contribution of \$216 million, which is estimated to be the difference in that year between the Government's share of current benefit disbursements and the interest earned on its part of the fund. This will serve to maintain at its present level the equity the Government already has built up in the fund through its past contributions."

A table showing the figures on appropriations to the civil-service retirement fund by the Government on the basis of policy decisions existing in 1953 and prior years, compared with actual and proposed appropriations, is set forth below:

[In millions of dollars]

Year	Old basis	Actual and proposed	Difference
1952.....	310	310	0
1953.....	398	0	398
1954.....	1,390	0	390
1955.....	1,416	216	200

¹ Estimated.

The estimates for 1955 and 1956 are rough projections based on the figures used in 1953 and prior years. They are lower than the estimated \$794 million level premium cost to the Government, carried in the tables of the report of the Committee on Retirement Policy for Federal Personnel which was submitted to the 83d Congress on June 29, 1954. Included in the level premium cost are amounts necessary to put the system on a self-sustaining basis.

The Achievement of a Just Peace

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1955

Mr. MULTER. Mr. Speaker, the joint commission on social action of the Union of American Hebrew Congregations and the Central Conference of American Rabbis recommended to the 43d general assembly of the Union of American Hebrew Congregations concerted action on various problems.

Although I was unable to attend the convention, I heartily endorse the recommendation of the commission, of which I am honored to be a member, as well as the action of its parent body in adopting the following statement:

THE ACHIEVEMENT OF A JUST PEACE

(A statement of principles adopted by 43d general assembly of the Union of American Hebrew Congregations in Los Angeles, Calif., February 14, 1955, upon recommendation of the commission on social action)

The quest for peace has been stamped indelibly upon the character of Judaism. Our prayers and hopes have always been directed toward the achievement of peace for all humanity. At a time when war was the normal relationship among the nations of the

world, the prophets proclaimed the vision of universal peace. From its earliest beginnings, Judaism has praised the peacemaker, condemned the warmonger; indeed, the early rabbis forbade Jews to traffic in the instruments of war. The majestic dream of a time when nation shall not lift up sword against nation, neither shall they learn war any more, has been an essential element of Judaism's heritage to all mankind.

As heirs of the great religious tradition which conceives of its ultimate goal as the establishment of the Kingdom of God on earth, we rededicate ourselves to the goal of universal peace. We confront the modern threats to peace, symbolized by the awesome power of thermonuclear weapons, with deep anxiety and concern but with undimmed faith in the even mightier power of God and man.

Only when there is a universal will for peace, can peace be achieved. In a world divided into two mutually hostile spheres, tensions inevitably develop, poisoning the very atmosphere of international relations. We recognize that aggressive communism is primarily responsible for this division and for many of the tensions threatening world peace.

That Communist imperialism is the chief threat to world peace does not, however, absolve the United States from the heavy responsibility of constantly examining our own policies and conduct to make sure that we do not, in discouragement and frustration, weaken in our determination to build a peaceful world. As Americans and as Jews, drawing upon our religious experience and insights, we must urge our Nation to intensify its positive efforts and to repudiate certain tendencies which in themselves constitute impediments to the achievement of world peace.

Accordingly, we urge—

1. That the United Nations be made in deed as well as in word the cornerstone of United States foreign policy. There is little doubt that the prestige and influence of the United Nations have been weakened by a tendency to bypass it, or to fail to make full use of its machinery in crucial matters. Our task must be to strengthen the United Nations. We believe that such strengthening requires the United Nations to become truly a world organization which it cannot be until it becomes a council of all nations. We darken the hope of world peace when we neglect the United Nations, disparage its values, and especially when we give vent to irresponsible threats to withdraw from this assembly of nations.

2. That the United States not yield to despair in the search for universal peace. We must not fail to pursue every path, to consider openmindedly every proposal, that might lead in the direction of easing world tension. We take pride in United States sponsorship of the uniquely generous Baruch plan for control of atomic armaments. But we are aware that this plan has been dead for years. We warmly commend President Eisenhower for his imaginative proposal for an atomic pool for peacetime purposes, and for our country's contribution of fissionable materials for peaceful uses. The United States should similarly seize the initiative in the quest for universal disarmament. Until a workable, realistic program of world disarmament is in force, however, the United States must continue, in concert with other free nations to maintain its military strength, including its atomic stockpiles. It is an ironic truth that these stockpiles may be the most effective present deterrent to a world war.

3. That consideration of a preventive war as a possible instrument of American policy be rejected as immoral and a blasphemy both of religion and of democracy. We heartily commend President Eisenhower for repeatedly repudiating such an alternative, and

for courageously urging patience and maturity in the pursuit of peace, but we are disturbed by the continued prevalence in places of high authority of a state of mind which seems to regard a preventive war as a solution to our difficulties. Religious groups especially have a profound obligation to inspire in the hearts of men the conviction that the achievement of peace is man's greatest challenge in our time.

4. That the fundamental contest between democracy and tyranny be recognized as a long-range struggle, which may continue for generations, and which will be won ultimately not by armaments but in the loyalties and minds of men. We can win this contest only by demonstrating constantly and conclusively that democracy is dynamic, that it spurns colonialism and racism, that it can and will address itself to the crushing problems of world poverty. In this connection, we welcome the achievements of the point 4 and U. N. technical assistance programs and urge that they be greatly expanded. We urge the speediest possible implementation of President Eisenhower's plan for peacetime use of atomic energy through an international pool.

5. That the processes of free discussion in the United States be revitalized. Too many Americans, distressed by the painful complexities of international affairs, have left thinking on these questions to their leaders. We are also disturbed by the tendency to stifle free discussion and healthy controversy by resort to loose charges and pressure toward conformity. The result of these tendencies is that the very processes of international diplomacy, negotiation, and compromise have been held up to contempt; honest criticism of existing policies and even advocacy of coexistence have frequently been equated with procommunism. These are among the factors contributing to the weakening of United States prestige throughout the world and to the grave impairment of morale in the United States diplomatic service, thus increasing the difficulties of achieving a genuine peace.

To revitalize public discussion and debate of crucial international issues, we urge the convening of an international conference of religious, educational, scientific, and civic leaders from all nations to discuss the threats to peace and to consider ways of strengthening the fabric of universal harmony.

6. That religious bodies of all denominations intensify their efforts to instill in the hearts of man a renewed dedication to peace. Only the ringing cry of faith can cross the barriers and curtains now separating man from man. The voice of religion, the message of salvation through righteousness and justice, must be heard above the clatter of the weapons of war. Reaffirming our belief in the sovereignty of God over all humanity, we pledge ourselves to join with all men of conscience in seeking a way to achieve mankind's opportunity for redemption: A world at peace.

Congressman Horan Reports

EXTENSION OF REMARKS

OF

HON. CHARLES W. VURSELL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1955

Mr. VURSELL. Mr. Speaker, with leave to extend my remarks, I wish to insert in the RECORD the following news release issued by Congressman WALTER HORAN, of Washington, which contains very interesting information about the

extension of rural electric light and power to the farm homes of America:

CONGRESSMAN HORAN REPORTS

WE LEAD

The great State of Washington leads the entire Nation in the percentage of our farms that are electrified—99.1 percent. We are still working on the remaining 0.9 percent. Moreover, our rural folks have electricity in abundance, thanks to our forward-looking leaders in every farming area.

BUILDERS

In fact, it has been men of courage throughout our State that have helped to banish the treadmill and the lantern. It has not always been easy to extend and expand our transmission lines into the remoter areas, yet it has been and is being done. The paradox of living remotely within an easy horseshoe ride of great dams like Grand Coulee or Chief Joseph without the blessings of electricity is being overcome. We are even lighting our skiing areas atop our majestic mountains.

This progress is a tribute to our leadership and to the spirit of neighborly cooperation that has seen those in the so-called cream areas help to extend service to those far distant from them. A score of years ago only 47 percent of Washington's farms had electricity, and those were in the more thickly populated sections. In the Nation the picture is also astounding. In Mississippi, 20 years ago, less than 1 percent of the farms had power or light; only 1.2 percent in Arkansas, 2.3 percent in North Dakota, and 2.3 percent in Texas. Strangely, Utah, with over half her farms electrified, was among the leaders then, second only to California and New Hampshire. Today the Nation's average is a little over 92 percent whereas 20 years ago, the national average was 10.9 percent.

NEW APPROACHES

For 20 years the emphasis has been on extending the blessings of electricity farther and farther into the rural areas. A formula still is in the law that requires: "One-half of each year's new (REA) funds for electric loans shall be allotted for loan use among the States in the proportion which the number of unelectrified farms in the State bears to the number of unelectrified farms in the whole country." Thus, in effect, out of all annual new REA funds, each State's allotted funds are reserved for applicants from that State for a period of 1 year.

When only 10.9 percent were electrified that was a wise formula. But when less than 10 percent lack electricity today, that formula stands in the way, as it is presently written, of a wise and flexible use of new funds for the consolidation of present rural systems, for the creation of new sources of supply, the rephasing of outmoded transmission systems and many other improvements that will give better service, more power and lower charges to our rural people.

A GOOD ADMINISTRATOR

Anchor Nelsen, for nearly 2 years now the Administrator of REA, wants this formula brought up to date. During his administration he has done marvels. One achievement stands out. He found a Hatfield-McCoy type of feud going on among the various rural electrical services in Kentucky. He moved in with his engineers, both electrical and, may we say, diplomatic. Meetings were held in Washington and Kentucky. Differences were overcome, agreements were reached. Integration was established and interconnections were made. Three million dollars was saved. Rates were reduced.

Now Anchor Nelsen is working on rural telephone extensions. More than 50 percent of our Nation's farms still lack telephones. Nelsen plans to carry on an aggressive and effective program to meet the needs.

WASHINGTON

I have served on the subcommittee that supplies funds to the Department of Agriculture for more than a decade now. I have good reason to be proud of the farmers of our great State of Washington for, from my vantage point, I can see the rural progress—or the lack of it—across the Nation. Our folks meet problems honestly and take full advantage of every just and proper opportunity for better, more productive and, therefore, more secure rural living. We will always have our problems but working together we will solve them. Thus we strengthen ourselves and provide a wholesome example for farmers in other sections.

Another Drought Report

EXTENSION OF REMARKS OF

HON. ED EDMONDSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. EDMONDSON. Mr. Speaker, we continue to receive alarming reports of the imminent danger of another great Dust Bowl in the Southwest, where 3 years of drought have created a national disaster area.

An illustration of these grave reports is afforded by an article printed on March 7, 1955, in the Daily Oklahoman, by the veteran reporter, Roy P. Stewart. Mr. Stewart, who has covered leading news events of the region for many years, speaks with authority on this important subject. The article follows:

ACRES OF DUST READY TO MOVE

(By Roy P. Stewart)

This is not intended as a scare story, but unless a beneficent providence sends gentle rains over the Southwest soon, there are more than 18 million acres of land restless to lend their unwanted grit to black blizzards of dust.

Oklahoma has less of it to contribute than its 4 sister States—only 1,334,000 acres—but as the winds come principally from eastern Colorado, western Kansas, northeastern New Mexico, and northwest Texas, this State will be on both the receiving end and a contributor, as dust seeks target areas far removed.

Last week's sudden, unseasonal warm weather, felt good to bodies chilled by winter winds, but throughout the Southwest, and particularly colder areas to the Northwest, it melted a frost pan which held down light soil, powder dry from lack of moisture.

That is true of most of Colorado's 4,519,000 acres all set to blow; of Kansas' 5,696,000 surveyed dry, light lands; of New Mexico's 1,444,000 acres and Texas' additional 5,397,000, making a total of 18,390,000 acres with too little cover to stop blowing.

Recent blizzards off the Rocky Mountain highlands brought snow but winds were so strong it was almost all swept off fields. It filled ditches and canyons, where sudden warm suns melted it, leaving pools of water beside parched fields, still cracking from thirst.

On thousands of abandoned wheat acres in Colorado, some in the high plains country of Texas and even some in Oklahoma, farmers could hardly do an effective job of listing soil in furrows quartered to prevailing winds because it was almost dust.

Some farmers are still hopeful, particularly in some Oklahoma areas where soil is light

enough to switch from wheat to grain sorghums, or to cotton, provided late moisture comes, and hesitate to plow up land with buried wheat seed. They could have a chance to overplant with another crop if moisture comes before too long.

Overgrazing the past 2 seasons because of drought, even by men who know how dangerous that practice is but hope rain comes in quantity before permanent damage is done, also contributes to the possibility of dust, soil conservation service officials will tell you. That is particularly true of semiarid, desert grass country, where there is sparse cover at best.

One reason there has been such a clamor for larger cotton acreage than present allotments call for is the possibility of seeding cotton if April rains come—right on top of wheat land. Grain sorghums, although not a basic crop under the support plan, also come into that view because so much layout land was shifted to feed raising.

Off Years Are Minority Years

EXTENSION OF REMARKS OF

HON. CLIFFORD G. McINTIRE

OF MAINE

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 10, 1955

Mr. McINTIRE. Mr. Speaker, President Eisenhower, in a recent press conference, advocated the election of Members of the House for 4-year terms.

In its December 28, 1954, publication, the Patriot, a newspaper in my district, made some interesting observations with regard to the merits of such a proposal.

Because there is a keen and widespread interest in 4-year terms for Congressmen, I am submitting this newspaper's editorial for the convenience of my colleagues:

OFF YEARS ARE MINORITY YEARS

Next week, the 84th Congress of the United States convenes.

Final tabulations of the official vote reveal the fact that this Congress was elected by a total vote cast of 44,447,496, which is 42.7 percent of the qualified voters as of last November.

Whatever mandate was given the 84th Congress was by less than 43 people out of 100 in these United States who could have voted. Obviously, it is a Congress authorized by a minority of the voters.

That is not peculiar for off-year elections. In fact, it is something of an improvement. Some States made notable records—New York with 84.4 percent of registered voters, Connecticut 81.3 and Arizona 81.1. But even this was of registered, not eligible, voters.

When compared to the 61 percent of eligible voters who turned out for the presidential elections of 1952, the off-year vote was pretty sad. Of about 100 million eligible to vote in 1952, a total of 61,679,882 went to the polls. Of some 104 million eligible in 1954, only 44,447,496 took the trouble to vote.

Of course, it is the fault of the 57 out of 100 who stayed at home that they are without representation in the halls of Congress for the next 2 years. They forfeited their right by staying away. They have been staying away in increasingly large numbers on off-years since the beginning of the Republic.

Doesn't that suggest the question, are off-year elections necessary? Do they serve any valid reason? Are the time, effort, and cost of a modern off-year election justified? If

the answers are all in the negative, as we suspect, then what is the remedy?

A Member of the House of Representatives hardly gets his feet under his desk when he is back campaigning for another 2-year term. As the more popular and responsive House, its Members should be elected and serve concurrently with the President, for a 4-year term. Senators might serve for 8 years and half of them be elected every 4 years with the President. In this way, a mandate of a majority of the electorate will be given the President and the Congress. A more responsible and representative government should result. It would always be a government by the majority of the American voters through their elected representatives.

Miss Adina De Zavala, Noted Texan, Historian, and Writer, Called by Death

EXTENSION OF REMARKS

OF

HON. PAUL J. KILDAY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 10, 1955

Mr. KILDAY. Mr. Speaker, on March 1, 1955, Miss Alina De Zavala, granddaughter of Gen. Lorenzo De Zavala, first vice president of the Republic of Texas, died at San Antonio. The Southern Messenger, of San Antonio, carried the news of her death in an item which I include under authority granted me to extend my remarks:

MISS ADINA DE ZAVALA, NOTED TEXAN, HISTORIAN AND WRITER, CALLED BY DEATH

On the eve of Texas Independence Day Miss Adina De Zavala, 93, pioneer San Antonio resident whose grandfather, Gen. Lorenzo De Zavala, played a prominent part in the establishment of the Republic of Texas and served as its first vice president, died Tuesday, March 1, at 6:10 p. m., in Santa Rosa Hospital. Her home was at 141 Taylor Street, but since last summer she had resided at Incarnate Word College.

All her life she was interested in Texas and Texans especially of historic interest and because of her enthusiasm manifested on all occasions the De Zavala Chapter of the Texas Historical and Landmarks Association, which she founded and in which she was the guiding spirit, was named in her honor and that of her father and grandfather.

Another prominent member of this organization, Col. Martin Crimmins, died in San Antonio a few weeks ago.

Miss Adina, as she was affectionately known to her many friends not alone in San Antonio but all over the State, traveled to all parts of Texas, sometimes on horseback, doing research work for her writings on early pioneers and attending their gatherings. She was well versed in all phases of Texas history, rich in the tradition of this great State whose cause her grandfather so ardently espoused.

Miss De Zavala, daughter of Augustine De Zavala and Julia Tyrrell De Zavala, was born at De Zavala's Point, the homestead of her father and grandfather, opposite the battlefield of San Jacinto in Harris County.

She received her early education at her home from a private teacher until she was old enough to attend the Ursuline Academy in Galveston. Following her attendance there, she was sent to a normal college.

Later she spent some time as a teacher in the public school on Avenue E, on the site now occupied by the Express Publishing Co.

Through a life of devotion to Texas history, folklore and general civic, patriotic, and uplift work, Miss De Zavala had, perhaps, more than any one person in Texas, aroused in the general public a desire for a fuller knowledge of the history of the Lone Star State.

She was, perhaps more than anyone else, responsible for interest manifested on the part of the public in celebrating the birthday of Texas Independence and other State holidays in recent years. She was also highly successful in bringing about a more general display of the Texas flag on all holidays.

As an author, she wrote the publication, History and Legends of the Alamo and Other Missions in and Around San Antonio and A Collation of Kingsborough's Antiquities of Mexico. For some years she edited a Texas History Department in a Texas magazine.

All the tablets and monuments erected by the Daughters and Son of the Heroes and Pioneers of the Republic of Texas and by the Texas Historical and Landmarks Association were placed by Miss De Zavala as chairman and historian of tablets and monuments.

SAVED SHRINE

It was Miss De Zavala's action in barricading herself in the Alamo for 3 days and nights, with a shotgun on her lap, that is credited with keeping the Shrine of Texas Liberty from being sold to hotel interests shortly after the turn of the century.

She obtained an option on the Alamo which she held for many years and in 1906 dictated the memorial and bill presented in the 29th Texas Legislature appropriating \$65,000 to complete the purchase of the famous mission.

It was the De Zavala chapter of the Daughters of the Texas Republic, of which she was president, that raised and paid the first part of the purchase price of the Alamo.

Of a brilliant mind, even at her advanced age, she was keen and alert and abreast of the times notwithstanding the fact she had lost her eyesight a few years ago.

A person, firm in her convictions and of sterling Catholicity, Miss De Zavala was generous in her benefactions to education and other worthwhile projects, and did untold good to the needy and unfortunate.

The eldest of the three De Zavala children, Miss De Zavala was the last to die. Her sister, Miss Mary, died a few years ago. Their brother, Capt. Augustine De Zavala, a former student of St. Edward's University, Austin, was active in the Spanish-American War and in the draft board during World Wars I and II. He served also as bank director in Austin and died in that city in 1952. He is buried in the family plot in St. Mary's Cemetery, San Antonio.

Results of Statewide Poll Among Nevada Citizens

EXTENSION OF REMARKS OF

HON. CLIFTON (CLIFF) YOUNG

OF NEVADA

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 10, 1955

Mr. YOUNG. Mr. Speaker, I have recently conducted a statewide poll among Nevada citizens on seven important issues facing this Congress.

The results have been tabulated by International Business Machines Corp., and I wish to call them to the attention of my colleagues.

May I also make formal expression of my appreciation to the thousands of Nevadans who took the time to express their views and thus render a valuable

contribution to the shaping of national policy.

The poll follows:

	Yes	No	Undecided
	Percent	Percent	Percent
1. Regarding foreign policy do you feel:			
(a) Red China should be admitted to the U. N.?	9.8	81.6	8.6
(b) The United States should withdraw from the U. N. if Red China is admitted?	33.9	54.0	12.1
(c) Economic assistance and technical advice to non-Communist countries should be continued?	69.9	17.5	12.6
2. Regarding taxation and the budget (the national debt now totals over \$274 billion; the interest on this costs American taxpayers more than \$6 billion each year; the deficit for present fiscal year is \$4 billion plus), do you favor:			
(a) Higher taxes to balance the budget?	15.9	65.7	18.4
(b) Following the President's recommendations which continue the gradual trend toward a balanced budget but still maintain a deficit?	75.3	11.3	13.4
(c) Reducing taxes by increasing the individual exemptions from \$600 to \$700 (will cause loss of \$2.4 billion annually)?	22.9	60.0	17.1
3. With regard to national security do you feel:			
(a) Administration is placing sufficient emphasis—over 45 percent of military budget—on airpower?	66.5	15.7	17.8
(b) Universal military training is preferable to extension of selective service?	66.2	20.5	13.3
4. Which of the following statements expresses your views on the Taft-Hartley law?			
(a) "Slave labor law which is unfair to unions and the average workingman."	7.3	40.1	52.6
(b) "Not strict enough in prohibiting monopolistic, unjust, and dangerous practices by unions."	31.9	18.6	49.5
(c) "Experience has shown that law is fair and just; may need some amendments but over all is a good law."	77.0	4.5	18.5
5. Do you favor the health reinsurance program whereby the Federal Government plans to encourage expansion of private health insurance by assuming exceptional risks?	42	39.4	18.6
6. Regarding natural resources do you favor:			
(a) More emphasis on State and local participation in reclamation projects?	69.9	12.4	17.7
(b) Encouraging private enterprise to participate in developing atomic power for peacetime use?	85.2	7.4	7.4
7. Do you feel postal rates should be increased to assist in cutting down the postal deficit (now \$1 million plus per day)?	74.1	20.9	5.0

Thirty-Seventh Anniversary of Renewed Ukrainian Independence

EXTENSION OF REMARKS OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. BURDICK. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD a letter I received from Dr. A. Zukowsky, president of the State branch of North Dakota of the Ukrainian Congress Committee of America, Inc., the speech given by Dr. Zukov on the 37th anniversary of renewed Ukrainian independence, and the Ukrainian Independence Day declaration.

The continuing determination of the people of Ukraina to throw off oppression and the spirit of liberty which has remained strong and unyielding through generations of tyrannical rule by their conquerors should prove an inspiration to all those who believe in freedom and individual rights.

The matters follow:

UKRAINIAN CONGRESS COMMITTEE
OF AMERICA, INC.,
STATE BRANCH OF NORTH DAKOTA,
Bismarck, N. Dak., March 6, 1955.
Hon. USHER L. BURDICK,
House of Representatives,
Washington 25, D. C.

DEAR REPRESENTATIVE BURDICK: I am taking the liberty of writing you regarding our recent celebration of the 37th anniversary of the proclamation of free and independent Ukrainian Republic, and 36th anniversary of act of union of all Ukrainian territories in one independent and indivisible state.

Radio programs, special church services, and other celebrations were held in North Dakota during January, with newspapers

carrying publicity on these events commemorating Ukrainian independence.

This proclamation was issued by the Ukrainian Parliament, the Central Council on the 22d day of January 1918, in Kiev, the capital of Ukraine. The free and independent Ukrainian Republic was recognized by countries all over the world, among them Russia, which soon afterward attacked the independent state.

The love of democracy and freedom lives on in the suppressed Ukraine, for although the Republic was short-lived and fell under the forcible occupation of the Russian Communists in 1922, the resistance of the Ukrainian people to Communist totalitarianism has not ceased until this day.

At the same time our committee had the opportunity to read the staff reports of the Subcommittee To Study the U. N. Charter, of the Committee on Foreign Affairs.

In this series of studies (particularly in staff study No. 4) Ukraine is referred to in comparison with Texas, i. e., that Ukraine is as much a part of the Soviet Union as Texas is of the United States. Moreover, the study urges the exclusion of Ukraine from the U. N. on the basis that it is not a nation but a part of the Soviet Union.

This sort of thinking is of course completely without basis, since Ukraine, in the international sense was, and is, a Nation in itself. It has been recognized by the great powers including Soviet Russia, England, France, and others throughout its history. To disclaim its status as a nation simply because it is under Soviet Russian tyranny would necessitate the exclusion of Czechoslovakia and Poland from the U. N. because they are also under Soviet domination.

The object of the Soviet regime is to absorb cultures and nations in order that the peoples which they enslave would offer less resistance to their tyranny. Such a move on the part of the United States would greatly diminish the feelings of the enslaved Ukrainians toward this country, because they look upon America as an ally in their struggle. Were America to deny their very existence as a nation we would play into the hands of the Communists.

Enclosed is a copy of the speech I gave on January 23d by transcription over the Bis-

marck and Dickinson radio stations. Also is enclosed declarations signed by people at rallies held at Wilton and Belfield during January.

On behalf of our Ukrainian Congress Committee of America, Inc., State branch of North Dakota, and the 20,000 Americans of Ukrainian descent living in North Dakota, I would appreciate your inserting these statements, including this letter, into the CONGRESSIONAL RECORD as a matter of public record.

Very sincerely yours,

Dr. A. ZUKOWSKY,
President, State Branch, UCCA, Inc.

SPEECH GIVEN BY DR. A. ZUKOWSKY, PRESIDENT OF STATE BRANCH OF UCCA, INC., OVER STATIONS KFYR, BISMARCK AND KDIX, DICKINSON, ON JANUARY 23, 1955

THIRTY-SEVENTH ANNIVERSARY OF RENEWED UKRAINIAN INDEPENDENCE

From coast to coast Americans of Ukrainian descent today are observing solemnly the 37th anniversary of the renewal of the independence of the Ukraine which was proclaimed by the Ukrainian Parliament—the Central Council (Rada) on January 22, 1918, in Kiev.

This celebration is not merely a Ukrainian one.

With the growth of understanding of the meaning of the celebration in America it increasingly becomes an American celebration. The governors of many American States, the mayors of many American cities proclaimed today as Ukraine Day.

So it was last year. So it was 2 years ago.

Today many of our States have raised the historical yellow and blue flag of independent Ukraine together with our star-spangled banner to demonstrate the identity of ideal which the two nations fought for under these flags.

What is the meaning of today's celebration for America? To find it we must look back into the yellowed pages of history and the blood-stained pages of the recent decades, and also look ahead into the future.

Ukraine is one of the oldest European nations, with a cultural and governmental tradition going back for more than a thousand years. This should no longer be news to any American. Many elaborate statements by eminent Americans about the glorious past of Ukraine can be found not only in books and articles but also in the CONGRESSIONAL RECORD of recent years.

The Ukrainian people are a traditionally democratic nation having always cherished freedom above all material treasures, and having throughout many centuries never ceased to fight for it.

Through her vital geographical position, through her immeasurable wealth of natural resources, the fabulous richness of her soil—Ukraine was always the main object of aggression of her neighbors, whereas Ukraine fighting for her own rights never had any aggressive intentions toward others.

So the history of Ukraine is a history of an unafraid and determined struggle for freedom and independence, for the unification of all the Ukrainian territories in one free and independent Ukraina state—a struggle which in recent history brought a short-lived but complete renewal of independence for Ukraine 37 years ago and the unification of all the Ukrainian territories in the Ukrainian Democratic National Republic of January 22, 1919.

It was then that the Ukrainian people rightfully and freely expressed their will concerning their state. And the Ukrainian Declaration of Independence of 37 years ago is as lawful and valid today and for the future as is our own American Declaration of Independence.

The fact that the tyrannical forces of Communist Russia have overrun the independent Ukrainian Republic does as little change the validity of this declaration as the fact that the predecessor of Communist

Russia—Czarist Russia—brutally violated the Pereyaslav Treaty, which was exclusively a military alliance, has ever changed the historical right of Ukraine to independence.

The Ukrainian people, having the sole right to decide upon their own destiny, rightfully and freely decided 37 years ago. Therefore, all discussion whether Ukraine should be federated with Russia or possibly torn apart for the convenience of her neighbors is now belated.

We repeat, the Ukrainian people have proclaimed their will when they were free to do so. So there was and there continues to be an independent Ukrainian state.

This state is enslaved now.

It is enslaved because there was no understanding of Ukraine's struggle against Communist Russia 3½ decades ago. Communist Russia now threatens the entire yet free world. Ukraine was her first victim. There were many to follow years later: The Baltic States, Poland, Czechoslovakia, Rumania, Bulgaria, and so on. There will be more if there will be no real understanding of the enslaved people here in the free world, particularly in America.

The Select Committee on Communist Aggression of the House of Representatives for the investigation of the Communist takeover and occupation of the non-Russian nations of the U. S. S. R. has given through eye-witness testimony ample evidence of the unlawful tyrannical rule of Soviet Russia in Ukraine, Byelorussia, and the other countries incorporated in the U. S. S. R.

Ukraine is our strongest ally behind the Iron Curtain; it is an ally which never stopped and will never stop fighting the enemy of human freedom. The Ukrainian people look for encouragement primarily from America, for they recognized long ago the identity of American and Ukrainian ideals.

The policy of liberation proclaimed by President Eisenhower is an essential part of our foreign policy. It is a part which will play a vital role in future developments of the world. And in designing this our policy, we should always keep in mind that Ukraine is the key problem of Europe, that as long as justice is not restored to Ukraine there will be no peace for the world.

Had we helped Ukraine when she fought Communist Russia so desperately 3½ decades ago, the world would be different today. There would be no Soviet Union, the life of millions and millions starved and tortured to death by this regime would have been spared, our American sons would not need to die in Korea, they would not have to perish in Communist prisons, there would be no fighting in Indochina, there would be no universal constant fear.

How else can we explain the recent proposals to alter the charter of the United Nations to exclude Ukraine and Byelorussia from membership in that organization, with the argument that this would reduce the voting strength of the Soviet Union and that Soviet Ukraine and Byelorussia are even so not independent.

Why not go even further and exclude all the nations of the Soviet bloc, such as Poland or Czechoslovakia? At the present they are exactly as independent as Ukraine or Byelorussia are. Their representatives are all representatives of the Soviet Government and none of them is the representative of his nation.

By excluding Ukraine and Byelorussia from membership in the United Nations we would only hurt our strongest allies behind the Iron Curtain, showing them that we are going along with their enemies and denying their right to independence.

Ukraine and Byelorussia alone should not be excluded from the U. N. in order to leave the Soviet Union with two less votes, which, with the existence of the veto, would not improve the situation. In the event that the

Soviet Union itself should be excluded, Ukraine and Byelorussia should remain as members, because they are victims of Soviet aggression.

Not the nations should be questioned, but their representatives. And we would gain immeasurably in our international position and moral strength if we would deny the acceptance of the present U. N. representatives of Ukraine and Byelorussia which were put there exactly as those of Poland or Czechoslovakia by the Soviet Union. This would leave their seats empty for the time being until their nations are liberated or representation could be given to those who will really represent the Ukrainian and Byelorussian people, as the representatives of Nationalist China in the U. N. do now.

We should be able to realize that by questioning the right of Ukraine or Byelorussia to their place in the U. N. we make another fatal mistake. We would actually strengthen the Soviet Union by hurting our allies behind the Iron Curtain. Let us not repeat the ignorance of three and a half decades ago which has cost our Nation so many precious lives. If we are not actively helping our allies now let us not discourage them by doing injustice.

The celebration of the anniversary of the renewal of Ukrainian independence is the occasion for us Americans to think of the future of the world, of the future of America.

UKRAINIAN INDEPENDENCE DAY DECLARATION

Thirty-seven years ago the Ukrainian people renewed their sovereign rights on Ukrainian territory.

The Ukrainian Parliament—the Central Council (Rada)—proclaimed the renewal of the Independent Ukrainian State on the 22d of January 1918 in the Capital—Kiev.

The free and independent Ukrainian National Democratic Republic was recognized by England, France, Germany, Austria, Hungary, Bulgaria, Turkey, Latvia, Estonia, Finland, Rumania, Czechoslovakia, Poland, Italy, the Vatican, Argentina, Georgia, the Don Cossack Republic, and Russia.

But continuing along the old path of Russian imperialism, Communist Moscow attacked the independent Ukrainian Republic and overran it despite the desperate resistance of the Ukrainian people. Thus the new Republic became the first victim of Communist Russian aggression. It also became the first nation to resist the aggression of Communist Moscow which today threatens the entire still free world.

The Ukrainian Government of the Independent Ukrainian Democratic Republic went into exile. Communist Moscow set up by force and violence the Communist regime and Government in Ukraine.

But the people, faithful to their democratic traditions continue to fight against this regime and the Soviet Government.

We, Americans of Ukrainian descent, gathered at the celebration of the 37th anniversary of the proclamation of the independent and free Ukrainian Republic in Belfield, on January 23, appeal to the Government, Representatives, and people of the United States of America to help the Ukrainian people to restore their own democratic Government.

We declare that the proposal to exclude Ukraine from the United Nations is against the interests of our country, against our American policy of liberation. The present regime in Ukraine and its right to represent the Ukrainian people can and should be questioned. But no one can question the right of Ukraine to be a member of the United Nations.

N. M. PROKOP,

Chairman.

FRANK KORDONOWY.

JOHN B. SHYKOWSKI.

JOHN KYTTO.

BELFIELD, N. DAK., January 23, 1955.

Modern Day Success Story

EXTENSION OF REMARKS

OF

HON. FRANK E. SMITH

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Friday, February 25, 1955

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent to revise and extend my remarks, I include the following article from the New York Times:

ALONG THE HIGHWAYS AND BYWAYS OF FINANCE
(By Robert E. Bedingfield)

Here's a success story built of a shrewd conviction that two sewing machine makers are too few for a country as big as the United States. It is the story of Leon Jolson, late of Warsaw, Poland, and Benjamin Krisloff, a Polish compatriot of some years' earlier arrival in America. It took 7 years' labors, a \$2,000 loan from the United Service for New Americans and one of \$50,000 from Mr. Krisloff to attain success.

Their \$50-million-a-year business is the Necchi-Elna Sewing Machine Sales Corp. Mr. Jolson, a 42-year-old refugee, is the organization's president. He owns 43 percent of its stock. Mr. Krisloff, 45, a former New York City cab driver who saved his tips and went into the sewing machine business with his brothers in the early 1930's, is secretary of the company. As the supplier of the original \$50,000, he heads a group which also owns 43 percent of Necchi-Elna's stock. The remaining shares are owned by persons outside the company.

DOES NOT MANUFACTURE

The concern does not manufacture sewing machines. It is the American sales distributor for the Swiss-made Elna portable sewing machine. Its biggest business, however, is the assembling and distributing of the standard-size Italian Necchi sewing machine. The latter uses American-made components. Only the basic machines are manufactured abroad.

For three generations the Jolsons of Poland and the Necchis of Italy were friends and business associates. Mr. Jolson's father was east European representative of the Necchi Sewing Machine Co. of Pavia, Italy, until his death in 1936. Leon, a graduate of the University of Warsaw, ran the family's \$700,000 plant in Warsaw from 1936 until it was confiscated by the Nazis in 1942.

Because Mr. Jolson was a skilled machinist he was given special work by the Hitler regime and was kept busy going from one concentration camp to another putting sewing machines into working order. One day word reached him through the underground that all 3,000 men in a camp where he was stationed were to be killed. Mr. Jolson managed to escape and joined General Bor's Polish underground organization.

IN HIDING 20 MONTHS

He did not come out from hiding for 20 months—until the Russian Army marched through Warsaw. But he found the Russians as bad as the Nazis. So he and his wife entered a displaced-persons camp. They placed their names on a Red Cross list for transfer to America. When the Jolsons reached the United States, 8 years ago last Friday, he turned to the one thing he knew—repairing sewing machines.

For several weeks he went from floor to floor in every building in Manhattan's vast garment area repairing sewing machines until he had saved enough to rent a small shop on West 29th Street. The times favored him. Mr. Jolson discovered, he says, that America's two big sewing-machine

companies had been content to change their models very slowly so that many features remained just as in the days before power machines came into use.

Opportunity, he felt, was fairly knocking his door down. In Europe 43 manufacturers fought for a slimmer market. This had forced developments which Mr. Jolson thought needed only to be introduced here to sell a great many machines. Without attachments European machines could stitch zig zag, embroider, make buttonholes, blind-stitch hems and overcast edges.

He managed to import four such machines from the Necchi factory in Italy late in 1947. He and his wife worked day and night using them to create an unusual advertisement. They embroidered cards with 98 varieties of machine needlework. They sent these to hundreds of retailers whose names they had obtained from a purchased mailing list.

The response was exactly what Mr. Jolson had hoped for. He used the inquiries to persuade Mr. Krisloff, with whom he had been dealing for supplies for his repair shop, to go into business with him. Necchi Sewing Machine Sales opened its doors as a company on February 6, 1948. The first year the company sold 10,000 machines. Last year, with the average price of a machine \$300, sales at retail reached \$50 million, roughly 10 percent of the American market.

Mr. Jolson became an American citizen in 1952. He still has to do some catching up on his Americanization, however, most notably in the matter of the 40-hour week. He toils from 8 o'clock in the morning to 7 o'clock in the evening and takes work home. Home is in Forest Hills, Queens. When he gets further from home than his backyard he is headed either for his office, the company's 2,200 dealers and distributors across the country, or for the synagogue.

Absurd Legal Loophole

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1955

Mr. KEATING. Mr. Speaker, where a person testifies under oath in a completely contradictory manner, he shows his utter contempt for the sanctity of his oath and should be found guilty of perjury. Under the present Federal statute on this subject, before proceeding to obtain an indictment, the prosecution must decide which time he was lying and then allege and prove that was the time he gave false testimony. All he has to do to escape conviction is to show that he happened to tell the truth that time and was lying the other time. Such a situation simply cannot be understood by the layman and should not be tolerated by the lawmaker.

It was to correct this intolerable and absurd loophole in the law that I introduced H. R. 799, to extend the law relating to perjury to cover the wilful giving of contradictory testimony under oath. The Attorney General has recently endorsed the principle behind this measure. I have requested the chairman of the Judiciary Committee to grant an early hearing to plug this loophole. I hope this Congress will act promptly to wipe out this absurdity.

Under leave to extend my remarks, I include the following splendid editorial on this subject from the Washington Star:

ABSURD LEGAL LOOPHOLE

A big loophole in the Federal perjury law will be plugged up if Congress approves an amendment proposed by Attorney General Brownell. Under the present law it is not sufficient to prove that a person made contradictory statements under oath. The Government must show which of the statements was false and which was true. In some cases this is not easy to do—and the Matusow case would seem to be one of those in the difficult category. Yet the former Communist has made false statements, at one time or another, before grand juries, in the courts and at congressional hearings. A grand jury and a Senate committee are trying to sift fact from fiction.

But it ought not to be necessary to spend time and money in such a search when it is plain from two sets of contradictory sworn statements that a person is a deliberate perjurer, or when such a person states that he has lied. Last year, to meet just such a situation, Mr. Brownell asked Congress to amend the perjury law so as to permit conviction on the mere showing that sworn contradictions have been given to a grand jury, a court or congressional committees. The request was made so late in the session, however, that no action was taken. Now the Attorney General, with the Matusow type of case in mind, has renewed his request. (The proposed amendment makes no mention of perjury committed before such an administrative agency as the Federal Communications Commission, to which Mrs. Marie Natvig gave conflicting testimony that has led to her indictment for perjury.) Mr. Brownell is right in describing as "ridiculous" the shortcomings of the present law. No self-confessed perjurer should be permitted to escape the consequences of his falsifications because of Government difficulty in proving which of two conflicting statements was a lie.

The \$20 Cut in Income Tax

EXTENSION OF REMARKS

OF

HON. M. G. BURNSIDE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. BURNSIDE. Mr. Speaker, under leave to extend my remarks into the RECORD, I should like to include the following letter, a copy of which was forwarded to me by the writer, Mrs. Sowards:

HUNTINGTON, W. VA., March 2, 1955.

The PRESIDENT

The White House,
Washington, D. C.

MY DEAR MR. PRESIDENT: As a secretary in the offices of a large corporation here in West Virginia, I have transcribed many letters to various Government officials throughout the years—letters of criticism as well as letters of commendation. I now feel compelled to write this one on my own.

I understand you are opposing a \$20 cut in income taxes. A \$20 tax reduction may seem a trivial matter to you, but I would like for you to look at the situation from another's point of view. I have a friend who is a widow, living alone in the little house where she and her husband lived for years. Since her husband's death she has been

forced to earn her living by doing housework, babysitting, etc. It will be several years before she can draw social security and in the meantime she is working for \$15 a week, out of which she must pay for rent, utilities, food, insurance burial fund, social security, and medical treatment (I know that she often foregoes medical treatment she actually needs to keep her frail body going simply because she does not have the money to pay for such care). Her clothing is hand-me-downs from neighbors and friends.

Do you realize that this woman makes \$780 a year, and is required to pay an income tax of \$22? This came as quite a surprise to me. She called me today and told me that her employer had not deducted any income taxes throughout the year, and asked me if she would have to file a return. Without stopping to look at the complicated book of instructions for filing income-tax returns, I assured her she wouldn't have to worry about income taxes—I knew she made only \$15 a week, and I thought there was some provision for head of a household in the income-tax setup. After talking to her, I dug out the instructions and found that the head-of-a-household provision does not reduce your taxes unless you have a dependent, and that the poor woman would owe the United States Government \$22 which she will have to borrow.

I know that our Congressmen and Senators are quite busy voting themselves a substantial increase in their own salaries, but some of them have seen fit to sponsor a bill to reduce income taxes by the munificent sum of \$20. Reports seem to indicate that this effort will be defeated and I am appealing to you for consideration. I believe you were elected by the voters of our country because they felt that your wide experience in dealing with people throughout the world would enable you to understand and sympathize with the problems of the individual, as well as the masses.

If the taxes cannot be reduced on an equal basis, I most certainly believe that in this land of plenty no human being who is obliged to maintain a home on \$15 a week should be required to pay any income taxes. Instead, they should be admired for doing the best they can and not asking for charity. Do you not feel that this is true?

Very respectfully yours,

SHIRLEY SOWARDS
(Mrs. Harvey Sowards).

Platform of the Slovak National Council Abroad

EXTENSION OF REMARKS

OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. BENTLEY. Mr. Speaker, I wish to call to the attention of the House that March 14 marks the 16th anniversary of the creation of the Slovak Republic, which remained in existence for approximately 6 years before it was dissolved by postwar developments. The memory of independent Slovakia has, however, been kept alive by many Slovak organizations here in the United States, notably the Slovak League of America.

At this point, Mr. Speaker, I wish to include in my remarks the text of the platform of the Slovak National Council

abroad which was adopted by the executive council of this organization last July 4 at Niagara Falls:

We, the representatives of the Slovak political exile, solemnly declare:

1. That we hold to the right of self-determination of all nations, including the Slovak nation;

2. That the best safeguard of the political, cultural, and economic rights of the Slovak nation we perceive in the democratic Slovak state, whose government and all its branches shall be elected, after liberation, in free, secret, and direct elections by the Slovak nation;

3. That we deem European federation as the most fitting form of political organization of the free nations of Europe; the realization of this idea we shall support;

4. That in line with the tradition of Slovak generations we repudiate bolshevism and all forms of communism and declare that there cannot be freedom for the Slovak nation as long as democratic governments shall seek a compromise with the Soviets or with states having a communistic government;

5. That we stand for close cooperation of all nations which adhere to democratic principles and whose aims are equal rights, liberty, and independence also for those nations which today cannot freely decide their own destinies;

6. That we are willing to cooperate with all anticommunistic regional and international movements in the West which aim to win the struggle against communism and set up a natural legal order behind the Iron Curtain;

7. That we demand equal rights for Slovak exiles—the same as those enjoyed by groups of other nations from Central and Eastern Europe;

8. That we do not recognize the right to the existence of Czechoslovakia and, therefore, also the right of exile institutions which presume to speak in behalf of Slovakia within the Czechoslovakia framework; we also deny this right to the Council of Free Czechoslovakia which expresses neither the will of the Slovak nation, nor the will of Slovaks in exile;

9. That we welcome the existence of free Czech representation abroad as well as the representations of other neighbors of the Slovak nation and are willing to cooperate with them as equals with equals against communism and for the freedom of our nations;

10. That we are for close and effective cooperation of all Slovaks in the free world, and for this purpose we shall further willingly maintain cordial relations with the Slovak League of America, and with every Slovak organization in the United States, in Canada, in South and Central America, as well as with those on the other continents, whose program and aims are identical with the program and aims of the Slovak League of America;

11. That in the United States and its allies we see a guaranty of the protection of human rights and of political liberties, compatible with the Christian character of the Slovak nation and, therefore, on the one hand, we thank the Government of the United States and the governments of its allies for receiving our organization, its leadership and its membership in their lands and granting them political asylum and, on the other hand, in the spirit of their traditions and sublime ideals of liberty and democracy, we hope to secure the program we have here outlined, which binds us as a constituent part of the crusade for the freedom of the entire Western World;

12. That we again stress these principles and requests, because we are convinced that this is in accord with the will of the Slovak nation whose present enslavement obliges us to remind free governments and nations of the demands which for ages have been acclaimed by all free humanity.

It is unfortunate that we have a continuing controversy on the subject of federation versus independence between various Czech and Slovak groups. I think the application of the principle of self-determination for all enslaved peoples, including the Slovaks, is the wisest policy for our Government to pursue under the present circumstances. In the meantime, I am sure that my colleagues will join with me in extending sincere sympathy to the suffering Slovak people behind the Iron Curtain and hope that the day will come when they will again be able to choose freely not only their political but also economic and social institutions under which they wish to live.

Judaism and Individual Freedom

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1955

Mr. MULTER. Mr. Speaker, an important statement of principles was adopted by the 43d general assembly of the Union of American Hebrew Congregations in Los Angeles, Calif., on February 15, 1955, upon the recommendation of the commission on social action.

Although unable to be present during the deliberation there, I am in complete accord with the action of the assembly as well as of the commission, of which I am happy to be a member.

STATEMENT ON JUDAISM AND INDIVIDUAL FREEDOM

Judaism teaches that liberty stems inalienably from God, and that the soul is the divine element in man which should not be interfered with by other men or governments of men. Deep respect for the right of conscience inheres in Jewish reverence for human personality. The right to express or keep private the dictates of his conscience, and to give utterance to honest differences among men, is part of the Jewish tradition: "These and those are the words of the living God." In the conviction that these principles of Judaism are equally relevant to the contemporary scene, and because we believe that the preservation of democracy everywhere rests in large part upon preservation of the principles of civil liberties and civil rights, the Union of American Hebrew Congregations, at this biennial assembly, hereby declares these basic principles:

The most significant trend in the area of civil liberties is the steady encroachment upon our freedoms by certain elements in Government. The legitimate and necessary requirements of protecting ourselves from Communist infiltration and espionage have been grossly exploited by some to justify certain governmental procedures which corrode freedom of speech and of conscience under the claim that these must yield to the larger security of the Nation. The need for a calm, steady, and positive program to insure the triumph of democracy over communism has given way to a pathological fear of communism which inhibits the thinking of some political leaders and colors the judgment of many citizens. We oppose any effort, legislative or otherwise, which would make criminal the expression of opinion, no matter how controversial. We must not hark back to the days of the alien and sedi-

tion laws which the people repudiated 150 years ago. The anomaly of the concept that the state can preserve its security while it weakens individual freedom seems to have been lost upon us. Seven centuries of travail, blood, and sacrifice, from Magna Carta to the Atlantic charter, hang in the balance.

We have tended to proscribe every person and organization at any time pro-Soviet, including many of the most effective present opponents of communism, and regardless of whether former attitudes now condemned were at the time consistent with our national policy. Those loyalty-security procedures which deny confrontation and thus encourage false witness; the type of congressional investigation which in contravention of constitutional liberties tries individuals for their beliefs; the public condemnation by the Attorney General of organizations without previous hearing; these must not become accepted techniques of government.

We deny the validity of the proposition that our Government can make itself more secure by denying justice to any man. Absolute security for the state is possible of achievement only in a totalitarian regime and is unattainable in a democracy. There can be no freedom without some measure of risk. In the current demand for absolute security, we must not utilize the totalitarian practices of the enemies of democracy, thus destroying the human and spiritual values which are the mark of civilized men.

Irked by the constitutional inhibition against self-incrimination, some congressional investigators are calling upon schools, colleges, and other institutions to deny the right to work to those who would seek refuge in the charter of our liberties. The university is being attacked because of the presence on its faculty of persons claimed to be politically undesirable. The unfortunate result is that the campus and classrooms in a number of our institutions are ceasing to be places where the youth of America may learn the spiritual values of dissent and non-conformity.

Within the framework of the national community relations advisory council we have taken our position with respect to the usurpation of power by some congressional investigating committees, and have made suggestions for curbing their excesses.

We protest the irresponsible use of political informers by our law-enforcement agencies. We deplore the view that citizens should be encouraged to inform against fellow citizens with respect to their opinions and political associations.

We would defend all constitutional privileges and immunities without regard to the guilt or innocence of those who invoke them. In our view, the preservation of these rights is of greater significance to our way of life than any benefit our law-enforcement agencies can derive from curtailment or suspension of these rights.

We abhor the test oath and its loyalty oath derivations. As did our forefathers before us, we reject the notion that the techniques of the inquisition, the high commission, and the star chamber are to have acceptance by us in any form.

We favor the vitalization of the Civil Rights Section in the Department of Justice by whatever legislative and administrative procedures are necessary. We believe that the preservation of civil rights and civil liberties is a function of Government equal in importance to the prosecution of subversive offenses.

There are heartening signs of increased awareness of the need to reverse current assaults on fundamental liberties. Yet the fever of suspicion and fear, which has impaired our country's prestige throughout the world, has not yet abated. We know that the price of civil liberties is eternal vigilance.

Liberty cannot be stored away, even for a day. Therefore—

1. We reaffirm the recommendation, adopted at our 42d biennial assembly, that the President of the United States be requested to appoint a commission of outstanding citizens representative of the broadest possible cross-section of American life to study the best ways of protecting our Nation from totalitarian dangers without subverting our traditional American freedoms.

2. We urge the rabbis and leaders of our congregations to join forthrightly in the struggle to safeguard civil liberties and to speak out with dignity and with courage for their preservation. The Jewish ethnic supports, indeed is the spiritual source of, these liberties. As teachers and adherents of Judaism, we are, by our religious faith, committed to defend them for the benefit of all men.

3. We urge the appointment of congregational social action committees to study the application of ethical principles to the problems of civil liberties, and to consider ways of resisting all efforts to enjoin upon us conformity of thought or speech.

4. We urge our national commission on social action to seek the cooperation of all groups which share our concern for the maintenance of American liberties. Our political and religious faiths are both bound up with the preservation of our liberties; as Americans and as Jews we must cooperate with those who would defend them.

Ames President Warns Against Trade Act

EXTENSION OF REMARKS OF

HON. M. G. BURNSIDE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. BURNSIDE. Mr. Speaker, under leave to extend my remarks into the RECORD, I should like to include the following news item entitled "Ames President Warns Against Trade Act—Harte Fears Tariff Squeeze," by Marie Wood, of the News staff, which appeared in the Parkersburg News, Thursday morning, February 3, 1955, of Parkersburg, W. Va:

Every American business is going to be affected if Congress extends the present so-called Reciprocal Trade Agreement Act, Richard Harte, president of Parkersburg's O. Ames company, warned last night.

Already the two O. Ames plants in Parkersburg with a payroll of over 800, are beginning to feel the tariff-imposed squeeze, Mr. Harte reported.

The O. Ames-manufactured shovels—made by American workmen to wholesale to American consumers at \$22 a dozen—are facing the competition of German-manufactured shovels which are shipped in under present United States tariff rates to wholesale at only \$16 a dozen.

Already heavily hit by the dieselization of American railroads, the local O. Ames plants now stand to be even harder hit.

The sardonic feature in this, Mr. Harte added, is that Germany's present unemployment is only 6 percent, and economic conditions in Germany and western Europe are so good that the British economists are using the word prosperity to describe them—in contrast to American unemployment of over 3½ million, representing 5 percent of the United States working force, and double the United States unemployed percentage of last year, despite the United States multi-billion-dollar defense program.

Further, he pointed out that the present United States tariff program is heading the Nation toward conditions of 1894, 1907, and 1917, and that means these low tariff rates will continue until enough American workmen lose their jobs. Congress will have to do something.

"The sad part of it is that we have to have such a visual demonstration," the O. Ames head commented.

Then: "What makes the difference is where you sit in the grandstand," he summed up the attitude of what he described as American big business.

"It's the difference of whether you manufacture 7 million automobiles or a few hundred thousand. As if I couldn't make 7 million automobiles cheaper than someone who makes a few thousand, and if I made 7 million I could take the attitude everybody ought to work for a low tariff.

"Those are the ones who can poke out their chests and haul up the American flag," Mr. Harte added.

He went on to say that business that does its job mostly with machinery doesn't have to worry.

However, the O. Ames Co. use 40 percent labor, and cannot be so successful, as the human element enters in, the company official pointed out.

Warnings have been issued that continuation of the present tariff program will put out of business over 100 American basic small producers who cannot possibly meet the competition they have been asked to meet from European and Japanese imports.

Congress itself has been held partly to blame since the 83d session approved a tax bill that reduced income tax on dividends coming from foreign investments.

By that act alone, Congress set up a 14-percentage-point advantage for American capital to go abroad and establish factories and to exploit cheap labor abroad in order to make products to be brought into America under American trade-treaty regulations to take jobs from American workmen.

The tariff situation plus the congressional actions making it more profitable to invest American capital abroad than to invest capital at home to develop American resources, is beginning to take a heavy toll.

The American marine industry, with 6 of its 7 plants located in West Virginia, was the first to raise its voice in protest.

The American Viscose Corp., with 2 of its 7 plants in West Virginia, subsequently protested.

Protestants appearing before the House Ways and Means Committee in Washington, conducting hearings on the extension of the Reciprocal Trade Agreements Act have included spokesmen for the glass industry, with many plants in West Virginia, and the Manufacturing Chemists Association, Inc., whose combined membership represents more than 90 percent of the tonnage of chemicals produced in the United States.

They have warned of the widespread unemployment which will result should the reciprocal trade agreements program be continued as proposed.

Commemoration of the 105th Anniversary of the Birth of Thomas G. Masaryk

EXTENSION OF REMARKS OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1955

Mr. KEATING. Mr. Speaker, I am proud to join with my colleagues in observing the birthday of one of those

great men of our times who belongs not only to his own homeland but to the entire world. March 7 was the 105th anniversary of the birth of Thomas G. Masaryk, who was such a man. Born in Moravia, of a humble parentage, Thomas Masaryk rose to prominence as a scholar, author, philosopher, and man of affairs.

It was his vision and tenacity that led to the emergence of the Czechoslovak state, out of the wreckage of World War I. He established the Czech National Council in 1917. He organized the famous Czech Legion which marched through the great expanse of Russia in the aftermath of the Bolshevik revolution. He came to the United States and, winning the support and friendship of President Wilson, proclaimed the independence of the Republic of Czechoslovakia and secured its recognition by all the great powers.

Masaryk became the first President of Czechoslovakia, and dominated its sound development as a European power until 1935, when he resigned on account of his health. It is perhaps a blessing that Thomas Masaryk died before the Nazi scourge immersed Europe. His complete dedication to his country and to the ideals of freedom and democracy will live on forever in his memory and teachings. His great friendship for the United States will remain as an inspiration to all of us who feel the strong bond of friendship in return toward the brave men and women who are keeping their country alive through the ordeal of Russian domination behind the Iron Curtain.

The Harvest: Nixon Visit Solidifies Americas

EXTENSION OF REMARKS OF

HON. JAMES B. UTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. UTT. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to introduce the following editorial from the San Diego Union, San Diego, Calif., of March 5, 1955, pointing out the significance of the Vice President and Mrs. Nixon's goodwill tour of Central America:

THE HARVEST: NIXON VISIT SOLIDIFIES AMERICAS

It is difficult for us in the United States to realize what a tremendous effect the goodwill tour by Vice President and Mrs. Nixon has had on Central America.

This is true in part because not many of us are fully aware of the well-organized minority hate campaigns which have been undertaken in our neighboring countries. Some evidence of this was spotlighted when the Communists controlled Guatemala, but the signs about "Yankee imperialism" can be found on walls in almost any country south of our border.

The impact of the Nixon tour has been described by Robert C. Hill, United States Ambassador to El Salvador:

"Perhaps the original announcement of this proposed visit by Mr. Nixon to Central America was received by the public with an understandable lack of enthusiasm. The

people of Central America are our friends, but they are also our neighbors. Here, as at home, neighbors have a way of being critical. . . .

"Central America also has memories of of times gone by when, rightly or wrongly, they considered Uncle Sam the neighborhood bully. It has been a long time since there was a basis for such recollections, but neighbors have long memories. . . .

"And these are the countries which—just because they are considered to be our solid friends—we have largely ignored in our international efforts to win friends and influence people on the side of democracy.

"Now, in a matter of days, public opinion here has changed. I have talked with newspaper men and with men on the street. They say: 'Mr. Nixon's visit proves you really are interested in us—it is not just words'. . . .

"This trip is exerting a tremendous influence toward achieving the hemispheric solidarity which is vital to the future of the United States and Latin America."

The comment is typical of that found in newspapers throughout the area covered by Mr. and Mrs. Nixon.

Perhaps the most tangible result of this trip has been the smoothing of relations between Costa Rica and Nicaragua. The enmity between the presidents of these countries has built up over a period of years, but Mr. Nixon, in statesman-like fashion, was able to influence both sides in a few days to a point where normal relations now are being restored.

The Vice President has indicated he has some serious recommendations to make—based on his observations during this trip. This should be given immediate consideration so as to take full advantage of the statesmanship which has done more good than armies or promises of years past.

The Vice President Makes Friends

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1955

Mr. KEATING. Mr. Speaker, when President Eisenhower selected Vice President Nixon as his personal representative to tour the Far East and, more recently, Central America and the Caribbean islands, our Chief Executive again displayed one of the qualities which has marked him as a great and inspiring leader—the ability to pick just the right man for the right spot.

If it were possible for the Vice President, accompanied by his charming wife, to visit every country in the world, including those outside and behind the Iron Curtain, much of the misunderstanding about our country's motives, intentions, and aspirations would surely be dispelled.

It is the warmth of their personalities and the sincerity of their interest in people which have endeared the Vice President and Mrs. Nixon to the people of all races and all stations in life whom they have visited. Floyd Barger, of the New York Sunday News, has so dramatically and interestingly caught the spirit of the recent good-will mission to our neighbors to the south that it is worthy of the attention of the Members. Under leave

to extend my remarks, I include this article.

Also included is an editorial from the Washington Evening Star.

[From the New York Sunday News of March 6, 1955]

NIXON IS HOME; HE CONQUERED CENTRAL AMERICA BY LANDSLIDE

(By Floyd Barger)

Washington, March 5.—The man who never wastes a smile or forgets to wave a hand when two or more people are gathered together came home today, mission fulfilled. He has just entwined Central America and the Caribbean islands with the United States in new and tightened bonds of friendship.

Vice President and Mrs. Nixon arrived back here this afternoon from Haiti, completing a 7,500-mile, 4-week tour of 10 countries. If this had been a political campaign—and the smiles, hand-shakes, and waves reminded one of the hustings—Nixon would have won by a landslide.

CONQUERED HEARTS OF THE PEOPLE

Everywhere, the Spanish-speaking people had a word for him—"simpatico"—meaning, he conquered their hearts. But the payoff of the trip—at an estimated cost of \$1 million—will begin when action (some of it urgently) is taken on Nixon's recommendations to President Eisenhower and the National Security Council.

What Nixon and his gracious wife Patricia brought back they also left in countless unforgettable memories etched on many who saw and were touched by the good-will couple.

The little orphan girl who never knew mother love and had a precious moment of it when Mrs. Nixon cuddled her in her arms in El Salvador.

The old men and women in a hospital at Colon, Panama, who wept at the sight of Mrs. Nixon.

RELUCTANT TO SHAKE MRS. NIXON'S HAND

In Panama City a dozen top-crust society women were reluctant to shake Mrs. Nixon's hand because she had shaken hands with lepers that day.

"I assured them it was all right," Mrs. Nixon said. "I didn't touch any leper inmates who had running sores, although some of the hands I shook were mere stubs. I wasn't afraid."

To Mrs. Nixon this was the most indelible experience of her trip which included appearances with her husband at luncheons, receptions, dinners, and doing 400 miles of tours on her own to 19 hospitals, 51 schools and 9 other institutions.

"The 160 inmates of the leprosarium really appreciated our visit," she said. "They see so little of the outside world."

SHOESHINE BOY BECOMES A MAN

Then there was the shoeshine boy in Guatemala City just turned nine who became a man the day he met Nixon. Rodolfo Gonzales ran alongside the Vice President's car 2 miles from the airport to the palace. The next day this free enterprise boy caught up with Nixon at the Independent Monument and gave him a shine.

Coinless, Nixon turned to Assistant Secretary of State Henry Holland and said: "Pay him three times what it's worth." A protocol official protested that Nixon would "spoil the boy." Nixon, in effect, said nuts.

Holland shelled out a quarter while Nixon wrote on his personal card, "Good luck. Come see me some day in Washington."

Today a local newspaper is conducting a campaign for a scholarship to send Rodolfo to the States.

In Panama a 10-year-old waited 2 days to get Nixon's autograph. His name was Franklin Delano Wasson. A line in his autograph book, under the signature, was

reserved for the signer's hobby. Nixon wrote: "Shaking hands."

PAT LOOKED FRESH IN BROILING SUN

Even in the broiling tropical sun, Pat looked as wholesome and fresh as the girl next door.

"Que bonita," the boys shouted, the Latin equivalent to a wolf call.

In Guatemala City, one big 12-year-old youth kissed her hand and tried to throw his arms around her.

Rafael Trujillo, ex-President of the Dominican Republic who now wears the title of benefactor, lit 10,000 lights outside the palace for the Nixons' first night there. When the Nixons made their enchanted entrance—300 feet across an Arabian Nights rug to the awaiting Trujillos—it was like a storybook picture of a kingdom of the past.

BARRELS OF CHAMPAGNE OPENED AT RECEPTIONS

And even though he had said a few hours earlier that he preferred a soft drink, Nixon was served champagne—the most golden, expensive brand obtainable. He merely sipped it, for he much prefers coffee or a small beer.

Nixon is known to feel that the money-pinched Latin-American Republics should have saved lots of money by not cracking open barrels of champagne on his behalf.

It was during his stops along throng-lined streets, visits to a textile factory in Ciudad Trujillo, a housing development in Puerto Rico, a banana plantation in Costa Rica, coffee farm in Honduras, sugarcane plantation in Cuba, that Nixon revealed himself as an uncannily shrewd politician. He sucked sugarcane, posed with bags of coffee beans, munched pineapple, gulped a banana, wore a Panama hat.

HE ALWAYS FACED THE CAMERAS

Every moment of his working day—he averaged 5 hours sleep a night—he was like an actor on stage. The play had to go on no matter how tired he was. But the amazing thing was that he and Pat are almost physically indestructible.

"If he rests, he'll rust," cracked one observer.

He played every moment to the hilt. He always faced the cameras. Yet there was no ham in him. He spoke in booming tones as if he had rehearsed a speech all day long, instead of making it up on the spot.

The smile was his charm and he could turn it on and off without waste, making it feel warm. He waved and waved, gesticulated with his left hand and grasped the fingers of strangers with his right.

For that handshake moment the stranger was alone in the world with Nixon. Words tumbled out: "How are you? What is your name? So nice to see you. Yes, yes, yes, yes, yes."

[From the Washington Evening Star]

THE VICE PRESIDENT MAKES FRIENDS

Efforts have been made during several administrations to expand the duties of the Vice President and to give the holder of that office a more important voice in policymaking. In the present administration, President Eisenhower appears to have found a formula for Vice President Nixon that is proving effective and valuable. It is the practice of having Mr. Nixon travel as a sort of special representative of the President, authorized to talk on a level of high responsibility with leaders of foreign governments and their associates.

The good impression which Mr. Nixon makes during these travels was illustrated first in his trip last year to Asia. It has been evident again in the journey just finished through Central America and the Caribbean area, a region that is highly important to us and that has been deeply disturbed in recent months by internal political crises and conflict between neighboring gov-

ernments. The Vice President took a good look at all of these problems, talked realistically to some of the key political figures and left behind his renewed and improved determination on the part of the local government spokesmen to resolve their area problems peaceably.

In turn, Mr. NIXON has brought back to this country an encouraging report on the trade potential in most of the area visited. He foresees a new period of political and economic stability there and he feels that private enterprise from our own country should explore the investment and commercial opportunities more thoroughly. One of his warnings to the Central American authorities, however, was that they could not expect capital investment from the United States unless the political and economic environment is such as to assure protection from unreasonable risk.

The Vice President is planning a more detailed report to the Nation soon. It promises to be a constructive and informative one.

Three Hundred Years of Jews in America

EXTENSION OF REMARKS

OF

HON. T. MILLET HAND

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. HAND. Mr. Speaker, with the consent of the House, I include in the CONGRESSIONAL RECORD an address which I was privileged to make to the Jewish community of the city of Wildwood, N. J., and their friends and neighbors, on February 28, 1955, celebrating the completion of three centuries of the participation of the Jewish people in our national life:

THREE HUNDRED YEARS OF JEWS IN AMERICA

It is always an honor to be called upon to speak before a substantial congregation of your fellow citizens, because I think that the invitation must imply that you expect, or at least hope, that the speaker will have something of merit to say to you. I trust that in this instance you will not be too disappointed. In this case, however, I feel a particular sense of honor and responsibility that you should have selected a non-Jew to speak to you on an occasion which is not only essentially a Jewish one, but one which is very close to your hearts, and which in a sense is a huge family celebration. I take this to mean a recognition that you and I, with all of our differences of race and creed and background and past cultures, are nevertheless one in our viewpoint of what makes a great society and a good life; that you and I are one in our Americanism, and in our intense pride in being Americans.

I like to think too that I am honored partly because of your appreciation for the small but sincere and continuous efforts that I have made over a period of many years in behalf of the Palestine homeland, and finally in behalf of the creation of the State of Israel. It can be truly said that Israel exists as the results of the devoted work and support of the American Jewish Community, and of the consistent support of the Congress of the United States. I think we can both take great pride in our work, and have great hopes for the future of this State, which is at once both spiritually and materially of the greatest significance.

We are here tonight to celebrate the Tercentenary of Jews in America. It is surprising how few people realize that Jews have

been a substantial part of our history from the very beginning. A great many people associate the incorporation of the Jews into American society as beginning after the great pogroms in Russia at about 1880, and it is true that there was a huge influx of eastern Europeans at that time, but centuries before that, your people had identified themselves with the very beginning of what was to become the United States. It is true beyond a doubt that Jewish merchants and Jewish adventurers were associated with the first voyage of Christopher Columbus to the New World, assisted in the financing of those voyages, and were actually aboard. There were records of Jews in North America in 1621, which was within 1 year of the landing of the Pilgrim Fathers. About the first Jewish group to settle permanently in North America, apparently landed at New Amsterdam (now New York) in 1654, and thus you are well within historical limits in marking your 300th birthday.

You came for the same reason that the Pilgrims came; to achieve religious and political freedom. And while America, from the beginning, was heavenly in contrast with the Old World, progress toward acceptance was slow. Governor Stuyvesant was unfriendly, as indeed he was to Lutherans and "Papists" and it was 30-odd years before any measure of rights were won. Restrictions were not removed until 1785 in Virginia, 1816 in Maryland, and as late as 1868 in North Carolina. The first prayer by a rabbi was uttered in the House of Representatives on February 1, 1860. The first Jewish chaplain was appointed in the United States Army during the Civil War.

It is a strange paradox of history that some of our ancestors, who came here for their liberties, were unwilling to grant it to others who did not conform to their views. Thus Protestants were as unwelcome in Maryland as Catholics were in parts of New England.

Too many people, even now, are for freedom of speech only so long as what you say pleases them. Too few, even now, really believe with Voltaire, who said: "I disagree with all that you say, but I will fight to the end for your right to say it."

But there were giants in the land, too, and one of them was Roger Williams. The tiny province of Rhode Island, under his liberal influence, provided that "all men whatever nation soever they may be, that shall be received inhabitants of any of the towns, shall have the same privileges as Englishmen, any law to the contrary notwithstanding."

With the climate of freedom thus provided, one of the earliest settlements was Newport, R. I., where a congregation was established in 1658. It was to the Hebrew congregation there that, in 1790, George Washington wrote in part:

"The citizens of the United States of America have a right to applaud themselves for having given to mankind examples of an enlarged and liberal policy, a policy worthy of imitation. All possess alike liberty of conscience and immunities of citizenship. It is now, no more, that toleration is spoken of as if it was by the indulgence of one class of people that another enjoyed the exercise of their inherent natural rights. For happily the Government of the United States, which gives to bigotry no sanction, to persecution no assistance, requires only that they who live under its protection should demean themselves as good citizens, in giving it on all occasions their effectual support."

Remember these glorious words, "The United States, which gives to bigotry no sanction, to persecution no assistance."

The fact that you were here from our beginnings is not important, but your full participation in our development is important. It is safe to say that as high a percentage of Jews backed the movement for

independence as did the English. There were only 2,000 Jews in the Colonies at the time of the Revolution. Most of them backed General Washington. At least one of them, Haym Solomon, was necessary to its success. A man of great wealth, he impoverished himself in behalf of the patriots' cause.

The pattern set by the Revolution has been followed in all our wars, the Jewish people serving their country valiantly and well.

And so, in peace, they have helped to weave the strong social fabric of America, both in the humanities and in commerce.

Abraham Duker says: "Jews pioneered in philanthropy, initiating through federations, the Community Chest movement, and introducing free loans, cooperative credit, visiting housekeepers, settlement work and visiting nurse services. Jewish workers pioneered in trade unionism, in unemployment insurance, cooperative housing, labor banking, medical care and recreational facilities for workers, with names like Samuel Gompers and Sidney Hillman among the outstanding labor leaders. Together with Jewish industrialists they often set the pattern of arbitration and peaceful settlement of disputes."

"In commerce and industry, they are best known for pioneering in the garment, motion picture and plastic industries, and for activities in the publishing field. They have been particularly active in the sciences, scholarship, and medicine. Like Americans of other faiths, Jews have also been prominent, and frequently made notable contributions, in all three branches of government."

Enemies of your race view with alarm your great influence in the fields of public opinion. But you can point with pride to their conduct. Who can say that the National Broadcasting Co., headed by David Sarnoff, or the Columbia Broadcasting Co., largely Jewish controlled, are not wholly American in their outlook? Who will argue that the Jewish-owned New York Times is not, by and large, the world's greatest newspaper, or that its columns reflect bias or prejudice?

But the activities of the Jewish people in the business world can be overemphasized. You have made preeminent contributions to your country in the world of literature, music, and the arts. Louis Untermeyer, the poet; Edna Ferber and Fannie Hurst, the novelists; David Belasco in the theater; Elman and Menuhin in music; Isadore Baline, if you please (whom all Americans love as Irving Berlin), come to mind amongst literally hundreds and thousands of others who have brought culture and pleasure to our millions.

In the field of enlightened capital, shall we mention the Kuhns, the Strausses, the Guggenheims; in the field of labor leadership, Sam Gompers, who for 40 years, was the American Federation of Labor.

And because the Jewish people have loved their country and wish to serve it, they have given us a dozen Senators, 50 or more Representatives, and other great public servants, of which Bernard Baruch, Eugene Meyer and Henry Morgenthau are but a few. Because of their love of law and order, justice and freedom, they have given us Brandeis and Cardozo.

But I labor the point. It is even more important that the everyday lives of the families of the 5 million Jews in America can and do teach us lessons in self-reliance, in law and order, in culture and decency, and good living.

And so you have won, and deserved to win, a full measure of acceptance in this great society which is America, but you and all of us must continue to guard our inalienable rights, remembering that to secure them is the highest purpose of government; remembering too that 2,500 years ago Solon said: "That is the most perfect government under which a wrong to the humblest is an affront to all."

Again quoting the Father of his Country in his letter to Newport congregation:

"May the children of the stock of Abraham, who dwell in this land, continue to merit and enjoy the good will of the other inhabitants, while everyone shall sit in safety under his own vine and fig tree, and there shall be none to make him afraid. May the Father of all mercies scatter light and not darkness in our paths, and make us all in our several vocations useful here, and in his own due time and way everlastingly happy."

I again thank you for the privilege of participating with you tonight on this memorable occasion and I express to you my everlasting gratitude for the good citizenship award which you have so graciously given me.

The Law of the Land

EXTENSION OF REMARKS

OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. FULTON. Mr. Speaker, I arise to congratulate Robert Post, of Pittsburgh, whom we all know as Bob Post, on the production of his motion picture *The Law of the Land*, which is doing so much to explain to the people of the United States the method of the making of the laws in the United States, as well as the practical working of the United States Congress.

We who have known Bob Post for many years, are pleased with the recognition which is being given both to the picture and the producer. On Tuesday, February 22, 1955, at Valley Forge, Pa., Robert Post has received Freedom Foundation's award for producing the picture which they say is "an outstanding achievement in helping to bring about a greater understanding of the American way of life during 1954." I believe that Freedom Foundation has made a wise choice in naming as one of the recipients of the George Washington Honor Medal for 1954 both my good friend Bob Post as well as the fine motion picture *The Law of the Land*.

Another individual who has by his support contributed much to the success of the picture is David J. McDonald, president of the United Steelworkers of America with headquarters in the Commonwealth Building, Pittsburgh, Pa. David McDonald is to be complimented for recognizing the value of the picture *The Law of the Land* and arranging for its distribution and showing among the members of the United Steelworkers, in order to bring to the working men and women a fine view of the working of the United States Congress and our United States Government.

Mr. McDonald knows the eager interest with which our working people are learning and taking new part in our local State and National Government bodies, which is making for an informed and intelligent electorate among the people. The action of labor leaders in our labor relations in developing an informed and experienced electorate, will make for efficient and stable Government in the fu-

ture, and contribute to the stability of our system of Government.

We hear many cries against various groups in this country, but there is one point on which we can all unite, and that is the development of an intelligent and informed, free electorate. We are proud that David McDonald and the United Steelworkers of America have seen fit to purchase copies of this picture that will give the congressional story national distribution. In its preface Mr. McDonald states:

Unselfishly, this picture is available to other labor unions, schools, church groups, fraternal and civic organizations—in fact, anywhere that Americans congregate.

This is labor statesmanship.

Statement to the California Congressional Delegation by the Department of California of the American Legion

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. DOYLE. Mr. Speaker, unanimous consent having been heretofore granted me so to do, I am pleased to present herewith the statement to the California congressional delegation on February 28 by the Department of California of the American Legion. It is self-explanatory and I believe will be of timely information to all who read it:

STATEMENT TO THE CALIFORNIA CONGRESSIONAL DELEGATION, WASHINGTON, D. C., FEBRUARY 28, 1955

Mr. Chairman and Members of the California congressional delegation, it is a genuine pleasure to again be given this opportunity to meet with you. We bring you greetings from the American Legion, Department of California. Your courtesy in extending to us this privilege to present some of the major problems concerning veterans' affairs in California for your sincere consideration is appreciated.

We have given each of the various subjects a number for your convenience only. They do not necessarily reflect the importance of one over the other.

1. We again request further assistance for the construction of the new 1,000-bed Veterans' Administration neuropsychiatric hospital approved for the San Francisco area, without any further unnecessary delay.

Comment: The approval for construction of this hospital was granted October 19, 1946. Subsequent to approval there have been many unreasonable and unnecessary delays. It was not until August 7, 1948, that the first site—a 200-acre tract at Fort Funston, San Francisco—was selected. Preliminary plans were then drawn and were later changed to provide for bombproof inner-core construction. The latter plans were not completed until May 9, 1950. Not until October 21, 1952, was the clearing, grading, and other excavation work completed at the Fort Funston site, at the cost of \$413,307. Early in December 1953 the site at Fort Funston was abandoned, following the placing of a ban by the Civil Defense Administration on such structures within 10 miles of any critical atomic-bomb target area.

Shortly thereafter, a site-finding committee from central office of the Veterans' Administration looked over several other prospective hospital sites in the San Francisco area, which finally resulted in the Administrator of Veterans' Affairs announcing on December 19, 1954, that a 115-acre site on the southwest perimeter of the Stanford University grounds (Palo Alto, Calif.), was accepted and that the Veterans' Administration would go ahead immediately with the condemnation proceedings to acquire the site. This hospital was badly needed even before approved for construction, and the need for it has continued to grow in each of the more than 8 years since approval.

2. The urgent need for replacements of the Oakland Veterans' Administration Hospital, Oakland, Calif.

Comment: Last year, in discussing the physical condition of this hospital with you, we were told you would appreciate having the views of the American Legion, Department of California, as to whether it was feasible and economical to remodel the present structure into a modern hospital building, or should a completely new hospital be built.

A special subcommittee from our department rehabilitation commission was appointed to make a thorough investigation of this problem and bring its findings and recommendations to our full commission. This subcommittee's study and investigation was made. Its report and recommendation were presented to our full commission. Among the major things they found were:

(a) The building was originally constructed in 1910 as a hotel of approximately 350 rooms and operated as such for 45 years.

(b) The Army took it over early during World War II and operated it as a general medical and surgical hospital until the year 1946. It was then transferred to the Veterans Administration and since then, operated by it as an 800-bed (standard capacity) general medical and surgical hospital.

(c) The building was never reconstructed by either the Army or the Veterans' Administration as a hospital.

(d) A great loss of space is taken up by bathrooms, hallways, clothes closets, etc. Such wasted space in this building—not feasible for hospital use—is estimated to be enough to provide sufficient space for one more floor.

(e) When the building was constructed it was along the lines of the larger type hotel rooms. No reasonably sized wards are available. Only 2, 3, 4, and 5 hospital beds can be placed to a room. Most of the rooms can accommodate only 2 or 3 beds. Such arrangements are very unsatisfactory for a general medical and surgical hospital because of the varied types of patients to be cared for. The doors in very room on all floors are too small to accommodate a hospital bed for moving patients, whether it be in case of fire, or interroom transfers. The elevator facilities are most inadequate. They are the original 1910 installation. Any replacement of parts requires having them especially machined and fabricated. They are too small to accommodate a hospital bed for such necessary movements from one floor to another. A guernsey cannot be accommodated in the elevators unless placed diagonally. Patients in wheelchairs and on stretchers, must be carried on the same elevator with visitors, other patients, and personnel. The bodies of deceased patients must be removed by the same elevators as used by the general public. The conditions of the plumbing and electrical wiring are deplorable. The plumbing system was installed for hotel services of approximately 500 guests. It is most inadequate for the demands necessary for an 800-bed general medical and surgical hospital. The hot-water pipes are so old that the pressure has had to be reduced to the lowest possible degree to eliminate the possibility

of a major shutdown because the pipes are known to contain a multitude of potential leaks. The electric-wiring system would be most inadequate for a hospital one-fourth the bed capacity, due to the varied pieces of technical and clinical apparatuses and other electrical equipment, necessary to properly operate a general medical and surgical hospital. Some independent electric power leads have had to be carried to equipment which is both costly and time consuming.

The four major surgical suites are old converted hotel sample rooms located on the mezzanine floor. They are inadequate to handle the surgical workload of this active general medical and surgical hospital. The air-conditioning system for this area is ancient in design, inefficient in operation, and skillfully balanced on an old bathtub, and is a source of constant deep concern to the surgical staff and the engineering division.

To sum all of this up, it adds terrifically to the cost, to say nothing of the fire hazard involved. It requires 800 employees working under hardship and many difficulties to take care of 661 patients in this 800-bed general medical and surgical hospital.

(f) It is the findings of our department, after considerable study, that it is physically impossible to convert the present structure into a modern economical hospital. Study was also given to the possibility of remodeling by adding another wing to the present structure. This was also studied by central office of the Veterans' Administration and rejected as economically unsound, as it would cost approximately \$10 million and, when completed, would still be inadequate for the increased needs, especially as it pertains to intermediary care; that is, the patient who has reached maximum hospital benefits and unable to care for himself makes him ineligible for domiciliary care, but is in need of nursing and attendant care.

Recommendation: It is our recommendation that an 800- to 1,000-bed general medical and surgical hospital building of modern design be constructed on the adjoining lot now owned by the Government. The lot in question is bound by 13th, Alice, 14th, and Jackson Streets. It takes up a full city block, or approximately 60,000 square feet, immediately east of the present structure, just separating the 2 by the width of Alice Street; that this addition be connected with the present building by overhead passageways or corridors and tunnel or corridors under Alice Street. When completed the present load of patients be moved to the new addition; the old or present building be moderately remodeled, furnished with adequate plumbing and electric power; the first floor be used for administrative space and that other necessary space be used for all types of services, such as overall rehabilitation, physical therapy, occupational therapy, etc.; and the balance of the building, exclusive of the basement, be used as an annex to care for patients requiring intermediary care. These are the veterans denied domiciliary care because they are too helpless to meet the requirements for membership and denied hospitalization because there is little that medicine can do for them, and to admit them would freeze beds badly needed for acutely ill patients.

There is room for much improvement in the basement of the present building to provide for employees' lockers, space for care and storage of patients' clothing, improved conditions for storage of oxygen tanks, and by adding one additional boiler to the present heating plant, it is believed, would sufficiently care for the heating requirements of the present and recommended addition.

Our committee estimates the total cost of the new addition, plus the remodeling and repairing of the new structure as outlined, to be approximately \$22 million to \$25 million.

Our committee's study took into consideration the location. Among the many ad-

vantages in having the hospital located at the present site and adjacent property in downtown Oakland are:

Transportation for patients, personnel, visitors, and economic delivery of supplies.

Maintaining adequate consultants and attending physicians.

Fire protection. The Oakland fire department cooperates 100 percent, and fire stations are within minutes of the hospital.

There would be many disadvantages should a new hospital be constructed in an outlying territory away from this present central location. Among some of these are: Loss of personnel, creating a recruitment problem; difficult to maintain consultant and attending physician service; loss or curtailment of many volunteer services such as volunteers nursing aid; the added cost of building and equipping a fire station, plus recruiting, training, and maintaining personnel for fire protection.

The only disadvantage advanced from any source to our knowledge, is that downtown Oakland may be considered a prime military target. For protection against an atomic bomb attack, the Civil Defense Administration has indicated such buildings must be constructed 10 miles away from a prime target area. It is not believed that such a hospital building or the patients would be any safer in an atomic or hydrogen bomb attack 10 miles out of downtown Oakland than they would be in the heart of that city.

3. The need for repair and rehabilitation of the Palo Alto Veterans' Administration Hospital.

Comment: This hospital was constructed in 1922, at which time the patient population was approximately 50 percent of what it is today. Practically nothing, with the exception of emergency alterations and repairs, has been undertaken since the hospital was constructed. All buildings are in need of alteration and repairs. Some should be replaced. A few of the buildings that are more urgently in need of alterations and repairs than some of the others are the general medical and surgical, the infirmary, and the admission or reception.

There are 104 temporary buildings used for nonpatient use. For 13 years now, consideration has continuously been given to the construction of a new dietetic building. The present structure is inadequate to accommodate the patient load. Equipment is poor and storage space, insufficient. Electric lines and transformers installed in 1922 cannot carry the necessary load and are badly in need of replacement. The surgical unit, the ear, eye, nose, and throat, and dental clinics, are badly in need of alterations. For over 9 years there has been a real need for an administration building. For several years there has been need for expansion of the section for female patients. Only 26 beds are available for this class of patient, with 38 mentally ill female veterans on the waiting list. The Veterans' Administration is paying for their care in other hospitals. We have been told, however, that when the new neuropsychiatric hospital for Palo Alto is completed, adequate facilities will be made available for mentally ill female patients.

4. The necessity for the expansion and modernization of the Wadsworth General Medical and Surgical Hospital, Veterans' Administration Center, Los Angeles, Calif.

Comment: We have been advised that the plans for the new pathological wing for this hospital were completed February 1, 1955; further, that it is expected that bids will be called for in March. This is considered a two-phase program. The second phase of the project anticipates the modernization of the present hospital building. The present building was originally constructed for intermediate care in connection with the domiciliary unit; that is, the care of the chronic patients, more in need of nursing and attendant care. It was not planned for

it to be, and it is not now suited for, a general medical and surgical hospital. The new pathological wing will house such services as surgery, X-ray laboratories, the reception and outpatient services.

It is our study and recommendation that the new pathological wing form the anchor for an additional 1,000-bed general medical and surgical hospital and the present facilities being used as a hospital under most difficult and trying conditions, be used or converted for the type of care it was originally intended. All Government and private medicine will agree that there is a growing need for the care of those chronically ill, who have reached maximum hospital benefits, but are unable to care for themselves.

5. Urgent necessity of replacing all temporary construction at the Veterans' Administration Hospital, Long Beach, Calif.

Comment: This is a 1,600-bed hospital. Approximately 200 beds and the administrative offices are housed in good, modern, permanent construction. Other buildings are in the rambling type of temporary wartime construction, built 12 or 13 years ago to care for Navy and Marine Corps patients during World War II. Thanks to the 83d Congress and more particularly to its Members from California, an appropriation of \$8 million was granted for additional permanent construction to replace a portion of the temporary barracks-type buildings. We are told the preliminary plans for the new addition were submitted to the Bureau of the Budget on February 1, 1955, and within 15 days after receiving these plans a member of the Bureau of the Budget inspected the present facilities. One could not make such inspection even though inexperienced, without observing the very poor, rundown condition of the temporary buildings, which are most difficult and expensive, if not impossible, to maintain. Roofs are continuously springing leaks, floors are buckling and splintering, a fire hazard exists, and conditions are unsanitary.

The present plan for this hospital is reported to be a two-phase plan. The \$8 million appropriated is to complete the first phase. It will provide permanent construction for 561 beds and one additional surgical suite. The second phase is to bring the remaining 761 beds under permanent construction at an estimated cost of \$12 million.

During the construction program, approximately 200 beds for veteran patients will be lost, if provisions are not made to care for an equal number of veteran patients elsewhere, such as the Corona Naval Hospital. The veteran population continues to increase in California, far more than in any other State in the Union. In spite of this, since 1949, California has lost over 1,700 general medical and surgical beds for veterans, while several other States—New York as an example—has had huge increases in the number of hospital beds for veterans, by new construction. We urge your continued interest in this project to the end that there will be no unnecessary delays.

6. Hospital beds for sick and disabled veterans in the San Diego and Imperial Counties area continue to present a problem.

Comment: The 200-bed General Medical and Surgical Veterans' Administration Hospital for San Diego, originally approved in October 1946, progressed to where the site was acquired, plans were completed, bids were called for and the low bidder was announced. Just before actual construction started, in January 1949, this project was eliminated by Executive order.

The Veterans' Administration has had for a number of years, a contract with the United States Naval Hospital in San Diego for a various number of general medical and surgical beds. The number contracted has varied from 250 to 100. It is believed that a fair minimum of 110 beds for general medical and surgical veteran patients (quick

turnover patients) would be adequate at this time, provided an additional 100 beds were made available for chronically ill veteran patients. Under the present and past contracts, the naval hospital does not admit the chronically ill, in need of hospitalization. Should our recommendations for the General Medical and Surgical Hospital at the Veterans' Administration Center, Los Angeles, be carried out, the provisions in the recommendations for the care of the chronically ill patients in need of nursing and attendant care would bring needed and perhaps adequate relief for this type of service for the entire southern California area.

7. The need for Federal aid to State and Territorial veterans' homes for capital outlay expenditures.

Comment: A majority of States have established, and operate veterans' homes for domiciliary and/or hospital care of disabled war veterans. The Federal Government has recognized the assistance given by the States in caring for thousands of disabled war veterans through Federal aid subsidies in part payment for the operating expense of maintaining veterans' homes. As you know, our very fine California Veterans' Home is in Napa County.

The ever increasing veteran population eligible to our California Veterans' Home has continuously required additional construction, modernization, additions, and/or improvements of domiciliary, hospital, and auxiliary buildings. Financial assistance is required by the several States, including California, in providing additional and planned facilities in relation to the veteran patient and member population.

Our department executive committee, meeting in Sacramento, February 5-6, 1955, by unanimous vote, adopted a resolution calling on our State legislature at the current session, to memorialize the United States Congress to appropriate the sum of \$5 million annually for 5 consecutive years to remain available annually until expended for the purpose of matching similar funds by States that qualify to receive grants for the construction, modernization, additions and/or improvements of domiciliary, hospital and auxiliary structures at State or Territorial soldiers' homes.

Our State government has been very generous in maintaining and modernizing our California Veterans' Home. It is considered the finest in the land today. At present there are over 1,900 members, both male and female, in domiciliary, chronic and convalescent, and hospital. Modernization and construction of new additions are presently under way. The overall plans call for accommodations to care for a maximum of 3,250 members.

8. The need for amending legislation to provide for payment by the Federal Government for cost and transportation to any place within the continental limits of the United States of bodies of veterans who die in State veterans' homes.

Comment: When a veteran dies in a Veterans' Administration hospital, or domiciliary Home, payment for transporting the body for burial to any place in the continental limits of the United States may be authorized. Veterans in our State veterans' home, without exception, met the Veterans' Administration requirements for hospital or domiciliary care. When they die, the next of kin or the State of California now have to pay for the transportation of their bodies to the place of burial.

9. The need for a national cemetery in the Los Angeles area.

Comment: It is reliably estimated that there are 818,000 veterans residing in Los Angeles County. There are well over a million veterans residing in the Los Angeles area. We have many complaints of the next of kin who cannot afford transportation to

the Golden Gate Cemetery, San Bruno, or Fort Rosecrans, San Diego, for the purpose of attending the funeral of their loved one who was killed overseas and returned to the United States for burial. The same holds true with respect to the next of kin of veterans, where it is the desire to bury them in a national cemetery. We know of no place in the United States with such heavy concentration of veterans where a national cemetery is so far away for their burial. The Veterans' Administration Cemetery in West Los Angeles is not available for burial of deceased servicemen or veterans who die outside of Veterans' Administration hospitals.

10. The urgent need for adequate funds to maintain the hospital and medical services for veterans in California.

Comment: The lack of sufficient funds allocated to Veterans' Administration hospitals and medical clinics in regional offices in California for the fiscal year 1954-55 have caused—

(a) A further reduction in the number of available hospital beds that are so urgently needed. As an example, 131 general medical and surgical beds are closed at the Veterans' Administration Center, Los Angeles, Calif., because of insufficient funds.

(b) Reduced badly needed and justified out-patient treatment to veterans for their service-connected disabilities. This reduction is causing hardship on veterans with service-connected disabilities and has now reached a point to where many private practicing physicians are dropping out or losing interest in the home town care program.

(c) A decided lowering of morale of Veterans' Administration employees, especially those in the department of medicine and surgery. They are only human and want some assurance of security. Under present conditions they never know from one day to the next whether they have a job or not.

(d) The reduction in the wonderful research program which was providing excellent medical and scientific information for the benefit of all peoples.

We urgently request that you give sincere consideration of appropriating the necessary funds for these justified services and/or seeing that the Veterans' Administration medical facilities in California receive sufficient funds from the appropriation to maintain their operations on a basis equal to the demand.

11. Veterans' hospitalization:

Comment: Some groups or organizations continue to oppose the laws that established the veterans' hospitalization program. This opposition appears to be purely selfish for economic reasons. It is based on:

(a) Alleged widespread abuse of hospitalization for the so-called non-service-connected veterans.

(b) Veterans do not constitute a special class and should not be entitled to this privilege.

The story about widespread abuse of this program by veterans falsely swearing under oath as to their financial and economic ability to pay for their hospital and medical care, is definitely contrary to the findings of the Subcommittee on Hospitals, of the Committee on Veterans' Affairs, House of Representatives, 83d Congress, 1st session, July 1953.

The right of American veterans to preferred treatment as a special class by reason of their military services has been long established as public policy supported by specific legislation extending throughout the history of our country. Those opposing the care of veterans as a class, are in direct contradiction to the will of the American people, as repeatedly expressed through enactments by the Congress. Their misrepresentations operate to deny privileges and entitlements to the sick, broke, and disabled veterans, which the American people desire that they receive.

Only recently the board of directors of one of our local chambers of commerce made public, a resolution adopted by them, opposing hospital and medical care for veterans. It is loaded with false statements and untrue accusations. This chamber . . . emphatically opposes the furnishing of free hospital, medical, or surgical care for non-service-connected ailments and urges that such services be discontinued. . . . They apparently favor free hospitalization in county and State hospitals for nonveterans who cannot afford to pay, but by their action, they have officially placed our Nation's war veterans below any other citizens. While we deplore their action, we think they were misled by false information emanating from those who have a selfish, economic interest for financial gain, and possibly those favoring socialized medicine.

Hospitalization for Veterans

EXTENSION OF REMARKS OF

HON. M. G. BURNSIDE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. BURNSIDE. Mr. Speaker, under leave to extend my remarks into the RECORD, I should like to include the following letter I have received from Mrs. Gilbert Q. Duncan, 729 Washington Avenue, Huntington, W. Va.:

DEAR SIR: I want to thank you for your letter of February 16 and for trying to secure hospitalization for my husband. I realize the situation is deplorable and that, you did all you could. It is deeply appreciated. You asked me to write to you if there was anything you could do for me. So I am taking this opportunity to seek aid not just for my husband, but for all veterans.

Today I talked with Mr. Linten at the Veterans' Administration (Veterans' representative of Huntington, W. Va.). He told me there were 18,000 veterans in this country with mental conditions. Most of them are in jails and can't even get into a State hospital. I am not going to try further to get hospitalization for Gilbert (her husband) since he is better off than so many others. It is heartbreaking to see a brilliant man in such a condition, especially since he could be helped with proper treatment. They are not equipped to give insulin at the Huntington State Hospital. He does not respond to other treatments. It is also heartbreaking to think that so many mental patients are in jails. Anyone who has had mental illness in the family knows that jail is no place for these patients. It seems that veterans are forgotten men now, and it is about time something is done about them, especially the mentally ill. So it is my hope that you can introduce a bill that would take care of the men in jail who do not belong there. It seems reasonable that the Government would be far ahead to cure these men and get them back on the job instead of paying pensions. I know that without proper treatment, many people will be in hospitals the rest of their lives.

If there is anything you can do to help this terrible situation, it will be deeply appreciated. You may use my letter if it will help any. It is very difficult to try and raise two little boys under these conditions. So if you can help any of the others, it would certainly help me. Let me know if there is anything I can do. Thank you again.

Respectfully,

Mrs. MARIAN DUNCAN.

The Great Contribution of the Irish People to America

EXTENSION OF REMARKS OF

HON. HERBERT ZELENKO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. ZELENKO. Mr. Speaker, with the advent of St. Patrick's Day, I deem it appropriate to speak on the great contribution of the Irish people to America.

Many people believe that there were only a few Irish in America at the time of the Revolutionary War and that no considerable portion of them arrived until around the middle of the last century. However, the facts disprove this statement. In Pennsylvania, for example, there is evidence to show that an important Irish colony came over with William Penn in 1682. Penn was well acquainted with the Irish people for he lived many years at Kinsale, county of Cork, as manager of his father's estate. When he first came to America he brought with him a number of Irish people from Cork and Wexford. Seventeen years later, on one of his return voyages, he brought with him a brilliant young Irishman, James Logan, of County Armagh, who later became Chief Justice of the provincial courts. In 1723 a considerable number of Irish people located in Dauphin, and in the next year Irish settlements were established west of the Susquehanna River, what is now York County. In 1728, 5,600 Irish arrived in Philadelphia.

It looks as if Ireland is to send all her inhabitants hither—

Wrote Secretary Logan in 1729—

for last week not less than 6 ships arrived. The common fear is that if they continue to come they will make themselves proprietors of the Province.

When the British Government started to suppress the American Colonists, the Irish unanimously gave their support to the Colonists for two reasons: the first was the inherent love of liberty which ever dwells in an Irishman's heart and his sympathy for all people struggling against political inequality; the other was the bitter heritage of struggle with the British Empire which heritage they brought with them to America, and which was transmitted with undiminished fervor to their descendants. It was easy to show that the power which had trampled upon the affections of their fathers and tyrannized over their rights in the Old World was aiming at the same object in the case of their children in the New. Only one generation removed from the exiled and suffering generation the sons had as lively recollections of the tyrannies of Britain as if the experience had been immediately their own.

Three native-born Irish—Smith, Taylor, and Thornton, were signers of the Declaration of Independence, as were six descendants of Irish—Carroll, McKean, Read, Lynch, Paine, and Rutledge.

Washington had a high regard for the Irish people and the records show that he had many of them as friends and associates. In 1748, when surveying land for Lord Fairfax, his journal shows that several Irishmen accompanied him—he mentioned among them Patrick Rice, Patrick Matthews, James McCormick, and Timothy McCarthy. Many of the Irish officers of the Army and Navy of the Revolution enjoyed his friendship and esteem. On March 4, 1776, he appointed Colonel Stephen Moylan his aide, and private secretary. Moylan was born in County Cork and was a brother of the Catholic Bishop of that diocese. When Colonel Moylan was promoted to the command of the Fourth Pennsylvania Dragoons, Washington appointed Colonel John Fitzgerald, a native of Wicklow, as his aide. Fitzgerald's successor in the office of aide to Washington was Major James McHenry, a native of Antrim. A later secretary to General Washington was Colonel Joseph Reed "The Incorruptible," whose parents were from Dublin. At Cambridge on March 16, 1776, Washington selected "St. Patrick" as the password and he named General John Sullivan as officer of the day. At Valley Forge on St. Patrick's Day, 1778, General Washington directed "that all the Army keep the day" and on March 16, 1780, in his general orders he directed "that all fatigue and working parties cease for tomorrow, the 17th, a day held in particular regard by the people of the Irish Nation." On December 18, 1781, Washington attended a banquet of the Friendly Sons of St. Patrick in Philadelphia and was then "adopted a member of the society." On the same day he wrote the president of the society accepting "with singular pleasure the gold badge of membership in so worthy a fraternity as that of the Sons of St. Patrick in this city, a society distinguished for the firm adherence of its members to the glorious cause in which we are embarked."

The Friendly Sons of St. Patrick of Philadelphia contributed approximately \$500,000 to the cause of the colonists and from its own members supplied the Colonial Armies with 11 generals: Stephen Moylan, Edward Hand, William Maxwell, William Thompson, Griffith Rutherford, John Patton, Anthony Wayne, Walter Stewart, Richard Butler, William Irvine, and John Shee.

One of the most brilliant generals in the Revolutionary War was Gen. Anthony Wayne, born at Waynesboro, Pa. His father and grandfather were born in Ireland. Wayne was an active member of the Friendly Sons of St. Patrick of Philadelphia, and was also a member of the Hibernian Society of Philadelphia. He was commander of one of the most effective fighting arms of the Revolutionary forces known as the Pennsylvania Line. Gen. Henry Lee, afterward Governor of Virginia, in his *Memoirs of the War in the Southern Department*, makes the following reference to General Wayne and the Pennsylvania Line:

Wayne had a constitutional attachment to the decision of the sword and this cast of character had acquired strength from indulgence as well as from the native temper of the troops he commanded. They were

by the designation of the Line of Pennsylvania whereas they might have been, with more propriety, called the Line of Ireland.

The muster roll of the Pennsylvania Line, as shown by the archives of Pennsylvania, reads like the registry of a parish in Ireland as, for instance, the muster roll of the 7th Regiment company commanded by Capt. John McDowell, shows 76 percent natives of Ireland; the company commanded by Capt. Jeremiah Talbot, 70 percent; Capt. Samuel Montgomery, 69 percent.

When Washington evacuated Long Island on August 30, 1776, he personally selected 4 regiments of the Pennsylvania Line and 1 from Maryland to cover the retreat. The Pennsylvania regiments were commanded by four native-born Irishmen: Col. John Shee—later General Shee—from Westmeath; Col. Robert Magaw from Strabane, County Tyrone; Col. Edward Hand—later adjutant general of the Continental Army—from Kings County, now Offaly; and Col. John Haslet from Dublin.

After the evacuation of Long Island, Col. Robert Magaw, with 3,000 soldiers from the Pennsylvania Line, was selected to defend Fort Washington in upper Manhattan against a force of 14,000 under the combined commands of Generals Howe and Matthew, Lord Cornwallis, and the Hessian commander, Baron von Knyphausen.

Among other Irish generals in the Revolutionary War were Gen. John Sullivan, who captured Fort William and Mary 6 months before the Battle of Lexington; Gen. Richard Montgomery, killed at the Battle of Quebec; General Warren, killed at Bunker Hill; and General Stark.

The first captain to be commissioned in the American Navy was an Irishman, John Barry; he was also the first American commander to receive the title of "Commodore."

Among the French troops sent by France to aid the American Colonies were the regiments of the famous Irish Brigade under the commands of Gen. (Count) Arthur Dillon and Colonel Walsh.

Among the members of the convention that framed the United States Constitution were four native-born Irishmen: Thomas Fitzsimons, Pennsylvania; Pierce Butler, South Carolina; Dr. James McHenry, Maryland; and William Paterson, New Jersey. Four were of Irish descent: George Reade, Delaware; Daniel Carroll, Maryland; Hugh Williamson, North Carolina; and John Rutledge, South Carolina. William Paterson was later appointed Justice of the United States Supreme Court. John Rutledge served as Justice of the Supreme Court of the United States from 1789 to 1791, was chief justice of the Supreme Court of South Carolina from 1791 to 1795. In 1795 he was appointed by President Washington as the second Chief Justice of the United States, but was not confirmed by the Senate.

In St. Paul's Cemetery on the west side of Broadway from Fulton to Vesey Street, two of the most imposing monuments are erected to Irishmen. On the Fulton Street side is the tall obelisk erected to the memory of Thomas Addis

Emmett, a brother of Robert Emmett; the Gaelic inscription on this monument is by Rev. John English, the Roman Catholic Bishop of Charleston, S. C., born in the city of Cork. On the Vesey Street side is a monument to the memory of Dr. William J. McNeven, one of the men of 1798, an associate of Robert Emmett. The inscription is in Latin, Gaelic, and English. Dr. McNeven, however, is not buried in St. Paul's Cemetery, but is buried in the Riker family cemetery on Long Island.

Right at the entrance of St. Paul's Church is the grave of Gen. Richard Montgomery, born in County Donegal, one of the brilliant young leaders of the Revolutionary War who was killed in the Battle of Quebec.

The equestrian statue of General Sherman at the plaza, 5th Avenue and 59th Street, is the work of Augustus Saint-Gaudens, born in Dublin, Ireland.

The first colonial Governor of New York was Thomas Dougan, a native of County Kildare. He was responsible for the charter which set up public schools, and he also proclaimed the doctrine of religious toleration. The first mayor of New York after the Revolution was James Duane, a son of Anthony Duane, of County Galway, Ireland. Duane had been a member of the Continental Congress. The first Governor of New York after the Revolution was George Clinton.

The Clinton family played a very important part in the history of New York and the United States. George Clinton and his brother James were born in Orange County. Their father came from County Longford, Ireland. George Clinton was a member of the Continental Congress; a brigadier general in the Revolutionary War; elected Governor of New York in 1777. In 1804 and in 1808 he was elected Vice President of the United States.

James Clinton served as a colonel and brigadier general in the Revolutionary War; took part in the siege of Yorktown; served in the New York Legislature and constitutional convention.

DeWitt Clinton, son of James Clinton, was born in 1769. In 1797-99 he was a member of the New York Legislature; in 1801 he was a United States Senator; in 1803 elected mayor of New York City; from 1811 to 1815 he was mayor of New York City and also lieutenant governor of New York; in 1812 he was a candidate for President of the United States against James Madison and received 89 electoral votes. From 1817 to 1828 he was Governor of New York, and died in office in 1828.

That many Irish families bear names of other than Irish origin is due to the fact that under the reigns of Henry and Edward IV many penal laws were passed by Parliament compelling the Irish families to adopt English names, or the name of a town, or a color, or an art or science. These laws were forerunner to the Austrian Empire law of 1787, and Napoleon's decree of 1808 ordering Jews to adopt surnames.

These laws of the Henrys and the Edwards resulted in Irish families adopting such names as White, Brown, and Black, Butler, Carpenter, Mason, and

Taylor. They also resulted in a rough translation of the Gaelic names into English; for example, James Smith, a signer of the Declaration of Independence, was a native of Dublin, a descendant of a family named MacGowan. In Gaelic "Mac" means "son of" or descendant of. The prefix "O" also means "son of," and "Gow" means smith or blacksmith. When the laws of Edward IV became effective this branch of the MacGowan family changed their name to Smith. Other changes were "McShane" meaning literally in Gaelic son of Shane, or John became Johnson or Jackson. McTiernan, literally the son of Master, became Masterson. O'Donnall became Donaldson. McFergus became Ferguson. O'Cleary became Clark.

How a name is changed from English to Gaelic is illustrated by the fact that a few years ago an energetic man from Ireland, Erie O'Gowan, toured America in support of a campaign to remove the border between North Ireland and Ireland. During World War II he was a well-known brigadier general in the British Army, known as Eric Smith, and he changed the name to the Gaelic O'Gowan when he realized the injustice the border was inflicting on the Irish people.

As an example of the Irish contribution to America, we might look at the record of James Shields, born in Dungannon, County Tyrone. He was a brigadier general in the United States Army during the Mexican War; in 1848 he was appointed Governor of the Territory of Oregon; in 1849 he was United States Senator from Illinois; 1858-59 he was United States Senator from Minnesota. He was commissioned a brigadier general in the Union Army in the Civil War, was wounded at the Battle of Winchester, and finished his public career as a member of the State Legislature of Missouri from 1877 to 1879.

President Theodore Roosevelt boasted that two collateral branches of his family were Irish.

The ancestors of Presidents Buchanan, Polk, and McKinley were from County Donegal; the ancestors of President Chester A. Arthur from County Antrim, Ireland.

Andrew Jackson, the 7th President of the United States was born in the Waxhaw settlement between North and South Carolina on March 15, 1767. His parents came from Carrickfergus County Antrim, Ireland in 1765. His father, a poor farm laborer, died before Andrew's birth. In 1780, at the age of 13 he enlisted in the Revolutionary forces under General Sumter. In 1781, he was captured by the British and experienced brutal treatment from his captors.

Jackson taught school and began the study of law at the age of 18. In 1823, he was elected to the United States Senate, and the next year was a candidate for President. He received the largest popular vote among the four candidates, though John Quincy Adams was elected by the House of Representatives through the influence of Henry Clay.

In 1828, Jackson was triumphantly elected President over John Quincy

Adams after a campaign of great bitterness.

With Jackson began a new era in American politics. His was the age of "Jacksonian democracy," the rule of the people.

Former presidents, even Jefferson, had been chosen from the more learned aristocratic class—from the "rich and well born" as Alexander Hamilton put it during the Constitutional Convention. In the early years of the Republic it was understood this favored class should take the lead in managing public affairs, while the masses were to follow and obey. With the election of Jackson the people came into their own. Himself a sturdy frontiersman who had risen from lowest poverty, "Old Hickory" was one of the plain common people, and they gave him their confidence and trust more fully than any other President. Victor in two Indian wars; hero of the battle of New Orleans. Men acclaimed Jackson for his proven courage and directness in accomplishing results; even his enemies, and he made them by the score, could not deny his honesty, sincerity of purpose, and his warm heart.

John C. Calhoun, Senator from South Carolina, one of Jackson's political opponents, was a son of Patrick Calhoun born in Ireland.

The New York World-Telegram in March 1947 had the following news item:

HONOR MRS. ROOSEVELT

Mrs. Eleanor Roosevelt, whose great grandfather, Valentine G. Hall, emigrated from Ulster, Ireland, and settled in Flatbush, will receive the honor medal of the Ulster Irish Society of New York at the organization's banquet Friday night in the Wedgewood Room of the Waldorf-Astoria, it was announced today. The medal is awarded to Americans of Ulster ancestry for notable service rendered to the United States.

In the field of invention the Irish have given us Fulton of the steamboat, Morse of the telegraph, McCormack of the reaper and binder, and John P. Holland, inventor of the submarine.

In surgery they gave us Drs. Agnew and Murphy.

In journalism: Greely, Laffin, Grady, and S. S. McClure.

On the stage: Bouccicault, Barrett, the elder Drew, and Keane.

In poetry: Father Ryan, the poet of the South, John Boyle O'Reilly, O'Hara, and James Whitcomb Riley.

In industry: Orr and McCall of life insurance; James J. Hill, the railroad builder; A. T. Stewart; O'Day of the oil industry; Cudahy, meat packer; Mellon and Farrell of steel industry.

In music: Patrick Sarsfield Gilmore, predecessor to John Philip Sousa, Victor Herbert, and John McCormack.

In athletics: Sheridan, Ryan, McGrath and McDonald, and in baseball McGraw, Jennings, and Connie Mack.

In religion: Dr. Francis Mackenzie, founder of the Presbyterian Church; Rev. James Waddell known as "the blind preacher"; Father Matthews who preached temperance; Archbishop Ireland, Cardinal Gibbons. The first Catholic bishop in New York was a native-born Irishman, Rt. Rev. Luke Concanon.

During the Civil War President Lincoln selected the first Catholic Archbishop of New York, John Hughes, born in County Tyrone, Ireland, to visit Europe as a special envoy.

A few years ago Reader's Digest published an article entitled "Prelude to Fame," a copy of an article previously published in the Queen's Work. It told dramatically the story of nine young Irishmen who were convicted of treason in the young Ireland uprising in 1948, and sentenced to death, which sentence was later commuted to banishment for life to Van Diemen's Land, then an English penal colony, now Tasmania. They all escaped; and later when the Queens authorities investigated the convicts were located as follows:

Richard O'Gorman was Governor of Newfoundland.

Thomas D'Arcy McGee was a member of Parliament from Montreal, Minister of Agriculture, and President of the Cabinet of the Dominion of Canada.

Sir Charles Gavan Duffy was Prime Minister of Victoria in 1871.

Morris Lyne was Attorney General of Australia, and was succeeded in that office by his assistant and fellow convict, Michael Ireland.

Four of the convicts came to the United States:

Patrick Donohue was a brigadier general in the Union Army during the Civil War.

Terence Bellew McManus was a brigadier general in the Union Army during the Civil War, and is known for his intense spirit of Irish nationalism.

Thomas Francis Meagher was a brigadier general in the Union Army in the Civil War, and was in command of the famous Irish Brigade made up of New York's 69th, 88th, and 63d regiments, the 28th Massachusetts, and 116th Pennsylvania Regiments. Later he was Governor of Montana.

John Mitchell was the only one of the nine convicts who did not hold public office. He was an editor and publisher, and a fearless, caustic writer. He lived in New York City after his escape from prison. In 1862 he became editor of Jefferson Davis' paper, the Richmond Enquirer; this caused a breach with his Irish friends who were all fighting on the Union side.

When the war ended, two of Mitchell's sons had been killed while soldiers in the Confederate Army; Mitchell's property in Richmond had been destroyed by fire in the siege of Richmond, and Mitchell was imprisoned in Fortress Monroe with Jefferson Davis. When he was released, he returned to New York, became reconciled with his old friends, and took an active part in the Fenian movement to free Ireland. In 1874 he returned to Ireland and was elected to the British Parliament from County Tipperary. Then ensued a vitriolic battle between Mitchell and the Prime Minister. Mitchell refused to take the oath of allegiance to Queen Victoria, and the Prime Minister insisted he could not be seated because he was an escaped convict. In the midst of the controversy Mitchell died.

His grandson, John Purroy Mitchell became the Fusion mayor of New York in 1913.

No matter how one may view the Irish contribution to America, these facts cannot be controverted. In the 48 States of the United States there are 253 counties bearing distinctive Irish names; there are 65 places beginning with "O"; there are 1,000 places beginning with "Mc"; there are 7,000 places bearing Irish names; there are 24 Dublins; 24 Waterfords; 18 Belfasts; 16 Tyrone's; and 10 Limericks.

Irish blood, brain, and brawn have played a valiant part in the fabric of America, and the people of Irish descent may take a pardonable pride in the Irish contribution to the development and preservation of the American Government.

The Law of the Land

EXTENSION OF REMARKS

OF

HON. ROBERT J. CORBETT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. CORBETT. Mr. Speaker, on George Washington's birthday last week, February 22, Robert Post, of Glenshaw, Pa., a constituent of mine, was awarded the George Washington Honor Medal by the Freedoms Foundation at Valley Forge, Pa.

This coveted honor was bestowed upon Mr. Post because of his achievement in producing a motion picture entitled "The Law of the Land." The picture was selected from over one hundred submitted as being distinctly effective in bringing about a better understanding of the American way of life during the year 1954.

Of particular interest to us is the fact that the Congress of the United States is the "star" of Mr. Post's picture. His story is that of a proposed bill being made a law of the land. It is told in a highly dramatic style and captures all the significant highlights, the heat and heartaches, the trials and tribulations that go into making a law.

Special permission was given to Mr. Post to set up his cameras in the House of Representatives and the Senate. His cast is one that I am sure would be a Hollywood casting agent's dream. It includes our present and former Speaker, the President of the United States and the Vice President, the Secretary of Agriculture, and many individual members of the House and Senate.

The film is strictly nonpartisan and attempts only to tell the story of how we make laws with proper emphasis on, democratic principles at work. It has received enthusiastic reviews from educators, civic leaders, fraternal groups and service clubs all over the Nation.

A comparative newcomer into the field of documentary motion pictures, Mr. Post conceived the idea for The Law of

the Land, wrote the story and was the "spark-plug" behind the picture's production. To him and to all those who worked with him to make his achievement and award possible, I offer my most sincere congratulations.

German Assets in the United States

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mrs. ST. GEORGE. Mr. Speaker, the following up-to-date editorial from the New York Times of March 9, concerning German assets in the United States, is worthy of our attention.

We, in the Congress, are prone to overlook minorities, no matter how just their case. I am afraid we are more interested at times in the number of votes than in the case of justice for the individual.

There are some cases, not many, of elderly women who were married to German nationals in the days when a woman had to relinquish her American citizenship when marrying a foreigner and assume his nationality. These women had trust funds set up for them by their American parents who did not want their money taken out of the United States. During the last war these trust funds were confiscated by the Attorney General's Office. These individuals are now to have their claims settled at the rate of \$10,000 per head. With luck, they may get an income of \$500 a year. Their money, these trust funds are American money and American trust funds. Not 1 penny has ever left the United States or been invested outside this country. These funds have been taxed, and have paid taxes into the United States Treasury. Only the income was sent to foreign nationals.

Mr. Speaker, this is a new approach to the problems resulting from the dislocations caused by war. Maybe it is true that we should proceed on the theory that "to the victor belong the spoils," but it is not justice, and it is not American.

The New York Times editorial follows:

GERMAN ASSETS IN THE UNITED STATES

The United States and Germany have reached a preliminary understanding on an American plan calling for a partial return of German property in this country seized during the war. According to this plan, which must still be approved by Congress, the United States proposes to return such property to individual owners in West Germany up to a maximum of \$10,000 per person, and to restore all German copyrights, trademarks, and cultural property. The same formula will be applied to residents of East Germany when Germany is reunited.

Germany welcomes this plan as a constructive step, but it is not a final solution in either principle or substance. The property is to be returned as a matter of grace, not as a matter of respect for private property—a principle to which the United States has frequently pledged itself and which it observed in large measure after the First World

War. Furthermore, the plan does not cover corporate property, which constitutes the bulk of the \$450 million worth of German assets seized. This is left to future settlement.

The problem has been complicated, first, by the ruthless Nazi treatment of private property, which prompted European nations to look askance at any return of German property; and second, by counterclaims of American nationals against Germany for war damages. The latter claims are now to be settled up to a maximum of \$10,000 in each case, from a fund of \$100 million to be set aside out of payments made by Germany for American economic aid after the war. But taking into consideration the scandals attending the alien property administration after the First World War, the use of such property for political rewards after the last war and the long delays in and exorbitant cost of any settlement, it cannot be said that the treatment of private property constitutes the most glorious chapter in the history of Western democracy. The sooner that problem is finally solved with full vindication for the principles for which we stand the better will we be able to meet the Communist challenge to the free world.

Commemoration of Hungarian Independence

EXTENSION OF REMARKS OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution, adopted on March 5, 1955, at the commemoration of Hungarian independence, Hunter College, New York City:

Whereas Hungary by tradition and history had been the bastion of Christianity since the 14th century and by three centuries of continuous fighting at the sacrifice of 4 million of her people, had secured peace and progress for Western Europe; and

Whereas the unjust and cruel consequences of the agreements of Teheran, Yalta, and Potsdam have led to Hungary's subjection to Soviet domination and Communist rule; and

Whereas the Hungarian people have never ceased to remain dedicated to national independence, individual freedom, and western cultural standards as has been demonstrated even under Soviet military occupation at the 1945 and 1947 elections; and

Whereas the present Communist regime and Soviet colonial exploitation are being maintained in Hungary only by violent domination by the Red army and arbitrary rule by the Communist secret police; and

Whereas the Hungarian people silenced by Communist terrorism have been deprived of all possibilities of expressing their true will and communicating with the free world: Therefore,

We assemble tonight under the banner of "free Americans for free Hungary," and raise our voice in behalf of our brethren in protest against their subjugation and the intolerable slavery into which they have been plunged: Be it

Resolved, That we herewith create a committee representing 1 million Americans of Hungarian descent and designate the American Hungarian Federation as our agent. The federation is herewith authorized and

directed to submit our appeal to the President of the United States, Dwight D. Eisenhower, and simultaneously to call upon him as the leader not only of the American people but of the free world, to reaffirm his solemn pledge against all tyrannies, never to compromise for the sake of illusory coexistence, those eternal ideals of national freedom and human rights defended throughout American history and to do all in his power to liberate our enslaved people from under Soviet tyranny and Communist degradation.

Tax Cut Move Purely Political

EXTENSION OF REMARKS OF

HON. GERALD R. FORD, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. FORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial entitled "Tax Cut Move Purely Political," which appeared in the Grand Haven (Mich.) Daily Tribune on March 5, 1955:

The obvious purpose of the House Democratic move to write a \$20 income tax cut for everyone was, and still is, political.

Fortunately, a Senate committee blocked action in its chamber to include this provision in its version of the bill, which the House had written into the administration's recommendations. This hasn't blocked a similar move on the Senate floor, but it has put a temporary kink in the tactic.

President Eisenhower properly described as irresponsible the proposal which would have cost the Treasury an estimated \$2,200,000,000 in revenue.

We don't say that the Republicans have all the right answers on tax legislation. There was widespread feeling that the GOP hurt itself in the last session of Congress by not making more allowances for the so-called little fellow. But blanket reductions of this nature, which have no scientific application to the whole problem of maintaining a balance between tax revenue and Government costs, could be both inflationary and dangerous to the national economy.

Nor do we claim that President Eisenhower has done all he could to bring down the high cost of government. He has a much improved record over the preceding Truman administration in this respect, but the money still being poured into projects abroad could stand some sharp scrutiny.

We simply contend that a "\$20 cut for all" is an oversimplification of the tax problem. The aim of any tax structure is to maintain balance and proportion. You kill initiative if you have nothing more to offer in a tax program than to "soak the rich." And you aren't solving the problem of ability to pay by spreading a somewhat nominal tax cut among all and sundry.

Not only have Republican Presidents had to combat this pernicious congressional habit of trying to upset the tax appellation for the benefit of a few votes back home, but both President Roosevelt and President Truman had to resist similar moves to embarrass the executive branch of Government.

This sort of slap-happy politicking provokes a great deal of the trouble in this country. It reflects on the ability of some of the Congressmen to dig into the tax problem realistically. The whole strategy seems to be to make the voter think that his dear Congressman is for him by trying to buy his support, as it were, with a \$20 bill. This is all the more ridiculous in the light of con-

gressional determination to boost its own pay checks by no miserly amount.

Let's get that budget in balance before we resort to the political wrecking bars.

Who Are the Disciples of Christ?

EXTENSION OF REMARKS OF

HON. EDITH GREEN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mrs. GREEN of Oregon. Mr. Speaker, an article *Who Are the Disciples of Christ?*, appeared in the November 30, 1954 issue of *Look* magazine. It describes the beliefs, background and emphases of the Disciples of Christ Churches—usually known locally as Christian Churches. The Disciples of Christ Churches, according to latest figures, number more than 8,000 comprising a membership of nearly 2 million. The Disciples of Christ have been leaders among protestantism in working with other religious communions in cooperative efforts through the National Council of Churches of Christ in the United States of America and the World Council of Churches. It is not a sect—but one of the larger protestant communions in the United States and around the world.

Therefore, Mr. Speaker, under unanimous consent, I include in the Appendix of the CONGRESSIONAL RECORD, an article entitled "Who Are the Disciples of Christ?"

(By James E. Craig, elder and trustee of the Park Avenue Christian Church, New York City)

Who are the Disciples of Christ? The Disciples of Christ constitute the largest indigenous American religious group, with around 1,800,000 adult communicants and some 8,000 autonomous congregations. In point of origin, the beliefs of the Disciples are as American as the Declaration of Independence. In point of liberty of individual conscience, they are as American as the Bill of Rights.

Some will say that the Disciples of Christ are a great evangelical Protestant denomination. Others will say that they are not a denomination at all, but the pure New Testament Church of Christ. Still others will prefer to describe them as a brotherhood, or a communion. Perhaps the most favored word among Disciples themselves is movement—a movement back to the New Testament and forward under God to ultimate unity of all who call themselves Christians.

Of the total of 1,800,000 communicants, some 1,300,000 are members of congregations cooperating through the International Convention of Disciples of Christ, which is a voluntary fellowship of local churches in the United States and Canada and of their various missionary, benevolent, and educational agencies. A "reporting convention" rather than a legislative body, it presents recommendations on every subject affecting the movement. These are advisory only, but, such is the convention's prestige, most of the recommendations are accepted by local congregations. Any Disciple may attend its meetings and vote. In this article, the word "Disciples" (unless otherwise specified) relates only to the congregations cooperating through the international convention.

What are the tenets of their creed? The Disciples have no creed but Christ and no

doctrines save those which are found in the New Testament or are reasonably to be inferred therefrom. The Disciples are God-centered, Christ-centered, Bible-centered, with no creedal formula but one—the answer of the Apostle Peter to a question from Jesus Himself: "Thou art the Christ, the Son of the Living God." Open confession of this faith and acceptance of the Nazarene as Lord and Savior, and baptism (by immersion) are all that may be demanded of a candidate for admission. The Disciples are inclined to regard formal creeds and historical sects as milestones on the highway of an evolving theology.

The Disciples believe in the priesthood of all believers; that is, that the believer can reach the Throne of Grace without any human intermediary. According to authorizations they find in the New Testament, they have evangelists, pastors, elders, and deacons. But they look upon these officers only as useful instruments sanctioned by the Apostles. They never doubt the right of any man to go directly to God, by prayer, for guidance in all problems arising in the conscience. They place absolute trust in divine mercy and good will. They nevertheless encourage pastoral consultation and advice.

How do the Disciples differ from other Protestants? Disciples have no catechism and no prescribed rituals. Disciples do not accept the doctrine of apostolic succession. Hence, they have no archbishops or bishops or hierarchy of ecclesiastical authority. They interpret the New Testament words for "bishop" and "elder" as synonyms for a single lay office, elective by the congregation, and in no sense authorized or regulated from above.

Disciples believe that confession of faith in Jesus as the Christ requires no added metaphysical doctrine. They regard conversion as a voluntary, rational act which does not require special revelation. In receiving a new member, they take the applicant's statement at face value. They employ no formula of interrogation.

Disciples believe that a Christian's right to Holy Communion is a matter for his own conscience. They admit to the Lord's Supper any baptized person, without regard to his secretarial affiliation.

Perhaps the most notable difference between Disciples and many other Protestant groups is the Disciples' emphasis upon individual liberty of opinion; upon each believer's right to interpret the Scriptures in his own way.

Disciples base their whole appeal upon a simple outline of faith and a democratic system of church government. They have no sense of rivalry among the denominations. They hold that so long as a member accepts the simple faith and the idea of democratic government in the church he may believe what his mind dictates about many of the tenets of other Christian bodies.

Disciples observe with joy that the differences among Protestants are receiving less and less attention today, while the many things they have in common are receiving more and more. To Disciples, the rising trend toward mutual grounds of faith marks a steady advance toward ultimate church unity. And in this field the Disciples have made their influence most heavily felt. They have been in the forefront of almost every important cooperative and ecumenical movement. Thirty-nine Disciples were active in establishing the old Federal Council of Churches; 200 are enrolled in the National Council of the Churches of Christ in the United States of America; 14 Disciple leaders serve the World Council of Churches.

What do the Disciples believe about the Bible? The Disciples share the common Protestant belief that the Bible (except for the apocryphal books) is the word of God, written by different persons at different times under the inspiration of the Holy

Spirit. They use the Old Testament for meditation and instruction, as a schoolmaster bringing the faithful to Christ.

Many Disciples believe, however, that the Old Testament represents two dispensations—one for the patriarchal age before Moses, the other for the age from Moses to the resurrection of Jesus. These accept the New Testament as a third and purely Christian dispensation, for the guidance of Christian churches and peoples.

In common with other Christian bodies, the disciples have their fundamentalists and their liberals. The literalists, or fundamentalists, accept every word of the authorized version of the Bible as the infallible word of God. The liberals believe that newer translations, and the studies of inspired scholars, have thrown new light upon many passages of the Scriptures. There is nothing to prevent liberals and literalists from sitting down together around the table of the Lord's Supper, each responsible for his own beliefs and each serving God according to the dictates of his own conscience.

Do disciples believe in the Holy Trinity? The disciples have had little trouble in discarding most of the dogmas which sprang up between the 1st century and the 19th. Hence, speculation about the Holy Trinity has bothered them little or not at all. They baptize in the name of the Father, Son, and Holy Spirit, as Christ commanded. They believe that the Holy Spirit is the comforter promised in the New Testament, but they do not worry over its constitution or the nature of its operations. They accept its guidance as constantly enlarging the horizons of Christian thought. They are not concerned about such matters as original sin and predestination.

Whom do the disciples baptize? They baptize only those adult enough to know what they are doing. They baptize by immersion, believing it to have been the New Testament way—an act of obedience and surrender, a symbol of the death, burial, and resurrection of the Lord Jesus.

Do the disciples believe in the Virgin birth? It is probable that about 99 percent of them do. It is possible that others have doubts. But there is no authority—except in individual congregations—which can accept one belief as orthodox and reject the other as heretical.

What do the disciples believe about sin and salvation? No answer covering all the congregations is possible. The disciples as a rule reject the doctrine of original sin; but most of them believe that we are all sinful creatures unless redeemed by the saving sacrifice of the Lord Jesus.

Early in the history of the movement, the conception gained ground that a reasonable God would not leave His creatures without a rational plan of salvation which any person could understand and follow. Walter Scott, a kinsman of the novelist, was perhaps the first notable exponent of this idea. He suggested a five-fold plan: Faith, repentance, baptism, newness of life, gift of the Holy Spirit. By faith, he meant a sincere belief in the power and goodness of God. By repentance, he meant not merely sorrow for past misdeeds but perfect contrition, coupled with resolution not to sin again. By baptism, he meant obedience to a command of the Savior and emulation of the example of the apostles. By newness of life, he meant such conduct thereafter as would be void of further offense to God and of scandal to the church. By the gift of the Holy Spirit he meant the coming of the indwelling comforter promised in the Gospels.

It was Walter Scott's belief that when a sinner honestly fulfilled these requirements, he had no need to look for some mystical inner manifestation of saving grace.

Do the Disciples believe in heaven and hell? Here, again, it is difficult to give an answer that will prove satisfactory to all

members of the fellowship. Almost all believe in the immortality of the soul and in a blissful reunion hereafter for all the faithful who have died in the Lord. Many doubtless believe in a literal Paradise and a literal hell. Others are content to leave the details of future rewards and punishments to Divine mercy. Disciple faith in general is a matter of personal conviction, rooted in confidence that the Kingdom of God will prove invincible.

How did the Disciples begin? The Disciples began by the confluence of two main currents of religious thought. One, that of the Christian church, developed in Kentucky and Ohio under Barton W. Stone. The other, that of a body which came to call itself Disciples of Christ, developed in western Pennsylvania and western Virginia under Thomas Campbell, his son Alexander Campbell, and Walter Scott. All these men, known as the Big Four, were of Presbyterian antecedents; all were well-educated according to the scholarship of their time, which laid emphasis upon Greek, Latin, and Hebrew.

These scholars and religious statesmen cast their lot among pioneers. In the early 19th century, a great westward migration was in swing. Men and women of various church allegiances found church homes among denominations with which they were familiar. Many others were unchurched wanderers. Out of this emergency, a great opportunity and a great vision came into flower.

The opportunity was that of bringing all these drifters into a single Christian fold. The vision was that of an ultimately united Protestant Church. This revolutionary idea cannot be ascribed to any one person. As early as 1803, Stone and his supporters gave voice to it in Kentucky. In 1809, Thomas Campbell gave it literary expression in his Declaration and Address. Scott and such popular preachers as "Raccoon John" Smith, Baptist, of Tennessee, imparted to it an evangelistic fervor. Alexander Campbell, a skillful debater, gave it forensic and theological expression.

Simple as the program may sound, the practical business of putting it into effect encountered enormous difficulties. It was easy enough to say there should be no creed but Christ, and to adopt the ordinance of Baptism, by immersion, and weekly observance of the Lord's supper. After the New Testament was declared to be the guide for Christian faith and practice, it seemed logically possible to ask for strict fidelity to the essentials of faith while allowing complete liberty of opinion regarding the non-essentials. Here, of course, came the rub: How do you decide what the essentials are and who is to make the decision? The distinction has troubled individual disciples to this day.

Are the disciples of Christ, Christian church, and churches of Christ all the same? In 1832, the disciples of the East and the Christians of the West came together in a single union. From that day on, the term "Christian Church" has been more commonly used in the Midwest and South; the term "disciples of Christ" has been favored in the East. In the international convention, and in many congregations, the words are used interchangeably. Two other groups formerly called themselves Churchian Churches. One of them, James O'Kelly's group, called itself Republican Methodists and then changed its name to Christian. A New England group has since united with the Congregationalists as the Congregational-Christian Church.

One branch from the family tree of Disciples and Christian Churches calls its congregations Churches of Christ. Its members form an extremely conservative body, adhering literally to the New Testament. It does not, in the main, believe in instrumental music in churches, in missionary societies or in other matters for which its

members see no specific authorization in the New Testament. Other conservative congregations do not support the international convention for reasons concerning New Testament interpretation.

Do the Disciples have an ordained ministry? Except in a few remote sections where ordained ministers are not available, almost all the cooperating churches do have ordained pastors. In an emergency, an elder or other layman may fill the pulpit. Elders usually, but not always, conduct the communion service.

In the early days, distrust of clericalism was so great that ministers were called elder, not reverent, and the wearing of gowns or cassocks in the pulpit was looked upon as smacking of prelacy. (Both these prejudices have now largely passed away.) No important distinction was made between clergy and laity. Indeed, any elder could perform any ministerial duty—except that of performing marriage ceremonies, a function usually regulated by the State. Certain weaknesses in this system became obvious. Congregations began to demand ordained pastors, especially trained for the ministry. Today, more than 34 Disciple colleges, universities, and biblical training schools are trying to keep abreast of that demand.

What are the Disciples' views on divorce? There is no central church authority on this subject. In practice, ministers and congregations differ in their attitudes. Some believe that the questions propounded to Jesus by Pharisees were trick questions based on then current Jewish law, and that what Jesus answered must be viewed in that light. Some take the Master's answer as binding and oppose any remarriage of divorced persons. Others are willing to consent to remarriage of the innocent party in a divorce obtained on the ground of adultery. Still others, perhaps a majority, believe that divorce has become a legal function of the State, and do not hesitate to remarry any person to whom the civil government has accorded the right of remarriage.

What are the Disciples' views on birth control? The old Disciple rule is that where the Scriptures speak, we speak; where they are silent, we are silent. There can be no doubt, however, that a majority of Disciple ministers believe that, in certain circumstances, birth control is justifiable. The one sure test of this attitude rests in the fact that no Disciple minister can be silenced, either by the brotherhood at large or by his own congregation. By the terms of his ordination, each considers himself empowered, as were the prophets of old, to denounce whatever he considers amiss in the life of his people—and silence seems to give at least a modified consent. In general, Disciples are content to leave such matters as birth control to the individual consciences of husband and wife.

What is the church service like? Sunday morning worship in Disciple churches follows pretty much the same pattern. With or without processions, and with or without organ, the service begins with the singing of hymns. This is followed by responsive readings, recitation of the Lord's Prayer, reading the Scriptures, pastoral prayer, an anthem or two, sermon, invitation to fellowship, gathering of tithes and offerings, communion service, benediction, and final hymn or recessional. Sometimes communion precedes the sermon. On occasion, the sermon may be omitted, but never communion. Many Disciples attribute their large and steady gains in membership to the weekly practice of offering the right hand of fellowship to all who desire to join a congregation.

How are the Disciples governed? The average Disciple church is governed by a pastor, an official board of elders, deacons, deaconesses, and perhaps representatives of the

Christian Women's Fellowship. Women are taking an increasingly greater part in disciplic activities, from pulpit to pew.

Elders look after the spiritual welfare of members; deacons manage incidental business. Laymen play a growing part; at least 50 laymen are giving national service at heavy financial sacrifices to themselves. The Christian Women's Fellowship and the Christian Men's Fellowship have a membership in excess of 200,000 each.

All matters of fundamental importance must ultimately be decided by the congregation as a whole. Trials for heresy are almost unknown among the Disciples, although withdrawals of fellowship for immoral or scandalously un-Christian conduct are subjects for congregational action. Disciples believe that only the Lord himself can expel any person from the Church Universal.

Do the disciples believe theirs the only true religion? Certainly not. They believe theirs to be most nearly in accord with the early Christian churches. They also believe that their greatest mission in life is to bring Christians of all faiths into one church of Christ. Their ancient retort to an ancient gibe about their name was to say: "We are not the only Christians, but are Christians only."

Great Game of Politics

EXTENSION OF REMARKS

OF

HON. GERALD R. FORD, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. FORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial entitled "Great Game of Politics," from the Grand Rapids (Mich.) Herald of March 7, 1955:

Early climax of the "\$20 income-tax cut for everybody" political game is in sight.

It appears all but certain that the Senate will turn down the rider attached to an administration bill by House Democrats and passed there 205 to 201. Senator BYRD of Virginia, who with his fiscally astute Democratic colleague, Senator GEORGE, of Georgia, won a 9 to 6 vote against it in the Finance Committee, says he will have a minimum of 10 Democratic Senators on his side.

Then it would go to Senate-House conference, where Senator BYRD hopes to get it disposed of as soon as possible.

One victory for responsible fiscal policy has been won and another is in sight.

But even though the rider is finally thrown out, we shall not have heard the last of it.

The irresponsible proposal is sure to be campaign material for 1956.

At this point, its House sponsors probably don't much care if it is doomed to defeat. They can say they tried to reduce taxes, and that's enough of a claim for a stump-speaker.

It has even been suggested that the House Democratic leadership did not actually expect or want the rider finally adopted.

Certainly the leaders must have known that Senator BYRD and Senator GEORGE would oppose it, with good prospects of success. The reputations of these men, in matters fiscal, are such that they could not be compromised by politically inspired but reckless moves.

If and when the rider is unhorsed, they will have made their point, however. A majority of Democrats will have voted for tax reduction.

It will then be up to the Republicans to shoulder the far more difficult task of defending a realistic and equitable, but far less flashy, tax policy.

Although the \$20 tax handout is a thoroughly bad idea, it may be hard to convince the 5- to 7-million small taxpayers whom it would relieve of all income tax liability.

It is a bad idea, to begin with, because it is no time to reduce taxes when the budget is still unbalanced and when at the same time personal income is the highest in the Nation's history and still rising. To do so means more deficit financing, further postponement of the reckoning, more taxes in the long run because a higher debt results in additional interest payments.

This particular tax-cut plan is particularly bad because it is not a part of a coherent tax proposal, but something tacked onto the administration's own carefully conceived program for tax reduction as that becomes practical.

The method of offering it was, indeed, suspect. It showed that its sponsors had no hope of getting it passed on its merits. They tacked it onto the bill to extend present corporation and excise rates which are now due to drop on April 1. In other words, they added a tax-cutting proposal to a tax-raising proposal.

It was a spectacular gesture, but we give enough credit to the Democrats to assume they wouldn't really want to be responsible for a tax cut that might or might not be justified by the time it would go into effect. It is more generous to assume they are simply playing the great old game of politics.

To the Eyes and Ears of the World We Must Seem Pretty Silly

EXTENSION OF REMARKS

OF

HON. ALVIN E. O'KONSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1955

Mr. O'KONSKI. Mr. Speaker, we must seem pretty silly in the eyes and ears of the world when we look upon certain incidents occurring within our own shores.

We are spending billions of dollars to stop communism all over the world, and yet permit known Communists freedom of action within our own shores.

To give an idea of such an incident, I would like to quote from a newspaper column appearing in the Duluth (Minn.) News-Tribune. In the column, titled "Between Us," by Siinto Wessman, there appears the following very pertinent and oh so truthful, pointed statement:

Knut Heikkinen . . . the man convicted of being a commie-alien . . . still doing whatever commie-alien do on a newspaper in Superior . . . the Tyomies . . . Government has tried to deport him for 4 years . . . but every time, Knut appeals . . . He's now free on \$5,000 bail while court of appeals ponders his case . . . Here we spend 15 million bucks on the Duluth airbase . . . to defend ourselves against them . . . while one of their number runs around loose in our own backyard.

I want to say that Siinto Wessman speaks the mind and the heart of many millions of Americans who are getting pretty impatient with our silk-glove treatment of Communists within our own midst.

The Navy Needs the "Forrestal" Type Carrier as Replacement for World War II Carriers

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. VAN ZANDT. Mr. Speaker, on March 7, 1955, Adm. D. B. Duncan, United States Navy, Vice Chief of Naval Operations, Navy Department, read the following statement of Adm. Robert B. Carney, United States Navy, Chief of Naval Operations, to the House Armed Services Committee, urging support for the Navy's fiscal year 1956 shipbuilding and conversion program.

Admiral Carney's statement follows:

STATEMENT OF ADM. ROBERT B. CARNEY, UNITED STATES NAVY, CHIEF OF NAVAL OPERATIONS, BEFORE THE COMMITTEE ON ARMED SERVICES, HOUSE OF REPRESENTATIVES, WITH RESPECT TO H. R. 4393

Mr. Chairman and members of the committee, I deeply appreciate the opportunity to have my personal statement with respect to H. R. 4393 presented to you today by the Vice Chief of Naval Operations.

This bill incorporates the Navy's fiscal year 1956 shipbuilding and conversion program, approved by the President, and for which we are now seeking funds from the Congress. Mindful that this committee already has an extensive knowledge of the Navy's shipbuilding requirements, it is my intention to present as concise and meaningful a picture as possible to this group, dealing with the program as a whole, and then follow by a more detailed discussion of one item in the program. I thank the committee for giving its time and attention to this program, so important to the Navy.

At the outset I should like to comment on the relation of military strategy to national policy. The fundamental character of military strategy derives from and must be in consonance with national policy. The Armed Forces functioning in accordance with approved military strategy are thus carrying out the mission of support of the national policy, from which a large number of functions and activities extend. Since our Government, to mention a few examples, is a party to the North Atlantic Treaty Organization which ties us to the general area of Europe, from the North Cape to north Africa and from the Atlantic Ocean to the Middle East, and since we have mutual security arrangements with many of the nations in the western and southwestern Pacific, not to mention those in our own hemisphere, and since national policy involves cooperation and collaboration with the free nations of the world, it is evident that our grand military strategy must be a forward one. From the fact that our grand military strategy is a forward one is derived the Navy's overall task to control the seas. The proper performance of this task is essential in order to project the power of our Armed Forces overseas and to any part of the world where it is needed and includes direct and positive support of the land battle and the air battle in overseas theaters of operation. The Navy is a primary and indispensable element in the projection of military power to overseas areas and naval airpower is an essential element in all phases of naval operations. The Navy on the sea, under the sea, and in the air, may well be the factor which determines whether a war is fought far from our

shores or in our own homeland. This is important. Ships and aircraft and the means of operating them, of the kinds and numbers required to fight in the kind of a war which we may expect if we are so unfortunate as to be plunged into one, are essentials to the Navy, and a continuing, progressive and forward looking shipbuilding program is a good part of the lifeblood of the Navy.

The basic objective of our annual shipbuilding and conversion programs is direct and clear-cut. Each is an increment of a longer range plan, designed to maintain the most modern Navy possible, with the needs of the future always in mind.

The two most important factors affecting our programs are, first, the specter of obsolescence and block obsolescence as it affects many of our existing ships; and, second, the vital necessity of maintaining the lead in today's race in the technological field. There are other factors which we must take into consideration. Our programs must be orderly, keeping pace with evolutionary transition, for it would neither be practicable nor desirable to replace the entire fleet at once. We will always have some old and some new. We must consider the importance of maintaining the know-how and mobilization base in the shipbuilding industry.

In preparing our annual shipbuilding and conversion program, we are also mindful of the naval capabilities of unfriendly powers. While such naval capabilities do not directly control the level of our forces, they do have a most definite impact on the tasks that we will have to accomplish. In the case of the Soviet Navy the most dangerous element is its submarine force. A large part of the U. S. S. R. undersea craft, now estimated at about 350, are modern and are certain to be well-armed and equipped. While we have no information that the U. S. S. R. has built, or is building, aircraft carriers, the number of Soviet naval aircraft is upwards of 3,000. This weakness in the lack of aircraft carriers is a weakness which we must exploit, and for which, I may add, we may take some measure of comfort. Soviet naval construction of surface combat ships, as well as submarines, is increasing. Both cruisers and destroyers in relatively large numbers have been built by the Soviets since the end of World War II. The U. S. S. R. has more ships in active service in commission than any other navy except our own.

Of major importance—our programs must place the emphasis on hitting power rather than on massive numbers of ships, mindful that balance must be retained.

Most of the ships now in our active and reserve fleets are World War II vintage; many have already passed the midpoint of their useful life expectancy. Unless a continuing and orderly shipbuilding and replacement program is provided, large numbers will become obsolete at about the same time, and because of the long lead-time for building ships, it would be impossible to replace these ships in a relatively short time, even if unlimited authorization and funds were available. In the technological weapons race of our era, yesterday's or even today's weapons in old or new hulls soon become marginal or obsolescent. We must not fail to continue our strenuous drive to develop new weapons, and when ready, to incorporate them in our ships without delay.

Our shipbuilding and conversion program is designed to achieve a proper balance between useful modernizing of the old and acquisition of new and advanced types with modern characteristics not achievable through modernization, and we are mindful of the need for proper phasing of our programs in order that economy and efficiency may both be realized to greater measure.

In every case where it would be economical and practicable to modernize an existing type, we have taken that course; but

where an existing hull cannot meet the need, or where a conversion would be disproportionately costly in the light of future value of the ship, we have requested that a new ship be built. I think that the committee understands that the point of diminishing returns is eventually reached with regard to the modernization of existing ships. When that point is reached, we must either replace the ship or vacate its place in the fleet.

My own philosophy with respect to this program may be briefly stated as follows:

It is a program designed around long-range needs—the fast carrier task force, to project airpower where it will be most effective; the development and employment of nuclear power for propulsion; weapons modernization, including missiles; greater sea-keeping qualities in our ships; and last, but far from least, the improvement of our anti-submarine effort, including the procurement of a few prototype escort types which could be produced rapidly and cheaply with a minimum of material and labor.

The bill before you would authorize and direct the President to undertake the construction of, or to acquire and convert, 34 naval vessels, large and small, plus about 14,000 tons of landing craft; and to convert or modernize 28 existing ships. The individual types and their respective tonnages are listed in the bill, but in summary, I should like to indicate briefly, for the more important items some of the features or reasons why they are included in the program.

(a) One, *Forrestal* type carrier has been requested in the program in order to continue an orderly replacement program of World War II carriers; to meet the operational demands of carrier aircraft envisioned for the future, such as requirements for increased catapult capacity, increased arresting gear capacity, stronger flight decks, larger elevators with higher lifting capacity, higher hangar deck overhead to accommodate larger aircraft; and in order to provide for increased jet fuel capacity, greater speed, and survival power.

(b) Eight submarines, three of which are nuclear powered, and five with improved conventional diesel powerplants. One of the latter will have guided missile capabilities.

We attach great importance to the 3 nuclear-powered submarines, 1 of which is a large radar-picket submarine. They represent a progressive advance in nuclear power, and will incorporate the latest developments available. The 3 nuclear-powered submarines represent a part of our continuing efforts to phase in nuclear power for ship propulsion as rapidly as practicable, depending upon the state of the art and upon the capacity of industry to produce the required powerplants. This transition must proceed in a prudent, orderly, and forward-looking manner, recognizing that development of nuclear-power propulsion is still in its infancy, and that the ships which we build must be useful for many years.

The 5 submarines with conventional propulsion systems are included in the program as a part of our efforts to overcome the acute problem of block obsolescence in this type. I would point out that the conventional propulsion powerplants are not obsolescent, or will they become so in the near future. The submarines in this program, with the diesel-electric-propulsion machinery, will have many advanced features, including new weapons, deep-diving capacity, and are badly needed in the fleet. We cannot afford to delay submarine construction until adequate nuclear powerplants are proven and available. We are confident that the conventional powerplants in the 5 non-nuclear-powered submarines in this program will be useful and effective for the life of the ship.

(c) World War II destroyers are rapidly becoming obsolescent, and on a modest re-

placement basis, we are requesting as new construction:

(1) Seven conventional destroyers with the latest antiaircraft armament, sonar, and antisubmarine weapons.

(2) Six frigates, a type similar to the destroyer *Leader* previously constructed, which will now also be classified as frigates. These ships will have improved antisubmarine and antiaircraft warfare capabilities, and improved sea-keeping qualities. We now plan that 3 of the 6 will have guided-missiles capabilities.

(3) Two escort vessels. Upon mobilization there will be a requirement for a large number of escorts for merchant convoys and slower naval forces, and these new escort vessels are being developed as a low-cost prototype that could be mass produced.

(d) The program includes 3 auxiliary ships—2 fast ammunition ships, and 1 fast general stores issue ship. In the design of these ships, consideration was given to increased speed and to a more rapid replenishment-at-sea rate.

The principal items in the conversion program are:

(1) The installation of angled decks on six carriers to gain improved performance from jet aircraft, plus the additional safety factor inherent in the angled deck.

(2) One austere conversion of a light cruiser to carry the Talos missile and one conversion of a destroyer to carry the Terrier missile. Again, these are prototypes.

(3) To permit the Navy to carry out its commitments in support of continental defense, it is planned to convert 12 escort vessels and 4 Liberty hull cargo vessels into radar picket ships. This is a continuation of a previous program.

The ships in this program have been recommended by me as Chief of Naval Operations, the Secretary of the Navy, the Secretary of Defense, and the President. It has been included as a program deemed essential by those who are responsible not only for the effectiveness of our naval forces, but also by those of the executive branch, who have great responsibilities for the security of the United States and the responsibility of making recommendations in the premises to the Congress. Notwithstanding the approval by these officials, some questions have been raised with respect to the carrier included in this program and therefore, I feel it would be appropriate to discuss in more detail the need for this particular ship.

I mentioned earlier that we place greatest dependence on hitting power rather than on massive numbers of ships. Our greatest hitting power today is spearheaded by our mobile carrier task force, and this bespeaks the importance attached to developments in aircraft carriers, aircraft, weapons and techniques, in order that we keep abreast of technological advances. It is essential that we keep abreast if we expect to carry out effectively our missions and tasks.

Our striking power must be available on D-day to initiate immediately our offensive and defensive tasks.

The inescapable effects of age are such that by 1965 we will have only 7 attack carriers fully capable of operating our high performance aircraft if the carrier program is discontinued; and 3 of the 7 would be 16 to 20 years old. Six more ships, incorporating every possible improvement, will have become marginal in capability. Such a situation would not meet the security requirements as envisaged today by those who are responsible for the military security of the United States.

It is the clearly and emphatically stated policy of our Government today that we should strengthen our airpower. The President has defined the United States airpower as the total airpower of the military forces.

The foregoing considerations constitute the basis for including an aircraft carrier in the fiscal year 1956 shipbuilding program.

For the nuclear deterrent role, the United States must possess striking forces which are powerful, varied in their nature and employment, and as invulnerable to surprise attack as we can make them. They must be varied in character because, if we were to rely on only one type of striking force, the enemy's defense problem would be much more easily solved, or he might more easily persuade himself he has solved it, and in this belief launch his surprise attack. A variety of types of forces also lessens the vulnerability of our national striking power to any single type of enemy attack. A mobile base, for example, will not be vulnerable to the very long-range ballistics missiles of the 1960-70 era. A sea base can be more readily defended against many forms of air attack, particularly in the atomic area. The sea base from which we can employ airpower, offensively and defensively, on the seas and contiguous land areas where the use of airpower would otherwise be unfeasible, impracticable, or impossible, is the carrier striking force. I would like to evaluate the capabilities of a carrier striking force.

A sea-based carrier striking force has the following capabilities:

1. An ability to deliver nuclear weapons in considerable quantity.

2. An ability to deliver such weapons against the very bases from which the enemy may challenge our control of the seas, such as enemy submarine pens, or other bases from which the enemy might operate vessels or aircraft against our forces.

3. Dispersal of part of our national power upon the sea where it is able to move about and thus, because it does not remain in a fixed position, reduce its likelihood of destruction.

4. An ability to operate effectively against targets the destruction of which requires very accurate delivery of weapons.

5. An ability to participate readily and effectively in "brush fire" type of warfare, such as Korean war and the Tachens, while retaining a power to join in an all-out nuclear attack.

6. An ability readily to shift pressure as the center of the threat shifts without constructing new bases and without danger of the old base falling into enemy hands.

7. And finally, the carrier striking force represents power that we can place overseas and use as we will, without negotiation or consultation with foreign governments, and without the advance build-up for which there may not always be time.

I can state unequivocally that the most important ship in the Navy's fiscal year 1956 shipbuilding program is the aircraft carrier of the *Forrestal* class. This ship, together with the four *Forrestal* class carriers previously authorized, is necessarily larger than any of our present carriers in order to be able to operate, without restrictions, new and more powerful carrier aircraft, as I have mentioned earlier. The modernization program for World War II carriers has permitted the Navy to date to keep abreast of carrier aircraft development and the needs of naval aviation. However, the practical limit for a substantial improvement of these carriers is clearly in sight. Anticipating this situation, the Navy designed the *Forrestal* class carrier with aeronautical and other features which will provide substantial operating margins for aircraft envisioned for its useful life. The *Forrestal* class carrier is a logical and forward looking step in the development of a proven weapon.

Carrier forces are deemed essential elements of the Armed Forces and are incorporated in approved force levels recommended by the Joint Chiefs of Staff and approved by the Secretary of Defense and the

President for the fiscal year 1956. As a matter of interest, the fiscal year 1956 naval force levels include one more carrier and one more carrier air group than in fiscal year 1955. This, I believe, clearly demonstrates the essentiality of the carrier forces.

Furthermore, the approved force levels for fiscal year 1956 include the operations of the best and most formidable carriers in our inventory, a fact which indicates the necessity for obtaining the best possible capabilities from this essential component.

Under the philosophy that we are girding for the long pull, and are leveling off with powerful forces that can be supported for such a period, it is to be expected that carrier forces will be needed for the foreseeable future, and it is axiomatic that the carrier forces in commission should have the maximum capabilities attainable. The aircraft carrier and the Fast Carrier Task Group make up a vitally important weapons system in which we have a major advantage over our most likely enemy. Any action at this time that would forfeit this advantage would appear to be a most unwise course indeed.

In conclusion, I should like to assure this committee that every ship included in this program is essential. Each type has a definite mission and definite tasks to perform in our concept of modern naval warfare. Each is designed to be useful for the maximum period of time. I earnestly hope that we will have the support of this committee in obtaining approval of this program and I recommend the enactment of H. R. 4393.

Upper Colorado River Storage Project

EXTENSION OF REMARKS

OF

HON. HENRY ALDOUS DIXON

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. DIXON. Mr. Speaker, while the upper Colorado River storage project is being supported in the following letter by George T. Hansen, Republican national committeeman from Utah, the project is in no wise a partisan affair. I insert in the RECORD Mr. Hansen's letter to show the vital importance of this project to the people of our entire country:

FEBRUARY 14, 1955.

HON. HENRY ALDOUS DIXON,
House Office Building,
Washington, D. C.

DEAR HAD: For the 3 million people of Colorado, New Mexico, Utah, and Wyoming, the most important issue facing the 84th Congress is the upper Colorado River storage project. It is more than important—it is vital.

Upon the legislative determination of that issue depends the economic life or death of this area. The Colorado River is the last big waterhole and unless the opportunity is provided to utilize their fair share of the water, the end to expansion and growth in these arid States is already in sight.

Paralyzing thirst already is being felt. Water rationing is necessary in some areas and the specter of water shortage discourages future expansion of population as well as industrial and agricultural development.

Water will make of this area the "treasure house of the West," and thus confirm the faith of the pioneers who coined this appropriate designation.

Objections to this project have been circulated from certain sources. The sources

cite opposition to the invasion of Dinosaur National Monument, and the destruction of scenery and natural beauties of the area.

The President of the United States in 1938 made a promise to the people of the West that the extension of the area of Dinosaur Monument would not interfere with power or grazing developments. Provision for power dams preceded the establishment of, and was years ahead of, the monument. Obviously the Echo Park Dam can be no invasion of a national monument.

Contrary to the theory of destruction, the facts are that the beauty of the area actually will be enhanced. Clear, still water will cover only the present flood-washed canyon floors. The impressive canyon walls will tower far above the water level. Their beauties will be made accessible for all Americans to see and enjoy for the first time. The project will open up a new recreational area for millions.

Our national administration has endorsed the Colorado River Storage Project after thorough study and first-hand investigations. The project has the support of the Secretary of the Interior, has been passed by the Bureau of the Budget, and has received favorable action by both the House and Senate committees in the 83d Congress.

No issue more vital to our western area has ever come before the Congress. When it reaches your House, you will have it in your power to provide a new economic life for the people of Colorado, New Mexico, Utah, and Wyoming. As a resident of the area and a representative of the Republican Party of one of the States vitally concerned, may I earnestly solicit your support.

Sincerely,

GEORGE T. HANSEN,
Republican National Committeeman
from Utah.

The Founder of Czechoslovakia: Thomas G. Masaryk

EXTENSION OF REMARKS OF

HON. JOHN F. SHELLEY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mr. SHELLEY. Mr. Speaker, on this anniversary of the birth of Thomas G. Masaryk, first president of the Czechoslovak Republic, it is only fitting that we should do him honor. As much as George Washington was the father of our country, Thomas G. Masaryk was the father of his. Yet the people of Czechoslovakia are not permitted to celebrate his birthday, because those who rule Czechoslovakia today represent the negation of everything Thomas G. Masaryk stood for. He stood for truth; they stand for falsehood. He stood for liberty; they stand for the bitterest kind of oppression. He stood for a religious and moral basis of life; they stand for atheistic materialism. He was the friend of America, and they are our sworn enemies.

Under the inspiration of Masaryk, Czechoslovakia became a model of democracy in the heart of Europe. Her fate at Munich left the friends of freedom dismayed. After enduring the worst of Nazi tyranny the Czechoslovak

people looked forward to an era of peace and freedom. Those hopes were cruelly dashed by Communist conspiracy and betrayal. Today the people of Czechoslovakia and the other enslaved peoples of the world need our continued support and encouragement. We will furnish that support and encouragement, for we believe that the spirit of the Czech people is still the spirit of Thomas G. Masaryk.

The Administration's School Program

EXTENSION OF REMARKS OF

HON. CARL ELLIOTT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. ELLIOTT. Mr. Speaker, the Montgomery (Ala.) Examiner on February 21, 1955, carried a perceptive article on the administration's program for school construction. I commend it to the membership of the House. Under leave to extend my remarks, I include it in the RECORD. The article:

WILL IKE'S PROGRAM REALLY HELP SCHOOLS?

In 1950 there were somewhat more than 25 million American school children enrolled in public elementary and secondary schools. Last fall the number had climbed to more than 29 million. By 1960 it is expected to go more than 37 million.

This terrific boom in children is magnificent assurance for the future of America. Yet the United States today is facing a desperate shortage of school buildings and teachers to take care of this unprecedented growth.

The other day President Eisenhower presented the long-awaited administration program to take care of the problem. It met with expressions of bitter disappointment in labor, educational, and liberal circles in general.

"Too inadequate and too cumbersome," was the restrained verdict of leading educators. "Too little and too late" was the tart criticism of political leaders such as Senator LISTER HILL, chairman of the Senate Labor and Education Committee. A scheme for the benefit of bankers was the even sharper charge of other critics.

The President himself, in his special education message to Congress, said that there was a shortage of more than 300,000 classrooms. In addition "to keep up with mounting enrollments, the Nation must build at least 50,000 new elementary and high school classrooms yearly." It must also replace thousands of classrooms that become unsafe or unusable as the years go by.

To meet this emergency, the President proposed:

1. Bond purchases by the Federal Government from school districts unable to market their bonds at reasonable rates of interest.

2. Federal assistance to States in establishing special school building agencies which would build schools for local school districts on a lease-purchase basis.

3. Federal grants, to be matched by the States, to enable school districts to qualify for either of the first two forms of Federal assistance.

4. Federal grants, to be matched by the States, to stimulate the development of long-range plans to overcome obstacles to school construction.

The President spoke of this program as envisaging a total of \$7 billion over the next

three years. Such were the headlines the program got. Actually, critics answered sharply that the program called for only \$200 million direct Federal aid over the next 3 years, the rest having to come out of State and local financing. Yet it is because the States and local communities don't have the money that most of today's school shortage exists.

From the viewpoint of most critics of the program, the President simply is dumping virtually the whole program back in the laps of the State and local communities. This is in line with general administration policy. But critics declare that the program simply adds the banks which will help float bond issues and dump the whole burden on States and local communities.

American Victory in Korea Twice Abandoned on Orders

EXTENSION OF REMARKS OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. VAN ZANDT. Mr. Speaker, there are still many big holes in the history of America's first military defeat—in Korea, June 1950–53. But thanks to the determined inquiries of the Jenner Committee on Internal Security, the day-to-day chronicle of Dean Acheson's personal management of the war from the State Department, in Washington, has gradually been unfolded.

Our military forces had two great opportunities to win the Korean war decisively and conclusively. But on each occasion the smashing final stroke of victory was countermanded from Washington. Who ordered the victory twice to be abandoned, and why?

The most recent chapter on Acheson's "limited war" was related on November 23, 1954, by Lt. Gen. Edward M. Almond, retired, who had been Gen. Douglas MacArthur's chief of staff in Korea. He was asked in public session: "General, how many opportunities did our side have to win the war in Korea?"

His answer, illustrated with 13 field maps from the Korean theater, was two—first, in November 1950, following the historic Inchon envelopment of the North Korean forces; and second, in June 1951, when some 50 Chinese divisions were trapped and routed clear across the peninsula on a line extending roughly from Seoul to Kansong. At that point—2 months after Truman's sacking of General MacArthur—the whole American offensive was halted and abandoned on direct orders from Washington—hearings, page 2109.

Your answer is, then, we had two opportunities to win the war?

I think so—

General Almond responded.

General Almond's testimony comprises 78 printed pages, including 13 detailed operations maps depicting various phases of the Korean war.

We believe—

Said Senator Robert C. Hendrickson, of New Jersey, in his opening statement—

That there have been and still are, hostile forces working tirelessly to corrupt, to misdirect, and to destroy us from within. We believe that the most skillful, and the most menacing, of these forces are engaged in trying to subvert our political and military policy.

The Senator then recalled that the committee earlier had heard Gens. Mark Clark, George Stratemeyer, and James Van Fleet.

In each instance, information was gleaned that helped clarify the still confused, partly undisclosed, story of the Korean war. In each instance, it was discovered that these great generals shared our uneasiness and had asked themselves some of the questions the American people are asking—Why? And who? And when? And how will it end?

General Almond was assigned to General MacArthur's staff in Tokyo in June, 1946, advancing to Chief of Staff in February 1949. He returned to duty in the States in July 1951, and retired in January, 1953.

From 60 percent of normal peacetime strength as of October, 1946, MacArthur's command gradually was built up to approximately 75 percent by June 1948; and by June 1950, General Walker's Eighth Army had been built up almost to full peace strength, Almond told the committee.

But peacetime organization meant a battalion of infantry with only 3 companies, instead of 4. It meant a regiment of infantry with only 2 battalions instead of 3. It meant a tank battalion with only 1 company instead of 3. It meant an artillery battalion with 1 battery instead of 3 in it. That was the condition of the Eighth Army when we were faced with throwing our troops into Korea (hearings, p. 2056).

The Communist aggression in Korea broke on June 25, 1950, just 6 months after the British Government had extended formal recognition to the Chinese Communist regime at Peiping.

From the very outset it was a confused and uncertain war.

Many things happened back here that I didn't understand, and I would hesitate to try to assign reasons for them—

General Almond told the committee. In other words—

Questioned Senator WELKER, of Idaho—

Your impression was that the State Department was calling the signals at that time?

That is correct, sir—

Replied General Almond.

On June 20, 5 days before the war began, 2 distinguished visitors had been in Tokyo from Washington. They were Secretary of Defense Johnson, and Gen. Omar Bradley, Chairman of the Joint Chiefs of Staff.

Did you get any impression or intelligence from those officers to the effect that trouble was brewing in Korea?—

Senator WELKER asked.

No, sir; we did not. I don't think they knew it—

General Almond responded.

General Almond was at his desk in Tokyo when first word of the Communist invasion reached him, about 2 p. m. Sun-

day, June 25. During the next 2 hours the whole peninsula burst into flame. Almost 200,000 North Korean aggressors swept into action in a military operation which had been skillfully planned and meticulously organized for almost 3 years. The South Korean forces were, as planned, overwhelmed and routed in 48 hours.

Two days later, June 27, the Pentagon directed Tokyo to send a reconnaissance party to Korea to determine the nature and extent of the Communist military operation. But so swift and demoralizing had been the Communist thrust from the north that this American party never reached the Seoul airport, already in Communist hands. The party was forced to put down at Suwon. On June 29, MacArthur himself joined this reconnaissance group at Suwon. Everywhere the ROK defenders were in utter rout.

At best, there were some 24,000 ROK troops available to resist the swiftly advancing column of 150,000 North Korean Communist troops. Back in Tokyo that night General MacArthur began a series of two-way ticker conferences with the Pentagon.

It was during that period, just before and during this trip to Korea—

General Almond continued—

that it became known to us, much to our surprise, I will say, and much to General MacArthur's surprise, that this country was going to participate in armed action in Korea. None of our plans had included this.

This was the beginning of the Truman-Acheson "police action," which was to cost 143,000 American casualties and \$20 billions, during the coming 3 years.

The first directive from the Pentagon suggested that MacArthur send a regiment of infantry to Pusan to protect the supply base there. Later MacArthur was directed by the Pentagon ticker to use whatever forces he deemed necessary to protect the supply lines through Pusan.

That terminated the telecon, and General MacArthur immediately ordered 3 divisions under General Walker, the bulk of the Eighth Army, to Korea; because he knew the situation was so bad that nothing short of a fundamentally sound military movement would salvage it. I don't think you have to have me testify that even that wasn't enough for the next 3 months. The immediate action that was taken was barely enough to drag along, so that General Walker could maintain the semblance of a continuous line in defense of Pusan, called the Pusan perimeter (hearings, p. 2062).

That is how Truman and Acheson pushed the United States into the Korean war—unprepared, under-equipped, still at less than full peacetime strength, and into a campaign which never had been considered even as a theoretical possibility by the staff headquarters in Tokyo. Korea was not in the Far Eastern Command's defensive area. Congress was not consulted on the decision for war.

At this point, General Almond told the committee:

Our lines held, in spite of the restrictions and limitations imposed by our own Gov-

ernment, and our casualty lists were enormous (hearings, p. 2063).

From this tenuous beginning, however, General MacArthur was able at length to fashion victory. The historic Inchon landing was planned and executed in 23 days, and was effected on September 15, 1950. In another 60 days our United States forces were up to the Yalu River.

But Formosa had been neutralized by Truman late in June, thus releasing all the Communist Chinese coastal forces to be concentrated in the north, in defense of Manchuria. As General MacArthur himself asserted:

Actually it was this protection which permitted the transfer of the very Communist armies assigned to the coastal defense of central China, for the attack upon our forces in Korea (hearings, p. 2069).

President Eisenhower revoked this neutralization of Formosa by our 7th Fleet late in January 1953, an act applauded publicly by MacArthur as one which "should be supported by all loyal Americans irrespective of party." The Korean armistice followed in 6 months.

But as soon as MacArthur hit the Yalu, in November 1950, the question of bombing the Yalu bridges developed. Specific orders from Washington sharply forbade this interruption of the Communist lines of supply and retreat—hearings, page 2068.

Similarly, the question of "hot pursuit" by American fighter planes was resolved by Washington in favor of the Communist forces sheltered in Manchuria.

So, too, was the issue of bombing the Manchurian bases resolved in Washington in favor of the Communist position. Of this situation, General Stratemeyer, commander of the United States Air Forces in the Far East, complained:

The enemy can hit me where I am based. I cannot hit him.

Precisely at this point the first victory in Korea was abandoned and forfeited on specific orders from Washington.

General Almond was asked at this juncture of his recital if he ever had heard of any commitments made in Washington not to win the Korean war.

His response:

Senator, I have no way of knowing what commitments were made. I can only answer that the things as they happened looked very strange insofar as the assurance with which the enemy appeared to operate. I think it would have been a very hazardous thing for the Chinese to enter North Korea in the abundant numbers in which they did, if they had thought that their bases of rice or ammunition, or any other kind of base, would be subject to attack.

That's the whole story of the first Korean victory abandoned by Washington. The Chinese Communists, somehow, had obtained complete assurances that they would not be bombed in Manchuria.

In November 1950 the Chinese Communists entered from their sheltered north to drive the Eighth Army and General Almond's X Corps back to Seoul. For the American forces, the brilliant and smashing Inchon victory of late September had been turned, in less than 3 months, into a tragic Dunkirk at Hungnam.

In this first Chinese attack from the protected north our Eighth Army was outnumbered 20 to 1—hearings, page 2072. But still MacArthur was not permitted to bomb the Communist bases in Manchuria. History one day will tell us who in Washington ordered this brilliant military victory at Inchon turned into shocking and humiliating defeat.

The second great victory for our United States forces in Korea came in May and June 1951. General MacArthur had been removed from his command by President Truman on April 11.

The Chinese Communists sent in a massive offensive on April 22, 1951. These forces comprised 38 Communist divisions, of which 24 were destroyed, and the Chinese withdrew on April 30.

But on May 16 the Chinese Communists returned to the attack with 175,000 new troops, principally against the United States 2d Infantry Division of approximately 20,000 men. This operation lasted 6 days and nights, during which General Almond's X Corps of 7 divisions suffered 14,000 casualties, and was driven back at some points almost 100 miles.

Nevertheless, on May 22, Almond launched his counterattack, slashing through the enemy at every point of contact, "and in the next 2 or 3 days this complete enemy force reversed itself and started hiking for the rear," General Almond continued.

They lost every piece of transportation that they had in this area. . . . With the result, by the 1st of June we had regained much of this territory that we had lost in December-January 1950-51, and some more besides.

About this time—I will say, between the 1st of June and the 1st of July, when we were adjusting this new line—a thing happened to me that I have never experienced before. By private conversation with my commander, the Eighth Army Commander, General Van Fleet, I was told to halt my troops on that line and advance no further. . . . In other words, it was decided somewhere above General Van Fleet's head—and where, I do not know—I complied with the orders—that when we had defeated this huge force . . . the cream of their army . . . I think we were entitled to capitalize on it . . . the mission of any battlefield commander is to win in the field, and not be denied a victory for his forces—hearings, page 2074.

Dean Acheson testified before the MacArthur hearings, in early June 1951 that the 38th parallel limited the official area of United States operations in Korea.

General Almond was asked:

When were you informed that the 38th parallel would constitute victory?

He replied:

I was never informed of that fact or decision. I was only informed that my troops, which I considered victorious, and which were prepared to destroy the enemy—that could have been easily done; the only knowledge I had of that statement by Mr. Acheson is the fact that we were ordered not to advance further.

This, then, was the second specific occasion on which the State Department ordered the American Forces in Korea not to win the war.

And, of course, they never did.

Acheson's policy—never to crush the Communist forces—prevailed to the very opening of the cease-fire talks.

When the Chinese Communist forces first were spotted in massive formations in Manchuria, in November 1950, President Truman met in emergency session with the National Security Council, in Washington. After the session he issued a public statement, November 16, declaring in part "that we have never at any time entertained any intention of carrying hostilities into China."

That was all the Communists needed. Seven days later, on November 24, the first Chinese units appeared in North Korea in organized massive offensive operations. And when these new forces finally were destroyed the following June, Washington summarily ordered the American counterattack halted in its tracks.

Mr. Acheson's war was America's first military defeat—not because our forces were wanting in valor, courage, or sacrifice—but only because it was a war rigged against victory from the very outset.

As soon as MacArthur's forces got close to winning it—"in spite of the restrictions and limitations imposed by our own Government"—MacArthur was summarily sacked.

And when MacArthur finally was busted, the New York Daily Worker heralded the news in screaming headlines of Communist triumph.

"Good riddance" roared the Daily Worker headline, in 72-point blackface.

The Owen Lattimore plan of 1947, to deliver China to communism, was now a fait accompli.

Hello Uncle Sucker: American Shipyards Close and Lose \$1.8 Billion—Foreign Shipyards Boom and Take in \$1.2 Billion From Uncle Sam

EXTENSION OF REMARKS

OF

HON. ALVIN E. O'KONSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. O'KONSKI. Mr. Speaker, of the 1,347 merchant vessels under construction today in the world's shipyards, being paid for by Uncle Sucker, only 14 of these vessels are being built in the United States of America. In 1954, United States ships carried only 29 percent of our own Nation's foreign trade.

Vessels aggregating 3,884,749 gross and 6,054,831 deadweight tons have been ordered in foreign yards by American interests during the postwar period. If placed in American yards these vessels would have cost \$1.8 billion. Their cost abroad is approximately \$1.2 billion. Here then is the wholesale flight of American capital—which has made the difference between a sound shipbuilding establishment in the United States and one that has been reduced to a state of emergency. The answer—lower shipbuilding costs.

However, there is no reason to blame the shipowner. Sound business practice dictates his orders. He needed ships. He could get them built in foreign yards for 33 to 45 percent less than it would cost in this country. Some had funds tied up in foreign currency which were not convertible to dollars. It was the only way to get their money out.

The high cost of American-built tonnage is keyed to higher wages enjoyed by this country's labor force. Certainly the solution to making our shipyards more competitive is not to lower our standard of living. The only alternatives are greater efficiency and Government aid.

Our shipyards have been operating on an austerity basis for some time, and a minimum of man-hours and a maximum of efficiency go into each ship. Therefore, Government help is necessary to keep some of this work in our own shipyards.

It would have cost the Government approximately \$67 million a year to have held this business for United States shipyards. However, the Government would have received back in taxes at least \$50 million each year.

The cost to the American economy is greater. The shipyards alone would have had to employ 17,000 more workers. An equal number would have been employed in supporting industries throughout the country. What it will cost in an emergency cannot be calculated.

At last report with the small backlog of orders on hand, our yards had dropped to 12th place in world shipbuilding.

An exclusive survey just concluded by Marine Engineering shows that shipbuilding contracts placed abroad by United States and affiliated interests in the postwar years now total 302 vessels of 3,884,749 gross tons, 6,054,831 deadweight tons, equipped with propulsion machinery aggregating 2,691,165 horsepower.

The contract value of this work if it had been placed with United States shipyards is estimated at \$1.8 billion. It is estimated that the cost of these 302 vessels built by shipyards in Europe and Japan will total about \$1.2 billion.

This great volume of new shipbuilding business placed abroad by American and affiliated interests had its beginnings in 1949. It far exceeds the total business contracted for with United States shipyards in the postwar years. During the past 8 years, beginning January 1947 and running through 1954, American shipyards completed 247 major-sized vessels of 4,642,000 deadweight tons for Government and private shipping interests. This is one-third less than the total tonnage ordered abroad in the past 6 years by these same private shipping interests.

This very definite and disturbing trend toward buying abroad, with its attendant neglect of the United States shipbuilding industry, is entirely a postwar development. In the 20 years between the two great wars very few vessels had been ordered from foreign shipyards by American interests. These were principally a few fruit carriers constructed for subsidiaries of the United Fruit Co. However, this trend has been developing very rapidly in recent years as will be

noted from the following tabulation which shows the accumulated total of orders placed with foreign shipyards at various dates of exclusive surveys conducted by Marine Engineering.

Date of survey	Number of vessels	Deadweight tons
September 1950.....	32	559,900
June 1951.....	100	1,630,310
February 1952.....	178	3,313,970
September 1953.....	261	5,273,034
March 1955.....	302	6,054,831

It will be noted that the rate of increase in the total of these orders has slowed somewhat in the past 18 months as compared with the period represented by the other surveys. Part of this is due to the cancellation of some few orders during the past 2 years, and to the considerable contraction in ocean commerce and activity experienced since the end of the Korean war. During the past 6 months, however, there has been a very definite revival in the ordering of new ships in the principal maritime nations of the world. American interests have participated in this and ordered some especially large vessels from Japanese and European shipyards.

If only one-half of these 302 orders had been placed in the United States, the shipbuilding industry would be in a flourishing condition. Instead it has reached a point where shipyard employment is now at a postwar low. However, due to remedial measures passed by the last Congress the prospects ahead for the United States shipbuilding industry have brightened considerably. This has been brought about by cooperative efforts on the part of the Maritime Administration, the Shipbuilders Council of America, and the trade associations of the American shipowners.

This loss of business by American shipbuilding establishments to foreign competitors has meant not only a reduction in employment at the yards, but contraction for the very many affiliated industries in the 48 States which supply materials and parts for the building of ships. The United States Government and State governments also have been big losers through reduced income taxes from individuals and smaller corporation taxes.

The shipyards of the world now have orders on hand for the construction of 1,300 seagoing vessels of about 16,500,000 deadweight tons. A large percentage of this huge deadweight tonnage is for American interests as, of the over 6 million tons ordered from foreign shipyards, well over 50 percent remains to be constructed. Many of these vessels ordered abroad by American interests will not be completed until the end of 1956, and some few in 1957.

During the postwar years the shipbuilding industry of most maritime nations has experienced an almost constantly expanding volume of business, except for the last 2 years. The American orders placed abroad have been a

major contribution to this condition and in effect has been a major source of export business for these nations. While the vessels cannot be classed as imports into the United States, the business does represent tremendous purchases from foreign interests, and in many cases is paid for in American dollars. To import these vessels into the United States and register them here would hardly be practical in view of the high duty that would have to be paid.

WHY ORDERS ARE PLACED ABROAD

All of these vessels ordered abroad will fly foreign flags upon completion. Most will be registered in Liberia and Panama. A liberal number, however, will be documented in Honduras, Great Britain, Holland, France, Norway, Italy, and Germany. This will enable the owners to employ foreign crews at greatly reduced rates over those paid to American seamen. A number of these vessels will never come to the United States as they will be utilized by foreign subsidiaries of American interests trading to the countries in which they are registered. However, many will be employed in the foreign trade of the United States and will fly the flags of Panama and Liberia. These vessels, of course, cannot be used in the coastwise and intercoastal trade of the United States as these routes are restricted by law to American built and registered ships.

This postwar trend of ordering new ships from foreign shipyards will continue and additional contracts will be placed this year and for the next few years if world conditions warrant. The principal reason for this is, of course, the cost factor. The higher cost of labor and materials in the United States makes it practically impossible for American shipbuilders to compete in the world shipbuilding market.

Another major reason for ordering tonnage abroad is blocked currency owned by American oil companies in foreign countries. This has been principally in the sterling areas. In return for the privilege of marketing their products in these sterling and other areas, American oil companies have been forced into agreements to accept payment in sterling, and so forth, without conversion privileges. As a result, considerable balances, through profits, have been built up abroad. The most practical method to retrieve these profits is to invest in goods produced in the foreign areas involved, and take them out upon completion. Therefore, American oil companies with profits on hand in foreign countries have ordered a large number of oil tankers, oilfield equipment and other materials required in the conduct of their business. Under these conditions United States shipyards are practically eliminated from bidding on the construction of any of these new tankers.

Among the American oil companies affected by the blocked currency condition are the Standard Oil Co. of New Jersey, Socony-Vacuum Oil Co., Standard-Vacuum Oil Co., Gulf Oil Corp., Tide

Water Associated Oil Co., The Texas Co., and the Caltex group. The latter is a combination composed of the Standard Oil Co. of California and the Texas Co.

While a considerable number of tankers have been ordered abroad by this American oil company group because of blocked currency, the total represents only a small percentage of the grand total of tankers and other types of vessels contracted for with foreign shipbuilders by American interests, mainly because of the cost factor. Some of the tanker orders placed abroad, however, have been contracted for by subsidiaries of American oil companies established principally in Great Britain, Italy, Germany, Holland, Belgium, France, Norway, and Denmark, and will be used by these subsidiaries to import oil into these particular countries where their products are marketed. A brief study of the companies listed in table 1 will reveal, through similarity of names, the foreign affiliates of American companies established for marketing or tanker operating. A number of oil refineries have been built in many of these countries since the end of the war by American oil companies.

Many of the 217 tankers listed in table 1 have been ordered abroad, chiefly because of the cost factor, by other than oil companies. Included in this grouping are the National Bulk Carriers, Tidewater Commercial Co. of Baltimore, Hillcone Steamship Co. of San Francisco, Naess Shipping Co. of New York. Also, large investment groups composed in many cases of Greek-American backed by American bankers and insurance companies. Several of the largest banking institutions in the United States, among them the National City Bank and the Chase National Bank, have loaned money for the building of tankers, as have, also, insurance companies like the Metropolitan Life Insurance Co. These vessels when completed are long-term chartered to oil companies for periods ranging up to 15 years. Among the Greek-American groups ordering tankers abroad are the Orion Shipping & Trading Co., J. M. Carras, Inc., Olympic Oil Lines, Onassis, North American Shipping & Trading Co., Niarchos, Atlantic Oil Lines, Livanos, and many smaller organizations.

The oil companies, both here and abroad, have for a long period encouraged the construction of tankers by independent investment groups, as by so doing the oil people are able to retain their capital for the development of oil properties and the marketing of oil. In many cases the investment group orders the size and type of vessel needed by the interested oil company, complying with their established construction practices and specifications.

A principal factor contributing to this postwar development of ordering new vessels built abroad is the vast increase in the amount of imports required by the United States since the end of the war. While the importation of all types of basic materials has experienced great in-

creases compared with pre-war figures, the big volume has been in iron ore, bauxite ore, gypsum, and oil, and this movement will continue.

For the transportation of this type of bulk cargo there is no necessity to operate ships under the American flag with attendant higher operating costs. Therefore, lacking the proper ships to move these bulk cargoes, American interests have gone abroad to secure most of the tonnage needed, mainly because of the difference in production cost between United States and foreign shipyards.

The types of cargoes moved has led to an ever-increasing size of vessel, and this has proven economically feasible because of the long hauls involved and the constantly spiraling cost of shipboard labor, upkeep, and maintenance. Along with this has come in the post-war years a new trend toward increased speed of ships. Accordingly, where one new 30,000- to 45,000-ton tanker now is displacing 2 and 3 smaller ones this same vessel with the sea speeds now being adopted is making almost twice the number of yearly voyages her counterpart of prewar days accomplished.

Before the war the number of large bulk iron-ore carriers in existence for ocean transportation was negligible. This situation is fast changing in the postwar years due to the development of new ore fields and the approaching exhaustion of American mines. This has necessitated the construction of big bulk carriers especially designed for long-haul runs.

The major steel producers, such as United States Steel Corp., Bethlehem Steel Co., Republic Steel Co., and the Inland Steel Co., have developed these new foreign iron-ore sources to serve the new and expanded steelmaking capacity created in recent years. None of these companies desire to engage in the transportation business, preferring to retain their capital for the development of steel mills and ore mines. Therefore, contracts have been made with shipping companies to move the ore into the United States.

Ships had to be built for this service and, based on costs, the business went to foreign shipbuilders. A number of iron-ore carriers already have been completed in foreign shipyards for American interests, ranging in size from 24,000 to 62,000 deadweight tons each. Bids currently are being solicited in Europe and Japan for the construction of additional ore carriers. Combination vessels also are being built which alternately can carry oil or iron ore and thus be in a position to participate in whichever trade offers the best freight rates.

Ore is being moved in new bulk-ore carriers by the States Marine Corp. from Liberian ore fields to Baltimore, where

it is transhipped to railroad cars traveling inland to Republic Steel Co. mills. Considerable ore now is being taken from the Venezuelan mines of the United States Steel Corp. and the Bethlehem Steel Co. The National Bulk Carriers and the Joshua Hendy Corp., with new ships, are bringing the United States Steel ore into Mobile and the new Fairless Works at Philadelphia. The Bethlehem Steel Co. is moving its Venezuelan ore into Baltimore with its existing vessels.

The new Labrador ore fields being developed by a United States-Canadian combination headed by the M. A. Hanna Co., of Cleveland, now is beginning to produce. Ore has been moved down the St. Lawrence River from the Labrador fields by the American-Hawaiian Steamship Co. with new vessels. Also, the M. A. Hanna Co. has ordered two 30,000-ton bulk-ore carriers from British shipyards to participate in this ore movement. Ore soon will be mined in new fields in Peru by the Utah Construction Co. and moved to the United States in big bulk carriers being built in Japan for an affiliate, Associated Ocean Freight Services of San Francisco.

TYPES OF VESSELS ORDERED ABROAD

The increase in the total of orders placed abroad since our last report has been mainly in the tanker and bulk-carrier categories. It will be noted from table 2 that five-sixths of the total deadweight tonnage ordered is of the oil-tanker type, these accounting for 217 vessels of 5,100,828 tons. Large bulk-ore and bauxite carriers total 27 of 615,450 tons, while dry cargo and refrigerated cargo ships add up to 43 of 321,673 tons. The very large majority of these 302 vessels ordered from shipyards in foreign countries are of the large transoceanic type.

From table 3 it will be observed that almost 30 percent of the total deadweight tonnage has been ordered from shipyards in Scotland and England, totaling 102 vessels of 1,698,152 tons. Japanese shipbuilding establishments secured the second largest percentage of the deadweight tonnage ordered, this representing 47 vessels of 1,331,249 tons. German plants are running a close third with 64 vessels of 1,238,368 tons.

While these three nations secured between them more than two-thirds of these particular vessel orders and almost 70 percent of the tonnage, totaling 213 vessels of 4,267,769 tons, the balance spread around among shipyards in other nations amounted to 89 vessels of 1,787,062 tons. This went to yards in France, Holland, Belgium, Norway, Denmark, Sweden, Italy, and Canada.

Low building costs has been the principal reason for attracting so much of this new construction to shipyards in

Germany and Japan. In 1954 contracts were reported placed in Japan for the building of some of the tankers included in table 1 at costs ranging between \$105 and \$130 a deadweight ton. Japanese yards were aided to some extent by indirect Government subsidies and by building contracts directly linked to the importation of sugar. Dutch and German yards currently are reputed to have the lowest building costs in Europe, and this has attracted much of the building for American interests. Italian yards, although aided by direct Government subsidies, have not been successful in securing the orders.

Largest of the vessels ordered abroad by American interests are the three bulk-ore carriers built at the Kure Shipyard, Japan, for the National Bulk Carriers. Two of these were finished in 1954 and the third in January 1955. These vessels have been registered in Liberia under the ownership of a National Bulk subsidiary, the Universe Tankships, Inc. Each is 794 feet long overall, 116-foot beam, 56-foot depth, twin screws, propelled by geared turbines of 16,500 shaft horsepower. These are the largest cargo vessels in the world.

Also completed at the Kure Shipyard for the National Bulk Carriers last year was the 47,000-deadweight-ton tankship *Phoenix*.

The largest oil tankers owned by any oil company in the world were ordered in January of this year by the Tide Water Associated Oil Co., western division, from two French shipyards. These vessels will be of 48,000 deadweight tons, and two each will be constructed by Chantiers de Penhoet, and Ateliers and Chantiers de France.

Four 39,000-ton tankships have been ordered in Japan by Orion Shipping & Trading Co. Two will be constructed by Harima Shipbuilding & Engineering Co., and two by Mitsubishi-Yokohama.

Among the many tankers being built abroad for the Afran Transport Co., affiliate of the Gulf Oil Corp., are two 37,000-ton vessels ordered from the Netherlands Dock & Shipbuilding Co., and one 36,800-ton ship now nearing the launching stage at Chantier de Penhoet, France. Two 47,000-ton tankers are underway at Vickers-Armstrongs, England, for the World Tankers Corp., and one 38,500-ton vessel at Howaldts-werke Hamburg A. G., Germany.

These are but a few of the very many outstanding vessels which have been completed or are on order in foreign shipyards of the world for the account of American or affiliated interests. Many slightly smaller vessels of 30,000 to 32,000 tons have been finished or are now underway together with an even greater number ranging in size between 20,000 and 30,000 tons.

TABLE 1.—Vessels ordered or completed in foreign shipyards for United States or affiliated interests during postwar years

BULK ORE

Lawyers Entitled to Benefits of Social Security

EXTENSION OF REMARKS

OF

HON. CARL ELLIOTT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. ELLIOTT. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the February 25, 1955, issue of the Montgomery (Ala.) Advertiser:

IT TAKES TIME

After all these years, the American Bar Association, traditionally a conservative body, has decided that social security is not socialistic after all. At the annual midwinter meeting of the house of delegates, policymaking body of ABA, the lawyers went on record as favoring voluntary admission to the Social Security System.

In a countrywide poll, it was revealed, State and local bar association presidents had voted 4 to 1 in favor of the plan—making the bar's 50,000 members the first professional group in the Nation to seek what once was denounced as the diabolical plan of bearded revolutionaries.

There were a few sour notes, of course. Judge Floyd E. Thompson, of Chicago, said that he was still against "making Socialists out of lawyers." The president of the Illinois State bar said that the move was "a first step toward renunciation of the independence of our profession."

But, in the main, the lawyers have recognized that social security is here to stay. The 8,000 members of the New York County

Lawyers Association had voted overwhelmingly for the proposal, the New York delegate said. Others reported similar lopsided votes in favor of voluntary social security.

A footnote to this change might be the old and new attitudes of another organization hardly noted for radicalism, the American Medical Association. In 1932, when a small group of medical economists had recommended the expansion of voluntary health insurance, AMA's official organ had denounced the proposal editorially as socialism and communism, inciting to revolution. Today, as half the Nation has some form of voluntary health insurance, AMA is the plan's most aggressive advocate, calling it "the American way toward better health."

And President Eisenhower's health insurance plan, which AMA has denounced in about the same language it used against voluntary health insurance in 1932, will probably be advocated by the doctors in a few years as a moderate American way to meet the health needs of the Nation.

Should the U. N. Expel Russia?

EXTENSION OF REMARKS OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following reprint issued by the U. S. News & World Report, of an exclusive interview with Henry Cabot Lodge, Jr., United States Ambassador to the United Nations, which was held in the conference room of the U. S. News & World Report, Washington, D. C.:

SHOULD THE U. N. EXPEL RUSSIA?

(EDITOR'S NOTE.—Should Soviet Russia be expelled from the United Nations for conspiring in and aiding open aggression? Could Russia be expelled under present rules? What can the U. N. do to prevent help to an aggressor in the future? What, also, are the chances that Communist China, an aggressor, will get into U. N.? If that should happen, should the United States get out? For the answers to these and other questions, U. S. News & World Report invited Henry Cabot Lodge, Jr., chief American delegate to the U. N. to its conference room. Henry Cabot Lodge, Jr., 52, former Republican Senator from Massachusetts, 10 years ago resigned his Senate seat in order to fight in World War II. He came home a colonel with five battle stars, and with a new interest in international affairs. Mr. Lodge's grandfather, the first Senator Henry Cabot Lodge, helped block United States entry into the League of Nations. The grandson, President Eisenhower's choice to head the United States mission to the United Nations, believes in the U. N. as a preventive of war and an important forum in the cold war.)

Question. How would you define the purpose of the United Nations Charter, Mr. Lodge? Is it the purpose of the charter to provide a meeting place for governments?

Answer. No. The purpose of the charter was to create an organization of peace-loving nations—and I underline those two words "peace loving"—who would get together in case of an aggression and repel it—who'd try to prevent aggression in the first place, and, if an aggression occurred, would get together and repel it.

Question. You don't regard the machinery of the United Nations itself as a formal structure such as a federation would be?

Answer. I think "federation" is much too strong a word. It's not even as much like a confederation as the Confederacy at the time of the Civil War, and that proved to be too weak to maintain itself in the face of opposition. The United Nations is nothing like as formal an organization as that was. Nothing like it.

Question. Is it an alliance?

Answer. It's not an alliance. We have no alliance with the Soviet Union. It's a center for harmonizing.

Question. In practice is it any more than a debating society?

Answer. It isn't a society. We are not on a basis of a society with the Soviet Union. It's an arena, it's a device, it's an instrumentality. It is, among other things, a place where we stand up against the Soviets when they try to use the U. N. as a forum for prosecuting their cold war. And, if we're successful in doing that, we can generate world opinions which will influence the Communists in the Kremlin. We've proven that several times.

Question. You underline the words "peace loving." Do you mean by that that if we had it to do over again, Soviet Russia might not have been in it?

Answer. Absolutely. I do mean that.

Question. What is your definition of peace-loving?

Answer. Well, I can define it negatively. It is a nation that has not been convicted of aggression by the United Nations. I'll put that down as a minimum definition.

Question. That would take care of Red China, wouldn't it?

Answer. In my opinion, that takes care of Red China.

Question. Would you be in favor of pushing the Soviet Union out of the United Nations?

Answer. That's a calculation you have to make. There are lots of pros and cons on that, you know. From the standpoint of logic, yes, they ought to be out. And, as I say, if we had known in San Francisco the way they were going to act, I don't think we would have ever been in favor of admitting them. But there are certain advantages in having them there, too. It gives them a chance to make an exhibition of themselves, and that's a chance of which they take very frequent advantage. And part of the effect of their making an exhibition of themselves is a unifying of the free world.

I've seen it happen many times—the free nations, being free, start to drift apart, and everyone follows his own way. The politicians in the free nations start attacking each other. But when it gets to that point, the Soviet representative will say something that is so monstrous, so shocking, so irritating, that the free people start pulling together again. If they were to leave it would not be the end of the U. N.

Question. What countries are now being kept out of the U. N.?

Answer. They are Japan, Italy, South Korea, Finland, Ireland, Portugal, Austria, Ceylon, Nepal, Jordan, Libya, Vietnam, Laos, Cambodia. West Germany is not eligible.

Now the Communists want to get in Bulgaria, Rumania, Hungary, Albania, and the section called Outer Mongolia, which they are trying to contend is a country.

Question. And China—

Answer. Well, China is there. It's a question of who represents China.

Question. We should be entitled to have Texas in there, too, then, shouldn't we?

Answer. If they've got the Ukraine and Byelorussia, then we certainly ought to have Texas—and I would add Massachusetts.

Question. Is this subject often discussed, this idea of taking in some and letting others go?

Answer. We talk about it all the time.

Question. In the circles around the United Nations—

Answer. Yes, and we've tried one scheme after the other. If there is one thing that I think we ought to unite public opinion on in this country, and in the other free countries, it is that when the revision of the charter comes up, we should amend it so as to eliminate the veto on admission of new members. I'm not advocating it necessarily on anything else, but on the admission of new members we ought to eliminate the veto.

Question. Would you make it a majority vote?

Answer. Well, you could require seven votes in the Security Council and two-thirds in the General Assembly. I'd just as soon do that.

Question. Getting back to the work of the United Nations, you spoke of some of these subsidiary organizations. What do you visualize as regards the new setup in the Assembly which permits nations to take group action as we did in Korea, but, without recourse to the Security Council where the Soviets have the veto? What constructive value do you think that may hold for the future in the way of preserving peace?

Answer. You mean the uniting for peace resolution of 1950? I think that if there ever is another aggression that United Nations gets into, like this Korean one, I think the response is going to be very much better. I think this uniting for peace thing, if it is ever needed, will completely bypass the Soviet veto, and I think there will be a much greater percentage of troops from other United Nations members than we had this last time. The Korea affair was the first time in human history that there had been collective military resistance to aggression under the auspices of an international organization.

Now, while it could have been better, it also could have been worse. We've learned a lot from it. I'm sure that if there is another aggression—which God prevent—we'll have a much better participation.

Question. What have you done to cure the defect to which many people point—namely, that the United Nations on its surface takes the position on a resolution against acts of aggression and still there are neutrals who do not obey and deliberately violate it? Mr. Vishinsky announced that defiantly in December of 1951—he said they had been sending ammunition and supplies to Red China's forces. Yet, the resolution of the U. N. called on all members to refrain from aiding the aggressor. What have you done about that situation?

Answer. I personally favor revision of the expulsion procedures—

Question. To deal with that sort of thing—

Answer. That's right. You see, when I came in there, the first speech I made was listing 10 specific things that the Russians had done in the way of guns, tanks, planes and so on—the calibers, types, and everything else—to show how they were actually aiding and abetting the aggressor. I was planning to lay a foundation for doing something like that, and then the aggression stopped. But one way to cope with that might be to strengthen the expulsion procedures.

Question. How do you deal, then, with the country which says it is "neutral"?

Answer. I think a country which just stays out of the fight has a perfect right to do that. But a country that claims to be neutral and is actually aiding and abetting a convicted aggressor—the U. N. ought to have a stronger sanction against that sort of thing, and a stronger expulsion procedure might be one answer.

Question. There wouldn't be any place for a "neutral," really, would there?

Answer. Well, if you aid and abet the aggressor, you are not a neutral.

Question. What specifically is "aid"? What about trade?

Answer. With trade, it always depends upon who's getting the benefit of the trade.

Trade isn't bad as such. I think we ought to grow up a little bit more on the subject of trade. There are many advantages to trading with countries that you don't like at all. You get in there and may get things out of them that you will be glad to have. Of course, when you trade with a Communist you have to know exactly what you're doing. He trades as a matter of politics and strategy, not out of the ordinary business motives that animate traders in a free country.

Question. That is one phase of it. But what about the authority and moral power of the United Nations to enforce this resolution which says, in effect, you shall not aid the aggressor? How far does that go toward stopping countries which claim to be neutral from giving direct aid to those people and saying that it's mere trade?

Answer. When the Soviet Union sent all those tanks and guns and planes to the Chinese Communists and the North Koreans, they were acting contrary to the resolution as passed by the United Nations. It was illegal as far as the United Nations was concerned.

Question. What about the sale of rubber that was made by Ceylon to the Chinese Communists during the same period?

Answer. That is contrary to the spirit of the resolution, but, of course, Ceylon is not a member.

Question. Britain sent rubber, too, to Russia during the war. They claimed that it wasn't strategic, or else they claimed they had enough of it anyhow—

Answer. Morally, of course, Soviet Russia was an aggressor in Korea. We have machinery outside the United Nations that does a pretty fair job of controlling strategic trade with the Iron Curtain countries. It would have been hard to deal with that in the United Nations.

Question. Shouldn't that be considered in the Charter if you are going to be an effective organization?

Answer. It is a defect, no doubt about it, and one that ought to be remedied.

Question. Can it be remedied without creating a superstate with authority?

Answer. I think you can have a very good try at it; yes.

Question. You are relying on moral force to do it, then?

Answer. Public opinion; yes.

Question. Do you think the threat of expulsion would prevent aid to aggressors or discourage them after they had started it?

Answer. I think it certainly would. I think if we had an easier expulsion method, that would be a very good thing.

Question. Is the revision of the expulsion method also subject to veto?

Answer. Yes. Every revision is subject to veto. That's why you have to gather a lot of public opinion behind it.

Question. As a practical matter, is there any way to expel anybody from the U. N.?

Answer. Not now, if any permanent member of the Security Council doesn't want them to be expelled.

Question. They have to agree to the expulsion?

Answer. That's right.

Question. How do you assess the Russians' present "soft" approach to the United Nations and the world?

Answer. I think it's superficial. It's very evident. I see it every day. But the basic premise hasn't changed a bit. They want to take over everything that they possibly can. The don't want to do the way we have done the past 150 years and develop their own resources. I don't know why they don't. They've got a great big continent there to develop. They have this mania to go out and subvert and conquer.

Question. How interested do you think the Soviet Union is in staying in the U. N.?

Answer. They want to stay in. They don't dare leave it. They can't destroy it, and they

don't dare leave it. They never miss a meeting.

Question. How do you account for some of their inconsistencies? For instance, Red China wants to be admitted. The Soviet Union wants Red China admitted, and yet Red China will not accept United Nations auspices in settling the Korean problem.

Answer. That's one of the strong arguments for keeping Red China out—she not only won't accept United Nations auspices but attacks and holds the United Nations in contempt.

Question. Is there much sentiment for admitting Red China among some of the countries?

Answer. I don't think so. I've heard it said that there is, but I have always felt the votes would be with our side if we ever had to get a vote on the merits of it. Of course, we've gone along now simply saying that we would not consider it. Last year we voted to postpone it. This year we had a resolution that was a little stronger. We didn't use the word "postpone," which implies that we'd let it come up automatically. We said, "We shall not consider it this session." We got 43 votes, which is 3 more than I thought we would get.

Question. Is the British position closer to ours on that?

Answer. The British voted with us on the motion not to consider it.

Question. Mr. Lodge, what do you think has been the greatest benefit to the United States in its participation in the United Nations?

Answer. I would say that the United Nations, in spite of the fact that one of the basic assumptions on which it was founded—which was an alliance between the United States and Soviet Russia—has never materialized, in spite of that fact has had a vital effect in preventing world war III from breaking out, as a result of United Nations action in the following incidents: The presence of Russian troops in Iran, the Communist encroachment on Greece, the independence of Israel, the independence of Indonesia, the struggle between Pakistan and India over Kashmir, and the aggression in Korea.

Any one of those affairs could have mushroomed out into world war III. They were all accompanied by violence and at least minor fighting. While the United Nations didn't play the sole part—and in many cases the United States played an enormous part—still the United Nations played an essential part in preventing world war III from coming out of those incidents.

Question. Would you say that if there had not been a United Nations, diplomacy would have accomplished the same thing?

Answer. No, I don't think so. I don't think it would in any case because, while the legal power of the United Nations has been nullified by the Soviet abuse of the veto, something has happened that was not foreseen and that is the development of a thing known as "world public opinion."

The increase in radio and television and journalism and printing, all that, all over the world, means that world public opinion, while it isn't in so sharp a focus as public opinion in New York State or public opinion in the United States, nevertheless is a very real force. And the Soviet Union, while it maintains an iron dictatorship wherever it has the legal power to do so, is very sensitive to public opinion in the world outside its borders.

Question. To what extent do you think that the criticisms made in the United States are due to what we often have heard as the overselling of the United Nations in the first instance?

Answer. Oh, I think that's a very big factor. Even at the founding of the United Nations, some people in 1945 in San Francisco, and some of the people who followed

them, undertook to get the idea spread around that here was an automatic peace producer, an automatic war preventive, like a patent medicine—you could take a swallow of it, and the disease would be cured. Well, of course, there isn't any such thing, and there never will be any such thing. If the United Nations is as automatic as a burglar alarm, why, that's all you can expect of it. Now, what happens after the bell rings is up to the members every time.

NO WORLD GOVERNMENT

Question. How far do you think that misunderstanding went? Do you think many people thought of it as a world government, as a supranational government?

Answer. There were a few. A very small percentage. Of course, it is not a world government and should not be a world government. In fact, I don't think world government is in the cards at all.

Question. How do you distinguish between what is called a world government and what we have in the United Nations?

Answer. In the United Nations, everything that is done is purely recommendatory, except in the Security Council. And in the Security Council we are completely protected by the veto. That's all there is that's legally binding. Now a government can take your boy out of your home and stick him into the army, a government can impose a tax on you, a government can issue coinage, a government commands your allegiance.

Question. Would you regard the United Nations, then, as a federation of governments?

Answer. No. I think it's a device, a contrivance, an instrumentality. It's a very useful, necessary thing, but when a man goes to work for the United Nations, he doesn't stop being an American, and there isn't any higher loyalty than to the American flag. There are 1,800 Americans working over there, running the elevators, fixing the electric lights, doing expert work of the intellectual type—of course, they owe the United Nations a day's work, and they owe it not to agitate and make trouble. But their allegiance is to the United States.

Question. When you say that it is not a federation, you mean that it is not part of a structure known as a federation, like a formal alliance. But isn't it actually a loose federation of states?

Answer. No, it is not a loose federation of states, because the Communists are in it and we have no such relationship as a federation with the Communists. All that the Communists and we are united on—if we are united on it—is the common desire not to be blown into destruction by the atomic bomb, and we hope we are united on that.

PROBLEM OF UNESCO

Question. What importance do you attribute to all the collateral, or subsidiary, organizations of the United Nations, like the U. N. Educational, Scientific and Cultural Organization?

Answer. I am not a great admirer of the way UNESCO has been administered although it has a fine purpose. I issued a statement to the press not long ago which indicates my view.

Question. Aren't you referring to the personnel and policies? What about the actual organizational setup itself? Should we have such subsidiary organizations?

Answer. It's a bad organizational setup. We have about 11 specialized agencies, and some are doing such a good job that you never hear of them. It's always the ones in which there is trouble that get into the papers. The International Civil Aviation Organization does a terrific piece of work, and you never hear about it because it works perfectly. They run the guides to navigation across the North Atlantic for airplanes. Every pilot swears by them. You don't worry about them. That takes care of itself.

The World Health Organization does a good job.

The Food and Agriculture Organization—I was just amazed at the number of enthusiastic supporters it has in this country.

I think the International Labor Office is well run.

But the administrative setup for these agencies is poor because there is no overall administrative direction at all. The Secretary General of the United Nations doesn't control them. They are considered to be specialized agencies of the United Nations, but he has no real legal authority over them. They are hard to touch from New York.

You may hear a lot of complaining about a specialized agency, but I can't do what you think I can do—go over to the Secretary General and say, "Here's this complaint about such and such." I can't do that.

Question. Are they floating international commissions?

Answer. They are floating international bodies. They are more than commissions. Each has its own governing body and makes its own rules and selects its own administrative chief and everything else. The point of contact is not through me. It's through the State Department.

Question. What do you mean by governing bodies? They don't govern any more than the United Nations itself does, do they?

Answer. Yes, they govern the specialized agency.

Question. But the United Nations does not govern them?

Answer. No.

Question. And they are independent, but they are often referred to as a part of the United Nations?

Answer. That's the point.

Question. The World Bank and the Monetary Fund are in that category?

Answer. Yes, specialized agencies.

Question. And yet there are people in this country who are blaming the United Nations for what UNESCO does?

Answer. Absolutely. I've made a study of why the U. N. is unpopular with some people in America—so far as it is unpopular; it's very popular with most people—and it's usually due to bad publicity attributed to UNESCO.

ONE-FLAG TROUBLES

Question. What are some of the things that arouse comment?

Answer. Well, some fellow in UNESCO writes an article saying we ought to have 1 flag, or we ought to have 1 citizenship, or we ought to have 1 this or that. The first time I appeared before the Senate Appropriations Committee asking for money—I had been a member of it for 7 years in the Senate, on the other side of the table—the first day I appeared, one Senator, an old friend of mine, handed me a thing that had "UNUM" printed on it, that looked like stage money, and said, "What is this? Is the United Nations beginning to emit currency?"

Well, of course, I repudiated it immediately. It was something that some joker in UNESCO had put out. It didn't really mean anything. But that kind of thing infuriates people. They think people are trying to destroy our Government, and I don't blame them for being infuriated.

Question. What branches of UNESCO are guilty of that sort of thing?

Answer. We don't know. There's no one in New York I can talk to about UNESCO. I'm just as remote from UNESCO as you are.

Question. Does UNESCO serve any useful purpose as far as this government is concerned?

Answer. The idea behind it is a good idea. I don't know about its specific accomplishments. The Russians joined it this year. They have never been in it before. I question the prudence of our getting out of it.

Question. Are these functions of other organizations, such as the World Health Organization, valuable to UNESCO?

Answer. Oh, they are not UNESCO. I haven't thought this through, but I question whether we ought to leave UNESCO and leave the Russians in it as the dominant voice. I just don't like to leave them in any of these organizations without our being there too.

Question. Why do you feel the Russians should stay in?

Answer. I've heard people say, "Let's get out." If we had been out of the United Nations when the Soviet Union tried to use the United Nations as a device to try to take over Guatemala, we would have been in very serious trouble.

Question. We would have been in the same position that they were when the Korean affair came along—

Answer. Yes, and look at what that got them into. And, believe me, on a thing like that nobody's going to fight for Uncle Sam the way Uncle Sam will. You just can't assume anything else. Now, we have marvelous cooperation from other members, but we are a big member of the team. We have to be there. To get out would look cowardly, but, apart from the looks of it, it would be a very imprudent thing to do, a very unwise and dangerous thing to do.

Question. Then you don't think the proposal that we get out of the United States very feasible—

Answer. I think it very dangerous.

Question. Even if they let Red China in?

Answer. I don't think they are going to get in.

MORE IN UNITED STATES FAVOR U. N.

Question. Have you ever found out in your informal chats with these people whether the Russians deliberately absented themselves in June, 1950?

Answer. I don't know, but I think it was accidental. It caused an awful lot of trouble for them.

Let me add one thing here. In 1951 the percentage of Americans who said they thought the United Nations was doing a good job was 43 percent; in 1954 it is 63 percent.

Question. Is this on the basis of a public-opinion poll?

Answer. National Opinion Research Center.

Question. To what do you attribute that increase?

Answer. I attribute it to one word—"Eisenhower." There are a lot of other things that go with it, of course.

You've got the Korean armistice, with the principle of voluntary repatriation.

You've got the fact that we foiled their attempt to go in and take over Guatemala.

You've got the fact that we've kept the Chinese Communists out, and Americans know that there would be great danger if the Chinese Communists were in. You've got the atomic-energy proposals.

Question. What really is UNESCO?

Answer. UNESCO is the United Nations Educational, Scientific, and Cultural Organization, not to be confused with the Economic and Social Council, which is altogether different. There are three councils in the United Nations—Security Council, Trusteeship Council, and Economic and Social Council.

Question. Who is our representative to UNESCO?

Answer. The Director General of UNESCO is an American gentleman with whom you are all acquainted—Dr. Luther Evans.

Question. Formerly of the Library of Congress—

Answer. Yes.

Question. Do we have a representative also?

Answer. Not an official representative. On the governing board there's a United States national who serves as an individual in his expert capacity.

Question. Isn't that the person responsible to and appointed by the State Department—or appointed by the President?

Answer. No. We are trying to get the UNESCO Charter changed to make him an official representative responsible to the President. But the Director is the responsible administrative head.

Question. We read about the American Association for the United Nations—Mrs. Franklin Roosevelt is active in it—

Answer. Dr. Charles W. Mayo is president of it.

Question. Mrs. Roosevelt was identified with UNESCO, wasn't she?

Answer. I don't believe she was. She was on the United Nations Human Rights Commission, I know.

ISSUE OF HUMAN RIGHTS

Question. Is that a separate Commission—the Human Rights Commission—of UNESCO?

Answer. That's not UNESCO. But what the Human Rights Commission did that aroused a great deal of commotion in this country was to negotiate these human-rights covenants, and although they were approved by the executive branch at that time, none of them ever got ratified by the Senate.

Question. What year was this?

Answer. This was in 1950, 1951, 1952. When this administration took office, we took the position that we didn't approve the use of the treaty powers to effectuate internal social changes, that the treaty power existed for the regulation of international relations.

If, for example, they want to make it legal for a foreign-born person to become President of the United States, the way to do it is not to make a treaty with some country, but to amend the Constitution and pass an act of Congress. So that whole idea has been dropped now. But that infuriated a lot of people, and understandably so. Any internal changes we want to make in this country should not be done by treaty—we want to do it ourselves. Treaties are for international affairs. This had to do also with minimum-wage and sanitation conditions in factories and all that. Well, that's not a proper subject for treaties, we think.

Question. To what extent is point 4 under the U. N. or under a separate agency

Answer. Well, there is a technical-assistance program directly under the U. N., and I think it's been well run. I think we get as much out of it for our dollar as we do in our bilateral technical assistance, because we've got a lot of other nations represented that we don't get in the other, and we don't get that invidious feeling that we are dispensing charity, which tends to kill the prestige value of the gift.

Question. Conversely, though, do the people of the rest of the world know the part we play in it?

Answer. They do. It's a good-will builder.

Question. The UN doesn't get the credit?

Answer. No. I don't think so. I think that's done us a tremendous amount of good. And it isn't much money compared with most of these things.

Question. What's the budget of the UN, roughly?

Answer. We contribute \$13 million, and that's a third. The budget is 39 million.

WHAT RUSSIA PAYS

Question. What does Soviet Russia contribute?

Answer. We contribute 33 percent. The Soviets are up to about 14 percent. We got them up and got ourselves down.

Question. How are those shares fixed?

Answer. They are fixed by an expert committee in accordance with national income adjusted for per capita income. The United States share is established by the ceiling of one-third which has been fixed for the largest contributor.

Question. How do you determine Soviet wealth?

Answer. What I did when I went there as a Senator in 1950 was take all their own statements about the progress they've made. I quoted all their own figures, and on the basis of that we got it raised.

Question. Are they any wealthier than we on paper?

Answer. No. They are not as wealthy as we are on paper. You see, what happened was that in 1948, when the thing started, the expert committee, the contributions committee, took a very theoretical view and produced a recommendation that the United States ought to pay nearly 50 percent of the total. Senator Vandenberg was our representative. He told me about it. He was horrified when this thing happened. Well, there we were faced with an expert recommendation that the United States should pay half of the budget. So, it's been a constant process since then to bring it down. Senator Vandenberg got it down under 40 percent. Now it is down to 33 percent. I think that's about right.

Question. Speaking of contributions, one of the main things people are interested in is how you allocate troops when these big aggressions occur. We gave 90 percent in Korea, and they killed a lot of our boys. What is the principle of equity on which that's based?

Answer. My idea is that when an aggression occurs, broadly speaking, nations should put up troops in proportion to population. They should not be expected to put up hardware or dollar exchange, because many of them just can't do it. In 1950 at the time of the Korean aggression, somebody at the Pentagon in effect said we were not going to take any troops unless they put up their own logistic support.

Largely as a result of that policy, United Nations members, other than the United States, put up the equivalent of only two divisions. I believe that if there had not been that policy, and we had taken them just by military manpower alone, supplying the dollar logistic support where they couldn't, we'd have had six divisions. As it is, the equivalent of two divisions that we had from the other countries would have cost us \$600 million a year at World War II prices had we paid for them ourselves, which we probably would have had to do.

The cost today is a military secret, but \$600 million a year is what two divisions cost during World War II. And also there's the higher arithmetic of nearly 17,000 casualties and 3,000 dead, which we would have had probably to absorb.

So, when you measure that \$600 million against the 13 million we put in as our basic annual contribution to the United Nations budget, it is not a bad deal. But it could be a much better deal if there hadn't been this shortsighted view, and I may say that if we have another aggression that mistake will not be repeated. The President has very strong views on that.

Question. That we shouldn't allocate a disproportionate amount of our people—is that it?

Answer. Yes. When a nation has effective, valuable manpower, the United Nations should get the service of that manpower even though they haven't got dollars.

Question. And we furnish all the logistic support—

Answer. Yes. We furnish the logistic support the way we did in World War II.

MORE FIGHTING MEN

Question. What reason do you have to believe that they would have contributed four additional divisions?

Answer. I know of cases where they offered them.

Question. From other countries—

Answer. Yes. And I also believe that others could have been very easily persuaded.

Question. The Turks wanted to send more, didn't they?

Answer. Yes. The Turks wanted to send more and the Greeks wanted to send more.

Question. How about Italy and places like that?

Answer. Italy's not in the U. N., although Italy did contribute hospitals.

Question. What is the legal situation as to renewal or amendment of the charter? Is this an automatic review that does bring it up this next year?

Answer. Yes; in 1955.

Question. Does that leave it entirely open to our Congress and the other legislatures to do with it as we will?

Answer. Well, the veto applies on changing the charter, and that's why you have to get a big hue and cry going throughout the world. That's where journalism comes into the picture. Legally, any changes can be vetoed. As I have said, many times the Soviets have proven their sensitivity to public opinion, and if we could get a big hue and cry going throughout the world to want to eliminate the veto on the admission of new members, that would make it unpopular for them. They'd lose some skin by opposing, and then they might not veto.

Question. Is that a little dangerous? Isn't that a precedent that might lead to loss of the veto in other matters which Congress itself is very anxious to retain?

Answer. I don't think so. I'd fight to the death to keep the veto on troops and things of that sort.

Question. It won't be a precedent?

Answer. I don't think so. It will be just on this one thing—the admission of new members. It will just lift the admission of new members out of the category of vetoable subjects.

Question. It's a procedural question, having to do with organization rather than sovereignty, isn't it?

Answer. I wouldn't say it's "procedural." It's pretty fundamental. It involves how much of the world's population will be in or not.

TWO KINDS OF VETO

Question. But isn't it a technical point between the use of the veto to protect your own interests and the use of the veto to prevent somebody else's government from being admitted? They're two different things, aren't they?

Answer. They are two entirely different things. I haven't any doubts that we could get the votes for the countries that belong in and get the votes against the countries that don't belong in.

Question. Suppose Congress takes no action whatsoever this next year with regard to amendment, just doesn't legislate at all—is there any automatic provision that expires with regard to the U. N.?

Answer. Oh, no. The charter is a treaty, you know. There's no time limit on it. What happens is that if a modification of the charter is agreed to, then it will go to Congress for ratification by two-thirds vote. That's what will happen. Anything that is proposed must be done with that in mind.

Question. To what extent are you a free agent as the head of the United States delegation? Do you have general instructions from the State Department and you implement them yourself?

Answer. I am in the Cabinet and go to almost all the Cabinet meetings. I can't go right now. This is a very busy time for me. Usually, however, when the Assembly is not going the way it is now, I come down to Washington every Friday for Cabinet meetings. So, I get policy guidance there. And I get it from the State Department.

Question. Would you say that the United Nations, as you have studied it, is a more effective instrument than the League of Nations?

Answer. Yes. I think it's a more realistic thing. I think they've learned from some of the mistakes of the League of Nations. There isn't any question about guaranteeing territorial integrity in the United Nations, which I think was one of the major mistakes in the League of Nations under article X. I don't think anyone seriously advocates that any more today. Even the Atlantic Pact doesn't do that. Because such a guaranty commits troops to precise geographic locations which may be very bad tactically.

Question. Your grandfather—Senator Lodge—was one of those who opposed that article X very vigorously, wasn't he?

Answer. Yes. I think my grandfather was ahead of his time.

Question. Do you think your grandfather would oppose what you're doing?

Answer. Oh, not at all. This thing is like an airport. It's something you've got to have. It's not a big, transcendental, world socialistic supergovernment. It's a practical device that you have to have, with the world getting smaller all the time.

Question. Why doesn't diplomacy still do that job today?

Answer. Well, diplomacy still does 90 percent of foreign relations. There's 10 percent that's very international in character where you waste too much time trying to take it up all the way round, one by one.

Question. To what extent are diplomats who are accredited to the United Nations performing diplomatic tasks at the U. N.? Is there much of that?

Answer. An Ambassador at the U. N., for instance, doesn't conflict at all with the Ambassador of his country here in Washington. He reports directly to his home government. They have no administrative connection. Of course, they may see each other at social functions. But it's a distinct work.

Question. Is it utilized for interchange?

Answer. Oh, yes, all the time.

MEETING THE RUSSIANS

Question. Is there more interchange, perhaps, with the Soviet Union representative at the time of the U. N. meetings than there is in the way of contacts in Moscow itself?

Answer. More than in Moscow, more than in Washington.

Question. It's permanent diplomacy in effect, isn't it? Instead of occasional contacts, it is continuous—you are always there—

Answer. You are always there, and you bump into each other all the time in committee rooms, in corridors, in the delegates' lounge, and so on. It hasn't ever meant anything tangible since I've been there, but there's always the possibility that it may, and, if so, there's one less door for you to go through. I think the President feels that that contact is an asset for the American people to have just in case of need. It doesn't cost you anything.

Question. It boosts the caliber of the men who meet, too, doesn't it? In other words, ambassadors can meet in a capital, but the caliber of those men is not always the level of the men we send to the United Nations—

Answer. I've never served with a higher grade group of men than I am serving with there. The foreign governments make a tremendous effort to send intelligent men. It is a very interesting group of men to be associated with. The small countries make a tremendous effort. Because a man can have weight at the U. N. on his individual merits regardless of the size of his country.

ATOMIC ENERGY NEXT

Question. What is your opinion as to what is going to happen in the next few weeks in the Assembly? What is the nature of the subjects that you have up before this next Assembly?

Answer. Well, this is a wonderful year at the U. N., in my opinion, because for the first time there is no organized fighting going on anywhere and we have this chance

to take a step forward for President Eisenhower's plan of peaceful uses of atomic energy.

As a great man once said, "The United Nations is not created to take us to heaven, but to prevent us from going to hell." Nevertheless, if the United Nations can play a helpful part in the material well-being of the human race, it's a good thing, and it is a particularly good thing for us.

As this session we hope to do the United Nations side of implementing this proposal for the peaceful uses of atomic energy. The other side of the plan is a treaty being negotiated now and setting up the agency which will put the fissionable materials to work. The United Nations should, we believe, set up a scientific conference whereby all these nations can make known their wants and get plans that transcend national frontiers so that these fissionable materials will be used in the most intelligent way. That is going to be—to me, anyway—the biggest thing in the Ninth General Assembly.

Of course, in the Security Council you never can tell what you're going to have. You can get anything there on short notice. But that, I think, is the biggest thing in the General Assembly. I have my doubts as to the Soviet's disarmament proposal that they're discussing now. It looks to me like lots of window dressing. They don't ever want to come to a serious talk about inspection.

They want to talk about inspection in the Security Council where they have the veto. Whenever they want to put anything into the Security Council you want to look out, because that's where they have the veto. They wanted to do that at the time of the Guatemala thing last June. They wanted to use the Security Council as a cover to take over Guatemala and so torpedo the Inter-American system.

Question. What do you think is the overall value in our proposals with reference to the civilian uses of atomic energy?

Answer. It's very real. The world politicians, as I see them at the U. N., are fed up with propaganda and gestures and cold-war stuff. There isn't a single cold-war device that they don't see. Now, certain parts of the public may be fooled by them, but the politicians are not. They think we are genuine and we mean it. This peaceful use of atomic energy is a proof of our genuineness.

I think, perhaps, one of our greatest national assets throughout the world is that people think we are kind. I hear it said that we're the first powerful nation in history that has been kind and hasn't wanted to imperialize and throw its weight around. This atomic proposal is tangible proof that we have a heart and we are kind, and I think it has done us an enormous amount of good.

The fact that after President Eisenhower made it, on the 8th of December, we worked quietly all this time without making a lot of propaganda out of it, I think, shows our sincerity. It showed that we were making a sincere effort to have productive bilateral negotiations with the Soviet Union, which failed.

WHY WARMONGERS?

Question. And yet people come back from Europe and tell us repeatedly that throughout the world we are regarded as warmongers—

Answer. The Communists are trying to make it seem that way, and I will say that some of our fellow citizens cooperate with them, sometimes unwittingly, because we do have some people who talk of nothing but dropping the bomb. Many of our magazines print these long articles about how we are going to attack and how this is going to happen and that is going to happen. Of course, every time we do that, the Communists pick it up and say, "There's the voice of the United States Government," and repeat it.

We don't always put our best foot forward. The noises that come out of America are often not the representative noises. The things that go out abroad about us are the things that are trivial—vulgar movies, arm-chair strategists, braggarts, and things like that.

The Soviets send pianists, ballet dancers, chess players, and in Europe they're beginning to think how civilized the Russians are and that the Americans think about nothing but the atomic bomb. I think we ought to put more money into showing the world what we really are.

Question. Isn't it amazing that men such as Clement Attlee, of Britain, who you think would know better, or Aneurin Bevan make the same charges?

Answer. Well, of course, I am speechless when I think of some of the things Attlee and Bevan have been saying.

Question. But they are representative of lots of people in Europe—

Answers. I don't know how representative they really are. I saw what Prime Minister Churchill said recently about the Anglo-American alliance, which I thought was pretty good, and I don't think if it came right down to a vote that the rank and file of the Labor Party would follow Bevan on cutting off ties with the United States.

INDIA'S INFLUENCE

Question. Do people like India's Krishna Menon have much influence in the U. N.?

Answer. Well, India is a great country in population. People pay a lot of attention to India. I pay a lot of attention to India. Whoever is representative of India is going to have a lot of attention paid him.

Question. You have a pretty good speaking knowledge of French, don't you?

Answer. Yes. I speak French.

Question. Would you say it has been helpful?

Answer. Very helpful indeed. French is a second language with many, many people.

Question. Do you write French as well as you do English?

Answer. Yes.

Question. Do many of the Russians there speak French?

Answer. Yes, quite a few Russians speak French. There are lots of Latin Americans who speak French—although I speak a little bad Spanish. French is a second language for some of the Arabs. French is very, very useful.

Question. How about the other people in your delegation—do any of them have other languages?

Answer. I make it a point always to have a Russian-language man on my staff. I have some very good Spanish-language men. There are five official languages in the U. N. I haven't a man who speaks Chinese because the Chinese all speak perfect English.

Question. How many members are there in the United States delegation?

Answer. Every country is entitled to 10 delegates—5 delegates, 5 alternates—to the General Assembly. The alternates are not like alternates to a national convention. They do everything the delegates do. The only difference is they sit lower down. There are 60 countries, most of them with a delegation of 10, so there are nearly 600 delegates.

Question. There are a good many social functions?

Answer. There have to be. You see, it's like a national convention that runs for 3 months—if you can imagine such a thing. You get all these people coming in from all over the world. There are not only the 600 delegates. There are X number of attachés and juniors, and you have to get to know everybody quickly and try to maintain a friendly atmosphere.

Question. Going back to a point we touched on, this document issued by the International Civil Service Advisory Board which indicated to some people that the

allegiance of a United Nations employee was forsaken to his own country and greater allegiance given to the United Nations—how is that really viewed in the U. N.?

Answer. Well, of course, that is a perfectly preposterous concept. When I was asked about it on Meet the Press recently, I denounced it immediately because no American who works for an international organization puts himself above the law of the United States. It's perfectly ridiculous.

There is no higher allegiance there than the allegiance to our own flag. There's no allegiance at all to the United Nations. It's an organization, it's an instrumentality, it's a contrivance. It's a very useful, necessary thing, but it has none of the attributes of government.

It was a very wrong and unfortunate use of the word "loyalty." I went around to the United Nations the next day, and the Secretary General issued a statement to the press completely sustaining my viewpoint. The report was badly worded in the first place, and then it was further misunderstood in the press. The Chairman of the Board issued a statement to that effect. Of course, the Board is only advisory to the Secretary General, anyway.

QUESTION OF LOYALTY

Question. How does this question of allegiance come up? Is there any occasion on which a professional employee of the United Nations would be asked to do something that would be contrary to the interests of the United States?

Answer. I can't imagine it. It's never happened.

Question. Why does the question come up, then?

Answer. In this U. N. Secretariat case it was really a misunderstanding because of poor choice of words. But a real loyalty question has come up in the case of UNESCO, because eight Americans employed by UNESCO have had a negative loyalty report from the International Organizations Employees Loyalty Board of the United States Government. Seven of them wouldn't even appear, let alone answer any questions. These people evidently think because they work for UNESCO they don't have to do what every other American would.

Question. What redress do we have in a case like this?

Answer. To state the facts and press the organization to correct the situation.

Question. How can those people receive funds from the United States Government?

Answer. They do so indirectly through our contribution to UNESCO. However, that's up to the Congress and the State Department. UNESCO is not in my jurisdiction. The question is important only in UNESCO. It has no reality as far as the U. N. itself is concerned because we have never had any such problem.

Question. Are those people still functioning as employees of UNESCO?

Answer. Yes.

Question. Can they be held in contempt of anything? Can they be arrested?

Answer. I don't know what you can do with them. They are in Paris. You can take away their passports, perhaps. I don't know. The State Department has tried patiently. Mr. Gerety, who has been chairman of this International Organizations Employees Loyalty Board, has been very patient. I should imagine that the United States Government could do quite a number of things. But you ought to ask the State Department about that. You're getting out of my field.

"STATELESS" FRIENDS

Question. Are there any stateless people on the secretariats of international organizations?

Answer. Yes, there are, and some are very good friends of ours. That's why I think it would be a pity to pass a law which says that nobody shall work for the United Nations

who isn't approved by the Attorney General. If we did that, then all countries would be able to do the same thing and we might lose some of these anti-Communists who are very friendly to us and who do us a lot of good. It would be a good idea to pass a law like that if we weren't screening our nationals in the Secretariat in other ways, but we are weeding them out through the President's Executive order.

We have 1,800 Americans there and all of the policymaking ones in important positions have been cleared, from Ralph Bunche, Director of the U. N. Trusteeship Division, on down. There are only a handful, about 50, who have not yet been cleared, and they are in very minor jobs. They will be reviewed shortly. So, when you are working it out effectively that way, why hamstringing yourself by passing a law which will result in some of your good friends in their being dismissed?

Federal Payroll Reduced by \$612 Million in 1954

EXTENSION OF REMARKS OF

HON. AUGUST E. JOHANSEN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. JOHANSEN. Mr. Speaker, the Federal payroll for civilian employees of the executive branch during the calendar year 1954 was \$612,123,000 less than for the preceding calendar year.

In December 1954, the number of Federal civilian employees was 186,238 less than in January 1953.

Since 1930 the population of the United States has increased 30 percent. In the same period the number of Federal employees increased 300 percent and the dollar amount of the payrolls increased 900 percent.

However much we may wish for even more substantial reductions in the payroll figures than were accomplished in 1954, the achievement of President Eisenhower's administration on this score is tremendously significant and heartening.

Not only have the brakes been put on, so far as a dangerous 20-year trend is concerned, but the trend has actually been reversed.

The following charts, taken from News Bulletin No. 49, issued by Paul O. Peters, give the comparative executive payroll figures for the calendar years 1953 and 1954:

Calendar year 1953

Month	Employees	Payrolls
January.....	2,554,310	\$893,513,000
February.....	2,540,954	836,739,000
March.....	2,526,819	897,785,000
April.....	2,502,772	887,745,000
May.....	2,478,963	799,638,000
June.....	2,482,359	823,980,000
July.....	2,454,714	834,482,000
August.....	2,430,412	785,594,000
September.....	2,401,912	808,805,000
October.....	2,373,113	787,943,000
November.....	2,366,710	757,788,000
December.....	2,357,294	874,352,000
Total for 1953.....		9,980,386,000

Calendar year 1954

Month	Employees	Payrolls
January.....	2,346,892	\$756,498,000
February.....	2,340,962	729,975,000
March.....	2,340,137	803,530,000
April.....	2,335,296	782,146,000
May.....	2,330,509	751,688,000
June.....	2,333,894	781,945,000
July.....	2,332,200	774,902,000
August.....	2,331,508	774,464,000
September.....	2,317,565	780,632,000
October.....	2,323,029	753,513,000
November.....	2,343,707	780,632,000
December.....	2,368,072	904,338,000
Total for 1954.....		9,374,263,000

George Washington: The Businessman

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, March 10, 1955

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Mr. Clem D. Johnson, of Roanoke, Va., who is the president of the Chamber of Commerce of the United States. He delivered the address entitled "George Washington: The Businessman," at the annual George Washington Day dinner of the American Good Government Society, at Washington, D. C., on February 22, 1955.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I deem it a high privilege to have a special part in this tribute to the Father of our country.

One of our 19th century historians, Herbert B. Adams, once observed that, "It would seem as though in one way or another, all lines of our public policy lead back to George Washington, as all roads led to Rome."

In my opinion, Mr. Adams' comment would be no less true had it been written yesterday. It is safe to say that we have never gone wrong by heeding Washington's advice.

Lord Brougham, the Scottish statesman, referred to Washington as "the greatest man that ever lived in this world uninspired by divine wisdom and unsustained by supernatural virtue."

Of course, his lordship's judgment might have been colored just a little bit. Brougham was the author of a manuscript entitled "Statesmen in the Time of George III," and considering the caliber of the British Ministry in that day and age, this must have been a dismal undertaking.

By contrast, it seems logical that Washington assumed an almost Olympian luster. Nevertheless, Lord Brougham's superlative appraisal of the first President is by no means undeserved, although I believe that we prefer to think of Washington as sort of a common denominator of ourselves—as the average American raised to the nth power.

For all his special qualities, George Washington was intensely human, and the more we think of him in that perspective, the more his memory becomes our surest anchor to the fundamentals of our Republic and to the precepts of the men who brought it into being.

My assignment in this annual seminar on the life of George Washington is to discuss him as a businessman. No subject could be more to my liking, but I confess that I approached it with some trepidation. The stereotyped stories of the Washington career say little or nothing of his business talent and commercial adventures.

As children, we are exposed to the ridiculous legend of the hatchet and the cheery tree, which as you know, was a fabrication of a certain Parson Weems.

Then we find Washington as an attaché of a very foolish British general named Braddock. It was Braddock, you recall, who thought it was most unsporting of the Indians to shoot at him from ambush. One can only hope that in his final moments the general was sustained by the knowledge that he himself had obeyed every rule of war as he had learned them on the vacant lots and the cobblestoned squares of the Old World.

The third chapter in the Washington stereotype finds Washington summoned to command the continental troops. He is victorious—he is elected President—he refuses a third term and retires to Mount Vernon.

Somewhere along the line, the stereotype tells us that George Washington married the wealthiest young widow in Virginia, and we are left with the unhappy impression that he never really knew what it was to work for a living.

This assumption is absurd on the face of it. As many a man has discovered, it is frequently more difficult to marry money and to live with what comes with it than to earn a competence on his own hook.

The truth is that if ever there was a self-made man, it was George Washington, and those are not my words. I was quoting from the late Calvin Coolidge, and Mr. Coolidge was so cautious in his judgment that he wouldn't admit a sheep has been sheared unless he had walked all around it and seen both sides of it.

A little research in the business life of Washington reveals that he was not only a self-made man but got off to an early start.

He was worth at least \$20,000 by the time he was 21, and every shilling had been acquired through his own efforts, and no thanks to anyone. At the age of 16, he was a qualified surveyor, with a commission to survey a vast acreage in the Shenandoah Valley then possessed by Lord Fairfax.

The young Washington spent 3 rugged years in the wilderness, working at daily wages that varied from \$7.20 to \$21.70 in terms of our money—and no squirrel was ever more thrifty. Or any young eagle more farsighted.

While on his mission for Lord Fairfax, Washington patented 500 acres of wild land in Frederick County for himself, and proudly called it My Bull-Skin Plantation, because of its proximity to Bullskin Creek. At the age of 18, his savings were sufficient for him to buy 456 acres adjoining this plantation for \$112.

And when he was 20, he bought 525 additional acres of Bullskin Creek for \$150. At 21, he had about 1,500 acres of good land and had spent considerable money on improvements. The clearing and cultivating of his holdings were not long delayed after he had staked out his claim and made his purchases.

The young Washington had known from childhood that he must make his own way. He was a younger son, while the principal heir to his father's estate was his half-brother Lawrence. His father left George a typical younger son's portion—a few acres on the Rappahannock—but not until the death of his mother, when he was a middle-aged man, did Washington come into possession of this bequest—and by that time it was only frosting on the cake he had baked for himself.

It is true, of course, that he came into possession of Mount Vernon through the untimely death of his half-brother Lawrence and the even more untimely death of Lawrence's daughter, Sarah, but Washington had already started on the road to wealth and would have acquired it without assistance.

The popular picture of George Washington as the pampered son of a rich father rather fades away when one peruses this record, and there emerges instead the portrait of a determined young free enterpriser who knows exactly where he is going and how to get there.

George Washington was a born businessman with a knack for management and a head for figures that his fellow executors of his half-brother's estate were not slow to discover. The other four dumped the burden of administration on his youthful shoulders. Lawrence had been the principal stockholder in the Principio Iron Works which operated profitable mines in Maryland and Virginia, and had been active in the business. George stepped into his place until the estate's interests were sold, thus acquiring his initial experience in an industrial concern.

At the same time, he was the administrator of a farflung empire known as the Ohio Company of which Lawrence had been president and principal stockholder. It was a development project involving a half million acres of western Virginia land—and a ticklish operation all the way around, for the French thumbed their noses at Virginia titles and claimed the whole of it.

Fortunately for young Washington—and fortunately for the United States as it turned out—Governor Dinwiddie of Virginia was disposed to argue with the French, partly because he too was a stockholder in the enterprise.

And so we find George, at the age of 21, commissioned by the governor to dispute the French claims—first by exploring the territory and then as an officer of militia with orders to settle the matter by force, if need be.

While these adventures more properly belong in the military phase of the Washington career, they served to introduce Washington to a territory in which he was to be much interested later on, both as a land owner and as President struggling to establish the land policies of a nation.

Meanwhile, there was Mount Vernon, an operation so large for its day, that it needed a strong hand to guide it in order to pay off, and Washington, the businessman, plunged into the multiple duties of a farm manager.

We can dismiss from our minds any picture of Washington as the gay young blade of the fox hunts, revels, balls, and routs of an easy going country squire life. There was social life aplenty, true enough, but the work came first.

Soldiering had not been a moneymaking enterprise, and while George was rich enough in land when he returned to Mount Vernon he was almost penniless as far as ready cash was concerned. The estate was neglected, run by indifferent management, and its records were either nonexistent or in a wild tangle.

As a farm manager, Washington would have no trouble filling one of the top jobs in that field today. Besides that he loved the life, and he once said that "the life of the husbandman of all others, is the most delightful. It is honorable, it is amusing, and with judicious management, it is profitable."

Every acre he owned or managed he sought to make profitable, and it might well be said that he was several generations ahead of his time in soil conservation, crop rotation, and fertilizing methods. We find among his writings the comment that "the present mode of cropping practiced among us, is destructive to landed property, and must, if

persisted in much longer, ultimately ruin the holders of it."

It is regrettable that Washington left us no thoughts on the subject of farm price supports, but as one reads between the lines of his agricultural methods, one is given the impression that he probably would not have approved.

Mount Vernon had produced some bumper crops of tobacco, but Washington disliked the manner in which tobacco drained the soil of its substance and he concentrated on the small grains, particularly wheat. In later years, he built his own flour mills, becoming the largest flour producer and merchant in the colonies.

He was then a surveyor, a dealer in lands, a coal-mine operator, a farmer, a miller, and on the side, a fisherman.

He tells of catching 50,000 herring in one night, all of which were salted down for sale.

This operation and others made it necessary for him to employ skilled labor on rather an extensive scale, and his relations with his help were uniformly excellent.

The term "fringe benefit" was then unknown, but we find him signing a contract with an expert gardener wherein it is specified that the gardener was to have "\$4 at Christmas with which he may be drunk for 4 days and 4 nights; \$2 at Easter to effect the same purpose, so at Whitsuntide to be drunk for 2 days; a dram in the morning and a drink of grog at dinner at noon." Those of course, were the happy days of strong beer at tuppence the quart.

It was against this background as a colonial businessman that Washington was summoned to command the first American Army.

As an officer of Virginia militia, he had learned more than the art of war. He had learned the infinite details of administration that enter into preparing an army for the field and maintaining its lifeline of supplies.

As a private entrepreneur, he was known throughout the colonies for his shrewd business brains, his meticulous honesty, and his almost uncanny ability to pick the right man for the right job.

Washington's mind was the business mind. He was not a businessman in the modern sense of the word, solely because he did not live in a business age. But the problems which he understood and knew how to solve were executive problems, and he approached them in the executive manner. His ability expressed itself in the selection of subordinates and in getting results through them.

And he needed all of this ability when he took over as Commander in Chief of the American forces. We all like to think that the Revolution represented a popular uprising of an outraged citizenry—when the truth is that only a minority of the citizens were sufficiently aroused to give aid and comfort to the cause.

The total population of the colonies was about 2½ million. Of these, half a million were slaves. Of the remaining 2 million, one-third, at least, were definitely Tories. This left 1,400,000, about one-fifth of which were potential soldiers.

Had all of them entered the service, Washington might have had an armed force of 280,000 men. But he never had any more than 25,000 men in his command at any one time, and that number rarely.

He found himself in command of an army without food or clothing; an army that was beset by short-term enlistments and rankled by hand-to-mouth pay in dubious currency. It had little artillery, and gunpowder was frequently so scarce there were only 10 rounds issued to a man.

We have all been told of the rigors of Valley Forge, and we are given a pathetic picture of Washington retiring to the quiet of a snow-swept glen to kneel in prayer for

divine guidance in an hour of dreadful crisis. Perhaps he did pray, but we might just as well be told a little more often that Washington was strong for the idea that God helps those who help themselves.

He had chosen Valley Forge as winter quarters in 1777 partly because of its proximity to Philadelphia, which was occupied by the British, and partly because the countryside was rich in wheat and cattle, which the honest farmers were eager to sell—if someone had the wherewithal in gold.

Washington had no gold, and the farmers seemed to be somewhat lacking in that impulsive quality of patriotism so necessary to make continental money look attractive. As a result, the British in Philadelphia got the beef and wheat—and the troops at Valley Forge gnawed on their belts and bootlaces.

Then Washington went into action. He issued an order—quite without authority, of course—that all farmers within a distance of 70 miles must thresh one-half of their wheat by the first of February, and the other half by the first of March.

Otherwise, he would seize it all and pay for it as straw. He sent his officers to enforce this order, and on the side, they contrived to persuade the reluctant agriculturists to part with cattle as well. Perhaps we had better not inquire too closely into the methods by which this persuasion was accomplished.

We do know, however, that Washington insisted that careful records be kept, so that every farmer would be paid in the end.

Naturally, there were many complaints to the Continental Congress, and in answer to charges filed against him, Washington replied that "necessity had warranted" his conduct, and he added that "a character to lose, an estate to forfeit, the inestimable blessing of liberty at stake, and a life devoted must be my excuse."

He was the original "Do it now man," and I have often wondered if the phrase, "Let George do it," might not have originated as a result of his administration of the Continental Army.

The Congress hesitated to make adequate provisions for arms and provisions in the weird concept that the people might protest from fear of military tyranny, and the public felt that patriotism from a small group of men was all that was required to insure success.

It was well known then, as now, you see, that any American could lick 10 lobsterbacks or 10 foreigners from anywhere—with his hands tied behind him.

Washington was under no such illusions, which probably accounts for his welcome to Baron von Steuben as drill master of the Army and his welcome to other foreign officers of experience in specialized arts of war.

While it is true that he might have bumbled in choosing Benedict Arnold to command West Point, he more than made up for this by the selection of such officers as Nathaniel Greene for important commands.

Greene was to Washington what Stonewall Jackson was to Robert E. Lee—a faithful subordinate of superior skill, the dependable vice president of what might well be called a new corporation—a man who could be given an assignment and then left to his own resources to carry it through with success.

Washington's career as a general was rather aptly summed up by Calvin Coolidge when he said that "we see the qualities of a great man of business which he brings to serve the vast task of organizing and equipping his armies."

The business general became the business President.

Once again, he surrounded himself with capable subordinates. Alexander Hamilton he had known and trusted for 12 years, and

he made him Secretary of the Treasury. Henry Knox was a trusted officer of the Revolution and became Secretary of War; Edmund Randolph was Attorney General, and Thomas Jefferson—largely because of his experience abroad—became Secretary of State.

One biographer of George Washington describes the launching of the first administration in the following words:

"The business in hand was to maintain and strengthen a new Nation with the aid of nation-builders of vision and courage. The war experience, coupled with a knowledge of the everyday man, since that time, had convinced Washington that the average citizen was not thinking nationally—that he had no conception of what was really taking place in the formation of a republic but was still immersed in local self-government. The education of the average citizen was a job to be performed by wise and efficient service from men who, like himself, were ready to set an example and live and act for the common good."

One of the first orders directed to the executive staff of the infant Government by the first President reads like this:

"Let me impress the following maxim upon executive officers. In all important matters, deliberate maturely, but execute promptly and vigorously and do not put things off until tomorrow which can be done and require to be done today. Without an adherence to these rules, business will never be done, or done in an easy manner, but will always be in arrears, with one thing treading upon the heels of another."

The word "arrears" in that quotation is highly pertinent, for if the new nation was anything at all, it was busted. There is no need to dwell on the manner in which the first Washington administration tackled the question of sound money and the public debt.

We will all be hearing more of that during the Alexander Hamilton bicentennial in 1957. And in passing, may I say that I am happy to note that the Alexander Hamilton Commission for which plans were first announced at this dinner last year, is now a going concern, with the blessing of the Congress and the administration.

Hamilton's program, it goes without saying, could not have succeeded without the strong shoulder of Washington behind the wheel. Washington viewed a public debt with the same repugnance that he had always viewed a private debt. He abhorred the idea of cheap money; he was anti-inflationary—and while we usually look to his writings for inspiration in more esthetic matters, it might behoove us to remember that he was what we today would call a bug on economy. This extended to his personal life as president.

On one occasion, the steward of his household found that only one shad was available in the market, and knowing Washington's liking for this fish, he bought it without stopping to count the cost.

When the fish was served, the President asked him how much it had cost. Washington knew the shad season as well as any fisherman of his day, and this wasn't the shad season.

"Three dollars," said the steward.

"Take it away," Washington thundered. "Take it away. It shall never be said that my table sets such an example of luxury and extravagance."

It would be fatuous for me to suggest that George Washington was the prototype of the modern man of business, and yet I believe that a businessman can read his biographies and his writings with an understanding that needs but little nudging from those who make a profession of interpreting the Washington career.

The fundamental principle underlying all of his private business operations was that

the possession of property carried with it an obligation to make it produce profitably for the owner and at the same time contribute something to the common good.

He carried that same principle into public life, translating it to mean that stewardship of national affairs must function on the business pattern.

Nowhere do we find any record of Washington subscribing to the present-day picture of work as an evil or to the philosophy that a man with a 20-hour workweek is somehow twice as happy as a man with a 40-hour workweek, and that presumably the happiest man of all is the man with a "no-hour" workweek—what the wags now refer to as a guaranteed annual wage with full unemployment.

George Washington was not only prudent, thrifty, and industrious—he got real joy out of his work—he knew the satisfaction of a good job well done.

His whole life was dedicated to building, to producing, to uplifting. I suspect that he did these things instinctively, not from his high sense of duty, but because he found them pleasant and satisfying and because they appealed to his innate sense of rightness.

Somehow it is hard for us to imagine George Washington demanding rigid price supports or free Government fertilizer, more pay for less work or advocating repeal of a State right-to-work law, or buying off a labor racketeer.

It would be hard to picture him in a movement to obtain freedom from want and freedom from fear at the cost of his own personal freedom of action.

George Washington, businessman, farmer, one of the richest Americans of his day, did not hesitate to risk his fortune and life when freedom was at stake.

Have times changed so much that we can now afford to ignore his example?

Failure To Educate Young Americans Is Good News to the Russians Who Are Going Strong With Their Own Educational Program

EXTENSION OF REMARKS

OF

HON. CARL ELLIOTT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. ELLIOTT. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the February 21, 1955, issue of the *Montgomery (Ala.) Examiner*:

IKE'S EDUCATION PLAN A DUB

President Eisenhower has been sold a bill of goods on his program for school construction, according to top school men over the Nation, including those in Montgomery.

They say the administration plan amounts to little more than saying to the States—"Do it yourselves."

Senator LISTER HILL is among those who do not take the school crisis lightly. He says there must be a substantial school construction program if our American children are to get a decent education. Senator HILL insists that the United States, as the world's richest nation and its leader, must prepare youngsters to lead.

The issue boils down to this: Either Uncle Sam does the job, or it won't be done.

And failure to educate young Americans is good news to the Russians, who are going

strong with their own educational program, including the preparation of technical men and scientists.

Ike would do well to get behind the education plans being offered by Senator HILL and other Democrats.

Conditions in Foreign Shipyards

EXTENSION OF REMARKS

OF

HON. JOHN MARSHALL BUTLER

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Thursday, March 10, 1955

Mr. BUTLER. Mr. President, the Senate Water Transportation Subcommittee, of which I had the privilege of serving as chairman, made an inspection trip in Europe last fall, and upon its return submitted a comprehensive report relating to conditions in foreign shipyards. The Senator from Ohio [Mr. BRICKER] as chairman of the Senate Committee on Interstate and Foreign Commerce, obtained unanimous consent, on February 18, to have this report printed in the Appendix of the CONGRESSIONAL RECORD, and it is contained on page A1044.

As a supplement to that report, I should like to direct the attention of the Senate to comments which were made on December 8, 1954, at a panel discussion on shipbuilding and ship repair, held in connection with the American Merchant Marine Conference and 28th annual meeting of the Propeller Club of the United States at Miami, Fla. These observations very succinctly emphasize the point that the relative efficiency of the United States shipyards in world shipbuilding is a matter of great importance to the economy and security of the United States.

With the hope that this excellent paper, entitled "Relative Efficiency of United States Shipyards in World Shipbuilding," prepared and delivered by Mr. Harry W. Pierce, president, New York Shipbuilding Corp., will contribute to a better understanding of the problems of our shipbuilding and ship repair industries, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

In the year just past, I have talked to a great many people in an attempt to impress them with two urgent needs; that of a strong and modern American merchant marine and that of a healthy shipbuilding industry in these United States. My interest is not wholly altruistic or objective—in fact, I will cheerfully admit that it is partially self-serving. As president of the New York Shipbuilding Corp., my own interests and personal welfare are bound up with shipbuilding. If there is no American merchant fleet there will be little, if any, shipbuilding beyond that carried on by our own Navy. As one who finds a peculiar and lasting satisfaction in ships and shipping, and because I believe sincerely and wholeheartedly in the importance of both to our national defense, as well as to the national economy, my labor sprang also from conviction that the cause is just.

A great many ships have been built by the maritime countries of the world since the end of World War II. A surprisingly large number—over 250 seagoing ships—aggregating over 5 million tons—have been built by American companies or American capital, but not in the United States. Shipbuilding has thrived in England, in Sweden, in Holland, to mention some of the leaders. It continues to flourish, particularly now in Western Germany and Japan. Yet with all this activity the shipyards of the United States have seen few similarly busy or prosperous years. At no time has there been anything like full utilization of the relatively modest peace-time potential of our established building yards. Why not?

The basic answer, of course, is price—that is, the cost of the ship to the customer. Of course, the price tag is not always the only consideration, for we have seen in recent years a situation in tankers, where time of delivery was more important than first cost. There are many other factors as well—financing arrangements or inducements, tax considerations, exchange rates or frozen currencies, indirect subsidies, protective laws and governmental regulations and, in many cases, national pride.

Nevertheless, I think there will be little dispute with the general premise that the bulk of shipbuilding contracts flow to the area where the customer gets the best price, all factors considered. Why then is the United States at such a disadvantage in the world market for ships? To put it another way, if ships for other than coastwise trade are to be built in this country, it is apparent that this can be done only through subsidy. For what, then, does this subsidy from the taxpayer pay? Are we only equalizing cost factors which result from the high American wage rates, or are we compensating for inefficiency and lack of enterprise and ingenuity on the part of American shipyards? If it is solely the matter of American wage scales or living standards, then why do not the same circumstances apply with equal force to all manufactured products? How do we sell anything in the world markets without subsidy, or protect our own home markets without excessive tariffs or regulations?

I am not going to attempt an exhaustive discussion on so wide a field as the questions above imply. Nor will I belabor this group with a debate on fundamental policies on which I feel sure we would find little disagreement. Rather, I would like to attempt to answer in terms understandable to our average fellow citizens, the question of relative efficiency and why we find ourselves at a particular disadvantage in shipbuilding. As anyone who has been involved even slightly in the question of shipbuilding subsidies knows full well, precise and mathematical determination of cost differentials are wellnigh impossible. This difficulty itself would force me to keep my observations in general terms. Regardless of differentials, the selling price of any fabricated article the world over is made up of four parts: (1) Labor, direct and indirect; (2) materials or services bought by the builder; (3) fixed charges or overhead, taxes, insurance, etc.; (4) profit.

Of these factors, we today will deal principally with only one—labor—which is by far the major consideration. It is obvious that labor enters into the cost of materials and services bought and therefore any advantage in general labor costs is reflected in lower material costs to the foreign shipbuilder. In any specific case this is susceptible of reasonably accurate determination. The cost of indirect labor is likewise a large part of overhead, but the real importance of overhead lies in the volume of work to which it must be allocated. Exorbitant profit margins simply do not exist in this competitive day; and if anything, percentagewise, higher margins are a matter of accepted practice abroad.

The labor cost is the product of two factors: the man-hours spent in performing work multiplied by the rate of pay.

The second of these factors—the rate of pay—is very largely beyond the control of the shipbuilder. The charge is often made that in the wartime days of cost-plus, or where subsidies are concerned, the shipbuilding employer has no incentive to oppose exorbitant demands made by his labor and that he cheerfully submits the bill to the Government. This is a charge neither easily proven or disproven. When management and labor sit down in collective bargaining to negotiate wage rates, many elements enter the picture. Certainly no shipbuilder has a desire to price himself out of the market, even as far as his American competition is concerned, although this is a consideration that apparently does not enter into some union thinking.

Nevertheless, in shipbuilding there is no great departure from the general industry pattern when all factors are considered, nor are there great differences between that pattern and corresponding rates in other heavy industry. Fringe benefits, which are so large a part of present day labor costs, premiums paid by various incentive or bonus systems, holidays and other payments for time not worked, make direct comparisons within our own country difficult. A comparison is practically impossible when applied to foreign countries, with the added complications of exchange rates and Government aid, particularly in those countries with a socialistic regime. In a paper presented in March 1953 at the meeting of the Philadelphia section of the Society of Naval Architects and Marine Engineers, Mr. Ingvar Jung gave a table of average wages for shipyard workers, reduced to United States dollars per hour as follows:

United States of America.....	1.80
Scandinavia.....	.80
Sweden.....	.90
Denmark.....	.64
Norway.....	.55
Great Britain.....	.54
Germany.....	.40
Holland.....	.38
Italy.....	.33
Japan.....	.10

As has been pointed out, exact comparisons are difficult or impossible. The figures quoted, however, are in general agreement with other sources and can be taken to at least indicate the tremendous cost handicap faced by the American shipyards.

If it were possible to reduce all elements to real wages, we could better evaluate the differential faced by the American shipbuilder. The major differences in the standard of living are quite evident to even the most casual visitor to foreign lands. One has only to look at the bicycles parked around a Dutch shipyard, and the automobiles at one of our own. Or look at the average workingman's home in this country with its television, electrical appliances, and other luxuries. Or look at the relatively expensive hobbies or recreational pursuits of the average American in comparison with his foreign counterpart.

I am sure no one wants to see the standard of living reduced in this country. It is what makes America great. Nor is the skilled shipyard worker one bit less deserving of the wages with which to enjoy these good things than the plumber, machinist, or the electrician in other industry. In fact, the fluctuation in shipyard employment, some of shipbuilding's physical drawbacks and hazards, make it sufficiently less desirable an occupation so that wages paid should not be considered so grossly out of line as they are frequently represented to be.

We here are primarily interested in the relative efficiency of foreign and American yards, i. e., the output per man-hour. For the purpose of further analysis in this di-

rection, differences in output per man-hour could be due to some or all of the following: (a) Greater industry on the part of men; (b) greater skill as craftsmen; (c) more extensive or better use of modern tools; (d) development of new and timesaving methods; (e) simplification of product. Each of these deserves a bit of elaboration, if only to stimulate later discussion.

There is little published data to substantiate or disprove the relative diligence of various national groups. Further, as in America, there is significant variation between yards in the same country. We hear much of the native industriousness of the Japanese, yet the tonnage output in the United States against total employment compares favorably with theirs. The power consumption curves I have seen in large Japanese shipyards indicate the same characteristics at the start and end of shifts as in our own. I am inclined to believe more the reports I read of the productivity of the West Germans, if only because most of the pertinent comment on their activities comes from competitive English builders. Certainly, the war proved the efficiency and effectiveness of free labor, even in the face of strikes and stoppages, over plodding slave labor. The American workman is subject to many psychological reactions, and there seems to be no question of his output once the proper incentive—and this is not always money—is offered.

In the matter of individual skill as craftsmen, I am inclined to believe that we actually have some advantage. It is true that the effectiveness of foreign industry is largely reliant on the aptitude of the individual craftsman as opposed to machine mass production in this country. Prolonged apprenticeships in our skilled trades are no longer so common as they were in the past. In their place, however, we find more stress on manual skills in our schools and the mechanical inclination of most of our youth, reflected in their amazing interest and skill in radio, model airplanes, hotrod cars, and similar hobbies.

In modern tools, I believe we have largely lost our one-time advantage. The use of electric power, pneumatic tools, modern welding and burning techniques, and specialized machine tools is now the common rule and not the exception abroad. Plants damaged during war years have been rebuilt, modernized, and reequipped. What plant manager would not welcome an opportunity to tear down parts of his plant and rebuild anew, particularly if the kindly Uncle in Washington footed much of the bill through ECA and Mutual Security aid?

Foreign shipyards have, by large, overtaken us in our war-gained lead in the development of the welded ship. The foreign inspection teams, under the auspices of the various economic recovery programs, gleaned much from their tours of American industrial plants and have obviously put the information to good use in modernizing their own plants and methods. Another more recent and perhaps far-reaching innovation in shipbuilding practice is European in origin. I refer to the use of the optical plate marking system wherein comparatively small-scale drawings, made very accurately, take the place of the oldtime full-scale loft layout, and are projected full size directly on the steel. Very considerable manpower savings are claimed and its adoption by leading yards throughout Europe is indicative. This development has not yet been accepted by the shipbuilding industry in this country, but it may be forced upon us by the lack of skilled loftsmen as well as its possibilities in labor saving.

Unquestionably, a most fertile field in this competitive day lies in the direction of cost reduction through simplification. The engineer's first answer to his problem is not always the best solution from the standpoint

of manufacture. Close liaison of drawing room and the shops can develop some amazing savings without detriment to the finished product and, in fact, frequently with improvement in function and maintenance. Special attention to this field is now being paid by some of our largest industrial corporations; it is one equally attractive to the shipbuilder and marine designer. This is not to be confused with another field in which the designer is vitally interested—constant research and improvement in structure, propulsion, fuel economy, better cargo handling, and so on. Through the research program of the Society of Naval Architects and Marine Engineers, a united effort is being made to keep American design ahead of our foreign competition. The program has been primarily financed by the shipbuilders, but the program merits and has in large degree the financial support of all maritime industry.

Overriding all of the above avenues of attack on costs are the very simple but basic items of: (1) volume, (2) continuity. It has been through the development of mass production methods that American engineers have revolutionized industry and raised our standard of living. At the same time, mass production and a consistent reduction in the labor portion of the sales dollar has made it possible for America to undersell many a foreign product for years. The Old World concept of craftsmanship, of the custom-built article, the lack of enterprise to invest heavily in capital equipment, which could be justified only by volume production and mass selling, have been the salvation of the American manufacturer in many a foreign market. No less an authority than Business Week has pointed out in recent months that our foreign competitors are fast overhauling us in this field. An increasing use of mass production methods abroad, coupled with low wage rates, is making it harder for all American products to meet competition on the world market.

There has never been and, by the nature of ships, there simply cannot be mass production of ships in that same sense. Two world wars have led to the production of an extraordinary number of ships built from a single design. Such multiple ship production is only a small step toward the concept of mass production. True, these programs resulted in spectacular savings in successive ships. They made possible the dilution of trained shipbuilders, with the relatively quick training of green men to specialized jobs; intrinsic saving in engineering costs and through greater volume of purchases. The result, however, was not reduction of man-hours through mass production machine methods, but simply the opportunity to reduce man-hours through somewhat more efficient utilization of manual skills. Could Chevrolet or Ford, for example, tool up for an efficient run of 500 cars?

It is hardly necessary to point out here that in peacetime our domestic shipbuilding never has had neither the volume nor any degree of continuity that would supply stability to our industry. In bad times, the skilled shipbuilder seeks work in other and more stable industries. Once he is conversant with job stability, he is not likely to be drawn back into shipbuilding by sporadic programs. At the same time it would be an extraordinarily venturesome management who would invest the kind of money required for extensive facilities with such an indefinite and uncertain market ahead.

Summing up, I think we may fairly conclude that today's American shipyards measure up, on a productive basis, to foreign competition. As a matter of fact, a comparison of recent figures for tanker construction indicates quite clearly that at least a portion of the tremendous wage differential has been overcome, either through efficiency of some of our yards, or by drastic cuts in overhead and profit margins. The

great disparity here and abroad lies solely in the matter of wages, which reflect the relative standards of living here and overseas. This differential is so great that it seems improbable that it can be overcome by any possible effort on the part of our shipyards alone; in other words, some Government assistance in the form of subsidy must help to bridge the gap. It is more than justified by the value of our shipyards both in national defense and as an essential part of our national economy. It is not paying for inefficiency or lack of effort.

Our survival in the world market beyond the reach of subsidy, however, presents a challenge to the labor, management, and technical personnel to prove their right to the American standard of living in outproducing foreign competition by sheer ingenuity, diligence, and teamwork.

Deficit Spending

EXTENSION OF REMARKS

OF

HON. PRICE DANIEL

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Thursday, March 10, 1955

Mr. DANIEL. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial entitled "Deficit Spending Is Leading Us to Dreadful Awakening," published in the Houston Chronicle.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

With America persisting in living off the cuff, we are heading for a dreadful awakening. Raymond Moley warned in a recent column in The Chronicle. He said that everyone is for economy in the abstract, but changes his tune when the economy affects him. He cited as examples an automobile executive who argued in favor of a large Federal expenditure for highways and a school-board member who wants more Federal aid for schools.

It is interesting to correlate the Moley article with an interview U. S. News & World Report had with Treasury Secretary George M. Humphrey, entitled "Inflation Is Still a Threat."

Two of the Humphrey quotes are especially apropos. In commenting on the danger of inflation, he said, "unnecessary Government spending, inadequate or improper taxation, or excessive credit expansion could again lead to inflationary pressures if we are not constantly alert." To avoid more inflation, he said, two things are needed, "First of all, we have to keep our fiscal operations on a sound basis and keep working toward a balanced budget at the lowest levels of taxation consistent with our defense needs. On top of that, we have to be sure that our monetary and debt-management policies continue to be directed along that narrow road between inflation and deflation."

Since Humphrey is a member of the Eisenhower administration, his warning takes on added significance.

When the Government sets the pace with deficit spending—we have already been told there is no hope of a balanced budget for the next fiscal year—we are bound to have "loose money." That means inflation. It means also that we are selling our children and grandchildren into economic bondage. It means that the time is not far off when we must have a "dreadful awakening."

A National Prosperity Budget

EXTENSION OF REMARKS

OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. ROOSEVELT. Mr. Speaker, we are today faced with a great amount of propaganda concerning the economic prosperity of our Nation. This propaganda does not stand up in view of reliable statistics on the subject. I therefore offer for the information of my colleagues, a positive, forward looking program for a continued, increasing prosperous economy by men of outstanding ability. Under unanimous consent, I include in the Appendix of the Record the attached article by the Conference on Economic Progress:

A NATIONAL PROSPERITY BUDGET

At home and abroad, America is faced with mounting responsibilities. Despite the most effective economic system ever devised, an excessive number of breadwinners have long been without jobs. In a land capable of almost limitless plenty, more than 7 million families have incomes below \$1,000 a year, and millions of children lack adequate schools. And on the tense international front, America has become the central tower in the structure of freedom.

As we strive to fulfill our responsibilities, we should always remember this: We suffer from no poverty of resources. In some underdeveloped areas overseas which have become crucial to the future of freedom, hundreds of millions of people toll with scant means which make it hard to maintain a bare standard of living and to resist Communist encroachment. In sharp contrast, the United States now possesses an immense reservoir of idle men and other productive strength, pleading to be used to meet our needs. Between now and the end of this year, we can bring more than 2½ million unemployed and new workers—the most skilled and productive in the world—into the stream of usefulness. We can, without inflationary strain, expand our total output for 1955 at least 6 percent above 1954, and by the fourth quarter of this year lift it to about 8 percent, or about \$30 billion at an annual rate, above current levels. If we unsheathe fully the great nonsecret weapon of our economic strength, we can more adequately and more easily serve our domestic needs and world responsibilities—and also balance the Federal budget.

But our current national economic policies are not well adjusted to the full use of this great nonsecret weapon. These policies seem geared to the objectives, optimistically described, of advancing our total output this year by only about 3 percent above last year. This would be far short of the expansion needed to keep up with a growing productivity and labor force. With such limited growth, the true level of unemployment—which includes both full-time unemployment and its part-time equivalent—would be likely to rise from about 4 million in 1954 as a whole to about 5 million in 1955 as a whole, with a considerably higher level by the year's end. That would leave us, even at the end of the year, with an annual rate of output nearly \$20 billion below the full production level.

Moreover, it is doubtful whether under existing policies and programs we would register even a 3-percent rate of growth for this year. Farm personal income, so essential to national prosperity, is being pushed

further downward, despite a 20-percent reduction since 1951 and a per capita income for farmers averaging only about one-third that of other citizens. Auto production, the mainspring of the recent upturn, is scheduled to decline later this year. Business investment in plant and equipment is not expanding, small business is losing ground, and consumer incomes are not rising sufficiently. Public policies, instead of being adjusted upward to furnish the stimuli required for a full economy, are mainly being reduced downward to mesh with a stagnant or retarded economy.

National security and international economic assistance, already severely slashed, are being compressed further in the face of serious world difficulties. With the shortage in educational facilities already a national disgrace and becoming a national menace, the Federal Government which alone has the resources to meet most of this deficit has thus far proposed only a strikingly inadequate stopgap. Vast health needs are being countered by an assumption that some new way can be found to pay for better health without really spending money. Natural-resource developments, for conservation and power, highways and water supply, are being driven further downward, although they are already far below the requirements for national security, population growth, and private industrial development. Old-age insurance is being held to levels which furnish our senior citizens only about one-third of the cost of a decent standard of living, and unemployment insurance protection is so weak that close to 2 million of those unemployed in 1954 exhausted their benefits. Minimum wage proposals are not even keeping up with changes in living costs; much less with economic growth. With about one-third of all American families living in substandard housing, there is practically no rebuilding of slums, and without this the housing boom may be near the saturation point.

Efforts to give the financial account of the Government priority over the economic account of the country put second things first; in addition, they are self-defeating because the customary Federal budget is not and cannot be balanced in an unbalanced economy without taking domestic and international risks which quite properly no one should take. In calendar 1954, the Federal deficit was about \$4 billion; in this calendar year, the prospective deficit is estimated at about \$3.5 billion.

Instead of spiraling the servicing of our domestic and international needs downward in a resigned attitude toward high unemployment and slack production, this pamphlet proposes an alternative course. It advances for sober consideration by the American people and their leaders a set of programs and policies based upon legitimate hopefulness rather than unwarranted complacency; upon rising to what we can and must do, instead of crystallizing and perpetuating the failure to do our best. The practical goal of these programs is to bring forth, by the end of this year, the more than 2½ million new jobs and the almost \$30 billion (8 percent) increase in the annual rate of total output, needed for full employment and almost full production.

To expand consumption, which is at the core of prosperity in relative peacetime, the personal income tax exemptions should be raised by about \$200, furnishing about \$4½ billion of additional purchasing power. The minimum wage law should be raised to \$1.25 and coverage expanded, which by the end of this year might add another \$2½ billion to purchasing power. Further to stimulate production and jobs, the annual average level of Federal outlays for this calendar year, in the conventional budget, should be raised about \$3½ billion above those now contemplated, which in a much

expanded economy would still be \$6½ billion below the 1953 level. Gradual expansion, to achieve the higher average for the year as a whole than now contemplated, could by the fourth quarter of this year add about \$3 billion, stated at annual rates, to outlays for national security and international aid; about \$750 million toward the restoration of agriculture; about \$1 billion toward improved education and about \$300 million toward improved health; and about \$1 billion toward the protection and expansion of our natural resources base, including public works.

It is also proposed that old-age insurance benefit payments by the fourth quarter of this year be increased by about a billion dollars at annual rates, and that unemployment insurance be greatly strengthened. These changes would not result in higher Federal budget costs because of their method of financing, but they would add greatly to consumer buying by enlarging the receipts of low-income families, who spend a larger part of what they receive. And it is recommended that the Government undertake to lift the annual rate of slum clearance and low-rent housing to an annual rate of between 300,000 and 500,000 units by the end of this year. The subsidy cost of this to the Government would be only a few million dollars annually in the first year, but no other single measure would add so much toward reemployment and business stimulation through the channels of enterprise.

This program is entirely consistent with the purpose of the Employment Act of 1946 that maximum employment, production, and purchasing power be combined with the preservation of free competitive enterprise. The program deals with traditional programs, but expands them to match our needs and productive abilities. A rise in the annual rate of Federal spending above current levels by about \$6 billion by the fourth quarter of this year would be accompanied by a rise of almost \$30 billion in our total national product. Due to vast reemployment and appropriate wage increases, the annual rate of wage and salary income would rise by more than \$15 billion. The annual rate of consumer spending—and consequently of business sales to consumers—would rise by about \$13 billion. The annual rate of farm personal income, to make up for the gross disparity in farm income, would rise by about \$4 billion; and expanded consumption of food and clothing, plus exports to underdeveloped areas, would cut deeply into farm "surpluses." The annual rate of total business investment would rise by about \$6,500,000,000; exclusive of inventory change, it would rise by about \$2,500,000,000. Corporate profits would rise by at least \$2,500,000,000. The people of America would not only produce and consume more; they would also save about \$3½ billion more at annual rates.

With this balanced economic expansion on all fronts, Federal spending under the customary budget would drop from 20.2 percent of total national output in calendar 1953 to 17.7 percent in calendar 1955. With a base established for even more solid economic progress in 1956, a balanced Federal budget in a balanced economy would result by the end of that calendar year.

Up to now, and out of line with the purposes of the Employment Act of 1946, separate economic policies and programs have been viewed in isolation, without looking at their effect upon the progress and well-being of the economy and the people as a whole. The farmer, old people, the unemployed, the small-business man, the low-income family, are being inadequately dealt with under scattered policies which measure what we think we cannot afford in detail without examining what we need and can best afford when we look at the whole picture. This trends toward a pennywise and pound-foolish policy.

Instead, we should embrace the concept of a national prosperity budget, which would blend in just proportion our common needs and capabilities in a full employment and full production program for all. Aside from the benefits to our national economy and our national security, this would stress the great moral values which weigh most in a democracy. It would bring the American people to an appreciation of the great things which bind us together instead of the small things which divide us; it would place the things we can achieve above the things we should not fear; it would range the things we must afford above the things we have erroneously come to believe we cannot afford; it would substitute for a sword hanging above our heads the great nonsecret weapon of our productive genius and capacity for progress when we pull together in practical pursuit of common goals.

The National Committee of the Conference on Economic Progress, all of whom do not necessarily subscribe to all details of this study, but who join in the desirability of placing it before the public, is listed on the outside of the back cover of this pamphlet. The staff work on this study, directed by Leon H. Keyserling, has been done by: Joel Darmstadter, Peter G. Franck, Mary Dublin Keyserling, Philip M. Ritz, and Warren C. Robinson. Help has also been received from John A. Baker, Wallace J. Campbell, Roy F. Hendrickson, Carl Huhndorff, Donald E. Montgomery, Robert A. Rennie, Stanley H. Rutenberg, Elmer E. Walker, and Nat Weinberg.

Jefferson-Jackson Day Dinner—Address by Hon. Samuel J. Ervin, Jr., of North Carolina

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, March 10, 1955

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a very fine address delivered by our colleague, the Senator from North Carolina [Mr. Ervin] at the Jefferson-Jackson Day dinner at Richmond, Va., on Friday, March 4, 1955.

There being no objection, the address was ordered to be printed in the Record, as follows:

OUR HERITAGE: A BLESSING AND AN OBLIGATION
(Address by Senator SAMUEL J. ERVIN, JR.)

I am grateful to the Democratic State Central Committee of Virginia for inviting me to join the militant and untainted democracy of the Old Dominion in this Jefferson-Jackson Day gathering. The invitation affords me ample excuse for absenting myself for the time being from the babel of Washington, where the confusion engendered by the Republicans calls to my remembrance an event which occurred some years past in my home town of Morganton, N. C.

On that occasion my diplomatic colored friend, Jock Fleming, went automobile riding with two companions. The automobile was undoubtedly full of gasoline. Its occupants were allegedly full of moonshine. The automobile left the road and turned over, causing substantial injuries to Jock's two companions. Jock was unhurt. After extricating Jock's companions from the wreckage and sending them to the hospital for medical attention, Morganton's Chief of Police,

Fons Duckworth, undertook to ascertain by inquiry of Jock who was driving the automobile at the time of the accident. He received this reply from Jock: "Fore God, white folks, 'fore God, I don't know. The last thing I remember all three of us were riding on the back seat."

I trust you will pardon at this point an allusion rather personal in nature. I cannot come to the Old Dominion without experiencing emotions similar to those which prompted Moses to remove his sandals from his feet because he stood on Holy ground. Kindred of mine fought for the Confederacy in virtually every engagement on Virginia soil from Bethel to Appomattox. One of my great-uncles was killed in action at Seven Pines. Another fell in combat on the Darbytown Road.

In the words of Britain's heroic poet, Rupert Brooke:

"These laid the world away; poured out the red
Sweet wine of youth; gave up the years to be
Of work and joy, and that uphoped serene,
That men call age; and those who would
have been,
Their sons, they gave, their immortality."

—The Dead.

Since their dust is commingled forever with Virginia's good earth, Virginia to me is hallowed ground.

I wish to bear this testimony to the Democrats of Virginia: It is a great privilege to serve in the Congress with the able and devoted men sent by you to that body. Senators HARRY BYRD and WILLIS ROBERTSON and Congressmen WATKINS ABBITT, VAUGHN GARY, PORTER HARDY, BURR HARRISON, PAT JENNINGS, EDWARD ROBESON, HOWARD SMITH, and BILL TUCK bring to the performance of their legislative duties the high courage, intelligence, intellectual honesty, and patriotism which the Nation has long since become accustomed to expect of Virginians.

In my remarks on this occasion, I forego discussion of the transient issues of the hour. I prefer to consider with you fundamental principles which must be preserved if the America we know and love is to endure.

1. OUR HERITAGE

As Americans, each of us can assert with the psalmist of old: "The lines are fallen unto me in pleasant places; yea, I have a goodly heritage."

These words of the psalmist suggest the subject of my remarks: "Our Heritage: A Blessing and an Obligation."

We received our heritage in trust for ourselves and our children and our children's children from all those men and women, both great and small, whose blood, sweat, tears, and prayers made the America we know and love a living reality.

Our heritage is liberty. While liberty has blossomed in our land, love of liberty did not have its origin here. It was brought hither by courageous men and women from the British Isles, the vine-clad hills of France, and the Palatinate of Germany, who craved above all the things of earth the economic freedom, the political freedom, and the religious freedom denied to them by the tyrannical rulers of the Old World.

Since so many men now appear so anxious to swap the reality of human liberty for the mirage of economic security, it would be well if we would pause a moment, and ponder the choice our ancestors made when they forsook the comparative security of the Old World for the terrifying insecurity of the New. It was not without many pangs of regret that they turned their backs for all time upon the scenes of their childhood, the graves of their beloved dead, the comparative security of the then civilized world, and journeyed in tiny barks across a boisterous ocean to establish homes for themselves and their children and their children's children in what was then a

perilous wilderness in a new and strange land.

Why did they do this? Why did they exchange the comparative security of the Old World for the terrifying insecurity of the New? The answer is simply this, and nothing more: They believed that only the slave, who depends upon a master for the bread of bondage, is really secure; and they knew that only the self-reliant soul, who spurns security for opportunity, is truly free. For this reason, they chose liberty rather than security.

Liberty reveals herself in a threefold guise as economic liberty, political liberty, and religious liberty. Let us consider her attributes in each of these aspects.

2. ECONOMIC LIBERTY

The brave men and women, who brought the love of liberty to these shores, did not learn economics sitting at the feet of those who promise "abundance for all by robbing 'Selected Peter to pay for Collective Paul.' They acquired their knowledge the hard way. Their teachers were despotic governments, which robbed them of the fruits of their labor by confiscatory taxation, and in that way reduced them to the status of economic slaves.

The valiant folk who made America great had the hardihood to accept the economic truths plainly visible to all persons who possess the capacity and willingness to meet reality face to face.

They knew that earth yields nothing to man except the products of his own labor. They knew that Adam's curse is an unchanging and unchangeable law of life: "In the sweat of thy face shalt thou eat bread, till thou return unto the ground." They knew that man has but one choice in respect to this immutable economic fact, and that such choice is simply this: Whether the bread which he must eat in the sweat of his face shall be the bread of freedom or the bread of bondage. They knew this unalterable decree of the Creator of the universe: Freedom cannot be induced to produce things of value unless they are permitted to retain a fair share of the fruits of their labor for themselves and their families.

They knew, moreover, that man can be free only if he is willing to accept the responsibility for his own life which is inseparable from liberty.

3. POLITICAL LIBERTY

The political philosophy of the Founding Fathers is readily understood if one bears in mind the historical fact that the Thirteen Original States—Connecticut, Delaware, Georgia, Maryland, Massachusetts, New Hampshire, New Jersey, New York, North Carolina, Pennsylvania, Rhode Island, South Carolina, and Virginia—became self-governing Commonwealths 12 years before the United States had its legal birth.

The representatives of the people of these States met in constitutional conventions, and framed State constitutions. These men were conversant with the story of the long and bitter struggle of the English-speaking race for some substantial measure of dignity and freedom for the individual. They loved liberty and loathed tyranny, and were convinced that government itself would have to be compelled by fundamental law to respect the inherent rights of the individual if freedom were to be preserved and oppression were to be prevented. In consequence, they inserted in the constitutions of the States declarations of rights designed to protect citizens from the States.

It was no accident that the first words incorporated in the constitutions of the original States were declarations to the effect "that all political power is vested in and derived from the people" and "that the people of . . . (the States) . . . ought to have the sole and exclusive right of regulating the internal government and police

thereof." The writers of the organic laws of the States placed these declarations in first place in their constitutions because the political concepts embodied in such declarations occupied first place in their hearts and minds. They had much cause for assigning prime importance to their beliefs in the sovereignty of the people and the rights of the States to local self-rule. They had suffered many things at the hands of a government far removed from the people.

The consciousness of early Americans that liberty is inevitably imperiled by a government far removed from the people finds further example in their implacable insistence upon the insertion of the first 10 amendments in the Federal Constitution. These amendments guarantee the personal and property rights of the individual, and declare that "the powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people."

The ancient beliefs that all political power is vested in and derived from the people and that the States ought to have the right to regulate their internal affairs are as valid today as they were when the Declaration of Independence was signed and the Constitution of the United States was ratified.

4. RELIGIOUS LIBERTY

The most heart-rending story of history is that of man's struggle against civil and ecclesiastical tyranny for the simple privilege of bowing his own knees before his own God in his own way. As Chief Justice Walter P. Stacy of the North Carolina Supreme Court so well declared in one of the great judicial opinions of all time, "men contend more furiously over the road to Heaven, which they cannot see, than over their visible walks on earth," and history records "the tragic fact that men have gone to war and cut each others' throats because they could not agree as to what was to become of them after their throats were cut."

The men and women who gave liberty to America were devout souls. They had learned some of the sorrowful facts of the spiritual life of man in the bitter crucible of experience. Most of them dissented from the doctrines and usages of the churches established by law in the lands of their origins. They were denied the right to worship God in their own ways. They were compelled to pay tithes for the support and propagation of religious opinions which they disbelieved. They had their marriages annulled and their children adjudged illegitimate for daring to speak their marriage vows before ministers of their own faiths rather than before the clergymen of the established churches.

But these cruel oppressions merely steeled their convictions that religion is a private matter between man and his God; that no human authority should undertake to control or interfere with the rights of conscience; and that "to compel a man to furnish contributions of money for the propagation of opinions which he disbelieves is sinful and tyrannical."

For these reasons, our ancestors staked the very existence of America as a free Nation upon the principle that "all men have a natural and unalienable right to worship Almighty God according to the dictates of their own consciences," and the corollary that this natural and unalienable right can be secured only by keeping the hands of the state out of religion and the hands of religion off the state.

5. A BLESSING AND A WARNING

Courageous men and women built America with strong minds, great hearts, true faith, and ready hands. They gave us a great country dedicated to the proposition that men "are endowed by their Creator with certain unalienable rights; that among these are life, liberty, the enjoyment of the fruits

of their own labor, and the pursuit of happiness." They gave us this land with the knowledge, however, that God grants freedom only to those who love it, and are always ready to guard and defend it; and they left us the solemn warning that a frequent recurrence to fundamental principles is absolutely necessary to preserve the blessings of liberty.

They bequeathed this warning to us because they had read the history of the long and bitter struggle of men for some substantial measure of dignity and freedom for the individual, and had found this shocking but everlasting truth inscribed upon each page of that history: Government itself is the deadliest foe of liberty.

This tragic truth was well expressed a third of a century ago by a great statesman and Virginian, Woodrow Wilson. He said: "Liberty has never come from the government. Liberty has always come from the subjects of it. The history of liberty is a history of resistance. The history of liberty is a history of limitations of governmental power, not the increase of it."

6. OUR OBLIGATION

Let us ponder these words of Wilson. Let us recur with frequency to fundamental principles. Let us preserve for ourselves and our posterity our goodly heritage—economic liberty, political liberty, and religious liberty. This is our obligation. We must perform it. As followers of Jefferson and Jackson, we cannot do otherwise.

Economic Disarmament

EXTENSION OF REMARKS OF

HON. STUART SYMINGTON

OF MISSOURI

IN THE SENATE OF THE UNITED STATES
Thursday, March 10, 1955

Mr. SYMINGTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD three editorials published in the St. Joseph (Mo.) News-Press, the Memphis Press-Scimitar, and the Richmond Times-Dispatch of Richmond, Va., dealing with the subject of economic disarmament.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the St. Joseph News-Press of March 3, 1955]

ECONOMIC DISARMAMENT

Senator STUART SYMINGTON presents a bold plan for curbing military production. At the same time each nation would increase its economic production and raise living standards. In a resolution presented in the Senate Tuesday, the Missourian calls on the President of the United States to present such a proposal to the United Nations.

The Senator's plan for peace would work as follows. Each nation's resources would be appraised. A limitation would be set on the amount that could be allotted to military production and the rest would have to go into civilian production. Look at this comparison of the use of steel. Last year the United States produced 5,500,000 automobiles. Russia produced 45,000. It is safe to surmise that the vast bulk of Russian steel went into heavy armaments.

Under the Symington plan only a prescribed portion could go toward tanks, planes, and other heavy armament. The rest would have to go for automobiles, factory machinery, farm equipment, and other

civilian goods. Nations would be subjected to periodic inspection to prevent any one of them from aborting the international agreement. There also would be a periodic review of the quotas and equitable revisions made. Both the review board and the inspection teams would be under the sanction of the United Nations.

Any nation that defied its quota immediately would tip its aggressive intent to the rest of the world. Such defiance would be a clanging alarm serving notice on the world that a war was brewing. Simultaneous with Senator SYMINGTON's speech, Prime Minister Churchill was addressing Parliament. The British statesman said that a system would have to be devised for disarmament if the world were to enjoy security and peace. Presently a secret conference of a U. N. subcommittee is in progress in London. The conferees are studying a plan for braking the armament race.

Some nations are rearming at the cost of their populace's living standards. Senator SYMINGTON cites poverty and low-living standards as breeders of communism. Our Nation's peaceful security therefore is jeopardized by substandard living conditions in other lands. Anything that we do to raise the living standards of others shores up our own continuance in peace.

The Senator has tackled the problem of war fear that taunts the world today. His answer is embodied in his plan for peace. Its import is of such magnitude it commands action.

[From the Memphis (Tenn.) News-Scimitar of March 1, 1955]

THE GAGE OF RED INTENT

We can have no hope that any disarmament talk, whatever its form, ever will lead to actual disarmament so long as the rulers of Russia continue to pour the bulk of their nation's resources into war goods.

Unfortunately, Russian "peace" propaganda has been too much trusted, too little suspected, in too many parts of the world.

But the real test of the Kremlin's intentions can be measured by the treatment of Russia's civilian population. How much for human necessities and comforts? How much for war?

That is the purpose of the "butter over guns" disarmament proposal, which Senator SYMINGTON, of Missouri, now recommends to the United Nations. Senator SYMINGTON proposes a Senate resolution calling on President Eisenhower to urge the U. N. to explore and consider this proposal.

The idea is simple: Whatever nation depresses the living standards of its people to build military power is an aggressor nation, and therefore a menace to the peace of the world.

"High living standards," said Senator SYMINGTON, "constitute a built-in deterrent against possible aggression."

It is a test any people can understand. It is a test from which the Kremlin bosses cannot hide. So long as they deprive their people of necessities and comforts in the interest of military power, so long must the free nations of the world judge them aggressors.

[From the Richmond (Va.) Times-Dispatch of March 5, 1955]

BUTTER OVER GUNS IS MAKING PROGRESS

The butter-over-guns proposal which we presented on this page last Monday for the consideration of the United Nations, is making headway in Washington. The plan, suggested by Sam Lubell and designed to stop the armaments race, has been given formal sponsorship of Democratic Senator SYMINGTON, of Missouri, and has been publicly commended by Senator KNOWLAND, of California, Republican floor leader, although he is a vigorous critic of the United Nations.

Senator SYMINGTON has introduced a resolution calling on President Eisenhower to urge the U. N. to explore and consider the proposal. Senator KNOWLAND rose on the floor to declare that the matter is "worthy of the attention of the Senate," and he added:

"I hope the Committee on Foreign Relations will consider them [articles and editorials on the subject from the Washington Daily News which had been read into the CONGRESSIONAL RECORD for March 2], and that the agencies of the executive branch which are interested in foreign affairs may also have the opportunity to discuss with the committee the merits or demerits of the proposal, in case there should be some weaknesses in the plan."

Other sponsors are expected to be obtained shortly for the Symington resolution, which requests President Eisenhower to present to the U. N. the Lubell plan "to explore the possibilities of limiting the proportion of any nation's resources which can be devoted to military purposes so as to increase steadily the proportion of every nation's resources devoted to improving the living levels of the people."

Mr. Lubell—whose new book, the Revolution in World Trade, caused the Scripps-Howard newspapers to get him to write for that large chain the article we published setting forth his guns-or-butter plan—is a long time associate of Bernard Baruch. While Mr. Baruch has not said that he helped Mr. Lubell work out the plan, it is highly probable that Baruch saw it before publication, and gave Lubell the benefit of his profound knowledge and wisdom. There is no better informed man in the United States on war mobilization and all the ramifications thereof than Mr. Baruch.

Senator SYMINGTON, himself an authority in this field, by virtue of several high positions he has held in private industry and the Federal Government, points out that the resolution he is sponsoring is based on three principles:

1. The way a government divides the resources at its command is a revealing measure of its peaceful or aggressive intent.

2. High living standards constitute an automatic, built-in deterrent against possible aggression.

3. After a nation has committed its resources to peaceful uses, a significant length of time must elapse before they can be converted to war.

A keystone of this plan would, of course, be careful and unlimited inspection of industrial plants in all the participating countries. The Soviet Union has always refused to permit such inspection. Yet the internal crisis with which that country now is confronted, growing out of shortages of food, clothing, and other consumers' goods, may create such pressure on the Government as to force participation.

Such is the hope of Senator SYMINGTON. If, however, Russia refuses to go along, its refusal can be publicized all over the world, and especially to the badly pinched Russian people. At the very least, the Soviet Government will be thrown sharply on the defensive.

Give Armed Forces Their Due

EXTENSION OF REMARKS OF

HON. PAUL J. KILDAY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. KILDAY. Mr. Speaker, under leave to extend my remarks, I include an

editorial appearing in the San Antonio Express of San Antonio, Tex., on March 7, 1955. This editorial has to do with the military pay bill under consideration in the House today.

GIVE ARMED FORCES THEIR DUE

For strengthening the Nation's defenses at a weak spot, President Eisenhower, in a special message, recommended that Congress raise the Armed Forces' pay all the way from private to commanding general.

To build and maintain the alert, effective, resourceful and constantly up-to-date Army, Navy, Air Force and Marine Corps required for national security, the President then pointed out, the United States must have a solid background of career men. Today that essential foundation of the Armed Forces is being weakened because too many men leave the service at the end of their initial enlistment period.

For that reason the Nation faces a challenge: How make a career in the Armed Forces attractive to qualified young men? How persuade the youth who has made good in the service to reenlist?

One way to promote those vital objectives, the President considers, would be to raise the serviceman's pay. Were that done, both enlisted man and officer would be under stronger incentive than before to earn promotion and higher pay.

Traditionally, in the Armed Forces the door to advancement is kept always open. But nowadays, when the services are so largely mechanized, opportunities are multiplied. The youth who possesses the knack, intelligence and industry to acquire skill is certain of his chance to get ahead in the Armed Forces. But that young man is worthy of his hire.

By way of carrying out President Eisenhower's recommendations, a House Armed Services subcommittee, by unanimous vote, has approved the proposed 1955 Armed Forces pay bill. That measure, due to be reported to the House floor this week, would increase the servicemen's earnings by \$735 million a year all told.

As compared with the \$40 billion a year defense budget, that is a modest sum; but no expenditure on the Nation's armament will yield higher returns. The servicemen's pay raise will represent an investment in fair play for the Nation's defenders, and hence in their morale.

Will Controls Throttle Natural-Gas Industry?

EXTENSION OF REMARKS

OF

HON. JAMES B. UTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. UTT. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to introduce two editorials on the natural-gas controversy which I think should be brought to the attention of all Members of Congress as well as the public.

I give credit to the Saturday Evening Post, March 5, 1955, issue for the following editorial entitled "Will Controls Throttle Natural-Gas Industry?"

WILL CONTROLS THROTTLE NATURAL-GAS INDUSTRY?

If any American citizen doesn't know the natural-gas story within the next few

months, it won't be the fault of the natural-gas producers. The Supreme Court's decision of last June, which gives the Federal Power Commission jurisdiction over the producing end of the gigantic natural-gas industry, has convinced the industry's leaders that, if Congress is to be persuaded to change the situation, the natural-gas story will have to be told to the public at large.

The Natural Gas Act of 1938 seemed to exempt from Federal regulation those engaged in the production or gathering of natural gas. This view was accepted by the Federal Power Commission, which on various occasions has denied that it had jurisdiction over gas producers. To remove all doubt of its meaning, Congress, in 1950, passed the Kerr bill, which was supposed to nail down the point for good and all. The Kerr bill was vetoed by former President Truman. The Supreme Court, in June 1954, decided that natural-gas producers are "natural-gas companies" as defined in the law and that, since the "gathering and production" took place before the sales of gas to the pipelines occurred, the producers are engaged in interstate commerce and are therefore subject to regulation.

What are the merits? The public, which burns the gas, is the real party in interest and is entitled to some nonhysterical reporting.

Pipeline companies which transport the gas from the production areas to the cities where it is consumed are subject to Federal regulation since they are engaged in interstate commerce. Distributing companies in the various cities and municipalities which use natural gas enjoy at least a partial monopoly and are properly subject to regulation by State public utilities commissions. The argument of those favoring regulation of natural gas producing companies and individuals, of whom there are more than 4,000, is that the producers are a basic factor in the whole industry and should be equally subject to public control. The Supreme Court took this view.

The natural gas producers, on the other hand, point out that they are engaged in a highly competitive business and that a continued supply of their product, natural gas, depends on the continuation of incentives offered to those who search for new supplies and invest large sums of money in doing so. Federal price fixing, along with the complicated and often contradictory bureaucratic rulings which accompany regulation, would, they insist, discourage such investment and exploration. Thus the consumer, in whose interest regulation is urged, might get less natural gas at higher prices, instead of vice versa.

In his dissent from the majority opinion, Justice Douglas declared that the decision on natural gas regulation should be made by Congress, not by the court, because "regulation of the business of producing and gathering natural gas involves considerations of which we know little and with which we are not competent to deal." At any rate, Congress will have to declare its intention once more, making it clear whether or not it wishes to maintain the distinction between interstate pipelines and distributors, on the one hand, and competitive natural gas producers, on the other. This distinction was recognized in the Natural Gas Act, but, despite the small part which the price of natural gas at the well plays in the amount which the domestic consumer pays on his monthly gas bill, the clamor that the Government should fix rates for the thousands of companies and individuals who dig for natural gas and find it has never ceased.

It is hard to believe that Congress will ignore the record of an industry which has increased its customers by millions within a single decade, while keeping the ultimate cost low during a period of inflationary prices. What more could be accomplished

by Federal regulation of this business is hard to imagine. The Supreme Court's decision of last year will certainly produce a new battle in Washington. It will be unfortunate if the debate becomes so intense that the basic principles involved are generally ignored. One of these certainly is that any move to impose regulation on an American industry should be supported by substantial evidence that a need for regulation exists and that the measures sought are consistent with the operation of a free economy.

The second editorial is accredited to March 7, 1955, issue of Time, and is quoted as follows:

NATURAL GAS PRICES—THE CASE AGAINST FEDERAL CONTROLS

As a fuel, natural gas heats 14 million United States homes and fires the stoves in 21 million kitchens. In politics, the booming young natural-gas industry, now seventh biggest in the United States, sets fires from coast to coast, and especially in Washington. This week angry gasmen are fighting no less than seven bitter court battles against the United States Government; in Congress three separate bills have been introduced by southern Democrats to remove Federal price controls from gas at the wellhead. This issue—whether or not gas prices should be controlled in the field—has been burning hot ever since 1950, when the famed Kerr bill, which exempted gas producers from controls, was vetoed by President Truman.

The gasmen, who are against control, got some potent help last week from a special commission appointed by President Eisenhower to study United States resources and power policy. Said the commission: "We believe the Federal Government should not control the production, gathering, processing or sale of natural gas prior to its entry into an interstate transmission line." The United States Supreme Court, on the other hand, ruled in favor of Federal control in the Phillips Petroleum case last June (Time, June 21). The court's argument was that controls in the field reduce prices to consumers. Though the producers may operate only within State limits and own no interstate pipelines, the prices they charge affect the ultimate cost to consumers thousands of miles away. Thus, while the 1938 Natural Gas Act specifically stated that its restrictions "shall not apply . . . to the production and gathering of gas," the Supreme Court held that producers come within the spirit if not the letter of interstate commerce.

The Federal Power Commission itself has never interpreted the Gas Act to include producers; in fact, it has argued against it. But it was quick to obey the court. It froze gas rates at the wellhead as of June 1954, regardless of the provisions already written into existing long-term contracts with the pipelines. The overall effect has been to invalidate virtually every contract throughout the industry—long-term contracts (20 years or more) between producers and pipelines written at the behest of the FPC to bring about stability. To protect themselves against increased costs, producers wrote in "escalator" clauses permitting gas price increases. Now all such adjustments are illegal.

Gasmen scoff at the court position that FPC control will mean saving to consumers. They point out that more than 90 percent of the costs occur after the gas leaves the field. Phillips Petroleum Co., for example, now sells gas from the Texas Panhandle for 9.5 cents per 1,000 cubic feet to Michigan-Wisconsin Pipe Line Co. which delivers it to Milwaukee for 35 cents. The Milwaukee Gas Light Co. then charges the housewife a whopping \$2.13 the first 1,000 cubic feet.

Gasmen insist that FPC is simply not equipped to control gas production. Since June some 7,000 applications for rate in-

creases have been filed and FPC has not yet acted on most of them. The problem is not simply one of setting a gas rate for 5,000 producers. Each gas field is a distinct operation with separate problems; rates must be set for thousands of different wells. The industry is so closely bound up with oil that gas exploration, drilling, and production costs are inextricably mixed together. To regulate gas, FPC would also, indirectly, partially control oil prices. Moreover, costs of drilling wells are climbing so fast that even the current contracts lag behind the true expense of production.

Perhaps the strongest argument of all against FPC controls is that producers do not have a protected monopoly, like most public utilities, but are highly competitive. They compete not only among themselves but also with sellers of coal, electricity, and oil. Said Magnolia Lawyer Ross Madole: "If the FPC has to control gas production prices in order to control the price of gas as delivered to the customer, then why doesn't it control the price of coal in steam-generating electric plants and the price of copper in telephone wires?"

Some companies have threatened to shut down interstate gas operations rather than go under FPC control. American-Louisiana Pipe Line Co., Tennessee Gas Transmission Co., and Texas-Illinois Gas Co. have either slowed down their expansion or postponed plans for new pipelines since many of the big producers refuse to sign long-term contracts. In Texas, more and more producers are talking of selling to local markets exclusively to dodge Federal controls, use their gas in Texas towns and the State's burgeoning petrochemical industry.

If Congress does not pass new legislation exempting producers from FPC regulation, the gasmen see no end to the troubles. But if Congress recognizes gas as a competitive commodity, gasmen think the laws of supply and demand will peg prices at a fair and competitive level.

How One President Made Law Without Congressional Approval—It Must Not Happen Again

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1955

Mr. SMITH of Wisconsin. Mr. Speaker, "The Yalta agreement is the blackest page in American diplomatic history," so said the Honorable George A. Finch, eminent constitutional authority in the National Republic for February 1955.

The Yalta Pact strengthened the hands of Red China and Soviet Russia. Today those aggressors are in a position to enslave millions of innocent people and our own country is trying to close the barn door after the horse has been stolen. It is a ridiculous and horrible situation and the cost to the American taxpayer cannot be estimated at this time—we know it will be in the billions of dollars.

Under leave to extend my remarks, I am including the article by Mr. Finch:

It would be futile to remove the doubts concerning limitations on treaties if the Constitution could be evaded by substituting executive agreements in lieu of treaties.

Executive agreements are not mentioned in the Constitution, but recent administrations invented the theory and adopted the practice that such agreements are interchangeable with treaties in the President's discretion. The flagrant abuse of this power by President Roosevelt at Yalta raised a storm of protest in Congress and was one of the reasons why so many Senators joined with Senator BRICKER in introducing resolutions for a constitutional amendment.

The Yalta agreement is the blackest page in American diplomatic history. The Nationalist Government of China under Generalissimo Chiang Kai-shek, after years of patriotic defense against the devastating aggression of Japan, became our firm and loyal ally in World War II. At Cairo in November 1943, President Roosevelt and Prime Minister Churchill promised the Generalissimo that Manchuria, Formosa, and the Pescadores "shall be restored to the Republic of China." That was to be a part of China's reward for her help against the Japanese after Pearl Harbor. At Yalta, on February 11, 1945, the same Messrs. Roosevelt and Churchill, but with Stalin in place of Chiang Kai-shek, agreed, among other things, that to Russia should be restored "her former rights" in Manchuria. The phraseology of the agreement bears inherent evidence of its Communist origin. It is characteristic of Communist perversion of history. Russia had no more rights in Manchuria than had Japan. Both were regarded as alien invaders and oppressors by the people and Government of China. Every one familiar with the Far East knows that the power that controls Manchuria controls all China and most of Asia.

The Yalta agreement reversed our traditional policy of the "Open Door" and respect for the sovereignty, the independence, and the territorial and administrative integrity of China. That policy was initiated by John Hay at the turn of the century to stop the march of Czarist Russia into Manchuria. In 1919 the United States Senate refused to approve the Treaty of Versailles because, among other provisions, President Wilson agreed to transfer the important Chinese province of Shantung to Japan in consideration for the latter's acceptance of the Covenant of the League of Nations. That great injustice was rectified at the Washington Conference of 1922, called by President Wilson's successor. Our traditional policy of sincere friendship for China raised our people and Government to preeminence in the respect and regard of the Chinese people. They erected a monument in Peiping to the memory of President Harding in appreciation of his services at the Washington Conference. The Yalta Agreement has contributed to the sabotaging of 100 years of Christian advance and Western culture in Asia.

The occupation of Manchuria by the Soviet Army under that agreement provided the golden opportunity for them to turn over to the Chinese Communists the arms of the Japanese who had been forced to surrender by American arms without Russian aid. That consequence of the Yalta agreement was more responsible than any other cause for the loss of face with his people by Chiang Kai-shek and his eventual forced retreat to Formosa. With the Chinese Nationalists installed in Manchuria instead of the Communists, there would have been no Communist invasion of Korea. The United States would have been saved \$15 billion expenditure and 150,000 casualties, including 33,000 deaths, and our enemies would not now be in positions of such strength that they cannot be dislodged except at the risk of another world war.

In extenuation of the Yalta agreement it is said that the Soviets would have occupied Manchuria, agreement or no agreement with the United States. That statement is a mere hypothesis which would probably have

been untrue if the United States had honestly supported its Chinese allies—but there were other subversive influences at work in Washington working for the Communist cause. A few months after the Japanese attack on Pearl Harbor, Congress, on February 3, 1942, authorized a credit of \$500 million to the Chinese Nationalist Government. China was in such dire need at that time the State Department feared its government would collapse before Congress could act. Yet, according to Senator PORTER, the distribution of the money was delayed for 4 years by Harry Dexter White and his associates in the Treasury Department. These men, the Senator charged in the Senate July 30, 1954, "bear a major share, if not by far the largest share, of responsibility for the destruction of the Nationalist Government of China. The basic material is readily available for all to see. When interpreted against the background of other easily documented material . . . this story can only be termed as one of everlasting shame and disgrace in the record of our foreign relations."

"Supposing it were hypothetically true that the Soviets would have occupied Manchuria without the Yalta agreement, they would have done so without our approval in advance, and Chiang Kai-shek would not have been coerced to lend the color of legality to his betrayal by concurring in President Roosevelt's arrangements with Stalin.

Secretary of State Dulles told the Senate Judiciary Committee that the President could not properly make agreements like Yalta with long-range permanent effects unless made subject to ratification by the Senate as treaties. The text of the agreement makes no mention of the necessity of ratification, but President Roosevelt stated that he intended to submit the agreement to the Senate in the prepared text of his report on the Yalta Conference to the joint session of Congress after his return on March 1, 1945. For some unexplained reason, this sentence was omitted from the President's speech as delivered. The complete text of the secret agreement was not made public until nearly a year later, after President Roosevelt's death. When releasing the text on January 26, 1946, Secretary of State Byrnes stated that Mr. Roosevelt always held the view that as to the cessions of territory at Yalta "it was a matter that had to be settled in the peace treaty."

Why did President Roosevelt change his mind about submitting the Yalta agreement to the Senate? Did his advisers remind him of his supposed discretion to consider it a valid executive agreement in lieu of a treaty? Or perhaps he recalled the agreement he made in 1933 with Litvinov, the first Soviet Ambassador to the United States, which assigned to the Government of the United States the title to private property in the United States belonging to Russian subjects that had been confiscated without compensation by Soviet nationalization decrees. The validity of that assignment was challenged in the courts of the State of New York on the ground that it violated State law and policy and the fifth amendment of the Federal Constitution. On appeal to the Supreme Court of the United States that Court, in a decision known appropriately as the *Pink case* (315 U. S. 203) held that the fifth amendment did not stand in the way of giving full force and effect to the Litvinov assignment. The fifth amendment provides that no person, which means friendly aliens as well as citizens, "shall be deprived of life, liberty, or property, without due process of law; nor shall private property be taken for public use without just compensation." The Supreme Court reasoned that, although the agreement was concluded by the President without the participation of the Senate, the same rule of supremacy of treaties over State law and policy results "in the case

of all international compacts and agreements from the very fact that complete power over international affairs is in the national Government and is not and cannot be subject to any curtailment or interference on the part of the several States." The Supreme Court concluded that "In respect of all international negotiations and compacts, and in respect of our foreign relations generally, State lines disappear."

When testifying in opposition to the Bricker amendment before the subcommittee of the Senate Judiciary Committee, Secretary of State Dulles stated that the widespread concern over the liability to abuse of the treaty-making power was a legitimate one. "Those who shared it were alert citizens," he said. "I believe they have performed a patriotic service in bringing their fears to the attention of the American public. But," he pointed out, "the arousing of that concern was a correction of the evil. There has been," he continued, "a reversal of the trend toward trying to use the treaty-making power to effect internal social changes. This administration is committed to the exercise of treaty-making power only within traditional limits. . . . I do not believe that treaties should, or lawfully can, be used as a device to circumvent the constitutional procedures established in relation to what are essentially matters of domestic concern."

While this administration has lived up to that promise, its assurances will not bind future administrations.

The American people are now being admonished that they must live in coexistence with communism. At the same time they are being told that the Kremlin has not changed its intention to dominate the world. We have witnessed the fatal results of following the slogan of the two previous administrations: "We must get along with the Russians."

If we must resign ourselves to a long period of coexistence with militant communism to avoid a third world war, it is our duty while there is time to protect our ramparts at home from insidious infiltration by destroying the Trojan horse now sheltered in the Constitution. Candid opponents all admit that there is now no limitation on the treaty-making power, but contend that a limitation is unnecessary and might be dangerous. Thomas Jefferson, however, foresaw that "if the grant of the treaty-making power were boundless then we have no Constitution. In questions of power," he added, "let no more be said of confidence in man, but bind him down from mischief by the chains of the Constitution."

Sir Winston's Deterrent

EXTENSION OF REMARKS OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. WILLIAMS of New Jersey. Mr. Speaker, I would like to call the attention of the Congress to the following editorial appearing in the Washington Post on March 3, 1955. This editorial is, I believe, an excellent critique of the grave questions of nuclear weapons and disarmament.

SIR WINSTON'S DETERRENT

Sir Winston Churchill has posed soberly and eloquently the strategic challenge of our times. There will be gratification in this country that the British Government's estimate of the importance of nuclear weapons as a deterrent to global war coincides

with what has become accepted American policy. Sir Winston views the meaning of power in the historical sense, and his remarks climax the evolution of British strategic thinking disclosed in the defense white papers. He sees a significant British contribution in the expansion and maintenance of the nuclear deterrent—and he has some highly important words on civil defense in the hydrogen age and on the necessity for a strong posture in conventional weapons as a deterrent to limited wars.

In a sense it is a rebuke to the incomplete unity of the two great powers that Britain should have to build her own hydrogen bomb when the United States is acknowledged by Sir Winston to be supreme in the field. The Manchester Guardian, for example, criticizes the lack of close cooperation in secret research and goes on to argue that the main value of the separate British H-bomb program will be in its influence on American policy. But the defects of cooperation in the past are now academic. There will be at least some comfort that the responsibility for nuclear defense soon will be shared with another free world power. The advent of a British H-bomb certainly will give Britain more say, and to that extent it should have a steadying effect.

Sir Winston is persuasive in his critique of disarmament schemes that would ban nuclear weapons but leave the Soviet Union with a vast advantage in conventional arms. This has been the glaring flaw in Soviet proposals in the United Nations and in the attitude of some neutralists. Sir Winston also has a pointed warning against too great reliance on nuclear weapons; he calls for conventional forces in readiness to deal with local conflicts if they should arise. This has special relevance, not only because the H-bomb is no deterrent to subversion, but also because any war in which nuclear weapons were used, even tactically, would open a Pandora's box. Our tactical planning ought not to be so geared to atomic weapons that we would be trapped with no alternative to using them.

Reassuring as much of this is, the address does not grapple with the ultimate problem. What happens if by a process of sublime irony, in the rolling Churchillian phraseology, the world reaches a stage in the story when safety will be the sturdy child of terror, and survival the twin brother of annihilation? What, indeed, can be done to avert the apocalyptic test, as Sir Winston so movingly puts it, if God wearied of mankind? There is room for disagreement whether the time of saturation in hydrogen weapons—when the Soviet Union will have the same power of destruction American arms now hold—is 3 years off, as Sir Winston believes, or has a less definable date, as President Eisenhower intimates. Very probably Sir Winston is right that Russia now lacks the means of delivering hydrogen weapons. But the day is surely coming when she will have both a full hydrogen arsenal and the means of delivery.

What then? Is it realistic to think that the world can long balance itself on the edge of a precipice? Is it enough for Britain and the United States to be content now with a disarmament formula in the United Nations which we know the Russians will reject? Sir Winston notes that the long history and tradition of Russia makes it repugnant to the Soviet Government to accept any practical system of international inspection. No doubt the present Soviet proposal at the meeting in London is as phony as its predecessors. But does this relieve us of the responsibility, while retaining our deterrent and the goal of workable inspection, to try for lesser accommodations, hoping that self-enforcing agreements on small points eventually may lead to agreement on the major objective? Precious little of this kind of thinking was reflected in the all-or-nothing mood reported before the Lon-

don conference. There would be less reason for the flinching, the wearying, and the despair which Sir Winston counsels against if free world diplomacy were as flexible in seeking new approaches as it is resolute in welding a deterrent.

The Fair Labor Standards Act

EXTENSION OF REMARKS OF

HON. ROY W. WIER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mr. WIER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a letter from Mr. J. A. Beirne, president of the Communications Workers of America, CIO, Washington, D. C., recommending that the Fair Labor Standards Act be amended to provide a \$1.25 per hour minimum wage.

Mr. Beirne's letter follows:

COMMUNICATIONS WORKERS OF AMERICA,

Washington, March 4, 1955.

DEAR CONGRESSMAN: Failure of the American economy to expand above 1953 levels threatens our Nation with serious social consequences.

This failure is reflected both in current employment and unemployment figures: As of December 1954, the number of Americans gainfully employed was down to 60,680,000, lowest since 1950. Unemployment continues to hover near the 3 million mark.

Unless our economy expands more rapidly, about 700,000 young workers entering the job market this year will be faced with problems of idleness. Unless such expansion takes place, many additional workers may be thrown out of work because of increased man-hour output due to new types of automatic machinery and improved production methods. The American Federation of Labor, in fact, has just predicted unemployment of from 3,500,000 to 4 million in March, largely due to such factors.

America's ability to produce for a higher living standard and full employment has been proven abundantly. Our problem is one of increased purchasing power which will create effective consumer demand for the products of American industry.

It is the belief of the Communications Workers of America, CIO, that such consumer demand can best be created by increasing the purchasing power of the 30 percent of Americans who, together, receive only 9 percent of all money income.

This can best be done, in our view, by amendment of the Fair Labor Standards Act to provide a \$1.25 per hour minimum wage and the broadest possible coverage for America's industrial citizens.

In this connection, we would like to point out a situation in our own industry. In our industry, telephone operators have been singled out for special discrimination. Operators employed in exchanges having 750 or fewer subscriber stations are exempt from coverage of the law and, therefore, are the most exploited workers in the industry. How serious this is may be seen from the fact that telephone operators employed in 10,733 of the 11,502 non-Bell telephone company exchanges are not covered.

When the Fair Labor Standards Act was originally enacted, all operators were covered. The only amendment to the law between its original passage and its amendment in 1949 excluded exchanges of 500 or fewer stations. In 1949, when the minimum wage was increased to 75 cents, all operators in ex-

changes of 750 or fewer stations were exempted, subjecting these women telephone workers to even more gross discrimination. The fact that these workers alone in our industry have been declared second-class industrial citizens highlights the full measure of indignity.

In keeping with our view, we have prepared the enclosed pamphlet, entitled "The Case for the \$1.25 Minimum Wage." It is our hope that you will study this pamphlet and that you will see fit to support a minimum wage and coverage in keeping with the new age of electronics into which we are entering.

Our union represents over 320,000 workers in the communications industry who are employed in 46 States and the District of Columbia.

Sincerely yours,

J. A. BEIRNE, President.

THE CASE FOR THE \$1.25 MINIMUM WAGE

During the past 2 years, America has dealt most generously with big business and with those of her citizens in the upper-income bracket.

Through changes in Federal tax laws, net income available for spending, saving, and investment has been redistributed in favor of those whose economic status was already highly favorable.

Even a cursory look at our cities and our countryside will show that it is not these upper-bracket-income citizens who should have priority in Government action designed to promote the welfare of her people.

Far too many Americans are still ill-housed.

Far too many Americans still lack adequate standards of living.

Far too many American children must forego educational opportunity to which all should be entitled.

Far too many Americans still lack adequate wages and purchasing power to participate as first-class citizens in this new golden age of production.

This is a matter of concern to all citizens of good will. It is of vital concern to American labor, many of whose members have suffered subnormal living conditions. It is a matter that cannot await any long-term economic process. It is a problem that cries out for immediate solution.

The Communications Workers of America, and its sister CIO unions, contend that such conditions need not exist in the America of 1955. They, together with organized labor generally, take the position that American productivity and industrial potential make such conditions needless cruelty. They contend that, in the light of present realities, no American doing useful labor need be condemned to a life of economic misery.

As a part of its program for a better America, the CWA and the CIO urge that Congress shall establish by law a minimum wage of \$1.25 per hour—\$50 for a 40-hour workweek—to replace the present inadequate 75-cent statutory minimum. In the light of present conditions, this is a modest objective—a minimum wage only two-thirds the average prevailing for manufacturing workers.

A \$1.25 hourly wage minimum is far below that required for even a minimum American living standard. But it is one that will improve the lot of those millions of Americans whose need is greatest. At the same time, it will generate purchasing power needed to keep our factories at maximum production. It is a minimum wage that America can well afford. It is one in keeping with the great industrial potential being created by our new technology of electronics and atoms.

SAME OLD ARGUMENTS

The industrial recession of 1937 was aggravated by wage cutting and by a lengthening of the workweek without overtime pay,

as well as by layoffs. To prevent this process from feeding upon itself, Congress passed the original Fair Labor Standards Act, putting a floor of 40 cents per hour under wages and a 40-hour roof over the workweek. As Congress debated the issue, a storm of wrath descended from whole sections of big business, of the press, and from reactionary political forces.

A minimum wage of \$16 per week, it was argued, would bankrupt and drive whole industries out of business, cause prices to rise beyond the ability of the consumer to buy, make it impossible for the United States to engage in international trade, increase unemployment and create economic stagnation, cause the minimum wage to become the maximum throughout industry.

In 1949, in an effort to bolster declining purchasing power, Congress amended the Fair Labor Standards Act, putting a floor of 75 cents per hour beneath the wages of those employed in interstate commerce.

Again the prophets of doom raised their voices in agonized chorus, dragging out the same old arguments.

History has since rendered its verdict. The dire consequences predicted have not come to pass. Increased purchasing power for America's lowest paid workers has, instead, contributed to economic progress.

Every major industry affected by the minimum wage law has grown and prospered.

Consumer purchases have risen sharply to new highs.

The United States, bolstered by the high productivity of its workers has more than held its own in international trade.

America has enjoyed record prosperity, based upon higher purchasing power and rising productivity.

The minimum wage has helped to buoy up the general wage level.

As America once more faces national debate on an increase in the minimum wage, similar arguments once more will be raised, alleging that America cannot afford to increase the living standards of its lowest paid citizens. These arguments are variations on the same old theme. They are based upon economic conditions that have been banished from this land.

THE ECONOMY

In the second quarter of 1953, America produced goods and services at the rate of \$370 billion annually. A year later, the annual production rate was down to \$356 billion. Billions of dollars worth of goods and services were forever lost to the American people.

During this same period, industrial production dropped, even more sharply, down 9½ percent. Steel production, the heart of the American economy, was down 29 percent.

In some areas, factories shut down or ran only part time. Newspaper stories of distressed areas became common. Labor income dropped by \$6 billion and the decline would have been greater had it not been for unemployment compensation.

At the depths of this decline, 4 million Americans were jobless and many more were under-employed. For many Americans, this meant skimping and, in some cases, the decline in industrial activity caused actual want. In many cities relief loads soared as people felt the pinch of joblessness.

Although there has been a pickup in economic activity, 2,900,000 were jobless as 1955 began. Economists and business leaders, exuding optimism, predicted that 1955 would be a second-best year, with production below 1953. Despite this optimism, there were indications of a turn in the economy, from one of growth to one of contraction.

America cannot afford a contraction of her economy or even a decline in the rate of economic growth. For the longer pull, failure of the economy to grow must have serious, possibly tragic, results. Rapid changes in technology, bringing with them a signifi-

cant yearly increase in man-hour output, must create a rising living standard or America will be plagued with mass unemployment.

The achievement, in 1953, of a \$370 billion economy gives proof that the problem is not one of production. This rate, in fact, is only a sample of what can be achieved. Only recently, Dr. Gover W. Ensley, staff director for the Congressional Joint Committee on the Economic Report, declared that a 50 percent rise in the national output to \$535 billion is possible within a decade.

Within recent months, accounts of startling technological developments have been featured in leading newspapers. These developments are making possible an even more rapid rate of economic growth than that of the past decade.

The Ford engine plant in Cleveland symbolizes what lies ahead. In that plant, 3 machines and 9 men perform crankshaft hole-drilling operations that required 29 machines and 39 men before the introduction of new automatic devices.

In a recent speech before a gathering of insurance executives, Cleo Craig, president of the giant American Telephone & Telegraph Co., reported that the Bell System already is 83 percent dial and that this will increase to 95 percent within a few years. Craig also reported that customer dialing of toll calls, without the use of an operator, is increasing rapidly; this being made possible by the development of automatic billing devices.

The magazine Automation, devoted to discussion of automatic devices, has reported that electric light bulbs today are blown at the rate of 90,000 per hour in a plant employing 290 workers. Such production would have required 4,000 workers in 1934.

The new Fairless plant of United States Steel, employing 6,500 workers, will produce 2,100,000 tons of steel annually. In older operations, 11,000 workers are required for the same production. Output per man is up 55 percent in steel since 1937, just before passage of the original Fair Labor Standards Act.

America should produce \$400 billion in goods and services in 1955 to continue even the rate of growth indicated in 1953. Failure to achieve this will result in significant unemployment and only illusory prosperity for millions.

Population growth alone adds about 700,000 new workers annually to the labor force. Increased productivity, unless accompanied by expanded consumer demand, must create displacement of workers. In October of 1954, nearly a million fewer workers were employed in manufacturing than in the same month a year previous.

Failure of the United States economy to grow in 1954 and 1955 will prove costly. Estimates of 4 million unemployed in 1955 were common as the year started. Such unemployment will result in lost production worth billions.

America cannot long afford a large pool of permanently unemployed workers. It cannot afford to have in its midst permanently distressed cities and areas. It cannot afford this greatest waste of all—waste of human resources.

There is no reason for American workers to be unemployed. There is no need for America to lose billions in unproduced goods and services. The resources and facilities for increased production are at hand. Greater purchasing power in the hands of those who need it most will stimulate production, since it will be used quickly to improve living standards. A \$1.25 minimum wage, more than any other single thing, will provide such purchasing power where it is needed most.

THE NEED

The human needs of America's lowest paid can be seen at a glance in any industrial community. Substandard housing, broken-down housefurnishings, ill-dressed children,

inadequate diets, the use of dangerous jalopies on our roads—these are only some of the surface manifestations of the need. Beneath the surface lies a more tragic story of inadequate medical care, broken health, needless broken homes, improper child care, and of juvenile delinquency.

Available figures on income distribution, while necessarily impersonal, further highlight the needs of America's lowest paid citizens.

The highest tenth of America's income receivers had a total of 31 percent of all money income in 1953, and the highest 20 percent had a total of 46 percent. At the other extreme, the submerged tenth received but 1 percent of all money income, the lowest 20 percent but 4 percent, and the bottom 30 percent received a combined total of only 9 percent of all money income.

This bottom 30 percent lives in actual want or on its darker edges. This America includes factory workers, distributive workers, communications workers, clerical workers, transportation workers—workers in almost every industry.

This America, by and large, is without savings or reserves. It is condemned to fearful economic insecurity—forced to turn to public and private relief at the slightest shift of the economic winds. Its existence accounts for the greater part of the social-service load that must be borne by the community. It is the group that would benefit most from a \$1.25 minimum wage.

NOT ENOUGH

Although America has grown much stronger and wealthier since 1938, much of its thinking with regard to the minimum wage remains geared to that year.

The 40-cent minimum wage remained in effect through the war years and through the worst years of postwar inflation. When the minimum wage was increased to 75 cents in 1949, living costs had risen by 80 percent. The increase did little more than take the living cost rise into account.

Measured in 1953 dollars, total production of goods and services were worth \$171,800 million in 1938. In terms of these same dollars, total production in 1949 had risen to \$294,200 million; an increase of 70 percent.

America's lowest paid and neediest citizens were excluded from a proper share of this increase in national wealth. In 1949, organized labor called for a rise in the minimum wage to \$1 per hour, based upon increased national wealth and the living cost rise.

In his recent message to Congress, President Eisenhower called for enactment of a 90-cent minimum wage, basing his recommendation upon living cost increases since 1949. This recommendation once more would condemn millions of Americans to second-class economic citizenship, denying to them any participation in America's increased ability to create wealth. It would perpetuate present inequities and, for the longer pull, would cause even greater distortions in income distribution. President Eisenhower, in his Congress message, stated that his recommendation would affect only 1,300,000 workers, who would have their wages raised by an average of only nine cents per hour.

Based upon 1953 dollars, production of goods and services is presently running at the rate of \$356 billion annually; a rise of 110 percent over 1938. A proportionate increase for those wage earners most in need certainly is in order. It would be logical, in view of this, to establish a real wage at least double that of 1938 for these groups—a minimum wage in excess of \$1.50 per hour, in present-day dollars.

American labor is not seeking such a wage minimum, recognizing its sudden impact upon the national wage structure and upon some industries. It is, however, asking \$1.25 per hour to assure to America's most ex-

ploited industrial citizens a fairer share of the Nation's product.

LOW STANDARD DANGEROUS

A continued inadequate minimum wage must inevitably have a lopsided effect upon the Nation's growth and welfare. An inadequate statutory minimum contributes to establishment and continuation of a low wage economy in whole areas of the country. This must cause serious and debilitating repercussions throughout America's mass production economy.

Spurred primarily by a pledge of low wages, and with the added inducement of special tax privileges and locally-paid-for physical facilities, many large and small employers are locating plants in low-wage areas. Given the advantages of low-wage structures, these employers have small incentive to increase efficiency.

Movement of plants into low wage areas causes serious dislocations in the communities from which these plants have fled. The process, in feeding upon itself, becomes a matter of vicious throatcutting. Ultimately, it must endanger the whole national wage and price structure—a cost far too great for any specious advantage that might be alleged at a given moment.

Over any period of time, this process will endanger the very communities into which low-wage plants are being invited. Low-paid workers cannot assume the tax burden of community growth which inevitably follows. The result is inadequate schools, municipal services, and a neglected community with deteriorating homes.

Competition for low-wage plants must also spread, as it already is doing, among communities in each low wage area. Greater and greater incentives must be offered to employers who cause communities to outbid each other. This might well bring shambles instead of industrial development.

What can happen is well illustrated by a letter from the mayor of Pelahatchie, Miss., a community of 989, to a New England manufacturer:

"Then our wonderful labor, 98 percent native born, mostly high-school graduates, will lower average hourly industrial wage rates 6 cents to 49 cents below other Southern States, and from 50 cents to 95 cents below Northern States."

There it is in a nutshell—the mayor promised all this plus 99-year tax exemption and a free plant. Obviously, such standards, if permitted to spread, must become ruinous to the country.

All areas of America deserve maximum development. This can be achieved through proper use of area resources, programs of adequate and cheap power, valley development and through the natural growth of America. Lasting beneficial results cannot be achieved through any wage exploitation driving down living standards and causing more problems than it solves.

The average national wage in manufacturing is \$1.80 per hour. The average wage in manufacturing in North Carolina is \$1.26 per hour. Just as water runs downhill, such low wages must undermine the whole national structure. Establishment of a \$1.25 hourly minimum will remove unfair wage differentials now threatening the economy.

A realistic \$1.25 statutory minimum will establish fairer standards of competition between areas, permitting an enduring growth predicated upon the need and resources of each area. It will provide to each area the mass purchasing power required for lasting growth. It will make for better communities in each area now undergoing industrial development. With the \$1.25 wage minimum, operating efficiency and suitability of a plant to a given area, rather than exploited workers, will become the basis of industrial growth.

THE QUESTION OF COVERAGE

All Americans are entitled to equal protection of the law.

Nevertheless, Congress exempted millions of workers from protection of the Fair Labor Standards Act in passing the original law in 1938, despite its power to regulate by law the wages and conditions of employees in interstate commerce. In 1949, when Congress amended the law, it further narrowed the coverage of the law, instead of providing protection for a greater number of employees.

In the communications industry, for example, Congress exempted those employees most needful of legal protection. These are telephone operators employed in smaller exchanges. While the original law protected all operators employed in exchanges having 500 or more subscriber stations, the amended law narrowed this coverage to provide protection only for operators employed in exchanges having 750 or more stations. As a result of this exemption, telephone operators employed in 10,733 of the 11,502 non-Bell telephone company exchanges have no statutory protection on wages and hours.

Some 7 million workers employed in retail establishments are presently exempted from coverage of the law. Many of these are in jobs affecting or involving interstate commerce. Many more in service industries—laundries, cleaning establishments and the like—are also exempted. These groups are notoriously among the most exploited in America, needing the protection of law to obtain even minimal wage and hour standards.

Certain categories of railway employees, employees of weekly newspapers, certain workers in lumbering and forest industries, workers in agricultural processing, fishery employees, pipeline employees, and seasonal employees are among other significant groups of workers not covered by the Fair Labor Standards Act.

Many of these groups, because of the conditions of their work and the insecurity of their jobs, do not have the benefits of union organization. Low wage conditions afflicting them have a depressing effect upon wage levels generally. The sole recourse of many of these workers lies in the law. Failure of Congress to improve the conditions of these workers is a matter of gross discrimination and a social crime.

Big business lobbies such as the National Retail Dry Goods Association, the United States Independent Telephone Association, the Chamber of Commerce and the National Association of Manufacturers can be counted upon to fight extension of coverage to workers not now enjoying the benefits of legal protection in wages and hours. These groups are almost certain to weep crocodile tears on behalf of the small-business man.

The arguments which are certain to be presented—and the Retail Association has already given forewarning—are as hypocritical as the lobbyists whose tears will flow so copiously. Behind the NRDGA, for example, there lie such small businesses as the multimillion dollar Allied Stores and Federated Stores. In the same fashion, the USITA provides a very convenient front for such small businesses as the General Telephone Corporation, second largest in the Nation's telephone systems.

TIME FOR ACTION

The St. Louis Post-Dispatch, one of America's most respected newspapers, recently carried an editorial entitled "The Deficit in Jobs." This editorial noted that the total number of persons gainfully employed in December of 1954 had dropped to 60,688,000. This was the lowest December total since 1950. It was a million and one-half below August of 1954, which, in turn, was the lowest peak month since 1949.

Peak employment in August of 1954 should have been at least 64,643,000, according to

this same editorial. The editorial expressed extreme concern with this job deficit and urged national recognition of the dangers concerned.

At the present moment, the American economy is underemployed and the Nation is losing over \$30 billion of productive output at an annual rate.

We have the productive capacity at hand. The productivity of our working force is increasing and will rise even more rapidly with the increased use of automated devices in our workplaces.

Our productive machine can run at full capacity if we provide effective consumer demand. This can best be achieved by applying purchasing power where it will be used immediately in the mass production market—to the 30 percent of America most in need of an improved standard of living.

This 30 percent has not obtained its just share of America's increased productivity and wealth. Its wages have hardly kept pace with 1938 levels. It must have a 1955 wage level if our American economy is not to falter.

A \$1.25 minimum wage and broader Fair Labor coverage for our industrial citizens are realistic and sound in the light of the facts concerning our industrial potential. They will permit growth consistent with our new technology. We cannot afford not to establish such statutory regulations. A half-step is an invitation to continued subnormal standards and second-class economic citizenship for millions. It is an invitation to a continued job deficit, to underemployment of our productive capacity and, perhaps, to economic stagnation.

J. Edgar Hoover Warns of Red Boring

EXTENSION OF REMARKS

OF

HON. JOHN MARSHALL BUTLER

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Thursday, March 10, 1955

Mr. BUTLER. Mr. President, there are still many in this country who feel that the problem of subversion and infiltration has been solved and that the tensions of the past 10 years have been fully relaxed. In my opinion, the greatest authority on the ramifications and consequences of this dangerous type of apathy and false understanding is Mr. J. Edgar Hoover, Director of the FBI.

On January 2, 1955, the Baltimore Sunday American included an interview with Mr. Hoover in which he stressed the vital need for continued alertness. This interview has so impressed me that I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the interview was ordered to be printed in the RECORD, as follows:

HOOPER WARNS OF RED BORING—FBI HEAD, ON 60TH BIRTHDAY, SAYS HARD-CORE MEMBERS STILL ACTIVE

(By William K. Hutchinson)

WASHINGTON, January 1.—FBI Director J. Edgar Hoover warned today that hard-core Communists are boring into such basic American industries as steel, automobile, chemical, electrical, and shipping.

The man who, in his more than 30 years as Director has built the Federal Bureau of Investigation into a massive bulwark of national security, sounded the warning in a question-and-answer exchange with International News Service.

Hoover's hard-hitting comments were made in an exclusive interview on the 60th birthday—New Year's Day.

America's top investigative official, who became Director of the FBI in 1924, has no intention of retiring in the foreseeable future. He is in vigorous good health and is wholly dedicated to his career of public service.

Here are the questions and answers which cover the highlights of Hoover's three decades as FBI Chief and which give eloquent expression to his faith in a better, safer, happier America:

Question. In your 30 years as Director of the FBI, what has given you your greatest satisfaction?

Answer. Three matters come to mind. In the first instance, I recall the concern which was manifested by leaders of Government in the early thirties over the rise in power of the lords of the underworld. In community after community these gangsters literally held the power of life over death.

An attitude of defeatism was sweeping the country. This attitude of defeat changed overnight when it was demonstrated that the FBI, with a comparatively small force of men, could secure evidence of their crimes and a determined prosecutive policy of the Department of Justice demonstrated that with this FBI evidence, gangster leaders could be sent to prison.

As a result, the underworld which they ruled was conquered.

Secondly, when the clouds of World War II were lowering, a wave of hysteria broke out of fear against fifth column and enemy assaults within the United States. Through alertness of law enforcement agencies, spearheaded by the FBI, no enemy-directed sabotage occurred and enemy espionage was controlled in World War II while civil rights were preserved in the American way.

Thirdly, the manner in which the work of the FBI has been supported and backed by presidents, attorneys general, the Congress and law-abiding people everywhere has contributed largely to making the FBI the career service that it is today recognized as nonpartisan, objective, and fair in all of its activities.

Question. What is your estimate of the present total strength of the internal Communist subversive force within the United States?

Answer. At the present time the Communist Party has a total membership of roughly 24,000.

These numbers may not seem large, but we must always remember that Communist power is not measured in numbers alone but in organized fanaticism, perverted reasoning and dedication to a cause.

These 24,000 members are hard-core Communists. The "faint hearted" have long ago been purged. The party is today recruiting members, but the most stringent security precautions are in effect.

Question. What is the present status of the internal security of the United States against the constant, insidious subversive activities of the Communists?

Answer. The Communist Party, United States of America, has been hit hard since 1948. To date, a total of 134 Communist leaders have been indicted under the Smith Act. Eighty-one have been convicted. The party has been kept on the defensive. This must be continued and never again should we drop our vigilance.

Question. Is the Communist Party still interested in the Nation's basic industries?

Answer. Most emphatically. The party today may be underground but all the time it keeps paramount the tactic of infiltrating basic industries, such as steel, automobile, chemical, electrical, shipping.

A program of "colonization" is being employed, whereby young party members are being told to secure jobs in industrial plants,

I consider this program one of the most dangerous being conducted by the party.

The party is now implementing a subtle program of trying to infiltrate its members into the well known anti-Communist unions where, in the future, they can exert influence. This program will fail if the truly dedicated American labor leaders remain alert as they have in the past.

Question. Have you any advice to law enforcement agencies, parents, school, authorities of community leaders for meeting the challenge of the present-day problems of juvenile delinquency?

Answer. There is no doubt as to the gravity of the problem. What is needed more than anything else is a determination to give youth a chance to be decent.

If our young people are taught the difference between right and wrong, the fundamentals of life, the virtues of hard work, thrift, integrity, self-reliance, and personal responsibility and, if they are given examples of decency on the part of their parents, adults, and all who come in contact with them, they themselves are more likely to be decent.

The many fine youth serving organizations, such as the Boys' Clubs, Girls' Clubs, 4-H Clubs, YMCA, YWCA, Catholic Youth Organization, the Boy and Girl Scouts, YMHA and the other fine agencies should have the fullest support of adults and youth should be encouraged to take part in these constructive and worthwhile programs.

Question. Can you give any advice on this same problem to the youngsters themselves?

Answer. Yes; first of all boys and girls, be decent and learn that you can make of your life what you will. Seek the guidance of your parents, ministers, teachers, and youth leaders.

They are concerned about you and know what is best for you.

Set your sights high and never be content with any activity until it is as nearly perfect as possible.

Freedom's Frontiers

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. WILLIAMS of New Jersey. Mr. Speaker, the recent Manila-Baguio Conference from which Secretary of State Dulles has just returned renews our hope for freedom in the Far East. More important than our military aid to threatened Asiatic countries, however, is our peaceful help in raising Asian standards of living and production to check the growth of communism. I think it is appropriate to call the attention of the Congress to the New York Times editorial position in this regard:

FREEDOM'S FRONTIERS

Secretary of State Dulles returned yesterday with a word of cheer after another one of those appointed rounds from which neither snow, nor rain, nor heat, nor gloom of night can stay his swift completion. This time he had been in such places as Burma, Indochina, the Philippines, and Formosa.

"I have seen at first hand," he said, as he got off the plane, "the forward positions of freedom—positions which the Chinese Communists are desperately trying to take. I found courage, and love of liberty, and hope." The hope, he thought, "stemmed

largely from the power of the United States and our dedication to the cause of freedom."

This position has the support of 15 chiefs of United States Far Eastern missions, who on Saturday ended a 4-day conference, held at Manila and in the lovely hill town of Baguio. These ambassadors held that, given a free choice, the peoples of the Far East will not be "seduced by gospels of hate designed to stir them up against each other and against other nations of the free world."

The Manila-Baguio Conference had of necessity discussed the question of military aid to threatened Asiatic countries, but it had also, as this newspaper's dispatch from Robert Alden stated, "considered multilateral and bilateral arrangements for cooperation in the achievement of this economic well-being of the people of the Far East."

Communism grows like a weed in the swamp of human misery—and even there it has never been accepted by the majority of any nation except under pressure of armed force. A year or so ago it seemed that this misery and the accompanying force might spread the Red regime through much of Southeast Asia. A few years before that it had seemed that much of Western Europe might succumb to the same evil circumstance. In Western Europe the growth was checked, though its dangerous miasma lingers.

Perhaps we can now hope for a corresponding development in the Far East, though it may be slower and more confused. It is not possible that the people of Asia, having been largely freed from the old-fashioned kind of colonialism, will now turn toward the slavery of Moscow. But to resist they will need our help—and, let us hope, especially our peaceful help in raising their standards of living and production.

Cities Like Worcester Make America

EXTENSION OF REMARKS OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, February 18, 1955

Mr. DONOHUE. Mr. Speaker, a most informative article concerning the history and development of the great city of Worcester, in the heart of the Commonwealth of Massachusetts, written by Mr. Howell Walker, appeared in the February issue of the National Geographic Magazine, and I am pleased to include it here for the information and edification of my fellow Members.

The article follows:

CITIES LIKE WORCESTER MAKE AMERICA—FROM THE VILLAGE BLACKSMITH TO NEW ENGLAND'S LARGEST INLAND METROPOLIS, THIS COMMUNITY HAS GROWN WITH INDUSTRY AND YANKEE INGENUITY

(By Howell Walker)

A white man sat down with a few Indians and smoked a pipe of peace. For 8 square miles of land he gave them 2 coats, 4 yards of cloth, a little money. The trade cradled the city of Worcester a century before the birth of the Nation.

But that bargain went up in smoke when red men burned the first huts. Wilderness regained its grip on Massachusetts' "Far West" frontier, 40 miles from Boston; over the ruins hung the silence of subsequent years. Then daring settlers tried again.

The lure of greener fields urged colonists to push inland from the crowded coastal strip. And Worcester, like so many other New Eng-

land towns, took root despite death and captivity at savage hands.

PERSISTENCE, RESISTANCE, AND SUCCESS

Hardy pioneers named the village for their English city where Cromwell fought and won the last battle against Charles II. Puritan determination developed it for "the better conveniency of attending God's worship, the better education of their children, and for the better accommodation of the tradespeople." To these precepts Worcester has always subscribed.

The city's background is the Nation's. A marker near the site of the earliest log cabins sums up chapter one: "The first settlement of this lonely region called Quinsigamond was attempted in 1673, but abandoned during King Philip's War. A second settlement, attempted in 1684, soon named Worcester, was also temporarily abandoned because of Indian hostility. Permanent occupation was effected in 1713."

In a pleasant valley among the gentle hills of central Massachusetts, the city today goes about life in much the same way as any other American community its size. As an industrial and educational center, the seat of Worcester County fairly represents New England.

For weeks I watched Worcester at work. Its impressive output of high-precision machine tools, steel and wire goods, forgings of aircraft and automobile parts, grinding wheels, and plastic whatnots amounts to an industrial revelation. But it was good to find a midcity smith hammering at an old-fashioned anvil.

Around the village blacksmith Worcester took shape as naturally as a house around its chimney. Some 700 manufacturing concerns have grown up within its municipal area. A population of 205,000 ranks the city third in New England, surpassed only by Boston and Providence, R. I.

Half the employed population works in factories. Nearly everyone goes to church. Thousands attend 109 schools and 6 colleges.

Sleek apartments are replacing outdated 3-decker tenements. Well back from elm-lined streets ramble handsome homes founded on steel, barbed wire, envelopes, looms, emery wheels, firearms, boots, brains—and honest, hard labor.

Worcester's strong tradition of craftsmanship—work expertly done by hand—has never let the Machine Age take the human touch out of its industry. This, plus a vigorous civic spirit and far more than idle interest in culture, makes Worcester tick evenly as the heart of the Commonwealth.

YANKEE INGENUITY FINDS A WAY

In 1685 the village began its industrial career with completion of the first gristmill. For the next century it lived quietly by agriculture and simple household crafts. During long winter months farmers tanned leather, made shoes, furniture, and other necessities. Much of their handiwork they traded at fairs.

Unable to obtain tools, machinery, and technical secrets from abroad, the colonial folk worked things out with Yankee ingenuity.

The town became a key center in a system of stagecoach lines covering the eastern part of the new Republic. But universally bad roads, often impassable in winter, discouraged movement of heavy goods.

In a bold and expensive project the inland community backed the digging of a canal to link Worcester with Providence, seaport of Rhode Island. Opened in 1828, the Blackstone Canal closed after a short but full life of 20 years. It introduced cheap transport of weighty freight and invited enterprising firms to settle in Worcester.

Railroads took over from the canal they killed; local trades gained momentum as steam heralded a new age of power.

INVENTORS CROWD CITY'S HALL OF FAME

Creative minds from the Worcester area revolutionized manufacturing around the world. As early as 1793 Eli Whitney invented the cotton gin; he also standardized parts of other products and opened the way for mass production in America. Elias Howe in 1846 patented the first lock-stitch sewing machine. In the 1850's a physician, Dr. Russell L. Hawes, designed machinery for folding paper into envelopes; Erastus Bigelow invented a power carpet loom; Thomas Blanchard turned out a new type of lathe for irregular forms and experimented with steam power.

The first piano wire made in America came from a Worcester mill. Here originated the steam calliope, the street lunch cart, and, some say, the first Valentine greeting card in the United States. In 1843 Charles Thurber improved the typewriter, effecting a letter-spacing principle still copied today. A graduate of Worcester Polytechnic Institute developed one of the first American gasoline-engined automobiles. And in 1926 a Clark University physics professor, Dr. Robert H. Goddard, first successfully projected a liquid-fuel rocket.

The city's hall of fame contains names of other notables. Here was the home of George Bancroft, eminent historian and father of the United States Naval Academy. Clara Barton, mother of the American National Red Cross and its first president, was born nearby in Oxford and closely identified with Worcester.

Immigrants—Swedish, Irish, French Canadians, Italian, Lithuanian, Polish, and others—supplied much-needed skills and manpower. Eventually, elements of almost all nationalities that make up America's population added their flavor to this melting pot.

Big-business men built factory blocks and rented space and power to small concerns just getting started. This encouraged the little man. If he had an idea, he could begin a project without large outlay of capital.

Worcester still shows intrinsic respect for craftsmanship. Call it art in industry, personal pride in product, or what you will. Here it has endured from the pioneer days of Yankee ingenuity to the know-how of now.

"Worcester really is an industrial museum," the vice president of the Worcester Historical Society told me. "All our big works started here in a small way. It is rewarding to trace their progress from the first rough tools to our streamlined mass production."

Some individual factories have their own special museums. The Worcester Pressed Steel Co. contains the John Woodman Higgins Armory—a remarkable exhibit of man's metal products. It demonstrates the history of the metal craft.

In one long room duplicating the great hall of a Gothic castle in Austria I admired a fabulous assembly of arms and armor. An adjoining hall displays modern steel products: parts for airplanes, automobiles, typewriters, and torpedoes—all made on the premises.

Mr. John Woodman Higgins, chairman of the board of the Worcester Pressed Steel Co., traveled widely to collect and arrange his industrial museum. Its object, in his own words: "To inspire steelworkers, to attract superior craftsmen, to stimulate functional art in industry, to improve steel craftsmanship, to inform the public regarding the history of steel, and to preserve the best examples of steel craftsmanship for future generations."

SHINING ARMOR SHOWS EARLY STEEL CRAFT

Drawn by the glittering array of armor, I visited and revisited the varied collection. I saw the foot soldier's standard uniform of 500 years ago, the ornate protection worn by a reigning prince, and a group of 16th-century knights mounted on chargers.

In the up-to-date wing a metal airplane hangs above an auto chassis, which is 90 percent pressed steel. Exhibits show the company's successive operations in the manufacture of propeller domes for battle planes.

Ordnance Department experts studied this armor collection during World War I, and the plant produced thousands of steel helmets.

Here hangs Jan Brueghel's master panel, the Forge of Vulcan. It shows Venus and Cupid assisting Vulcan at his anvil and furnace; they make tools and products like those exhibited in the museum's cases. Walls of the 17th-century alcove carry portraits of kings in fancy parade armor, while the modern gallery has as many pictures of contemporary craftsmen at their machines and furnaces.

Adjoining the museum, the steel factory also invites visitors. Among the mass of machinery, I watched giant power rolls and presses accomplish in seconds what medieval armorers would have taken months to finish by hand.

Worcester's diverse industries are mostly home-owned, not uncommonly managed and manpowered by generations of the same families. They usually follow the old American custom of plowing back profits. With a generous civic spirit, many direct part of their earnings to local hospitals, art museums, and educational facilities.

WPI TRAINS INDUSTRY'S VIP'S

"Industry made Worcester Polytechnic Institute possible," said its late president, Rear Adm. Wat Tyler Cluverius. "And as long as the engineering college maintains its high standard, it will hold the interest of industry."

Established in 1865, WPI rates high among the Nation's engineering colleges. Its alumni have pioneered in steel, automobiles, aircraft, machine tools, railroading, shipbuilding, electrical communications, chemical research, oil, rubber, and abrasives. An annual enrollment of 900 represents every section of the globe.

The first instructor and superintendent of the institute's machine shops designed valves for an early plunger elevator and started several highly successful manufacturing plants. These include Worcester Pressed Steel and the Norton Co. He was Milton Prince Higgins, known as the father of the public trade school movement in America.

Entering the Worcester Boys' Trade High School, I paused by a bronze plaque. Under the Philosophy of Learning a Trade appeared this simple wisdom: "To make a good living; to have a happy family; to make preparation for hard times; to wear overalls in the shop with the same dignity as good clothes are worn on Sunday—this is the wholesome philosophy of learning a trade." —MILTON P. HIGGINS.

From what Higgins began in 1910 has materialized one of the best equipped training centers of its kind in America. Its courses lessen the need for factory apprenticeships. Its shops have trained hundreds of skilled mechanics for industries like Norton Co., Worcester's biggest industrial concern and the world's largest manufacturer of abrasive products.

In April 1953, Norton Co. added to its already enormous factory a \$6 million precision grinding machine plant spreading over 6½ acres. Two months later a tornado swept through Worcester, leaving the newly built division roofless and littered with debris; the repair bill ran to a million dollars.

"But machines were back in production within 69 hours," said Norton's public relations manager. "And by September 1953, the plant was as good as new."

That tornado, with twisting winds up to 350 miles an hour, left 90 persons dead, 10,000 homeless, and \$50 million worth of damage.

Norton Co. grew out of a potter's shop that successfully bonded natural emery with clay and fired the mixture in a kiln. So began the era of the emery wheel—an improved version of the age-old grindstone. Later the company pioneered grinding with diamond.

Norton now turns out enough grinding wheels to allow every man, woman, and child in Worcester a different type, size, or shape. They range from drills tiny as a dentist's to 10-ton pulpstone wheels 6 feet in diameter.

PULP WHEEL GRINDS 40 CORDS A DAY

"Most mechanically produced pulp for paper is ground with our stones," said a Norton research man. "A large one can grind 40 cords of wood a day."

Another Worcester manufacturer materially helps the paper industry. Rice Barton Corp., established 117 years ago, has probably built more machines for making newsprint than any other company in the paper machine manufacturing field. In fact, the firm forged, cast, and finished the machinery that makes and coats the pages of the very magazine you are reading.

"It takes from 9 to 18 months and about 400 workers to complete just one of the machines," said a representative. "Selling prices are as high as \$2,500,000 for a large machine."

Shortly before 1850 a local doctor, Russell L. Hawes, became so interested in mechanics that he abandoned his medical practice to work for Rice Barton Corp. (then known as Goddard & Rice). A few years later he patented a device for making envelopes. Thus began an industry new to Worcester and to the United States. Prior to Hawes' achievement, Americans usually just folded a letter and sealed it with wax.

Today several divisions of the United States Envelope Co. operate enormous plants in Worcester.

One of the city's oldest and largest industries is also one of the most ancient metal crafts.

"The basic process of wiremaking by pulling metal through a die dates back to the eighth century," an official of American Steel & Wire's Worcester division explained.

Not until 1831 did anyone better the process. Then Ichabod Washburn, a blacksmith by trade, developed a machine for drawing steel rods into wire and started a timely business. Instead of expensive whalebone, women's fashions absorbed wire for hoop skirts, bonnets, and hairpins. And the expanding young West needed barbed wire for fencing livestock on boundless plains.

By 1880 Washburn's concern had grown into the world's leading wiremaker. Nineteen years later it merged with the newly formed American Steel & Wire Co., which subsequently became a division of the United States Steel Corp.

Today the Worcester plant covers 140 acres, employing some 3,500 workers. Monthly output approximates 12,000 tons of steel and wire products.

HOT STEEL ROLLED AT 50 MILES AN HOUR

The magic of wiremaking fascinated me. Like a colossal clothes wringer, the rolling mill presses a 3-ton red-hot ingot the size of a bathtub into a 6-inch bar 90 feet long. The next set of rolls squeezes it thin as your wrist while a flying shear cuts it into 30-foot lengths. These billets gather speed as they pass through subsequent rolls. Out race hot rods at 50 miles an hour to coil up like snakes, no thicker than a pencil but three-fourths of a mile long.

Cleaned in acid, rinsed in water, and coated with lime, a rod is drawn cold through a die to a prescribed diameter. A successive set of dies can reduce it to four-one-thousandths of an inch.

Consider the myriad uses for wire in everyday life: kitchen utensils, nails, screws, and bolts; suspension bridges and needles; hoisting apparatus or typewriter parts;

springs for vehicles, guns, telephone dials, and watches; piano strings, overhead and submarine cables. Ours is a world of wire without end.

In another division of the plant, cold-rolling machines produce flat strip steel for the manufacture of such items as knives, saws, rules, gages, razor blades, and ribs for umbrellas.

The small but significant beginnings of some early industries encouraged others to settle at Worcester. So in the 1830's William Crompton arrived—all the way from Lancashire, England—to manufacture textiles with newly patented machinery.

His son improved power looms and eventually formed the firm of Crompton & Knowles Loom Works. In normal years the company has 2,500 employees on 25 acres of floor space. It yearly ships about 10,000 looms for domestic and foreign use. These machines weave fabric from half an inch to 50 feet wide and weigh from one-half to 60 tons.

"The loom has come a long, long way down the road of progress from the looms of ancient Egypt," a former president of the factory said. "In the benefits it has bestowed upon mankind it ranks with the plow, the printing press, and the locomotive."

FROM SHEEP'S BACK TO CARPET

M. J. Whittall Associates, Inc., weaves a million yards a year of fine Anglo-Persian rugs and modern carpeting.

"We've still got growing pains," said Manager Harry Inett, 50 years with the company.

"We buy our wool directly from the backs of sheep grazing in India, Iraq, South America, and New Zealand," Inett said, "and we process it right through to the finished carpet."

We followed the works from beginning to end: reception of raw wool, scouring, carding, yarn making, wool and worsted spinning, weaving, trimming, finishing, and rolling for shipment.

In 1883 the growing importance of textiles stepped up manufacture of loom parts. Entering the field, two WPI graduates started the Wyman-Gordon Co. They took over a photographer's tiny shop on the cheapest land in town.

Now the company employs more than 2,500 persons in its Worcester division and another 1,500 at its western plant in Harvey, Ill. Watching the operations in Worcester, we flinched from heavy bars of red-hot steel shifted by overhead cranes. Sturdy crews manhandled the fiery metal under steam-driven hammers to shape automobile crankshafts and important aircraft parts. The constant pounding deafened and bodily jolted me.

Imagine the buffeting endured by the actual task force, day after day. Some have stuck to this rugged labor for more than 30 years.

The Government selected Wyman-Gordon to develop a special project: wider use of light metals like magnesium and aluminum in aircraft forgings. England, Russia, and Germany already had facilities for similar ventures; America had to keep pace.

Accordingly, in 1946 Wyman-Gordon completed a new plant at nearby North Grafton. It included an 18,000-ton press, designed primarily for large magnesium forgings and those of aluminum alloys.

How big can a forging plant get? Under the United States Air Force's recent press expansion program, the light-metals forging plant has been increased more than 10 times its original size. Now housed in this massive factory are five presses ranging in size from 1,500 tons to 50,000 tons. Standing by the base of one of these towering presses, I had that feeling of smallness and wonder I have known at the bottom of the Grand Canyon.

I saw \$100,000 worth of jet engine impellers hot off the press, and one of the most intricate forgings ever produced in any metal—a brake-assembly unit of a plane wheel, looking like a birthday cake, candle and all. Here also were aircraft forgings bigger than any heretofore produced in the United States.

Wyman-Gordon, a leader in research work for the industry, has played an important role in the development of techniques for forging steel, high-temperature superalloys, aluminum, magnesium, and now titanium, that new wonder metal.

It's a relief to find in Worcester a place of business proud to produce the smallest something. As an experiment, Commonwealth Press, which prints anything from calling cards to complex catalogs, published a book it believes is the tiniest in existence. It is a translation of verses from the Rubaiyat of Omar Khayyam, bound in leather. Somebody once fitted 24 of the works into a thimble.

FIRST AMERICAN NOVEL PUBLISHED

A printer was the city's first great citizen. Escaping enemy-held Boston, Isaiah Thomas smuggled his press to Worcester in 1775 and circulated its first newspaper. A successor to Benjamin Franklin in this field, he built up the foremost printing and publishing business in the young Republic.

Pioneering in mass-production methods of book publishing, Isaiah Thomas printed the first novel by an American author, *The Power of Sympathy*, by William Hill Brown; also the first medical and music volumes. One of the earliest copies of the Bible published in this country came from his press, as did spellers, primers, almanacs, and ballads of the day. When paper got scarce, he established Worcester's first mill to make it.

To compile his thorough history of printing in America, Thomas accumulated the best source material available. Anxiously he sought to found an institution which could preserve his library and build upon it.

As a result of his efforts, the Commonwealth of Massachusetts incorporated the American Antiquarian Society for "the collection and preservation of the antiquities of our country, and of curious and valuable productions in art and nature . . . to enlarge the sphere of human knowledge, aid in the progress of science, to perpetuate the history of moral and political events."

TWENTY SHELF-MILES OF HISTORY

The society was organized during the War of 1812. At Worcester it was safe from the guns of foreign fleets, and there the society's library and offices have stayed.

On more than 20 miles of continuous shelves rest well over a million books, pamphlets, newspapers, maps, prints, and manuscripts. Fittingly, one room of the building preserves Isaiah Thomas' original printing press.

The library contains copies of 75 percent of all recorded books and pamphlets printed in the United States before 1820. It has the Nation's most complete collection of American newspapers from 1704 to 1821, and for the years up to 1865 the newspaper files rank with those of the Library of Congress.

Distinguished American historians and 12 Presidents of the United States have been members of the society. Leading scholars, as well as the casually inquisitive, have turned often to this valuable storehouse for national knowledge.

In a conversation with Calvin Coolidge, not long out of the White House, someone referred to him as the ex-President.

"But I am still president," Coolidge replied sharply, "of the American Antiquarian Society."

"We get all sorts of queries," said the society's director, Clarence S. Brigham. "Once two elderly men came in to settle a dispute: Who played right field for Baltimore in 1898?"

"We found that very easily," Dr. Brigham said, "because of our immense newspaper files. It was Willie Keeler, who ended up in baseball's hall of fame."

And in the American Antiquarian Society.

In 1829 the Worcester Natural History Society began collecting and labeling wild flowers. Today this organization stresses the need for conservation of America's natural resources. In addition to educational exhibits, the society's museum conducts classes for children and adults in natural-history subjects.

"I don't know what we'd do without the National Geographic magazine," said Director Richard C. Potter. "It's an invaluable and constant source of reference in our studies."

Mr. Potter arranged for me to visit his society's nature-training school outside the city. Walking over some of the school's 40 acres bordering a pond, I found groups of children studying various forms of nature: Flowers, trees, and flowerless plants, astronomy and weather, reptiles and birds (page 201). Since Mr. Potter became director of the Natural History Society in 1940, membership has more than quadrupled.

Among the first in the United States to purchase land for a public park, Worcester has preserved hundreds of acres for recreational purposes. Lake Quinsigamond, 7 miles long, forms the city's eastern boundary; over its current-free course some of the country's topnotch oarsmen race in national regattas; here in 1952 were held United States Olympic rowing trials (page 208).

A minute's walk from a solid block of factories took me to the Worcester Art Museum. Its superb collection of masterpieces ranges from 2600 B. C. to modern times. I saw rare works of classical, medieval, and early American art in galleries that are among the Nation's best (page 198).

In the same area stands the Memorial Auditorium, where crowds swarm to hear unusually fine concerts or watch first-rate plays. For more than 90 years music lovers have annually thronged the week-long Worcester Music Festival, the country's oldest.

BIOLOGISTS STUDY BASIC MEDICAL PROBLEMS

On the city's outskirts, in the mansion of a once-private estate and in several additional buildings, the nonprofit Worcester Foundation for Experimental Biology lives up to its name. Here, scientists strive to solve problems important to mental health, arthritis, cancer, and reproduction. This work is done primarily through studies of hormones produced by the adrenal and sex glands.

In only 10 years of existence the foundation has come up with some interesting findings. Workers discovered that cancer patients secrete an abnormal balance of sex hormones. The present research program involves a study of the chemistry of blood in persons suffering from the disease. Since cancer is a runaway growth of tissues, its causes depend on the intimate chemistry of the cells; and the relation of this chemistry to steroid substances is important to cancer research.

BIG INDUSTRIES FROM SMALL CRAFTS

Worcester's old crafts never die; they usually grow into something bigger. It happened with steel rolling and wire drawing, manufacture of railway carriages and trolley buses, fire extinguishers and firearms, and worsted materials for civilian and military clothing.

Besides the phenomenal growth of older industries, new ones are still springing up. Since World War II, 283 firms have started and stayed in business.

So Worcester grows with increasing industry. But the city's real strength, like that of the Nation, stems from the people. They started from scratch; inventive genius was their chief natural resource, and it still is.

Worcester is a city of industry made so by the character of its citizens. It began with a bargain between white man and Indians. Puritans laid the sound foundation. Then men faced hard work with strong hands, initiative, skill, and intelligence. They still do.

There are other places in the United States like Worcester. Its story is the story of the growth of industrial America. Such communities made this country what it is today.

Resolution Urging Amendment of the Sugar Act of 1948

EXTENSION OF REMARKS

OF

HON. HENRY ALDOUS DIXON

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. DIXON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following memorandum by the State of Utah House of Representatives by Representatives Larsen, Hebertson, Gardner, and Kerr:

House Joint Memorial 1

An act memorializing the Congress of the United States urging the enactment of legislation amending the Sugar Act of 1948 to enable the domestic sugar industry to have a fair and equitable share of sugar consumption in the United States

Be it enacted by the Legislature of the State of Utah:

Whereas the Sugar Act of 1948, as amended provides for a fixed quantity of sugar which can be marketed in the United States by processors producing sugar from beets or cane grown in the United States, Hawaii, Puerto Rico, Virgin Islands; and

Whereas sugar consumption in the United States has increased from 7,500,000 tons in 1948 to 8,250,000 tons in 1954 due largely to an increase in population from 150 million to 163 million during that same period; and

Whereas sugar consumption in the United States may be expected to continue to increase at the rate of more than 100,000 tons per year; and

Whereas under the Sugar Act of 1948 as amended, no portion of the increased consumption is permitted to be produced or sold from beets or cane grown by domestic producers; and

Whereas the sugar industry is a vital part of the agricultural economy of Utah and the Nation, being an important source of income to producers and factory laborers; and

Whereas any national emergency would require the existence of a strong, vigorous domestic sugar industry capable of providing a major part of the Nation's sugar needs; and

Whereas the domestic sugar industry is capable of meeting the challenge of an expanding market and of possible requirements in case of a national emergency, if permitted to do so under the law; and

Whereas the Government has found it necessary to limit the acreage of many major crops because of overproduction, and many of these acres are adapted to sugar beet production which could be used to supply a larger proportion of the domestic sugar needs, and at the same time aid in the solution of the difficult problem of what to do with diverted acres: Now, therefore, be it

Resolved, That the Legislature of the State of Utah does hereby urge the Congress of the United States to enact legislation amending the Sugar Act of 1948, as amended, in such a manner as to enable the domestic sugar in-

dustry to be allowed to produce and sell a fair share of the sugar needed to meet the increased demands of consumers within the United States resulting from our Nation's growth, and to provide for the maintenance of a stable, vigorous domestic sugar industry which will make a sound practical use of farm land now restricted from other use, and to provide an adequate supply of a strategic material within the United States in case of a national emergency; be it further

Resolved, That the Secretary of State forward copies of this memorial to the President of the United States, the Speaker of the House of Representatives of the United States, and to Members of the United States Congress, and senators and representatives from the State of Utah.

The Navy and the Atomic Age

EXTENSION OF REMARKS

OF

HON. DEWEY SHORT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1955

Mr. SHORT. Mr. Speaker, under leave to extend my remarks I submit the following enlightening address delivered by Adm. Robert B. Carney, United States Navy, Chief of Naval Operations, before the Cincinnati Chamber of Commerce in Cincinnati, Ohio, on Monday, February 21, 1955.

Time will prove that Admiral Carney will go down in history as one of our greatest officers of the United States Navy. His address is so full of hard commonsense and irrefutable argument, along with undeniable facts, that it should be read by our present generation and preserved for posterity. It is the product of a clear mind, clean heart, and noble character, born of innate ability, careful training, rugged discipline, and long and successful experience.

THE NAVY AND THE ATOMIC AGE

(Address by Adm. Robt. B. Carney, U. S. Navy, Chief of Naval Operations, before the Cincinnati Chamber of Commerce, the Cincinnati Chapter of the Navy League, and the Naval Reserve Advisory Council of Cincinnati, Cincinnati, Ohio)

The Navy is a composite of great weapons systems capable of discharging its job, both in wars that are hot and wars that are cold. But the word "Navy" represents more than the material components such as ships, guns, guided missiles, and aircraft; it represents a complex system of people who are not only trained in sea-fighting and all manner of technical specialties, but are molded in the fields of character and mentality to produce the utmost of intelligent dedication in the application of their knowledge.

Of the past, I will only say that regardless of their scope and temperature, had we not won the wars at sea, we would not have won the wars. So much for the past. The Navy is not living in the past and we have no intention of doing so. Nor are we merely living in the present. We are profoundly concerned with the tasks which we might be called upon to perform for any crisis in the atomic future. Perhaps I should say that we are concerned with a 3-dimensional projection of history in which we are adhering to the applicable things of the past, planning for the best utilization of what we now have in our locker should we be confronted with an emergency today, and planning a future

Navy that will have the greatest capability for furthering our own national aims and defeating the intentions of any enemy.

Prior to embarking on a discussion of the Navy in this atomic era, it might be useful to permit our informed imagination to contemplate what war in the future could be like.

In its most depraved and horrible form, it could involve the unrestricted use of nuclear weapons on both sides. Consequently, we must reckon on the possibility of the holocaust; but we must also consider that conflicts of lesser scope and magnitude are possible because of the deterrent effect of world-wide understanding of the ghastly consequences of atomic war.

Until nuclear weapons are brought under foolproof international control, they must be included in our security thinking. At the same time, we must not be blinded to other dangers; a single concept could be a trap. Strength in depth, strategic mobility, sensitivity to changing conditions, and versatility are essentials in the scheme of long-range security.

Recent history has taught us the stern lesson that our possession in 1945 of some very powerful weapons did not deter Red conquest of China, nor did it stop the Reds moving into Greece, nor did it stop the Red's march into South Korea, nor did it stop the Communist thrust against Indochina. Nor does it appear to stop them now.

Our mere possession of atomic weapons has not deterred the world's most skillful and persistent arsonists, although it has undoubtedly been an important factor in preventing their setting fire to the world. Perhaps the masters of the Kremlin do not desire a struggle that could bring self-destruction; nevertheless the world may yet see many relatively minor struggles. Minor though they be, they are of profound importance because the sum total of multiple little defeats could add up to a situation of great gravity.

First, we as a nation must be prepared to withstand the shock of the worst surprise blow that could be delivered against us. I, for one, do not subscribe to any idea that the spirit of our people would be whipped by the first blow and ready to surrender. Patrick Henry's words never had more meaning to our citizens than they have today.

The instigator of a war, large or small, always has the momentary advantage of surprise and can predetermine where, when, and how he plans to accomplish his initial objectives. Knowing precisely his own intentions, he can fashion plans and implementing tools which he thinks will be foolproof. But, commonsense would certainly counsel an aggressor that even he must have an assortment of alternative capabilities up his sleeve lest his opponent anticipate his scheme.

Obviously, the defender is in a less advantageous position than the aggressor for he can never be certain that he will be able to predict his opponent's moves, either politically or militarily. Therefore, it is imperative that the defender be prepared for various contingencies; preparation for only one rigid and unalterable course could be suicidal.

Our first and constant objective is to avert war, and the best preventive lies in convincing strength and convincing readiness. Sea-air power plays an important part in this picture with its mobile and flexible capability for contributing to America's power in the air, its elusive capacity for dispersal, its wide range of geographical potentiality, and its built-in defenses.

The Navy would be immediately involved in any atomic exchange—defensively, parrying the enemy's efforts whether they come from above, on, or beneath the sea's surface; and by lashing back with all the destructive force that our sea-based weapons can bring

to bear. For such a fight, the Navy is prepared to make a significant contribution, both with weapons systems already perfected and with others under development.

By its central location in the Eurasian land mass, international communism has the opportunity to radiate out in any direction. Conversely, he could be hit from many directions. From the standpoint of the maritime aspect of this fact, it is significant that beyond his littoral and coastal sea lanes lie vast expanses of ocean in which our forces can operate if we retain freedom of action—carriers, guided missile ships and submarines, or perhaps an elusive force of submarine-supported seaplanes. But these capabilities are not had just for the asking. The Soviets even now own the second largest Navy and are working feverishly to expand it. The prize of maritime supremacy is again being contested. Our national planning must allow for this lest we lose the necessary margin in one of the essential elements of our national security.

It should be noted that these American sea forces I have mentioned all have the built-in attributes of concealment and surprise. Nor do they require any permissive diplomatic arrangements.

With these thoughts for background consideration, let us train our glasses on the horizon for a glance at what could be the pattern of future naval wartime operations.

Should the Armageddon come, there will be the need to blunt and survive the initial attack of the enemy, no matter in what form or from where it may originate. This certainly will involve many of our ships and aircraft operating on vigilant ocean patrol, their electronic sensories probing the depths of both sky and sea to facilitate finding and destroying the enemy's transoceanic raiders. There will be the immediate necessity for sea-based aircraft and missiles to participate in massive attacks against the enemy's source of strength and power.

Presumably, massive blows would continue as long as either side retained the capability. With the passing of that initial phase, and if the issue is still unresolved, tough people would carry on across the radioactive ashes and waters, with what weapons are left. Nuclear explosions will certainly not eliminate the ageless problems which the oceans have presented to man. Even if an enemy gained temporary advantages from an atomic exchange, unless he gained sea control he could not invade our land and take control of our Government. Sea control will be an elemental consideration in accomplishing either the follow-through phase of an atomic war or the better appreciated chores of a prolonged nonatomic war.

To summarize, our Navy would be required to protect sea areas vital to our own and allied interests both before and, God forbid, after the atom; a Navy will be needed to support our national commitments overseas. We might be called upon to seize contested beachheads, to render active combat support to our sister services, to launch and intercept guided missiles—in short, to perform any military task within the realm of our own blue-water interests.

The kind and size of a navy needed to do all these things depends on the arms situation the world over. For naturally, our weapons and methods must change with changing conditions, including the changing nature of our competition. Modern war is ruthlessly competitive, and weakness in any one sector or segment of defense is merely to tempt and perhaps even invite aggression.

In this connection, we in the Navy have been carefully watching and soberly evaluating the Soviet Union's ability to translate her obvious desires for maritime preeminence into solid materials and hardware. They are utilizing their own shipyards to build new cruisers, destroyer-types, submarines and smaller vessels such as tor-

pedo boats and mincraft. They are buying and having built ever-increasing amounts of merchant tonnage from our allies and friends. They are strengthening their naval aviation.

We do not know all of the armament characteristics being built into these new Soviet naval vessels. We do not know exactly how they are progressing with nuclear propulsion, guided missiles and atomic ammunition. We can only assume that they are not overlooking those applications to naval problems. One must also logically assume that they are not building new ships and deliberately equipping them with obsolete armaments—deliberately building new ships to be sunk by more modern weapons, the existence of which is well known to them.

The probability of multiple tasks being involved in future control of the oceans calls for building into all our weapons systems the maximum mobility, flexibility, versatility and last mentioned, but by no means of least importance, economy. An undefeated navy would be of little consolation to a nation suffering from economic collapse.

The rise of the Soviet Navy in no way minimizes the military threat opposing us and our allies on land and in the air, but it does indicate determined Soviet effort to leave no loopholes in the master plan. And there is another point of no little significance. The fact that the Soviets have embarked on a vast naval building program is one of the most conclusive bits of evidence that they are not contemplating a short war.

Recent public discussion here in the United States of Soviet maritime growth has proven to be a rather sensitive matter in Moscow—so sensitive, in fact, that Soviet spokesmen have deplored American naval views concerning the supposed aggressiveness of the Soviet Navy.

I can only say in rebuttal that I can see no valid purpose of any nation going to the great expense of building in a short time the second largest navy in the world, and still expanding, unless it visualizes some need to change the status quo at sea.

There have been other critics from overseas who have sincerely proffered their help to us in determining the future strategy of the United States. Although obviously well intentioned, we must carefully consider the source of such advice which is not necessarily imbued with the American viewpoint nor with an understanding of the United States problems. Perhaps it would not be amiss to point out that they have been somewhat limited in their own experience in the conduct of war at sea.

In some respects the naval officer is a fortunate military man, because from his earliest days, he has not only made his home aboard ships at sea but also he has lived with the many weapons which operate from and with ships. Those who do not wear wings nevertheless live constantly in the shadow of the airplanes' wings for they are normal tools for the job that he is doing on and beneath the surface. The Navy man constantly absorbs through his pores a familiarity with such air weapons as fighters, attack bombers, seaplanes, blimps, helicopters, and more recently, with various types of missiles.

Also, curiously enough, the naval officer rubs shoulders continuously with ground troops—the Marines, than whom there are no finer. No matter what type of ship he is aboard, whether it is an attack transport or an LST in connection with amphibious problems, or whether it is a destroyer or a cruiser which must be trained for accurate gunfire in support of the troops, the naval officer must know something about the Marines' business. He must automatically acquire information that is needed to transition troops from water to land. Actually,

we have gone further than that and rendered support to troops deeply deployed in the hinterland, as was the case in Korea. These contacts with forces of the land, sea, and air have become a part of the United States Navy's business and perhaps entitles us to a measure of confidence in our own appraisal of the realities of sea warfare.

Here in our country we have come to accept argument and controversy as a fundamental method of finding out the truth. Argument is a characteristic of America that you find around the "cracker barrel" of the country store, and in the Security Council in Washington. Perhaps the cracker barrel is one of the finest security councils we have. An appreciation of any subject is always improved by debate. So I should like to digress for a moment and discuss a few points raised by those who are unimpressed by the importance of sea power.

Some have questioned whether the Navy can be depended on to provide safe conduct for sea transport. There are those who still say—in the face of all the fact to the contrary—that the carrier is a dead bird.

First, let us take a look at this sea transport business. I will say at the outset that it would be perfectly wonderful if our country could stand the cost of transporting everything by air.

It is true that certain items must be fast moving; the trend is in that direction, and our war machines, regardless of service and flag, will need the most rapid logistics support possible. This does not mean, however, that surface freighters, rail, road, and ocean are all passe. Far from it, in fact.

It would be perfectly wonderful if our country could stand the cost of sailing all military passengers and cargo aloft over the submarine menace. All the military services would appreciate the inherent advantages of some sort of invulnerable cargo carrier—invulnerable to submarine attack, air attack, and missile attack. But the cost of such an operation is something that must be taken into consideration by us taxpayers. We must consider the cost of cargo aircraft that would be relatively invulnerable, the cost of fuel, and the cost of both airborne and seaborne tankers, the cost of expanded air facilities and maintenance, the cost of operating personnel—all these airlift costs must be weighed against the cost of transporting by sea. Most of those cost differentials are here to stay.

Another consideration is the tonnage requirements of combat in these days. Suffice it to say that whether we are talking of rapidly dispersable armored ground forces or antiaircraft elements, tonnage estimates per man are going higher and higher. So it is with the airman. So it is with the services of our allies to whom we are committed all over the world. The ever-widening logistical demands are staggering. Our overseas airfields need thicker and ever-lengthening concrete runways, more vehicles, more repair facilities, more defensive measures. All the foregoing is not to say that air transport does not have its place; indeed, there are certain critical items that can and should be speedily air transported over great distance to all the services.

The Navy has always had, and will continue to have, an active and participating interest in improving our national airlift capacity, but we also know the bulk of overseas lift must for the foreseeable future be moved by sea and protected in transit.

Now, let us take a look at the carrier. There are millions of square miles of territory in the world from which air power could do a great job of work. But where the requisite of land-based air and its extensive bases either cannot be constructed because of national objections or could not be constructed in time to do us any good, how, then, is air power to be applied from these myriad points on the globe?

Obviously, many of these places can be reached by mobile sea-air power.

As to the reported vulnerability of the carrier, put yourself in the position of the enemy. Your first problem is to know where the carrier lurks. So, you must send out a snooper. The snooper will undoubtedly locate something on his radar, but he cannot be sure what the pip is telling him unless he takes a look. The carrier of course, has powerful, far-reaching radar of its own, as do the carrier planes, as do the supporting ships. And you should see what happens to an approaching aircraft when the modern surface-to-air guided missile sallies forth to extend its greeting. I can tell you that it is quite a thing.

But, for the sake of argument, let us suppose that the snooper gets off his report, "Enemy carrier group latitude so-and-so, longitude so-and-so"; enemy bombers are alerted, and shortly afterwards they take off for the geographical position indicated by the snooper's report. But the carrier force does not stay put. Unless it is kept under constant surveillance, the bombers—jets with a need to husband their fuel—will have to search for it again. Within a matter of hours, it will be hundreds of miles from the point of original contact. Meanwhile, the carriers have already been alerted; their fighters, with performance characteristics equal to anything that will oppose them, are already stationed aloft, their radars probing, their air-to-air missile switches alive. Ships' guided missiles are poised and ready. And do not forget that the atomic art is reaching the point where guided missiles could be tipped with atomic warheads. That kind of flak could make large segments of the sky untenable.

The aircraft carrier has the unique quality of giving us, in the same package, both a hot-war and a cold-war capability. For example, our 6th Fleet in the Mediterranean provides the primary heavy-air striking force for NATO's southern flank. Its primary mission today is to support the armies and tactical air bases located in Italy, Greece, and Turkey. Its presence has had a profound influence on the national attitudes and favorable political actions of our friends in the Mediterranean basin.

In Formosan waters today as the history of the cold war unfolds, another chapter is being written by our versatile, mobile aircraft carriers. They, with their hot-war capability, play an important cold-war role, keeping it cold—or at least cool. The Tachen operation was a shining example of the sort of situation in which American tactical air power could be invoked only by carriers.

The constant combat readiness of a global sea-air capability provides the United States with a military asset and a military advantage of priceless value. Within a few days, our fleets, which are already globally deployed, can be dispatched to troubled areas. Recently, within 4 hours of the time the decision was reached in Washington to cover the removal of troops and civilians from the Tachens, Seventh Fleet aircraft were on guard over the islands and cruisers and destroyers were soon patrolling nearby—ready for anything that might develop. That could only have been accomplished with a readily available sea-air power.

Nor does the carrier provide the Navy's only potential in projecting sea-air power. Seaplanes offer the possibility of providing a significant and flexible addition to our sea-air capability. New military applications of this weapons family are still in the making, but already we visualized a considerable potential.

But perhaps the most significant development is one of which you are already aware. I refer to nuclear propulsion. Nuclear ship propulsion, although still in its infancy, is beginning to expand; and, I predict that it will one day become commonplace in our Navy. Not only are various types of nuclear-

powered surface units surely approaching, but nuclear flight may not be as far away as first anticipated and looks to have attractive possibilities in the field of water-launched aircraft.

In this connection, it was interesting to read what a Soviet scientist has recently envisaged in the field of atom-powered transport. He stated that the installation of nuclear reactors will be particularly convenient in the case of large vessels. Thus, a seagoing vessel with a cargo capacity of several tens-of-thousands of tons will need a supply of nuclear fuel as large as the size of a cigarette case and this will be sufficient for a whole month's sea journey.

The nation that makes a major conversion from oil to atoms will have taken a long stride in the maintaining of sea supremacy.

Although I have spoken this afternoon primarily of the Navy, we are but one component of our total national armed strength and it takes more than a navy to win a war; we know that it takes more than any two of the services. It takes all three services mutually supporting in a common effort. We believe also that it could take more than any one nation to win a major struggle in this complicated age. We will need the combined resources and will of powerful allies and they will need a powerful, vibrant United States. The continued existence of our alliances can only be assured by retention of sea supremacy.

I would like to leave this thought with you. Long after you and I have ceased to participate in affairs mundane, the seas will be a vital highway both in peace and in war; and sea-air power will be needed to secure that highway. It is to be devoutly hoped that our country will never let go by default this great military advantage which we now hold in world where every advantage must be cherished and none needlessly relinquished.

Fine Highways Message

EXTENSION OF REMARKS OF

HON. GLENARD P. LIPSCOMB

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. LIPSCOMB. Mr. Speaker, under leave to extend my remarks, I wish to insert an editorial which appeared in the Los Angeles Examiner on February 24, 1955:

FINE HIGHWAYS MESSAGE

In his special message to Congress on highways, President Eisenhower took a conciliatory, cooperative attitude that brought the highway problem back into its proper focus.

It is exactly this attitude which has been lacking recently in the legislative branch of the Government where intemperate, irresponsible, and usually ill-informed statements have become the rule.

The President stated his suggested program and gave his reasons, but he was not dogmatic nor insistent. He opened wide the door to compromise.

In his words:

"Inescapably, the vastness of the highway enterprise fosters varieties of proposals which must be resolved into a national highway pattern."

The Hearst newspapers must agree with the President's recommendation that the Federal Government assume the principal responsibility for financing the national system of interstate highways.

This recommendation is essentially the Hearst plan for better roads published by this and other Hearst newspapers more than 2 years ago.

It was a good plan then, it is a good plan now, and in the past 2 years it has received the endorsement of almost all of those organizations whose purpose is to secure better roads for America.

And while the President was not insistent, Congress will do well to give this recommendation careful study before it decides to "compromise" the highway bill into something that will not really improve any system of roads anywhere.

We believe that the President's temperate message will settle a lot of unnecessary dust that has been kicked up in political scuffles.

The way is clear now for Congress to get down to work and produce a highway bill based on known needs and known needs only. The highways, as we have said so many times, are not political.

Let's All Be Thankful That We Are in Front of the Iron Curtain

EXTENSION OF REMARKS

OF

HON. CHARLES A. VANIK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. VANIK. Mr. Speaker, I wish to invite attention to the following poem by Cleveland William Schneider which recently won a Freedom Foundation award:

LET'S ALL BE THANKFUL THAT WE ARE IN
FRONT OF THE IRON CURTAIN

(By William Schneider)

Looking out into a free world
What would those enslaved ones see?
Things they never dreamed of
Enjoyed each day by you and me.

Free schools for all our children
Jobs for all who would work
And at good living wages
Whether factory worker or clerk.

Most families own an auto
To roam this land and see
The wonders of our Nation
And just think—it's all for free!

The worker has his union
To bargain for his rights
He sits with his boss 'round the table
And peacefully avoids a fight.

Our laws are based on justice
That's why we are so free
No one can be wrongfully treated
By his municipality.

We worship in our churches
Whether Protestant, Catholic or Jew
Only God is our Supreme Ruler
No one else dictates to you.

Our homes and farms are many
Owned by those of every race
No one dares disturb them
Invasion they never face.

We strive to live a peaceful life
And give a helping hand
To others not so fortunate
Whether here or on foreign sand.

So look outside and see the truth
It's free so come and see
Why peaceful lives are best enjoyed
In lands of Liberty.

One Speaks Out, at Last, for the Little Man

EXTENSION OF REMARKS OF

HON. J. L. PILCHER

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. PILCHER. Mr. Speaker, under leave to extend my remarks, I enclose herewith the following editorial entitled "One Speaks Out, at Last, for the Little Man," which appeared in the Camilla Enterprise, Camilla, Ga., March 4, 1955: ONE SPEAKS OUT, AT LAST, FOR THE LITTLE MAN

It looked like in the last 2 weeks no one was going to speak out for the "little man," who makes up about 99 percent of the population in reference to the House passed, Republican opposed, tax cut of \$20 for every taxpayer.

For a good many years since the war the small taxpayer, the man who really makes up the bulk of the tax-paying numbers and pays the largest proportion of the taxes, has been promised some relief. Most of these tax payers have no write-offs, no depreciation, no deductions, no tricks or special accounts in which to gain a little breather from the heavy load of Federal taxation.

The microscopic reduction which automatically went into effect last year, having been stacked on top of the old rate to finance the Korean difficulty, was so small that it didn't make any appreciable difference in what this taxpayer was paying. Coupled with this was a rise in the social security rate which more than offset this tax reduction and the Nation's smallest taxpayer last year found himself paying more taxes in 1954 than in 1953.

The Democratic move, which would have saved each taxpayer \$20, would have been felt. It would have been felt weekly in the paychecks as the column of deductions was a little smaller.

The politically sensitive House passed the measure over strong protest. The President branded it folly, Republican leadership called it many things, Secretary of the Treasury Humphrey said it was "inflationary" but it remained for an economic adviser to the President to speak out this week with words to the effect that the \$20 was just what was needed to perk up the country. It, as he termed it, would start buying again, would put money where incomes were pinched the hardest. It would do more to reduce unemployment, than reductions at the top.

It has long been a difference between Democratic leaders and Republican leaders as to what makes our economy tick. The Democratic concept is that a few extra dollars in the hand of the smaller wage earner starts the business machine to ticking, while Republican leadership has always maintained that business must be encouraged to make expansions, create more jobs, and the benefits will trickle down to the smaller wage earner.

Inducements since the war have favored the larger investor, the stockholder, the manufacturer, the corporation. The little man is still fighting a heavy load of taxes and higher prices for everything, plus higher interest rates when he borrows. The farmer has seen his income decline due to the same policy and there have been no stimulations for his prices or income.

The proposed tax cut would cost the country a little over \$2 billion. This \$2 billion would be put right into the trade channels in every part of the country and in every

line. Its effect would be very good on business in general. In the long run the Government would perhaps make this money back through increased business income and its corporation tax structure.

The single wage earner making \$50 per week pays Uncle Samuel each Friday or Saturday \$6.80 plus a \$1.00 more social security which makes \$7.80 every payday. That is mighty rough taxes in anybody's language when you measure it against his living expenses. Richer people pay more percentage-wise, but it doesn't cut into their day to day living.

Thirty-second Anniversary of Lithuanian Independence

EXTENSION OF REMARKS OF

HON. THOMAS J. DODD

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. DODD. Mr. Speaker, I would like to call to the attention of the House the following resolution adopted by the Lithuanian American Council of New Haven, Conn., at the observance of the 37th anniversary of the declaration of independence of the Lithuanian people.

I think we might all gain inspiration from the courage of these people who have lost their homeland to Communist aggressors, but not their determination to restore freedom to Lithuania, and uphold it in the United States.

The resolution is as follows:

RESOLUTION UNANIMOUSLY VOTED BY THE LITHUANIAN AMERICANS OF THE CITY OF NEW HAVEN, CONN., AT THE OBSERVANCE OF THE 37TH ANNIVERSARY OF THE DECLARATION OF INDEPENDENCE BY THE PEOPLE OF LITHUANIA, HELD UNDER THE AUSPICES OF THE AMERICAN-LITHUANIAN COUNCIL, AT THE ST. CASIMIR HALL, ON THE 27TH DAY OF FEBRUARY 1955

Whereas in 1940, Soviet Russia, in vicious conspiracy with Hitlerite Germany and in brutal violation of all the treaties and obligations solemnly underwritten by her, invaded Lithuania with armed forces and, against the will of the people, annexed her to the Soviet Union, and, in 1944, following the defeat of the German armies on the Eastern front, again took over that country in complete disregard of the wartime policies and obligations to which the Soviet Union was cosignatory with the United States and other allies of World War II;

Whereas for almost 15 years Lithuania, one of the Baltic nations, has borne the yoke of slavery, as a result of the brutal and unprovoked aggression by the Soviet Union;

Whereas the Kremlin conspirators are constantly trying to seduce the free nations to enter into agreements with the Soviet Union in hope of splitting their common defense efforts and gaining their tacit consent to the status quo of enslavement of millions of people under the heel of international communism: Therefore be it

Resolved, That this gathering of American citizens of Lithuanian descent of the city of New Haven pledge their wholehearted support of this great country's efforts to achieve lasting peace and justice in the world, and urge the Federal Government of the United States to respond to the demands of this crucial time in initiating a positive and dynamic political program against the international Communist conspiracy; be it finally

Resolved, That the Lithuanian Americans of New Haven, once again reaffirming their loyalty to the principles of American democracy, pledge their wholehearted support of the administration and Congress of the United States in their efforts to bring about a lasting peace, freedom, and justice in the world.

MATHEW VOKETARTIS,
President.
MARY JAKUBAITIS,
Secretary.

Loyalty and Justice

EXTENSION OF REMARKS OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. WILLIAMS of New Jersey. Mr. Speaker, the many Americans in public and private life who have justifiably been deeply concerned over the operations of the Federal Government's employee security program can take little pleasure in the long overdue and elementary procedural reforms recently instituted by the administration. Although it is nice to know that the administration has finally become cognizant of the public record of gross injustices which the security program has worked against loyal and competent Federal workers, we are still far from having a just and adequate security program. I am in complete agreement with the editorial position of the New York Times of March 7, 1955, on this most serious subject. Under unanimous consent, I include this editorial in the Appendix of the Record:

LOYALTY AND JUSTICE

The deep and growing disquiet felt by many Americans about the operations of the Federal Government's employee security program has finally impelled the Eisenhower administration to order some badly needed improvements. The latest changes represent a forward step which can be welcomed against the background of all too many public examples in which the security program has worked manifest injustices against loyal and competent Federal workers. This public record of injustices has tended to make Government employment unattractive to able people with alternative opportunities, with the result that at times our security has probably been reduced rather than enhanced.

How serious has been the defects in the security program until now may be realized by taking account of what the situation must have been before the new safeguards now introduced. Federal employees have been suspended without being told of the charges against them, and sometimes the charges have not been "specific enough to be meaningful to the employee." Meticulous care has not always been employed in suspending employees, and there has not always been "a personal interview with the employee prior to suspension." The top legal officers of departments concerned have not always been consulted nor their opinions "secured as to the sufficiency of the information justifying suspension." There has not always been a legal officer present at security hearings. Security boards have not always been composed of "persons possessing the highest degree of integrity, ability, and good judgment."

Heads of different agencies have not always consulted with each other when one agency proposed to make an adverse judgment on a person previously cleared by another.

The quotations given above are from Attorney General Brownell's statement on the substance of the latest changes. This is a late date indeed to introduce such elementary reforms, and it is chilling to reflect on what the situation may have been in individual cases up to now.

Does the latest set of changes go far enough and protect both the national security and the rights of the individual Federal worker? The answer would seem to be rather clearly in the negative. Federal employees still may not confront and cross-examine all their accusers when security officials believe that the production of a particular witness may jeopardize the national security. But by what criteria are such determinations made? Are there other misinformers like Harvey Matusow being protected from exposure under the guise of serving national security? This question must inevitably arise against recent history as background. Is our Government not sufficiently ingenious to protect the identity of particular informants while subjecting their testimony to outside check? The problem is not easy, but it would not seem to be insoluble.

There are other serious problems too. What safeguards now exist to prevent such flagrant miscarriage of justice as was suffered by Prof. Val Lorwin? Professor Lorwin was indicted by an officer of the Eisenhower Administration in December 1953 on the ground that he had lied in denying that he had ever been a Communist Party member and on two related matters. Six months later an Assistant Attorney General had to go into court and ask that the indictment be quashed because the Department of Justice attorney who secured the indictment had made two gross misstatements of fact to the grand jury. Such an outrage was possible, even though Professor Lorwin had earlier been suspended and cleared by the State Department.

The problem of fairness and justice in security procedures has long since become a major national question. Millions of Americans must have security clearances to work for the Government directly, or on Government production orders, or on Government-subsidized projects. To be labeled a security risk today is perhaps the most terrible of brands on a person who has been convicted of no crime and tried in no court of law.

There are those who deserve such stigma and such punishment. But none of us can rest easy in our minds or hearts when we know that innocent men and women may be placed in this most terrible of Coventrys because of the spiteful words of a vengeful neighbor or to satisfy the ambition of an unscrupulous security officer or Government attorney. The soundness of the foundations of our national tradition of freedom and justice are at stake. And if these are not sound, we have no security and can have none.

Natural Gas Industry

EXTENSION OF REMARKS OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 10, 1955

Mr. BROOKS of Louisiana. Mr. Speaker, under the privilege granted me

to extend my remarks in the RECORD, I present an editorial that appeared in the March 1, 1955, edition of the Shreveport Journal entitled "Threat to Gas Industry":

THREAT TO GAS INDUSTRY

Louisiana's producers and marketers of natural gas, as well as those of other States which depend upon this resource for much of their income, should applaud the action of President Eisenhower's top advisers in recommending that the individual States be allowed to retain control of the gas industry.

Specifically, the recommendation of the President's Cabinet members is that the States be allowed to control production, gathering, processing, and sale of natural gas prior to its entry into interstate transmission lines—this in the face of a Supreme Court ruling which has the opposite effect.

The President's stand may have a great bearing upon the manner in which Congress deals with the question during its current session.

Additional opposition to Federal regulation of natural gas production is contained in the March issue of the Guaranty Survey, a monthly publication of the Guaranty Trust Co., of New York. Following are excerpts from the Survey's discussion of the issue:

"Shall the competitive and hazardous business of natural gas production be regulated as a public utility, or shall it be allowed to operate under the rules of private competitive enterprise? The continued vitality and growth of this dynamic industry, and of others as well, may hinge upon the answer.

"The question arose suddenly last June as the result of a Supreme Court decision. By a vote of 5 to 3, the Court ruled that the Natural Gas Act of 1938, which gives the Federal Power Commission authority to regulate sales of gas for resale in interstate commerce, applies to sales by independent producers to interstate pipeline companies. Section 3b of the act reads: 'The provision of this act . . . shall not apply . . . to the production or gathering of natural gas.' For 16 years it had been generally supposed, and the Commission itself had repeatedly ruled, that this exemption covered sales by independent producers and gatherers, that is, producers and gatherers not affiliated with the interstate pipeline companies. The Court's decision, which reversed one of the Commission's rulings, upset this established belief and the practices based upon it.

"The strength of the opposition to Federal regulation of natural-gas production is based upon the belief that it is not only unnecessary but positively detrimental. Gas men are convinced that their industry cannot thrive in a public-utility environment. The cost of drilling dry holes cannot be capitalized and hence cannot be made the basis for rate regulation by conventional methods. Exceptional risks can be taken only when there is a reasonable prospect of corresponding rewards to the successful. Unless these risks are taken, new natural gas reserves in sufficient amounts cannot be found.

"Congress is being asked to amend the Natural Gas Act so as to establish beyond doubt the exemption of producers and gatherers from its provisions. (Such an amendment was passed in 1950 but was vetoed by President Truman.)

"The immediate loss and injustice to natural-gas producers are serious enough, but the questions involved in Federal regulation strike even deeper. An increasingly vital industry is threatened with creeping paralysis. A precious natural resource is exposed to the risk of artificially induced wastage. Consumers face the prospect of effects on price and supply exactly the opposite of those intended. Worst of all, the

whole concept of free competitive markets is under attack. If natural gas production is subject to Federal regulation, no segment of industry entering into interstate commerce is logically exempt. What Congress is being asked to do is not merely to rescue an important industry and its customers from the risk of grave injury, but to reaffirm a basic principle of American politico-economic philosophy."

National Support for Bolton Nursing Commission Plan

EXTENSION OF REMARKS

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mrs. FRANCES P. BOLTON. Mr. Speaker, my resolution to establish a National Commission on Nursing Services, House Joint Resolution 171, has received an outstanding response from key health leaders in all parts of the Nation.

Under unanimous consent to extend my remarks, I am inserting a press release which describes in some detail the public reaction to my legislation:

HEALTH LEADERS THROUGHOUT UNITED STATES STRONGLY ENDORSE MRS. BOLTON'S PROPOSAL FOR NATIONAL COMMISSION ON NURSING—EMPHASIZE IMMEDIATE NEED FOR THOROUGH STUDY—SAY NURSE SHORTAGE IS NATIONAL PROBLEM—COMMEND WISDOM OF LONG-TERM APPROACH

Outstanding groups and individuals representing the fields of public and private health, nurse associations, hospital administrators, State boards of nursing, university deans, State directors of vocational education, State health officers, hospital directors of nursing, community organizations, and other comparable groups, in statements released today by Congresswoman FRANCES P. BOLTON, pledge their wholehearted support of a congressional resolution to establish a National Commission on Nursing Services.

Mrs. BOLTON, Republican Representative of Ohio's 22d District, is noted for 15 years' leadership in the Congress on nursing, health, and welfare legislation. During World War II she authored the Bolton Act which created the United States Cadet Nurse Corps.

The Congresswoman introduced House Joint Resolution 171, to establish a National Commission on Nursing Services, on January 25, 1955. It has been referred to the Committee on Interstate and Foreign Commerce.

Congresswoman BOLTON said she has had specific requests for more than 5,000 copies of her bill from hundreds of groups and individuals in the health fields, State governors, Members of Congress, and leaders in Government, industry, and education.

Leaders were united in their opinion that the nursing situation in the United States is at a critical state and that immediate steps should be taken to find out what the facts are so that remedial measures might be taken by private and public authorities.

Many agreed with Congresswoman BOLTON that the current rate of hospital construction, while vitally necessary, is outstripping the increase in the number of trained nurses. A representative statement was one from Bessie E. Oakes, director, nursing service, Central Michigan Community Hospital, Mount Pleasant, Mich., which said:

"I think the Commission would be a step in the right direction. While the need for more professional nurses is urgent, it is also national in scope and by the very nature of the problem, it must have the long-term approach.

"We have a great need to add at least 50 more beds to our hospital right now and I as a public-minded citizen, say, 'Let's get started.' But, as a nursing administrator, I say, 'Where, oh where, will we get the nurses?' We can build a hospital in a year or 2, but it takes 3 years to train a nurse."

Leaders in various health and community fields underscored Congresswoman BOLTON's emphasis of the need for better utilization of existing nurses and for relating their services to the great advances in the medical sciences. They felt that since the public welfare is the principal objective, Mrs. BOLTON's proposed Commission would go far toward informing the public of the need for a more and better trained nurse personnel. Many respondents said they discussed House Joint Resolution 171 within their professional groups, which then formally offered their services in any way they could be of assistance.

Following are excerpts from representative letters from all parts of the United States:

STATE OFFICIALS

Oregon: Harold M. Erickson, M. D., State health officer, Oregon State Board of Health, Portland: "After reviewing the bill and your remarks upon its presentation, we feel you should be commended for the comprehensive manner in which you have approached this problem of nursing services. We are particularly impressed with your comments regarding the necessity for the economic status of the nurse becoming more nearly commensurate with her skills and added responsibility. The more effective use of nursing skills for real nursing needs is another area we are happy to see that you have included. Our present limited nursing power could surely be expanded by better use of nursing time and at the same time give more satisfaction to the nurse than she now obtains."

Pennsylvania: Robert T. Stoner, State director of vocational education, department of public instruction, Harrisburg: "Your initiative in promoting this worthy endeavor should ultimately result in a unified program of nursing education which will key the education of nursing personnel to the needs of the Nation. I am sure that vocational education as authorized and supported by congressional action will be interested in adding its personnel and facilities to this effort."

UNIVERSITY OFFICIALS

Virginia: W. T. Sanger, president, Medical College of Virginia, Richmond: "If something aggressive is not soon done, I am confident that the public will wake up and find an almost tragic situation due to the shortage of well-prepared nurse personnel. There has been much emphasis of late on recruitment and glamorizing of nursing as a career, but not enough emphasis on developing understanding on the part of the public as to where our country stands now and even more so in the future with reference to nurse shortage. I have not been able to think of any solution except the development of more large schools of nursing supported by tax funds or philanthropy as we support teacher education, although not too adequately."

New York: Mrs. R. Louise McManus, director of nursing education, Columbia University: "Faculty of Nursing Education heartily endorses proposed legislation for the Commission on Nursing Services. We believe multidisciplinary approach to the problems of nursing will contribute to the solution of many related problems which present barriers to providing adequate health services to people of this country. Shortages of nurses prepared to fill key teaching and admini-

tive positions is critical. Training grants are urgently needed."

Florida: Vivian M. Duxbury, dean, School of Nursing, the Florida State University, Tallahassee: "It would certainly seem that the establishment of such a commission might help to interpret to the public our very great need in nursing today, particularly in that field of preparing nurses for teaching, supervisory, and administrative position, as well as for the care of the patient at the bedside."

Ohio: Howard R. Taylor, Jr., vice president, Penn College, Cleveland: "I think you should be commended for this proposal and I firmly believe that such a study will provide the basis for a more effective plan to alleviate the nursing shortage."

STATE BOARDS OF NURSING

Tennessee: Nina E. Wootton, R. N., secretary-consultant, Tennessee Board of Nursing, Nashville: "Be assured of our cooperation individually and collectively in your effort to have this resolution passed."

HOSPITAL ADMINISTRATORS

Connecticut: Hiram Sibley, director of program development, Yale-New Haven Medical Center, New Haven: "That our Federal Government should aim to provide a setting in which such thinking can be done is to me a positive and constructive approach to a complicated social problem. If the right people can be appointed your proposal offers many benefits to the future of the nursing program."

Kentucky: Dr. J. W. Armstrong, superintendent, Berea College Hospital, Berea: "I hope that favorable action will be taken and that results do not get tangled in a jungle of confusion and time. This study could well help solve our problem."

Pennsylvania: T. K. Leimbach, superintendent, Community General Hospital, Reading: "Your bill is a step in the right direction. We sincerely hope that it will become a law of the land."

New Jersey: Raymond W. Stem, administrator, Warren Hospital, Phillipsburg: "After a careful review of the bill, I am firmly convinced that this is the first firm approach to the question of nursing shortages."

Oklahoma: Bryce L. Twitty, administrator, Hillcrest Medical Center, Tulsa: "Your proposal seems to me to be logical and fair and I think it would be a good thing. We are all interested and appreciative of the very fine work you are doing."

Georgia: Dr. W. H. Lewis, director, Floyd Hospital, Rome: "I have read with interest and approval your comments upon the nursing service of the country. The situation warrants not merely study but action."

NURSES ASSOCIATIONS

New York: Hilda M. Torrop, executive director, National Association for Practical Nurse Education: "We are thoroughly in accord with your bill which provides for a Commission on Nursing Services. The NAPNE has long been aware of the need for the type of information the Commission will produce. Many of the points indicated for study are identical with those the NAPNE has outlined in a prospectus prepared for presentation to a foundation, in support of a request for funds to make essential studies."

Arizona: Vellamo Tikkala, R. N., chairman, committee on public relations and nursing education, Arizona State Nurses Association, District No. 12, Phoenix: "I have shared this information by reading the bill at a meeting of the house supervisors and head nurses at the Maricopa County General Hospital, and last night the bill was discussed at our monthly district meeting. Each of the nurses who discussed the bill were very much in favor of it, and agreed that such a commission was needed to find a solution to the present nursing situation."

New York: Ethel G. Prince, R. N., executive secretary, Nurses Association of the Counties of Long Island, Inc., district No. 14, the New York State Nurses Association, Brooklyn: "There is much need of the type of work a commission would accomplish since the building of hospitals has so far outdistanced the number of nurses being educated."

North Carolina: Marietta C. Raines, R. N., B. S., member of the legislative committee of district No. 3 of the North Carolina State Nurses Association, Winston-Salem: "I should like to commend you for your proposed National Commission on Nursing Services. It is something which is much needed in the nursing profession and should have a far-reaching effect in relation to the health and nursing care of the people of the Nation. As a member of the legislative committee of district No. 3 of the North Carolina State Nurses Association, I shall do all I can to see that your proposal is supported in this area."

New York: Joseph F. Munn, R. N., president, Nurses Alumni Association, Brooklyn State Hospital, Brooklyn: "Our praise and encouragement is sent wholeheartedly for your work and success to obtain your goal—and ours. I think this is the shot in the arm the nursing profession needs."

HOSPITAL DIRECTORS OF NURSING

Maryland: Anna D. Wolf, R. N., director, School of Nursing and Nursing Service, the Johns Hopkins Hospital, Baltimore: "I have read your resolution to the Congress with considerable interest. Such a commission as you have proposed should bring before the public very forcibly the requirements for nursing services and the educational and recruitment needs to meet these obligations."

California: Delores J. Schemmel, director of nurses, Huntington Memorial Hospital, Pasadena: "Commission composed of the best appointees available dedicated to objective investigation and study would gain respect of the American people and lead to concerted public action."

Utah: Anna L. Vogt, director of nursing, St. Mark's Hospital, Salt Lake City: "I think your proposal is a sound and practical one, and I sincerely hope that it will be passed and put into effect soon. Your proposed bill is really a practical and sensible measure for providing some workable tools for development and progress in the nursing profession. I would like to express the appreciation of our nursing staff to you. Much success for the passage of this bill."

Maryland: Richard E. W. Bolin, R. N., director of nurses, Springfield State Hospital, Sykesville: "I have given the resolution careful study and as a nursing administrator on the 'firing line' as it were in the critical field of psychiatric nursing, I endorse your resolution completely. Your move, Mrs. Bolton, was inevitable and completely necessary in view of the many situations relating to the national health problem as they involve nursing and nurses. Your proposed commission, I am sure, has excellent possibilities in that it will be able to inject a larger degree of objectivity into its studies and evaluations than has hitherto been possible."

Pennsylvania: M. Naomi Houser, R. N., director of nursing, St. Luke's Hospital, Bethlehem: "I presented the bill to our faculty at conference Tuesday and there was a unanimous decision that I communicate with you to commend you on your fine vision and keen insight into the nursing situation combined with your efforts to further study our needs."

Congresswoman Bolton was asked whether she felt her proposal for a Commission on Nursing Services would preclude specific grants now before the Congress for improvement in practical nurse training programs, for traineeships for graduate training of professional nurses and professional public health nurses, and for research.

"Definitely not," said the Ohio Congresswoman. "The nurse shortage today is endangering the health of the Nation, and we must deal with it as an emergency situation. I strongly support the Eisenhower administration's health proposals. But I feel that emergency action alone will not solve the problem. A national Commission on Nursing Services would deal with the entire scope of nursing services, the effect of shortages on the health of the American public and the possibilities for future legislation which would be of maximum benefit to the public and the health professions."

Address of President Syngman Rhee, of Korea

EXTENSION OF REMARKS

OF

HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. BRAY. Mr. Speaker, under leave to extend my remarks, I want to submit the text of an address by President Syngman Rhee, of the Republic of Korea, delivered in Seoul, March 1, 1955:

Today is the 36th anniversary of our Mance Independence Day and the 10th year since the liberation of our nation from Japanese aggression. We meet today to pay tribute to the patriots of 1919 who undertook to keep the ideal of freedom alive when all around them it seemed to be dead. They lived under the tyranny of one of the world's worst police states, and yet they dared to speak out for justice and liberty at the risk of their own lives.

The best tribute we can pay to them is to show by our own actions that their courage and faith are still alive in our own hearts. The darkness of our own times is like the darkness of the totalitarian terror under which they were enslaved. The dangers of our time may be even greater, but so are our opportunities and our responsibilities.

The patriots of 1919 had no government they could call their own and no soldiers to defend their cause. They had no allies upon whom they could call for help. They had very little to sustain them except their faith in freedom—and this faith proved to be enough.

We in our time see our nation devastated, divided, and threatened by the worst aggressor in all history. But we do have a government and an army of our own. And we do have allies who have proved their integrity and unselfishness in standing by us in our darkest days.

Korea has become a symbol in the eyes of the world. We were threatened but we refused to surrender. We were invaded when we had almost no army at all, but we fought back with endless devotion to our democratic liberties. The world has learned a great lesson from the spirit and courage of the entire population of Korea. Our people endured the worst suffering ever visited upon any nation in the disastrous winter of 1950. And despite everything that has happened to us, the determination of the people of Korea remains as a bright light to encourage all the free world in its struggle to beat back the dark and evil aggression of communism.

I do not mean to say very much about what we Koreans have done. You know what you have all had to endure, and you know that you would suffer as much again, and many times worse if necessary, rather than submit ever to the slavery of communism.

In this life and death struggle we count on the nations of the free world, and especially on the United States. In this time of tortured history, there is only one strong barrier that stands between the Communist tyrants and their dream of world conquest, and that barrier is the strength of the United States of America.

This strength of America is not alone military or industrial; it is largely moral and psychological. It is the same strength that prompted the fathers of the American Revolution to declare their independence in 1776 and it is the same strength which inspired our patriots to declare our independence in 1919. It is the strength of idealism which led the United States to take the lead in bringing the free world to our support when the Communists attacked us in 1950. It is this same unselfish spirit of brotherhood that leads America to help us with our economic reconstruction and that is attempting to build an alliance of anti-Communist strength in Asia.

There is an old saying that those who will not learn from history will be required to repeat it. I wish the Communist rulers would meditate long and deeply upon the role that the United States has played in all its history. America never has been a colonial power. When it came into the Philippine Islands and later into South Korea, it was with the aim of liberation and assistance, not aggression.

There is no more ridiculous charge ever made than the repeated propaganda of the Communists that the United States is building up military bases in Asia for purposes of colonialism and imperialism. Exactly the opposite is the case, as has repeatedly been proved; but they recite their lie in order to deceive the uneducated masses of peoples and line them up against America.

The United States entered South Korea with its armies when we had no government and no military strength of our own. It helped us to conduct elections and build our own democracy; and it has armed and trained for us an army for our own self-defense. Similarly, the United States has intervened in Chinese affairs solely to help defend the last outpost of Chinese independence, for the everlasting benefit of both the entire free world and the great masses of the Chinese people themselves. One of the greatest proofs of American generosity is the great helping hand it has extended to its defeated enemy, Japan.

I wish the people and the Government of the United States were not quite so quick to criticize and doubt themselves. When they hear the Communist propaganda charging that the people of Asia do not like their interference, they are fearful that there might be some truth in such charges, and they have a tendency to withdraw.

If I could deliver just one single message to the heart of all America, it would be this: Trust yourselves a little more. Have faith in your own ideals. For truly the American principles and the American ideal are the last great hope of the world.

The people of Asia know America, perhaps better in some ways than the Americans know themselves. It is too bad that American newspapers have so much to say about the supposed dislike and distrust of the peoples of Asia toward the United States. It is too bad there is so much discussion in America of the fact that the only atomic bombs ever used in warfare were those dropped by American aviators upon an Asian people. This kind of self-castigation has partially, at least, closed the eyes of the American people to the tremendous position of strength they hold in our hearts. Stories such as these are created by the Reds to win over the voting population of every land as part of their Communist revolution campaign. In this way the Soviets have suc-

ceeded in making many nations their satellites. All intelligent Americans should realize this and make it known to their fellow citizens.

No Asian will ever forget that at the time of the Boxer Rebellion the United States used its indemnity from China to educate Chinese students. No Asian will or can forget that the entry of the United States into the Philippines was for the purpose of educating and assisting the Philippine people to attain their independence. No Asian can overlook what the United States is doing for Korea and China.

The truth is that the United States is a giant only partly aware of its own strength. When that giant is awakened by some awful catastrophe, as it was at Pearl Harbor, its strength is shown to all the world—as is its generosity and forbearance after the fighting is ended.

Perhaps it is inherent in any democracy that its real power is concealed except in emergencies. In this period of half-war, half-peace—when every responsible statesman is doing his best to prevent a world disaster—the democracies reveal to everyone their own self-criticisms and their own tendencies to retreat as far as possible rather than to fight.

Under such circumstances, it is the totalitarian dictatorships that look powerful. While the democracies fear that any show of defensive force might precipitate a world war, the dictatorships launch huge air raids upon democratic areas. When conferences are held, the democracies do all they can to relieve tension—while the dictatorships seize that occasion to launch threatening military attacks—as they did at Dien Bien Phu during the Geneva Conference.

But while the dictatorships look, talk, and act fierce, the facts show that they are nothing but paper dragons. Red China has a large army, but the masses of Chinese hate their masters; and there is nowhere on the continent of China any industrial power to support a major war. Russia conducts a tremendous game of global bluff, but is weak in oil, coal, and steel—and has behind its Iron Curtain an uneasy collection of captive peoples who long for the opportunity to reassess their historical independence.

In 1919 the patriots who launched the Marseilles revolution had very little to uphold them except faith in themselves, in the decency of mankind, and in liberal democracy. Their greatest ally was courage, and with it they cast aside fear.

In this world of 1955 the democracies of the earth have no greater need than that same self-confidence and idealistic faith. What is it that causes some of our friends to be afraid?

Is it death that they fear? If so, they should remind themselves that all through human history brave men and women have had to risk their lives in order, slowly and painfully, to win the liberties that we enjoy today.

Are they afraid that in another world war civilization itself may be destroyed? If so, they should take note of the fact that democratic civilization already has been erased from more than half the population of the world. The rest of our civilized areas may also be lost unless we acquire the vision and the courage to defend the great heritage that has come to us from the past.

I do not wish on this occasion to issue only a simple restatement of democratic principles. If I emphasize them, it is not with any intention of avoiding the direct issue of what we should do to confront a very immediate and present threat of Communist aggression.

What I do deeply believe is that our greatest enemy is not the armed masses of Communist soldiers who confront us with one gun in their hands and another gun held at

their own backs. The greatest enemy of the free world is its own fearfulness and self-doubt. If this can be overcome in time, the Communist dictatorships can be stopped and the rot that lies behind the Iron Curtain can be exploited to cause its own collapse.

For 10 years, after the German and Italian and Japanese aggressors were soundly defeated, the free world has retreated time and again before the onward rush of the Communist imperialists. This retreat by the free world and the consequent advance by the Communist dictatorships has created an illusion of weakness on the part of the democracies and of strength on the part of the dictatorships.

The grave dangers that confront us all arise in large part from the existence of that illusion. It blinds the judgment of the allied statesmen as they seek for the means of self-defense. And it similarly blinds the Communists as they make increasingly grandiose plans for still faster advances.

Back in 1917 the intellectual Marxians still believed that they had no other choice than to wait and hope that Karl Marx was right when he promised them that the free world would fall of its own errors and thus pave the way for a nonviolent triumph of communism.

The success of the Communist revolutionists in seizing control of Russia led them to raise their hopes still higher. Then they began to plan actively for world conquest—and under Lenin's leadership they laid down the principle that the surest way to world conquest led through Asia.

During the past 10 years the ambitions of the Communists have constantly expanded. They no longer look to an indefinite and distant future, when the world will fall into their grasp through sheer decay. Now they believe they have built up a military power and a myth of invincibility that will carry them triumphantly through a succession of easy victories to a climactic war of annihilation.

The choices that lie open to the free world today are far more limited than they were 10 years ago. There is no easy road to salvation. There is no security to be won without risk. No one but a demagogue can promise peace and security for freedom except by the harsh and painful way of courage and sacrifice.

The role of Korea in world affairs is not one of primary leadership. We are not even a member of the United Nations. We cannot proclaim a program and expect to rally the free nations around us to achieve it.

Nevertheless, we do feel that our nation has a mission worthy of our great history. When the Communist aggressors struck against us, we fought back. Despite our grievous suffering, when even our allies thought the time had come for a compromise peace, our united voice was raised to ask for yet more sacrifice and suffering in order to gain a basic and essential victory.

And now, when new crises sweep across the world, our voice is still raised to counsel courage, and faith. We stand on the frontal battlefield of the global struggle, but we seek no fancied and false security in neutralism or in the compromise with aggression that all history teaches is only a shortcut to defeat.

We believe in victory. We know what communism is, and we do not think for an instant that it is possible to appease its ambitions. We do not try to coexist with cholera. And we do maintain our hope that this spirit of Korea will yet prove of genuine value to the free world.

We are not a big nation but we refuse to be a weak one. And we face the future with confidence, because we know that among our democratic allies there exists the only genuine reservoir of strength that is great enough to determine the future destinies of the world.

Civilian Distress From Army Camp Fluctuation

EXTENSION OF REMARKS OF

HON. WATKINS M. ABBITT

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. ABBITT. Mr. Speaker, on several occasions I have had the privilege of addressing the House with respect to the problem being faced by the residents of Southside, Va., due to the Army's deactivation of Camp Pickett. It will be recalled that the Army abandoned Camp Pickett on June 30, 1954, following a stay of some 4 years. The camp is now in mothball status with a group of some 75 persons charged with caretaking the Army's investment covering an area of some 46,000 acres.

This is the third time within the past 9 years that this situation has been allowed to exist. Camp Pickett was opened in 1942, closed in 1946; reopened in 1948, and closed in 1949; reopened in 1950, and of course closed again last year.

The result has been a constant strangling of the economy of a large area of Southside, Va. It has been even more disastrous to the small town of Blackstone, Va., which is 3 miles from Camp Pickett.

During the course of the past 16 months, I have been actively engaged in a campaign with the Army and the other related agencies of the Department of Defense attempting to have them make clear what the future will be for this section of Virginia. The Army has taken the position that it does not need Camp Pickett at the present time but that it should be retained for some future use. The Air Force has declined to use it although it admittedly has one of the best airfields in our section of the country. The Army has moved various military units to other less desirable places rather than to utilize the vast facilities of Camp Pickett which are obviously superior.

With this in mind I have endeavored to have the Army declare Camp Pickett surplus in order that this vast acreage be put to some useful purpose and to eliminate this drag on the economy of our State.

A number of newspapers have commented most favorably upon our efforts, and I wish to insert editorials from three of our papers dealing with various aspects of this overall problem which I feel are pertinent to this question.

Editorial in the Daily Press Newport News-Hampton-Warwick, Va., Sunday morning, March 6, 1955:

CIVILIAN DISTRESS FROM ARMY CAMP
FLUCTUATION

Representative CARL VINSON's disagreement with the Southside, Va., effort to have Camp Pickett either disposed of as a surplus property, or used, calls sharp attention to just one of the many wastes incident to war. The most disheartening aspect is that such things seem to be completely unavoidable.

Mr. VINSON, who is chairman of the House Armed Services Committee, said he agreed "that the Army should make use of Camp Pickett, but the camp may have to remain closed." The fortunes of the little town of Blackstone, of about 3,500 population, are intimately bound up in this reservation's use. During the Second World War it was used as an Army penal camp. It was made idle after hostilities ceased. It was reoccupied later, and since then has been closed again. When Pickett is active, Blackstone booms; when it is idle, Blackstone suffers.

This is of at least indirect interest on the peninsula. Take Fort Eustis. As Camp Eustis it was used for staging and training in the First World War; then it was closed. In the early 1930's the cavalry reopened it and did some tank development; then it was closed again. For a time it was used as a Federal penal camp. Then it became a Works Progress Administration camp to rehabilitate depression-hit transients. Again it lay idle, until the Army's transportation corps took it over and now has a large establishment.

Suppose Pickett was disposed of as surplus. If a new crisis arose the Government would have to obtain other land and develop a post. That evidently is why Mr. VINSON wants the Army to keep it on a caretaker basis, as the Army plan now is. Yet so long as it is so maintained it inflicts a boom-and-bust economy on Blackstone nearby. Camp Pickett affords a special example of seemingly unavoidable waste imposing harsh civilian hardships.

Editorial in the Portsmouth Star, Sunday, March 6, 1955:

CAMP PICKETT'S POTENTIALITIES

The congressional controversy stirred by the proposal to sell Camp Pickett near Blackstone, Va., was to be expected. Those Congressmen away from the Virginia situation have a hard time seeing the need for disposal of an abandoned Army camp, and raise the anguished cry that national defense must not suffer. Yet it is our contention that national defense now or in the future will not suffer if the Army disposes of Camp Pickett. However, we do know that Blackstone and, indirectly, Virginia economy will suffer if the camp is allowed to remain on its present standby basis.

The Virginia Jaycees have wisely adopted a resolution which calls for the Army to dispose of Camp Pickett. The resolution points out the fact that not only is an economic vacuum being created in southside Virginia, but the national taxpayer is losing out also. As long as the 46,000-acre tract is in Government hands, Nottoway County can collect no taxes, and while the camp is idle, the area cannot economically benefit from its inactivity. As the camp is 14 years old, it is depreciating rapidly, more so because its structures are not at present being utilized.

A proposal to declare the camp surplus was defeated in Congress last year and should get serious restudy and passage this year. As the camp has been opened and closed three times since its opening in 1942, it is evident the Army has no serious plans to make it a permanent base. With the current emphasis on airpower and atomic weapons, large numbers of infantrymen such as could be trained at Pickett, at great cost since the camp would have to be refurbished after years of inactivity, would not be needed.

Pickett is an exceptionally well-outfitted camp and is considered the best training and maneuver camp in the Second Army area. This alone is sufficient reason that it be opened on a permanent basis. However, as this does not seem to be the Army's desire, in the interests of both National and State economy, the pattern of Camp Butler in North Carolina should be followed.

Camp Butler posed a problem to our Tar Heel neighbors comparable to that which

Pickett presents to Virginia. The State of North Carolina was able to purchase this property at nominal price after it was declared surplus. At Butler, 15 miles from Durham, there were created 4 large State institutions with 760 on the payroll, and 5 industries with 450 on the payroll. There were established youth prison centers, training schools for subnormal mental students (in some instances patients), and a place for alcoholic rehabilitation.

If Virginia can acquire Camp Pickett, many problems besetting our Capital Outlay Study Commission could be more easily solved. State mental hospital facilities now greatly overcrowded could put branches there. Overflowing State colleges could set up temporary or permanent extensions on part of the property. Some prison facilities could be carved out of the area. At present some of the State prison facilities are so overcrowded the prisoners are being stacked like cordwood in firetrap buildings. Also, youth prison centers and training schools for the mentally handicapped could be established. Pickett's potentialities are virtually limitless in the area of industrial expansion.

Solution to the problem must come quickly because of continuing building depreciation from inactivity and because of State needs. The Pickett problem can be shelved no longer.

Editorial in the Progress-Index, Petersburg, Va., Monday, March 7, 1955:

AN EXCELLENT BILL'S GLOOMY PROSPECT

Representative CARL VINSON, Georgia Democrat, and chairman of the House Armed Services Committee, has said "it would be a fine thing" if the Army continued to use Camp Pickett, but the installation "may have to remain closed."

Fourth District Representative WATKINS M. ABBITT has submitted a bill calling for either utilization or disposal as surplus property of the Camp Pickett site. The measure will go to Representative VINSON's committee, which apparently is not a healthy place for it.

Representative VINSON told newsmen recently that Camp Pickett has been given a mobilization-day assignment, which means it would be used again if a defense emergency warranted. Meanwhile, under this condition, it would remain an unproductive piece of potentially productive land.

We have stated a number of times the reasons we believe Camp Pickett should be utilized by the Defense Department or awarded to some private or public source that would make good use of it.

As long as the camp remains as it is, the economy of a large section of southside Virginia will be affected by an unstable force. Representative ABBITT's bill is an excellent one, and we hope it travels past Chairman VINSON to success in House and Senate.

Resolution for Minimum Wage of \$1.25 an Hour

EXTENSION OF REMARKS OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks I wish to include the following resolution adopted by the Greater Lawrence CIO Industrial Union Council, urging Congress to enact legislation providing for the establishment of a minimum wage of \$1.25 an hour:

Whereas the President of the United States has proposed, and Congress is now considering, legislation to increase the Federal minimum wage above the present inadequate figure of 75 cents an hour; and

Whereas a fair and reasonable minimum wage would raise the living standards of underpaid workers, increase the national income, stimulate business activity, minimize unfair industrial competition based upon sweatshop wages and help to solve the problem of runaway shops; and

Whereas a fair and adequate minimum wage is of particular concern to textile workers, whose earnings have been frozen and in many cases reduced because unscrupulous owners of unorganized mills have held wages down below the level of subsistence, who have for 4 years suffered unemployment and partial unemployment from the resulting chaos of liquidations and migrations, and who live in constant fear that some new sweatshop will steal their livelihood; and

Whereas the imposition of such conditions on more than a million workers is an intolerable abuse of economic justice and a threat to the Nation; and

Whereas the President's proposal of a 90 cent minimum falls far short of the need, and will not significantly remedy any of the problems we have cited; Therefore be it

Resolved by the Greater Lawrence Joint Board of the Textile Workers Union of America, CIO, That we most strongly urge the Congress of the United States to raise the Federal minimum wage to \$1.25 an hour, and call upon our Senators and our Representatives to support such legislation and work diligently for its adoption.

Revision and Amendment of the McCarran-Walter Immigration Act and Revision of Fair Labor Standards Act of 1938

EXTENSION OF REMARKS OF

HON. CHARLES C. DIGGS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. DIGGS. Mr. Speaker, today I am introducing a bill to amend and revise our present immigration and naturalization law. I am also introducing a bill to amend the Fair Labor Standards Act of 1938 so as to increase the minimum hourly wage from 75 cents to \$1.25.

First, may I state that insofar as the present Immigration and Naturalization Act is concerned, I am in vigorous support of the chief objections to this law. At no time in the history of our Nation has there been a more desperate need, for the sake of preservation of civilization, to resolve misunderstandings, fears, and distrust among the peoples of the world. We are gripped by awareness that it is these tensions which have spurred nations in the race for military supremacy in atomic warfare.

Over and over again, in this critical period of world history, America has re-avowed its concepts of fairness and standards of decency; its faith in the dignity and worth of all men. We have reaffirmed our faith in the principles of our Declaration of Independence, and to uphold these principles are now, in

this Congress, considering the issue of maintenance of Reserve Armed Forces to protect our way of life, our Nation—homes and families—in their right to freedom and equality.

Yet these contentions, backed up by thousands and thousands of American dollars invested in programs of economic assistance to fellow-nations, in channels of communications—radio, press and goodwill ambassadorships—that we may make our American way of life and the basic concepts of our form of Government made known to propagandized and enslaved peoples of the world, are contradicted by one of the most important laws of a land which proclaims:

Give me your tired, your poor,
Your huddled masses, yearning to breathe free,

The wretched refuse of your teeming shore.
Send these, the homeless, tempest-tost to me,

I lift my lamp beside the golden door.

I do not hesitate to say that there is an apparent keen bipartisan awareness of those contradictions. Former President Harry S. Truman saw them in his veto of present immigration legislation. The present administration's awareness of them was made known in campaign pledges promising remedial action.

The very title of title II, chapter I, of our present immigration law is a contradiction to American concepts in its statement "Annual Quota Based Upon National Origin." It is a provision which discriminates against certain peoples because of national origin, color, and religion. In addition, the quota is based upon statistics concerning the number of inhabitants in the continental United States in 1920, notwithstanding the fact that well before November 11, 1941, concepts concerning unified relationships in foreign policy were revolutionized.

In its administrative features, its vestment of wide discretionary powers within the hands of one official, the present act withholds from its guests and those who proclaim their accord with the American concepts, equal protection of the law. It subjects them as has already been discovered to the possibility of imprisonment without charge of crime.

In addition, the act contains unnecessary restrictions and penalties against individuals. These are but the major objections to this plan.

The bill which I am sponsoring today is one originally introduced by the Honorable EMANUEL CELLER.

Through it the national origins quota system would be eliminated and in its stead our Nation would establish in its book of law its basic policy of acceptance of persons without regards to race, color, national origin, or religion. Preference groups would be established with regard to purpose—as family unification, occupational preference, national interest preference—rather than with regard to national origin and would establish a unified quota system based on 1950 census, with minimum and maximum percentages set equally for all countries.

The bill would eliminate insubstantial ground for revoking or denying citizen-

ship and arbitrary grounds for denying admission. It would make clear distinctions in requirements for entry between aliens seeking permanent residency and visitors coming for other purposes.

We, who form the Congress of the United States, that governmental body which is to represent, reflect, and uphold the principles of government under which our Nation found its freedom from oppression, under which it rose to its present status of world leadership must uphold our own integrity and exhibit openly our sense of moral responsibility by erasing from our books a law which is not in keeping with American faith. I urge this Congress to take swift action to demonstrate its bipartisan faith in the American way of life by working for and voting for the passage of the measure which I have presented.

The second bill which I am introducing would amend the Fair Labor Standards Act of 1938 so as to increase the minimum hourly wage from 75 cents to \$1.25. In our program of fostering economic security, we must give our attention to domestic affairs. The minimum wage under Federal law of 75 cents per hour was established in 1950. In the 5 years since that time there has been an acknowledged substantial increase in the cost of living and in the average hourly earnings in many of the Nation's industries. The increase of the minimum hourly wage, in keeping with the economic growth of our Nation, would assist those workers in areas where recognition has not been given to increasing costs. Such an increase in these areas would have, in increased spending, its beneficial effect upon the Nation's total economy.

I urge the Congress to adopt this measure for a minimum hourly wage of \$1.25 as that figure adequate to meet present economic standards.

The American Jewish Society's Statement on Soviet Policy

EXTENSION OF REMARKS OF

HON. THOMAS J. DODD

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. DODD. Mr. Speaker, the American Jewish Committee has made a tremendous contribution to our understanding of conditions within the Soviet Union. On January 30, 1955, the committee adopted the following statement on present Soviet policy. I respectfully urge my colleagues to read this statement.

STATEMENT ON PRESENT SOVIET POLICY

Consideration of certain aspects of present Soviet policy has led some observers to the hope that there would be a genuine change, including a more equitable treatment of all religious and ethnic groups.

The Soviet Government has recently made some minor concessions to world public opinion, such as the relaxation of travel restrictions, the release of a few selected foreign prisoners, and the softening of hostile

propaganda. However, it has not taken any genuine forward step on the basic issues that separate the Soviet Union and the free world, and it continues to wage the cold war.

In the field of human rights, with which the American Jewish Committee is primarily concerned, there has been no significant change. Slave-labor camps are still maintained; the protests of 100,000 slave laborers in Vorkuta in 1953 were cruelly suppressed. The amnesty proclaimed after Stalin's death excluded most political prisoners, and a new wave of arrests of those suspected of sympathizing with the strikes in East Germany and the satellite countries has taken place.

The Soviet Union still fails to accord elemental human rights to its inhabitants: men are still jailed arbitrarily; the right to emigrate is still withheld; freedom of expression is still suppressed; religious education of youth is still forbidden; religious observance is still strictly limited; free development of religious communities is still blocked.

The Soviets have not modified their policy of suppressing Jewish communal and cultural life. The fate of the Yiddish writers deported in 1948 is still unknown. Jewish communal leaders in the satellite countries remain in jail. Although public anti-Semitic campaigns have been toned down, anti-Jewish propaganda in the disguise of anti-Zionism continues. In Rumania, Czechoslovakia, Hungary, and other satellite countries, hundreds of Jewish leaders, held in jail for years, have received harsh prison sentences for their Jewish communal activities.

The United States and the Western Powers have demanded that the Soviet Union prove by deeds and not mere words that its policies have really changed. Likewise, the American Jewish Committee, as an organization concerned with the fate of 2½ million Jews in the Soviet empire, points to the need for deeds, not words, with respect to human rights.

1. We deeply deplore the failure of the Soviet Union to accord elemental human rights to all within its borders, whatever their race, religion, or nationality.

2. Elementary justice demands that the Soviet Union release all Jewish leaders jailed because of their communal activities; return deported Jews to their homes; permit freedom of religious worship and education; allow Jewish religious communities and cultural institutions to administer their affairs freely; allow emigration to those Jews who wish to do so.

3. The American Jewish Committee is convinced that without the restoration of elementary human rights throughout the Soviet Union there is no reason to believe that the Soviet Government genuinely desires to become a peaceful member of the family of nations.

Adopted January 30, 1955, Hotel Roosevelt, New York, N. Y.

The Matusow Mess

EXTENSION OF REMARKS OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1955

Mr. MULTER. Mr. Speaker, the following article by Stewart Alsop which appeared in his column *Matter of Fact* in the New York Herald Tribune of March 6, 1955, is a graphic illustration of the need for revision of committee investigative procedures.

MATTER OF FACT (By Stewart Alsop) THE MATUSOW MESS

The hearings in the matter of Harvey Matusow, the self-confessed liar and former professional Government witness, have turned into a tedious farce.

This is sad, since the hearings could have served a most useful purpose. But no doubt it was inevitable, in view of the passionate bipartisan desire in the congressional committee's concern and in the Justice Department to conceal their own disgraceful role in the matter.

The Senators who have been grilling Matusow have been working hard to establish two propositions: (a) That Matusow is a liar, a fraud, and not to be trusted, and (b) that Matusow has come under Communist influence and sponsorship. No congressional committee has ever set itself an easier task.

On point (a) Matusow himself is an eager and effective witness. As for point (b), it is now quite clear that Matusow fell to the Communists by default.

He tried to peddle his story all over Washington and New York. But he was so obviously a slippery faker that no reputable publisher, newspaper, or reporter would touch him with a barge pole. In this vacuum, the pro-Communist publishers, Cameron & Kahn, with the backing of a left-wing union, placed a bet on Matusow in the form of a small advance.

The bet paid off lavishly with a detailed confession, which, of course, the Communists have been using to a fare-thee-well.

But if Matusow was so obvious a fraud, how did it happen that three congressional committees and the Justice Department, as well, used him repeatedly as an "expert witness?" And if the Communists are now using him, whose fault is it, if not the fault of the Senators and Representatives and Justice Department officials who built him up in the first place?

In all the barrage of questions in the current hearings, these indelicate queries are never asked. Yet they ought to be asked, and they ought to be answered.

For it is bad enough that Congress and the executive department should accept the word of a man like Matusow without making the slightest attempt to examine his credibility. What is really disgraceful is that from the very beginning, there has been ample and solid evidence that Matusow was a liar, evidence wholly available to the congressional committees and to the Justice Department.

Take two examples: Early in 1952, at the very beginning of his career as an informer, Matusow testified under oath before the Senate Internal Security Subcommittee that he "knew by sight probably 10,000 Communist Party members in New York * * *". This was inherently and obviously a lie. Yet Matusow was an anti-Communist witness, a "friendly" witness. So no questions were asked.

Or again, in the autumn of 1952, speaking in Montana as an "expert on communism," Matusow said on the record that "the Sunday section of the New York Times alone has 126 dues-paying Communists." This particular lie was spotted by these reporters, who pointed out that the entire staff of the Times' Sunday section numbered 87, including two part-time copy boys.

These are only examples of the kind of obvious untruths that should instantly have alerted the Justice Department and the congressional committees. The FBI, to its credit, apparently dropped Matusow early for just such reasons. But right through 1953, as long as Matusow said what was expected of him, the Justice Department went right on hiring him and putting him on the stand as an "expert witness."

In this same period, Senator JOSEPH R. McCARTHY was hailing Matusow as a "great

American." This might be expected of McCARTHY as long as Matusow played the game the McCARTHY way. But many other Senators, including those who have been falling all over each other to show how much they dislike and disapprove of Matusow, heard him respectfully when he testified as an "expert witness," and asked no inconvenient questions.

It once seemed at least conceivable that good might come out of this smelly mess. There is a crying need for an honest and straightforward inquiry by both Congress and the Justice Department, into the kind of practices which are sure to lead to more smelly messes—much to the delight of the Communists—if they are not corrected.

For example, a serious inquiry would determine why neither the committee staffs nor the Justice Department investigators apparently make any effective attempt to establish the credibility of such "expert" witnesses as Matusow. A serious inquiry would also examine most seriously the flatly contradictory and demonstrably untrue testimony of other professional witnesses.

But it was no doubt naive to expect any sober examination of the problem posed by Matusow and his kind. For then the Justice Department and the committees concerned would have to consider their own past practices, perhaps even to admit mistakes—and that, of course, would never do.

Denmark—The Better Way?

EXTENSION OF REMARKS OF

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. GATHINGS. Mr. Speaker, each nation of the world realizes that the basis for its economy is agriculture; and, therefore, what other nations are doing to improve and strengthen their agricultural economy is of interest to us.

For this reason, I am pleased to place in the RECORD a very fine article written by Mr. Harlan Trott, of the Pacific News Bureau of the Christian Science Monitor, concerning the agricultural program of our friend and ally, Denmark.

It is interesting to note that Denmark adopted the Koge resolution the same year the United States Congress enacted the Federal Reclamation Act, and both have had the effect of encouraging the development of family-size farms.

Mr. Trott's article, which appeared in the March 4 issue of the Monitor, follows:

DENMARK—THE BETTER WAY?

(By Harlan Trott)

COPENHAGEN.—In Denmark, of course, there are class distinctions just as everywhere else. Only the Danes have difficulty discovering where to apply them.

This augurs well for the popularity of the Scandinavian Airlines System's thrilling new polar route which makes Denmark and California overnight neighbors.

Any way you look at it, America's breezy westerners are sure to get along just fine with these friendly Danes. There's nothing standoffish about either and SAS will show the way.

It doesn't take visitors very long to detect the high and very even cultural level which the Danes have reached through their excel-

lent school system, including the extremely practical folk schools founded by the great Lutheran Bishop Grundtvig.

This and the quality of democracy out of which it has grown explains why university professors and bus drivers can converse with ease on any worthwhile subject, and usually do.

The only difference between them, according to Mogens Lind, is that bus drivers earn more than professors.

"Nobody looks down on a man who is a millionaire," one straight-faced Dane explained. "Besides, we know that the tax collector is not going to let him go on for very long, and anyway he is not happier than the rest of us."

Knud Tholstrup impressed me as a man no less happy than those who are blessed with more immunity from tax collectors. The Direktor of Kosangas lives in a beautiful new-glass house on the road to Kronborg Castle. He drives a new Ford car, and is a major distributor of bottled fuel gas in Denmark and other Balt countries.

At the same time, Mr. Tholstrup refuses to default to the tax collector. As a member of Parliament he favors the tax-reform program of Denmark's small but influential Justice Party.

Denmark after the war was a country without raw materials, a country badly robbed by the Nazis, a country where the Iron Curtain has cut off a great part of its shipping and trade in the Baltic. Even so, I am told the Danes have the highest living standard among the European nations involved in the last war.

Free trade and land value taxation are two inseparable planks in the Justice Party's platform, policies which helped to prevent the disintegration of little Denmark after the defeat by Prussia and Austria in 1864 reduced Denmark to half the size of Maine.

"What we have lost without we must win back within," Capt. Mylius Dalgas told his countrymen. He referred to the vast wasteland in the Jutland Peninsula. In 40 years this bleak tract was transformed into farms, gardens, and forests.

This will interest Californians. The Danes did it with the same tax principles the people of the Central Valley used to make Modesto and Turlock perhaps the richest farming areas in the world. They did it by taxing the value of benefited land and not the buildings, orchards, irrigation ditches, and other improvements.

The Danes adopted a public revenue system that made it unprofitable to hold land idle. They encouraged farmers to own and use the land and intensify production so as to get the most out of the soil. Just like in the Central Valley of California, the Danes taxed people into business instead of out of business.

Denmark's land reform program worked so well that today 94 percent of Denmark's 200,000 farmers own their own farms. The United States ranks second with 64 percent.

About the time the United States Reclamation Law came into being, the Danes were adopting their so-called Køge resolution. In essence it stated, "As the small-holders consider their form of husbandry to be the most advantageous for themselves and the community, their economy cannot be based on subsidies and contributions from the state or from other sections of the community. They seek no favor for themselves in the way of tax legislation, but on the contrary the earliest possible removal of all tariffs and taxes on consumption or earnings of capital and labor; and they demand instead that, for meeting the public needs, taxes be levied on the land value which is not due to any one person's individual work but arises from the growth and development of the community. Such charges will not weight upon labor but will make land cheaper and thereby make it

easier for every man to have a home of his own."

For anyone confused by the economics of farm subsidies—people paying more taxes in order to pay more for butter—the Køge resolution of 1902 offers food for thought. Denmark's example in trade and taxes implies that a people's wisdom is not necessarily measured by population or income.

The giants of this earth perhaps have something to learn from little Denmark.

Opposition Against Reduction in Tariff

EXTENSION OF REMARKS OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial from a recent issue of the Chelsea Record, Chelsea, Mass.:

TARIFFS, OPTICS, AND SECURITY

Recently, before the Ways and Means Committee of the House of Representatives in Washington, Henry S. Woodbridge, vice president of American Optical Co., spoke on pending legislation to change the Federal tariff structure. Points he raised were vital ones, particularly to people in communities where there are optical plants. Chelsea is such a community, with an American Optical Co. plant at 80 Heard Street.

Mr. Woodbridge opposed the proposed change in tariff regulations which would reduce import duties and thereby increase the flow of optical goods, particularly instruments at present, into this country from foreign sources. The proposal, basically, calls for a 3-year extension of the reciprocal agreements, with the President having the authority to reduce duties by 5 percent each year for 3 years.

Imported microscopes and other instruments already present a serious situation for American Optical Co. and all other instrument makers. West Germany, Italy, England, and Japan already are sending items to this country in ever-increasing numbers. For example: In 1947, imports represented 1 percent of the total microscope sales in this country. In 1954 the same figure was 44 percent. Because of the far lower wage scales and living standards in these countries, these imports far undersell domestic products. This, naturally, reduces the volume of the optical business, and the number of jobs in the industry.

The question Mr. Woodbridge raised was: If the optical industry in the United States is eliminated by foreign competition, who will make the necessary instrumentation in the event of a national emergency? If overseas sources of precision optical apparatus should be cut off—as they have been twice in recent history—where would the United States find the workers to make the lenses and prisms necessary for range-finders, bomb sights and fire-control equipment?

Skilled workers in these fields are not trained in weeks or months. It takes years. If there is no civilian industry—no place where these workers can earn a living at their trade—there will be no skills available if an emergency arises.

An amendment to the proposed bill has been submitted by the industry. It calls only for investigation by the Defense Mobilization Board of circumstances which might threaten national defense or public health with findings and recommendations to be sent to the President for suitable action.

Congress will, eventually, be influenced in this matter by the thinking of the people. Industry has expressed its opinion. People who do likewise may be helping to protect themselves—and their country.

Reviewing the Security Program

EXTENSION OF REMARKS OF

HON. PETER FRELINGHUYSEN, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. FRELINGHUYSEN. Mr. Speaker, on January 20, I introduced H. R. 2590, a bill for the establishment of a Commission on Internal Security. I wish permission to extend and revise my remarks to include an article by Mr. Roscoe Drummond, which appeared in the New York Herald Tribune of March 2 supporting the proposal of a review of our security program by an individual commission:

REVIEWING THE SECURITY PROGRAM (By Roscoe Drummond)

WASHINGTON.—The modest changes which the administration is gingerly making in the employee-security program constitute a useful beginning—but only a beginning.

To put the job of reviewing their own handiwork into the hands of the same officials who devised the security program, and who have been principally responsible for carrying it out and defending it, is not going to get you a very objective or a very bold review. It's like asking baseball pitchers to revise the pitching rules and the batters to revise the batting rules. Each has too great a vested interest in one side.

This is why neither the administration's own basically-everything-is-all-right review of the security program nor the Senate's probably-everything-is-all-wrong review is likely to be adequate.

It is not being unfair to organized Republicans to recognize that their tendency is to find that nearly everything is going perfectly and that all you need to do is to tighten up a bolt here and add a spot of oil there.

It is not being unfair to organized Democrats to recognize that their investigative tendency is to find that nearly everything is going to pieces and that the best solution is to scrap the works, including the Republicans, and start all over again.

The fact is we are not going to get a detached and searching reexamination of how the security program can be made to work better—both for the protection of the Government and for the protection of individuals—until such a reexamination is put unreservedly into nonpartisan hands.

President Eisenhower has acted upon this principle many times—and to good advantage. The several Hoover commissions, the Randall commission, the Highway Commission, the National Conference on Public Schools are all examples of how the administration has acted to take partisan politics out of the study of national problems. This doesn't mean diluting responsibility. The administration's responsibility is to decide what it shall accept or reject and to carry out the program once it is objectively reviewed.

The desirability of having the best possible security program—thorough and fair, just and strong—is as great as the desirability of having the best possible road-building program or the best possible review of veterans' benefits. If a commission study in such areas of public policy and procedure

is useful, it would seem reasonable to put as much care into improving the security program.

One independent investigation of the security program is being undertaken by the New York City Bar Association on a \$100,000 grant from the fund for the Republic.

A proposal for a commission type of inquiry is before the Senate Government Operations Committee this week on motion of Senator HUBERT H. HUMPHREY, Democrat, of Minnesota. I suspect that if the President does not take an initiative stronger than he has thus far, Congress will take the matter in its own hands. This itself is far from ideal, since the primary responsibility for policing the personnel of the executive branch of the Government belongs to the President.

Nearly every newspaperman in Washington knows of cases in which Government employees have been casually, cruelly, or cavalierly treated under the security program. Here is a recent instance:

"I was dismissed without a single direct statement from the Government to me. The news came by devious channels to my superior in my private work. (I worked for the Government in a consulting capacity.) I have never been told the basis of the decision; I have had no hearing, no opportunity to speak in my own defense; and there is no path of redress open to me so far as I can see now."

Attorney General Herbert Brownell, Jr., has just announced that from now on the employee must be fully acquainted with the specific charges against him and that he should be given a personal interview.

It will seem unreasonable to many that it has taken 2 years to establish such a minimum essential of justice—to know precisely what you are accused of and to have a chance to defend yourself to your chief—and this suggests that a bolder, more detached review would break new ground for the benefit of everybody.

Extending Universal Military Service and Training Act

SPEECH

OF

CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1955

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 3005) to further amend the Universal Military Training and Service Act by extending the authority to induct certain individuals, and to extend the benefits under the Dependents Assistance Act to July 1, 1959.

Mr. HOFFMAN of Michigan. Mr. Chairman, this is the Tydings amendment, so-called.

Mr. DONDERO. Mr. Chairman, will the gentleman yield?

Mr. HOFFMAN of Michigan. I yield.

Mr. DONDERO. Mr. Chairman, it is possible I may be absent from the Chamber at the time the vote is taken on this bill. If so, and I could be present, I would vote for it.

Mr. HOFFMAN of Michigan. Mr. Chairman, this is the so-called Tydings amendment which the Congress wrote into the law when the draft act was earlier before us and again when the act was extended.

I understand an attempt was made to by the amendment which was accepted by the chairman of the committee, and which was adopted earlier today. But under the law as it is written even with that amendment there is doubt about what will happen to farm workers.

This amendment is offered because the armed services just does not pay proper attention to the laws which the Congress enacts; and I would like to make it clear to the departments if I may, that when we write a law we would like to have the executive department execute it.

To substantiate what I say I am reading a directive issued by General Hershey on the 3d day of January 1945. The directive follows:

EXHIBIT B

State Director Advice (No. 288) Issued: January 3, 1945.

Subject: Reclassification of registrants in agriculture, ages 18-25.

(Confirmation of telegram to all State directors within continental United States dated January 3, 1945.)

The following letter from the Director of the Office of War Mobilization and Reconversion has been received by the Director of Selective Service:

"The Secretaries of War and Navy have advised me jointly that the calls from the Army and Navy to be met in the coming year will exhaust the eligibles in the 18-through 25-year-age group at an early date. The Army and Navy believe it essential to the effective prosecution of the war to induct more men in this age group.

"You have reported that other than the men becoming 18 years of age the only remaining substantial source in this age group is in the 384,000 men now deferred because of agricultural occupation. You have further advised me that if this group is not available, you must call into the service occupationally deferred men in the next age group, 26 years and older, most of whom are fathers.

"The Chairman of the War Production Board, Mr. Krug, advises me that the loss of these men would make it extremely difficult, if not impossible, to meet critical war demands. Moreover, these older men would not meet the expressed needs of the Army and Navy.

"The War Food Administrator, Mr. Jones, has advised me that although we still need all of the food we can raise, the loss of production through the induction into the armed services of the physically qualified men in this 18-through 25-year-age group who do not clearly fall within the scope of the Tydings amendment should not result in a critical condition.

"The Tydings amendment to the Selective Service Act does not give the agricultural worker absolute exemption from selective service. It was not so intended. In asking Congress to adopt this amendment Senator Tydings said: 'All my amendment seeks to do is to provide that whenever a person is employed continuously in good faith in the production of food, and taking him off the farm would leave a large section of land uncultivated, and there is no replacement, he shall be deferred upon those facts until a replacement can be found.'

"I have reported these facts to the President. He has found that the further deferment of all men now deferred in the 18-through 25-year-age group because of agricultural occupation is not as essential to the best interest of our war effort as is the urgent and more essential need of the Army and Navy for young men. The President feels in view of existing conditions, agriculture like our other war industries can, with few exceptions, be carried on by those in the older age groups.

"The President has authorized me to ask you to take such action in connection with the administration of the Tydings amendment as may be necessary to provide to the full extent permitted by law for the reclassification and induction of the men agriculturally deferred in the age group 18 through 25."

Forward text of Justice Byrnes' letter to all local boards and boards of appeal. Direct all local boards to promptly review the cases of all registrants ages 18 through 25 deferred in class II-C excluding those identified by the letters "F" or "L." In considering the classification or retention of such registrants in class II-C, local boards will consider the President's finding that "the further deferment of all men now deferred in the 18-through 25-year-age group because of agricultural occupation is not as essential to the best interest of our war effort as is the urgent and more essential need of the Army and Navy for young men." Also direct local boards to issue orders for preinduction physical examination to all registrants ages 18 through 25 in class II-C excluding those identified with the letters "F" or "L" in accordance with the most expeditious schedules it is possible for you to arrange with the commanding general of your service command. In order to accomplish the review and preinduction physical examination as promptly as possible, local boards may conduct the review of any such class II-C registrants at the same time as they are forwarding such registrants for preinduction physical examination.

HERSHEY.

That directive created so much criticism that the general issued another one on the 23d day of the same month.

The second directive follows:

EXHIBIT C

State Director Advice (No. 288-A) Issued: January 23, 1945.

Subject: Reclassification of Registrants in Agriculture, Ages 18-25.

(Confirming telegram to all State directors within continental United States dated January 22, 1945.)

Questions of interpretations of State Director Advice 288 have been brought to my attention by Members of Congress and by others.

The directive of January 3, 1945, State Director Advice 288, did not change or modify in any manner the Tydings amendment. The opinions and findings contained in State Director Advice 288 were for the consideration of the local boards in determining the classifications of registrants in the age group 18 through 25.

Section 5k of the Selective Training and Service Act known as the Tydings amendment places upon each local board the responsibility to determine, subject to appeal, in the case of the individual registrant whether or not the registrant meets the requirements prescribed by this section.

Notify all local boards immediately.

HERSHEY.

(This telegram was dispatched only to State directors within the continental limits of the United States as it is not applicable in the Territories of Alaska, Hawaii, Puerto Rico and the Virgin Islands.)

The result was that the State authorities instructed the local boards to disregard completely the Tydings amendment.

In support of that statement I cite the CONGRESSIONAL RECORD of February 2, 1945, when this same issue was before us. Permit me to read a part of that debate.

At that time—February 1945—the Honorable Earl Michener—as capable, as industrious a Member as ever served in this House—addressed the House and

called attention to the disregard of the provisions of this amendment by local authorities interpreting and administering the act. Permit me to quote:

Mr. Speaker, a few days ago I called the attention of the Congress to the alarming condition in agricultural sections because of the interpretation being placed by local draft boards on General Hershey's directive of January 3, requiring the reclassification and induction of boys 18 through 25 years of age who were deferred because of agricultural occupation.

Then, referring to a statement issued by the local board, our former colleague said:

The above statement by the board was published on January 29, and in the evening of the same day Maj. Nick A. Luscombe, representing the Michigan State director of selective service, addressed a meeting in Lenawee County and made it clear that all farm registrants 18 through 25, who were physically qualified, were to be inducted into the military service, the Tydings amendment and the statutory law of the land to the contrary notwithstanding.

The gentleman then added:

We are asking that the local boards, whose members live in the community and know the facts, be permitted and required to draft or defer under the provisions of the law provided by the Congress. (CONGRESSIONAL RECORD, vol. 91, pt. 10, 79th Cong., 1st sess., Feb. 2, 1945, pp. A411-A412.)

On the same subject, from the Well of the House, on February 5, 1945—CONGRESSIONAL RECORD, volume 91, part 1, page 829, 79th Congress, 1st session—will be found a statement which, taken in connection with what happened at that time, shows clearly that the executive departments do not follow the law as it is written by Congress:

Mr. HOFFMAN. Mr. Speaker, the confusion which has arisen over the drafting of agricultural workers, in my judgment, can be laid to the directive of General Hershey issued on the 3d day of January 1945, No. 288. The gentleman from Michigan [Mr. Hook] inquired of the gentleman from Minnesota [Mr. Knutson] where there was any reason to charge the drafting of these men to the President. If the gentleman from Michigan [Mr. Hook] will read Directive No. 288—CONGRESSIONAL RECORD, page 761—sent out by General Hershey he will find there quoted the statements of Mr. Byrnes and Mr. Jones, and in the statement signed by General Hershey, quoting Mr. Byrnes, it is stated:

"I have reported these facts to the President. He has found that the further deferment of all men now deferred in the 18-to-25 age group because of agricultural occupation is not as essential to the best interests of our war effort as is the urgent and more essential need of the Army and Navy for young men."

There is where the trouble started, and you cannot get away from it. The fact is that after that order went out the local draft boards throughout the country, acting on it, as the President must have expected they would, began to ignore the Tydings amendment. They began to put men who were in II-C directly over into I-A, and to send them into the Army without any review as to whether they fell under the Tydings amendment and should be deferred. When they did that they disregarded their duty.

In my judgment, they are not to be criticized, because the idea that the Commander in Chief can do no wrong, make no mistake, has been stressed so often and so strongly by some papers, by Members of Congress, by almost every columnist, that as a practical matter the local draft boards had no choice.

I know what has happened and so do you. A local draft board which deferred these agricultural workers would have been charged, just as you and I have been charged during past months, with being disloyal, with aiding the enemy, with exempting men who were not entitled to be exempted, with refusing to support the war effort. Who is there in a local community who wants to stand up to that kind of criticism from the daily press, from the administration, and the administration spokesmen?

There is more to the same effect to be found in the CONGRESSIONAL RECORD. Permit me to quote—CONGRESSIONAL RECORD, volume 91, part 2, page 2431, 79th Congress, 1st session, March 19, 1945:

Mr. HOFFMAN. Mr. Speaker, whether, if the present policy of General Hershey in disregarding the Tydings amendment is followed there will be a shortage of food, I do not know. . . .

I do know that notwithstanding the so-called corrective of the directive sent out by General Hershey some local boards were advised by selective service officials under General Hershey to disregard that corrective.

Similar complaints were made in the Senate. On April 23, 1945, Senator Shipstead of Minnesota, among other things, said—CONGRESSIONAL RECORD, volume 91, part 3, page 3634, 79th Congress, 1st session:

Mr. SHIPSTEAD. Mr. President, I ask unanimous consent to have printed in the RECORD a concurrent resolution which was adopted by the House of Representatives by a vote of practically 4-to-1, dealing with the question of drafting farm help, and its effect upon the production of agricultural products, and asking for the appointment of a joint committee of the House and the Senate to investigate.

There being no objection, the concurrent resolution (H. Con. Res. 29) was ordered to be printed in the RECORD, as follows:

"Resolved by the House of Representatives (the Senate concurring). That in order that there may be no further misrepresentation of the will and the desire of the Congress in enacting subsection K, section 305, title 50, United States Code, commonly known as the Tydings amendment to the Selective Service Act, Congress reaffirms the necessity to our war effort of said subsection K and again expresses its will and desire that the local selective-service board, in classifying the registrant, observe subsection K and concern itself solely with the registrant's essentiality to an agricultural occupation or endeavor, and to the question of whether or not a satisfactory replacement can be obtained."

The purpose of this amendment is to call attention to the fact that, as long as there is a provision in the law which permits the President to use his discretion as to deferments, the will of the Congress will not prevail.

The gentleman from Georgia [Mr. VINSON] made the statement that the amendment offered by the gentleman from Virginia [Mr. HARRISON] took care of the situation. In my humble judgment, it does not take care of the situation, because, under the law as it would read, the President still has authority to make the rules and regulations governing deferments. This situation is not new, nor is the disregard by the executive department of legislation enacted by Congress new.

Please note that the House, by the adoption of House Concurrent Resolution 29, on March 19, 1945, recognized the necessity not only for the Tydings

amendment, but for a further directive to the executive department.

We are today putting through legislation which gives the armed services control for a period of 8 years over the lives of every physically and mentally fit American young man.

Why enact a draft or conscription act which carries a loophole which will enable the executive department to conscript into the service individuals that the legislative department—the Congress—declares shall be entitled to deferment or exemption?

The amendment which I have offered is the Tydings amendment. It was debated in both Houses. It was adopted by a substantial majority in both Houses. After its terms had been disregarded by the armed services, the House and the Senate found it necessary to call attention to this maladministration. There would seem to be no reason why today, extending the act for 4 years, that Congress should not, in unequivocal terms, express its will.

Puget Sound Naval Shipyard

EXTENSION OF REMARKS

OF

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1955

Mr. PELLY. Mr. Speaker, under leave to extend my own remarks and include extraneous matter, I would like to say that during the past 2 years I believe there have been some rather significant and heartening developments in our naval shipyards. A spirit of competition as between various public yards has resulted in cost consciousness by the respective labor-management area groups to the end of obtaining more defense for the taxpayer's dollar. A program looking toward elimination of peaks and valleys in employment levels has raised morale. So has a policy of incentive awards.

From close personal observation, I have found that the Bureau of Ships is making every effort to schedule work so as to combine economy and stabilization of employment which is a most difficult assignment.

I cannot praise too highly the personnel of the Department of the Navy from the Secretary on down for the effective way that the construction and modernization program is being handled.

In my congressional district is the Puget Sound Naval Shipyard, which has been recognized because of its record of quality, efficiency and economy. This yard is the community project of Bremerton, where labor, management, and all segments of the population combine through an organization called the Puget Sound Naval Base Association to justify and maintain a stable workload.

The following resolution adopted March 7, 1955, by this association reveals its cooperative and forward-looking objectives:

Whereas a major objective of the Puget Sound Naval Base Association is the develop-

ment of various ways and means to help maintain a relatively steady workload for the Puget Sound Naval Shipyard; and

Whereas the achievement of this objective permits the shipyard to stabilize its employment, thus bringing about an efficient, businesslike utilization of its supply of highly skilled shipbuilding craftsmen, and thereby contributing to both the short-time and long-time total defense of the United States; and

Whereas the Puget Sound Naval Shipyard is demonstrating repeatedly that its productive team of management and labor is a leader in the field of aircraft-carrier conversions and is capable of performing low-cost quality repair work for ships of the fleet when called upon; and

Whereas the shipyard is located on a deep-water seaport in close proximity to the strategic North Pacific Ocean and is located in the Kitsap County community, which is keenly and vitally interested in the Navy and is pleased to have the men of the fleet as friends, neighbors, and visitors; and

Whereas the shipyard is manned by career craftsmen, artisans, professional engineers, many of whom have dedicated their lives to naval shipbuilding and who are teaching valuable knowledge and experience to the youth of the community; and

Whereas Adm. Robert B. Carney, Chief of Naval Operations, United States Navy, in a recent address prepared for the Cincinnati Chapter of the Navy League, the Naval Reserve Advisory Council, and the Cincinnati Chamber of Commerce, said that atomic powerplants for aircraft are closer than had been anticipated and predicted that atomic propulsion will become commonplace in our Navy; and

Whereas Charles S. Thomas, Secretary of the Navy, told the Senate Armed Services Committee that planes and ships are being equipped with guided missiles; and

Whereas the budget and workload schedules are being reviewed at the national level: Now, therefore, be it

Resolved by the Puget Sound Naval Base Association, That the entire Washington State congressional delegation be encouraged to work actively toward these goals:

1. Construction of a new large drydock, capable of both the construction of and repair of underwater damage to the large aircraft carriers of the future.

2. Continued conversion work on aircraft carriers for all types of aircraft. This includes the U. S. S. *Coral Sea*.

3. A stepped-up program of repair and overhaul of live ships.

4. Construction of large *Forrestal*-type carriers whenever the decision is made for construction on the west coast.

5. Establishment at once of an atomic propulsion project with arrangements for selected project members to work with Hanford, Wash.; Arco, Idaho; and other atomic projects.

6. Construction of modern submarine repair facilities with at least one sub overhaul job per year so as to maintain essential skills. Proximity to Carr Inlet is to be noted.

7. Construction of small craft of one type or another to assure diversity of skills.

8. Conversion of vessels to fire guided missiles.

9. Continue to obtain work on submarine contracts from the Hanford plant and similar organizations; be it further

Resolved, That the Washington State congressional delegation be encouraged to make strong representations to the Navy Department for the strategic basing of an operation fleet in the Puget Sound area; be it further

Resolved, That copies of this resolution be sent to each member of the Washington State congressional delegation, the Honorable Secretary of the Navy, and the Honorable Governor of Washington State.

No Stone Unturned

EXTENSION OF REMARKS

OF

HON. PETER FRELINGHUYSEN, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. FRELINGHUYSEN. Mr. Speaker, because of its general interest to all Members of Congress, under leave to extend my remarks I should like to include an article from the *Christian Science Monitor* of March 2, 1955, entitled "No Stone Unturned":

NO STONE UNTURNED

(By Neal Stanford)

WASHINGTON.—Twice before official Washington has taken a look at this subject—and filed it away for future reference. But the chances are that it will not be pigeonholed this time. That recent 40-by-220-mile H-bomb fallout picture was too graphic. The result is that both on Capitol Hill and in the hush-hush departments of the executive branch this subject is now coming into its own. The subject: Governmental continuity in case of an H-attack on Washington.

Both the Executive and Congress are beginning to see that this is a question that must be considered. The Founding Fathers faced the contingency of a President dying in office; and our Constitution provides for the unhappy event of both President and Vice President not surviving their terms. But the framers did not have to face the possibility—remote as it may be—of an entire administration being wiped out by an atomic attack. That is something the current successors have to tackle.

They took a quick look at it after the first A-bomb blast and felt that as long as the Soviet Union did not have the A-bomb there was no real worry. Then when the Soviet did explode its first A-bomb, several Congressmen both spoke and wrote on the need for arranging governmental continuity should the United States Capital be destroyed in a sneak atomic attack. But again the discussion died down. It is back again with the disclosure by the Atomic Energy Commission of the truly devastating potentialities of an H-bomb.

So again one hears on the Hill and around the Capitol talk of how to arrange for a Federal Government that could carry on if all of the Washington personnel happened to be wiped out.

A proposal that is being revived and discussed both openly and secretly here is that the only existing semblance of a governing body that represents the whole country should be officially delegated to step in and take over. That body is the Council of State Governors. They could step into the breach caused by the H-bomb and at least make a start of running things. Either their chairman or one of their members chosen by lot could become temporary President.

This proposal, based on the worst possible picture painted by the AEC, envisages almost total destruction for the Capitol and its occupants. That, of course, is a remote possibility considering early warning, tracking, intercepting, shelter, and evacuation preparations now underway. If indeed any Nation ever dares risk the retaliation such an H-bomb attack would bring.

The point is, however, as all talk about it emphasizes, that even the possibility should be faced and it be officially decided whether some proposal for such conditions should not be written into the Constitution or law of the land. This time, it is argued, the question should not be shelved for lack of dis-

cussion. Officials now know the potentialities and it is up to them to decide if the danger is real enough to do anything about it.

The Council of State Governors is admittedly a weak substitute for Federal executive power in an emergency. But it does exist now as an entity and could be developed into something stronger and more productive if desired. It has the one great advantage of being national—representing the entire Nation—not a section thereof. Also it is made up of experienced officials with political background and executive experience.

Presumably the chairman of the council—if he were to be President pro tempore—would pick his Cabinet from his colleagues. There would be lieutenant governors available in the 48 States, so that State government would not falter or collapse.

Finding a substitute for the Congress might be harder—but two proposals are generally brought forward whenever this subject comes up: a hastily called election in 3 months, or appointment of a certain number of State senators and representatives to seats in Washington—not necessarily a full Congress, but enough to transact business.

This subject of governmental continuity in the H-bomb age is admittedly too novel and tremendous to be resolved in a day or a month or possibly even a year. But it is a subject that those who know most about the power of new weapons discuss seriously. The problem is to get it out in the open and to keep the public informed.

S. 968

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. WILLIAMS of New Jersey. Mr. Speaker, in regard to the President's program for Federal aid for school construction, as embodied in S. 968, introduced by Senator SMITH of New Jersey, I would like to call the attention of the Congress to the following statements of Frederick Raubinger, New Jersey commissioner of education, and Archibald S. Alexander, New Jersey State treasurer. I am in complete agreement with Dr. Raubinger's analysis of S. 968 and join with State Treasurer Alexander in saying that the Federal program appears likely to be of very little help to New Jersey.

STATEMENT BY DR. FREDERICK RAUBINGER ON SENATE BILL 968, INTRODUCED BY SENATOR H. ALEXANDER SMITH, OF NEW JERSEY

This bill is designed to authorize Federal assistance to States and communities to enable them to increase public elementary and secondary school construction.

TITLE I

Title I is designed to authorize purchase by the Federal Government of obligations issued by local educational agencies to finance school construction where such obligations could not otherwise be marketed at reasonable rates of interest. As we read this part of this bill, it seems designed to provide a Federal guaranty in New Jersey of 50 percent of a proposed bond issue of a local educational agency, at a reasonable rate, based on the prevailing rate of marketable obligations of the United States, plus one-half of 1 percent.

During the past 3 years, the following situation has prevailed with regard to rates paid for bonds issued by school districts in New Jersey:

The audit reports indicate that in the fiscal year 1952-53 the school districts of New Jersey issued bonds in the principal amount of \$47,138,300, representing 99 issues. Thirty-two issues in the amount of \$20,742,000 were sold at interest rates of 3.2 percent or higher.

In 1953-54 there were 67 issues in the principal amount of \$32,440,000.

Nineteen issues in the amount of \$10,374,000 were sold at interest rates exceeding 3.2 percent at an average rate of 3.4 percent.

From July 30, 1949, to June 30, 1954, only 13 New Jersey districts have issued bonds with interest rates exceeding 3.5 percent, most of them during the past 2 years. These issues totaled \$8,607,000 out of a State total of \$155,248,700 issued by school districts during this 5-year period.

It will be noted that the fluctuation in the municipal bond market has noticeable effect on interest rates paid by school districts. It should be further noted that the obligations of the State of New Jersey enjoy better rates than similar obligations of the United States. Illustrative of this is the teachers' college bond issue floated January 28, 1953, in the amount of \$15 million, on which the interest rate was 1.69 percent.

Thus, there are a number of New Jersey districts which could benefit by the support of the credit of either the State or the Federal Government. However, we note that as much as 15 percent of the Federal sums appropriated in this bill for any year might be available to a single State, and we note further that the eligibility of a district to participate in such a program is determined by the eligibility of the State, based on the per capita income of the State. Thus in periods of financial stress, unless more money were appropriated, it is probable that the subdivisions of a State with a financial standing of that of New Jersey, would be unable to qualify with high enough priorities for funds available under this title. In any case, there is no provision in this title which could not be carried out, at least as efficiently, by a State guaranty of reasonable interest rates for local bond issues, if the State legislature and the people so decided. In such an event, sections 106 and 107, providing for the administration and audit of such provisions, could be operated by the State independently of the Federal Government.

In general, we believe that this title is more applicable to States which have statutory debt limits for local districts which cannot be exceeded. In New Jersey under 18: 5-86 of New Jersey Statutes Annotated (title 18, Education), the commissioner of education and the local government board have the power of extending debt limits under certain conditions. We believe that this has served to operate in such a way as to help prevent excessive interest rates, and that this conclusion is substantiated by the record.

TITLE II

Title II would extend Federal support, together with that of the State, for "obligations issued by State school-building agencies to finance the construction of school facilities for rental to and eventual ownership by local educational agencies." In New Jersey no such State school-building agency exists. Such an agency may be compared in general with authorities such as the New Jersey Turnpike Authority or the Garden State Parkway Authority. However, section 202, paragraph B, providing for coordination between such a school-building authority and the State educational agency, eliminates the probability that a turnpike authority is analogous. Hence, we would suppose that such a school-building authority or agency would be created by the legislature subject

to approval by the voters, and would obligate the State to guarantee bonds in a given amount to finance the authority. After this had been done, the following situation would be a hypothetical illustration of its operation:

The State authority would provide \$100 of bonds for school building purposes.

New Jersey would guarantee \$2.50 of a \$5 assumed debt service rate, while the Federal Government would lend the remaining \$250 for 32 years without interest as an additional guarantee for the bonds.

The State authority would, under provisions required by the Federal Government, require that annual payments for rentals for such buildings would be sufficient to meet interest obligations, that one-fourth of 1 percent would be deposited as an insurance for such interest (similar to Federal Deposit Insurance Corporation), and that the cost of maintenance, repair, replacement, and insurance of such facilities would be provided for in the rental.

The Federal Government does not grant an indefinite and outright guarantee for interest payments, and even stipulates that any advance from the supplemental reserve which it provides be repaid with interest. The Federal Government, through the United States Commissioner of Education, may stipulate the investment of Federal funds advanced as part of the basic reserve fund guaranteeing principal and interest.

In reviewing title II, the following questions have been raised concerning its relationship to present New Jersey law, and even to the New Jersey Constitution. Can a State school building authority be established to provide such funds without the approval of the people? Can the State school building authority stipulate such items as maintenance, repair, and insurance, where present school law charges local boards of education with these responsibilities? Since New Jersey law provides that the board of education has no legal life beyond 1 year and cannot make rental agreements beyond that period, could a local school district enter into any long-term rental agreement with a State authority without a vote of the people, and perhaps without an amendment to the constitution?

Basic New Jersey thinking with regard to long-term obligations of the school district is the premise that the electorate or, in city districts, the board of school estimate, alone has the right to bond a district or commit a district to any capital expenditure. It is not likely that any legislation at a State level could change our present pattern without (a) reducing to some extent local control and initiative, and (b) materially affecting the credit of the school district.

TITLE III

Title III provides for "Federal grants to the States to assist them in helping local educational agencies, economically unable to qualify for the assistance described above, to obtain urgently needed school facilities." We estimate that in New Jersey perhaps only 15 or 20 small school districts would be able to qualify for such aid, if they could not qualify for the provisions of title I and title II. Such districts would be unable to sell their obligations at a reasonable rate, even if half of these obligations were guaranteed by the Federal and State governments, and would be unable to pay an annual rental or amortization payment adequate to finance their obligations. In other words, these districts would be those which we would consider eligible for outright State grant or Federal grant for the building of school facilities. This title provides that for such districts, the State of New Jersey would have to provide at least 60 percent of the grant, and that as much as 40 percent of the balance could be paid by Federal grant.

To qualify for such a grant, it would be necessary for the district to fail to qualify

under title I and title II, which presumes that there would be a State school building authority in New Jersey unable to provide for such districts. This title gives broad powers to the United States Commissioner of Education to review such applications and to establish restrictive conditions for both the State and local agencies in respect to qualifying for payment, the conditions under which payment would be granted, and the type and kind of construction which would be eligible. It would give to our State educational agency considerable powers which it does not presently possess, which would only be possible through the adoption of new legislation. It gives to both the State and Federal Governments jurisdiction over the financing of the project by the local district.

TITLE IV

Title IV, provides for "Federal grants to the States to assist them in meeting the administrative costs of developing and initiating programs designed to overcome obstacles to local financing of school construction." It states specifically that such payments will not be made unless there is "a new program for the State" related to the development and initiation of programs for State assistance to local districts. New Jersey could not qualify in all likelihood for such assistance unless a State school building authority were established.

This title does not necessarily have to be related to the first three titles, if its purpose is to improve administrative provisions in the States for providing technical or other assistance to local school districts in their building problems. In the setting in which it is placed, it must be regarded as an adjunct to the first three titles, and as being only applicable in case of their adoption by a given State.

GENERAL STATEMENT

If the intent of this bill is to provide immediate, necessary relief for school districts and to facilitate immediate construction of buildings, it would not attain this purpose in New Jersey, since many of its provisions would require extensive revision of existing statutes and possibly referenda by the electorate. The amounts of money provided in title I and title III seem unrealistic in view of the total amount of school construction estimated as needed in the 48 States. Its main purposes seem to be to extend Federal guaranties of credit to State agencies or authorities created by the State, and in New Jersey such guaranties are not presently needed if the State itself provides such guaranties to local districts.

Any consideration of the bill must further consider the extent and amount of Federal control and State control which is desirable for imposition upon local districts. This bill would involve the Federal Government in thousands of decisions concerned with local districts, instead of granting money to States under certain terms and allowing the States to make the decisions.

Our past and present programs for school construction in the State have been almost universally engendered by local initiative, and we believe that this is a force which must be maintained. We believe further that the use of State guaranties of credit may be provided for local districts in other ways than by the establishment of State school building authorities. Acquisition of school buildings through a rental-purchase system should only be considered if local residents have the power to determine the nature of long-term obligations, and the effect of such obligations upon the fiscal soundness of their communities.

STATEMENT BY ARCHIBALD S. ALEXANDER

I agree completely with the conclusions of the Department of Education memorandum. I do not believe that any of the four titles will be of substantial assistance to New Jer-

sey. I believe that any assistance which will be furnished to New Jersey will have to be at the expense of increased Federal and State control over local school affairs. This is contrary to New Jersey's tradition and violates the sound general principle that remote control is inferior to local responsibility and control with respect to matters which are peculiarly local in impact and interest.

We requested the State Tax Policy Commission about a year ago to make recommendations for solutions of the pressing problem which many school districts have with regard to construction of facilities. This is the second aspect of the school-aid problem, the first aspect, with regard to operating expenses, having been dealt with during 1954. The Tax Policy Commission evolved a tentative plan and met to discuss it the evening of the day when the President's program was announced. It was impossible to consider the matter fully until the President's program had been analyzed.

The staff of the State Tax Policy Commission is completing this analysis and there will then have to be another meeting, now scheduled for March 7, 1955. At that meeting I intend to take the position stated earlier in this memorandum, and I would hope that it might be possible to persuade the Commission to do likewise.

**Speech by Maj. Gen. S. D. Sturgis, Jr.,
Before National Rivers and Harbors
Congress**

EXTENSION OF REMARKS

OF

HON. DEWEY SHORT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 2, 1955

Mr. SHORT. Mr. Speaker, under leave heretofore granted, I include the following interesting and informative address delivered by Maj. Gen. S. D. Sturgis, Jr., Chief of Engineers, United States Army, before the National Rivers and Harbors Congress in Washington, D. C., on May 25, 1954:

Gentlemen, as earlier speakers have indicated, this is the first time in 4 years that this congress has come together. I believe that this meeting is most timely because there has been much progress in the field of water resources development in the United States during the past decade, and many changes in public approach to this important problem. Our whole country is alive as never before to the importance of our water resources. In fact, our water resources development policies and procedures of past years are, indeed, receiving a "new look" from the people of this country. Some of these looks are thoughtful; some of them are baleful; all of them are significant and need our attention either to improve our current policies or to preserve them against unsound and questionable proposals. At any rate it is a time that stirs the blood and calls for action.

What are the evidences of this renewed and expanded national interest in these questions? I should like to cite a few, as follows:

1. Certainly the farmers and agricultural organizations of the Nation are extending their interest in conservation of land and water resources, attempting to speed up the great work they are doing in soil conservation. But in extending their efforts to achieve a greater measure of flood protection in our upper watersheds, serious problems

are being introduced in overall valley planning.

2. In the general field of flood control there has been a steady growth of demand for protection as our population and industry has expanded. But there is a growing recognition that this job is far from complete, and that many of our main river valleys are still subject to the destructive impact of great floods, in some cases with no popular solution even in sight. There is also a growing concern that recurring flood losses are an economic drain which this country cannot afford.

3. Our deep-draft ocean harbors have been improved progressively since the days of sailing ships, but in some cases they are no longer adequate to handle the cargo vessels and tankers of today. Adequate improvement and maintenance of these essential facilities are a basic need of our shipping interests, and should not be neglected but are being neglected due to inadequate funds.

4. Traffic on our inland and intracoastal waterways has risen sharply during the past 25 years, from 9 billion ton-miles in 1929 to over 60 billion ton-miles in 1952. But many of the channels and structures which permit movement of this ever-increasing commerce have been in heavy and constant use for 30 to 50 years. We thus have an aging system striving to meet the needs of a revitalized and dynamic water-transportation industry. Basic industrial and heavy economic development have followed the course of these waterways and rely upon them. They must be modernized to encourage rather than throttle future development.

5. There is a new appreciation of the importance of our Great Lakes and their connecting channels as the basic transportation system of our industrial Midwest. The recently authorized St. Lawrence Seaway is only a part of the improvement needed to permit full use of the potentialities of this great system.

6. Reclamation of arid land and provision of supplemental water supplies is still an important factor in the economy of our Western States. Its importance to the future economic development of wide areas in the West is increased by population shifts of recent years.

7. Our experience with flood control has demonstrated the rather startling fact that the benefits from regulation of low water flows of rivers may equal or exceed the values of flood control and protection. Farmers everywhere are beginning to appreciate the attributes of moderate and larger dams in this respect. Increasing use of our rivers for water supply, as outlets for industrial and municipal wastes and for recreation, have emphasized the necessity for maintaining and augmenting the normal year-by-year flow of our rivers.

8. In certain areas of our country where fuels are scarce there is almost a frantic demand for hydroelectric power to maintain industrial growth and ever lessen the burdens of farm and home. At the same time, there is a distinctly growing feeling upon the part of people as a whole at the justification of greater participation by local groups and private industry in this field. We have heard the term "partnership" used in this connection to denote a real cooperation between the Federal Government and non-Federal interests in the development of this major resource.

9. Drought conditions such as now afflict the five-State area of Texas, Oklahoma, Colorado, Kansas, and New Mexico show clearly that we must conserve and use wisely all available waters. Even in the normally humid East, there is growing use of irrigation. Eastern States legislators are, even now, studying water-rights legislation, which is an old story to the West.

These are by no means the only fields of expanding interest in and public reexami-

nation of problems connected with water-resources development, but they will serve to indicate the widespread nature and complexity of differences upon these problems. As the President of the United States has indicated to you, the enlightened settlement of these matters are vital to our national strength and progress. Under the lash of necessity, however, we must approach their solutions within the limits imposed by the hard necessity of maintaining our strength for national defense and, at the same time, a sound fiscal policy.

Citizens frequently tell us that they are concerned because we cannot undertake all of the improvements which are so vitally needed and at the same time meet our national and international commitments without risking collapse of an overloaded economic structure. This is a very real problem which people have difficulty in applying if it restricts their personal interests in any particular Federal activity. But it applies perforce to the field of water resources, too. It deserves the best thought of all our people; and the public spirited services of organizations such as yours which can crystallize and make known the priority needs of important regions interested in water resource development.

How can this challenge be met? What is the Corps of Engineers doing about it? These questions cannot be fully discussed in the time available here today. But I can and will present some measures and ideas to stimulate your interest and for you to think further about. There is, for example, a growing feeling that there should be a greater local participation in flood control and other aspects of water resources development. Such action holds the possibility of greater accomplishment even with reduced Federal appropriations at a time when the Federal Government has many more places to put its dollars than it has money to spend or invest. The Corps of Engineers supports this basically sound policy; but considers that application must be practicable and not so restrictive as to throttle development which requires the impetus of substantial Federal participation.

We in the corps feel that development of our water and land resources cannot, in the face of present necessities, proceed on a hit-or-miss basis. Back in 1927, over 25 years ago, we initiated the so-called 308 surveys which were the first attempt at comprehensive water resources planning for all of our major river basins on a nationwide basis. All that has happened since then, and our present dilemma, merely emphasizes the fact that our planning must be coordinated; that improvement and development must recognize the interrelationship of our water needs and problems; and that solutions of one phase of the work must complement rather than conflict with the needs of others. In our studies and construction we have constantly in mind the ideal of comprehensive and coordinated development.

We have in the past and are now consistently advocating sound methods of project evaluation; fair and equitable allocations of cost of multiple-purpose developments; recognition of the rights of States and non-Federal interests in water resources; greater Federal activity in securing needed basic scientific data; and the clarification of Federal water resource policy in areas where it is deficient and productive of conflicts and inefficiency.

In brief, I think that, without immodesty, I can say that the Corps of Engineers, which has served as a pioneer in Federal water resources development, is keenly aware of the new national interest in this field and it striving to keep ahead of public needs and contribute from its fund of experience to solutions of the problems.

Finally, what is this Congress contributing to "further a sound and coordinated develop-

ment of the Nation's water and land resources," which I quote from your brochure setting forth the purpose of your organization? What can you do to further this purpose at this critical time?

I think it is quite plain that old methods and procedures will no longer suffice. An interest in individual proposals or projects is understandable and useful but is necessarily a limited interest at a time of new appraisal and transition.

For example, I have noted with interest the constructive governmental concern with this problem which has drawn the ablest men in the water-resources field into service with task forces of the Commission which is now restudying the relationships between the Federal Government, the States, local organizations, and private enterprise in water-resources development.

These practical experts, however, require and have asked for information and advice from Federal agencies, including the Corps of Engineers. We have gone "all out," I assure you, in cooperating with these gentlemen. They must also have information as to the ideas and needs of the people who are directly affected by policies and projects and who, in the final analysis, pay for them. Is it not a function of a public organization such as yours to aid such study groups by presenting sound ideas and views for their consideration?

This is a time when, in water-resource development, we stand between the "upper and nether millstones" of maintaining our military strength and preserving our economic structure. It is, therefore, bound to be a time when limitations on Federal activity will generate competing demands for Federal participation. It is unavoidable that interests will conflict; that strong groups may advance their particular needs at the expense of others; and that the overall public interest may be ignored. Your organization provides a meeting ground for the diverse but related aspects of water-resource development. Is it not, therefore, eminently situated to reconcile conflicts and generate strong public support for a soundly coordinated water-resource activity?

In 1950, the President, on behalf of the entire Nation, attempted to make a reappraisal of Federal water resources policy. Possibly a few people recognized the ramifications of that task. This useful approach has not yet been carried to a conclusion; but the need for clarification and establishment of sound water policy is greater than ever. Impetus for such a policy must come not only from the Federal Government and its agencies; primarily it must stem directly from the people. Such a policy cannot be evolved in the ivory tower of the past because water, in its varied uses and problems, intimately affects every citizen and every citizen has become far more aware of that fact than 10 years ago. Here, finally, I see one of the greatest opportunities of your organization—to recognize intelligently and realistically the situation which faces us in the development of this basic resource and to aid in making known the views and needs of the citizens of this country.

Thus, the new nationwide concern—the "new look" at water resource development—demands that such organizations as yours as well as the Federal agencies, provide real leadership. You must become effective instruments in crystallizing the ideas and needs of interested citizens in the correct direction. Antiquated methods must give way to a highly scientific approach, and coordinated action; and these must serve an awakened and enlightened public interest.

Gentlemen, there is the problem and I cannot overemphasize it. I do not doubt you can make progress here and there by the old methods of pressure and mutual cooperation. But with the world situation as it is and with the new, broad and highly

thoughtful interest of the awakened American people the employment of such methods of themselves will end in your defeat in detail. Worse than that, the Nation's water resource program will fall far behind the development of the rest of our economy.

In my opinion a more realistic approach will be for you to recognize clearly these popular forces, harness them and guide them to national objectives in the water resource field as delimited by the President. To do this your various organizations and groups may have to hire competent engineers and economists for advice. To do this you personally may have to study continuously all sides of the economics and engineering of the issues involved. To do this you must adopt those concepts and policies that will benefit the Nation as a whole—not for tomorrow but for decades to come. To do this may require local sacrifices of projects and proposals that are unsound. But in the end such a statesmanlike course will redound to the individual good as well as that of the Nation. More than that it will assure a strong and prosperous America because water resource development will have grown in step with a healthy economy.

Iron Curtain Captives

EXTENSION OF REMARKS

OF

HON. THOMAS L. ASHLEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. ASHLEY. Mr. Speaker, the peoples of two European nations this week have special occasion to lift their minds and hearts to the remembrance of freedom, even though they now find themselves bowed under the relentless hand of communism.

March 7 was the 105th birthday anniversary of Thomas Garrigue Masaryk, founder of the Czechoslovak Republic and on March 15 the Hungarian people will mark the 106th anniversary of Hungarian independence from Hapsburg rule.

It is our hope that the people of Hungary and Czechoslovakia will look back to the origins of their freedom, now lost, and renew their resolve to once more attain independence and a rightful place among the free nation of the world.

I have great faith in the spirit and resolve of these captive peoples. During my work with Radio Free Europe I saw, over and over again, evidences of it. And I saw, too, how these courageous people look to the United States for help and encouragement.

It is not enough that we voice pious tributes and bold promises to the liberty-loving people behind the Iron Curtain. Only by our continuing fight against communism at home and abroad can we set the pace for others who would be free. Only by our unwavering insistence in the councils of nations and on the very doorstep of the Kremlin itself can we keep the spark of hope alive.

We must give concrete evidence of our genuine concern for these oppressed peoples. Let us liberalize our immigration laws and welcome to our shores their homeless. Let us redouble our efforts, through such agencies as the Voice of

America, to pierce the Iron Curtain, and let us make sure that our military strength matches our urgent demands for a free world.

Rev. Paul A. McNally

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Thursday, March 10, 1955

Mr. KEFAUVER. Mr. President, the passing of a renowned scientist represents a distinct loss to society, particularly when the pursuits of the individual have been devoted to the advancement of civilization through the acquisition of knowledge hitherto hidden from man's eyes. Such a great loss has recently occurred at Georgetown University, here in the Nation's Capital, in the death of the Reverend Paul A. McNally, S. J., vice president of the university and one of the outstanding astronomer-mathematicians of our day.

We mourn this sad event, and extend expressions of sincere sympathy to the president and faculty of Georgetown and also to the alumni and student body.

Such well-deserved encomiums have just been published editorially in the Washington Post and Times Herald and by the Washington Evening Star of March 7, 1955, that I ask unanimous consent to have them reprinted in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Washington Post and Times Herald of March 7, 1955]

THE REVEREND PAUL A. McNALLY

The Reverend Paul A. McNally, S. J., vice president of Georgetown University who died Friday, probably was best known as one of the Nation's eminent astronomer-mathematicians. As director of the Astronomical Observatory at Georgetown he participated in a number of internationally famous expeditions to study solar eclipses. Father McNally was widely honored by scientific societies, and the attention his work received helped make Georgetown, which has operated an observatory since 1841, known throughout the world as an astronomical center. A man of many parts, Father McNally also had taught mathematics, had served as regent and dean of the university's medical school, and was chairman of the physics department at the time of his death. His administrative talents were recognized in the broad responsibilities he bore. We extend our condolences to Georgetown on his death.

[From the Washington Evening Star of March 7, 1955]

FATHER McNALLY

Georgetown University has lost a devoted leader and servant in the sudden death of the Rev. Paul A. McNally. Born on the same day with President Eisenhower, he came from his native Philadelphia to Woodstock College, Maryland, pledged to the Society of Jesus in 1908, and was graduated with the A. M. degree in 1917. Later he was at Innsbruck in Austria, Fordham University, the Gregorian

University in Rome and the University of California. Before beginning his Washington career in 1925 he taught mathematics at Boston College and at Fordham. His assignment at Georgetown Observatory commenced when the Rev. Edward C. Phillips was promoted to be provincial of the Maryland-New York province of the Jesuit order.

The aspect of astronomy which interested Father McNally most was that of solar eclipses. He joined forces with the National Geographic Society in expeditions to watch them in Soviet Siberia, Canton Island, and Brazil. But his ability as an administrator resulted in his being drafted away from his studies of the sky. He was made vice president of Georgetown University in 1942, directed the campaign for funds for the new Georgetown University Medical Center and then was appointed executive officer of the activities of the institution thus created, serving until a heart condition forced him to relinquish the task in 1953. Since that date most of his effort had been devoted to the Georgetown University physics department, for the development of which he formulated great plans.

A tireless and completely selfless worker, Father McNally was an inspiring example to scores of younger men. He insisted upon the highest standards, yet his popularity was a legend wherever he served.

A New Industrial Magazine Is Born

EXTENSION OF REMARKS

OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. THOMPSON of New Jersey. Mr. Speaker, in the past few months a new magazine has put in its appearance in the field of American industrial journalism. It gives me a great deal of pleasure to welcome and to extend best wishes to *Plastics Technology*. The plastics industry is one of the fastest growing in the United States and it is happy omen for its future that a magazine of the obvious caliber of this one has been established to meet the needs of intercommunication within the industry.

In this connection, I include an editorial appearing in the first issue which sets forth the aims and purposes of the new publication. The editorial follows:

A NEW INDUSTRIAL MAGAZINE IS BORN

This is the first issue of *Plastics Technology*—a new publication concerned primarily with the technical aspects of the plastics industry, and edited for the technical men in production, research, development, sales, service, and management.

It is a logical outgrowth of the plastics section of *Rubber World*, another Bill Brothers publication, and is timed to meet the needs for a publication which will report and review the technological advance of the industry.

This issue, volume 1, No. 1, presents a physical sample of the editorial formula we have developed out of the thoughtful suggestions of hundreds of plastics technologists who have given freely of their time and effort because of their realization of the need for such a publication. Here, all material will be carefully selected and edited for value to the reader, and presented in an honest, factual and comprehensive manner. Of necessity, some of our editorial aims are

long-range in nature, but we expect to achieve them in due course of time.

Certainly, in presenting *Plastics Technology* we do not assume to infringe upon the well-earned franchises of other established publications. Rather, we expect to carve out our individual niche and by intelligence and integrity thus serve those responsible for the extraordinary and rapid development of their industry. As the magazine of applied engineering it will be our special mission to chronicle and interpret the industry's advance and direction in a lively and interesting, but always accurate and unbiased fashion.

The plastics industry is now coming of age after an infancy associated with inflammable collar buttons and an adolescence of many misapplications. In maturity, plastics must take their place as recognized engineering materials that will contribute more and more to the advance of our industrial civilization. It is in this forward march that *Plastics Technology* undertakes to play an important part.

We could not conclude this brief expression of our editorial philosophy without thanking those who have helped so enthusiastically in the production of this first issue—our contributors, the men of the industry who make up our editorial advisory board, and our editorial staff. And being human, we shall be most happy to receive your comments—the brickbats as well as the bouquets—and your studied suggestions for making *Plastics Technology* progressively more useful to a vital and dynamic industry.

ARTHUR M. MERRILL,

Editor.

Detroit's Choir-Singing Congressman Rabaut: "Voice of the People"

EXTENSION OF REMARKS

OF

HON. CHARLES C. DIGGS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. DIGGS. Mr. Speaker, a most fitting tribute was paid to Representative LOUIS CHARLES RABAUT, of Michigan, in an article written by Reporter James M. Haswell, which appeared in the Sunday, March 6, 1955, issue of the *Detroit Free Press*. It is a pleasure and privilege to include this article in the RECORD:

DETROIT'S CHOIR-SINGING CONGRESSMAN KEEPS HIMSELF TUNED TO THE TIMES—RABAUT: "VOICE OF THE PEOPLE"

(By James M. Haswell)

WASHINGTON.—Detroit's East Side Congressman, LOUIS CHARLES RABAUT, 69, has a great human touch. With him, truly, politics is people. For 20 years LOUIS has called more Congressmen by their first names than any other man in Washington.

RABAUT came to Congress because of a protest against the machine age. He objected to industry's practice of firing men past 40.

"You are wrecking home life," he told Detroit efficiency engineers. "You are glorifying the young kid over his father by paying youth the big wages. You are putting the old man behind the stove in the family kitchen. It's no good, I tell you."

SINGS AVE MARIA AT RITES IN HOUSE

RABAUT was a marked Democrat from the day he entered the House as 14th District Representative. He could sing as well as talk. He had social poise, and made friends quickly.

Speaker Joseph W. Byrns, Democrat, Tennessee, almost at once put him on the Appropriations Committee, where now he has served longer than any man except Chairman CLARENCE CANNON, Democrat, Missouri.

Within a few months Byrns died and RABAUT sang at funeral services held in the House. As his silvery tenor soared into the lovely melody of Ave Maria, official Washington recognized that a new personality had arrived.

Thereafter RABAUT sang in the White House, at political gatherings, in Washington churches, everywhere. He became the sweet singer of the New Deal, the choirboy who had come to Congress.

During two decades here RABAUT has supervised the spending of billions. He once saved taxpayers \$535 million by inserting 13 words in an appropriation bill.

"Not many Americans," says RABAUT, "ever get a chance to save half a billion dollars."

Once he drove a pork-barrel bill through the House with a single wisecrack. It was an economy year and the barrel wasn't full. RABAUT's job was to turn back hungry Congressmen who were proposing amendments to spend just a little more money.

"This Chamber rings with economy," RABAUT said sarcastically. "These walls echo the words, 'I am for economy—but not in my district.'" That stopped 'em. Not a man added a dollar to that bill that day.

RABAUT says the high spot of his committee service came the year he had charge of one big bill adding together all regular money bills of the session. The experiment wasn't repeated, but RABAUT still likes the idea.

"It is one way to impress on all the people," he says, "how much money the Federal Government spends."

During two decades of lawmaking RABAUT has voted with the New Deal, with labor, against drifting into war, for national defense, for the seaway, and for reciprocal trade. Labor once called him its 100 percent Congressman.

"PACK YOUR BAG," CONSUL IS TOLD

In the 1930's he was a globetrotter. "The people in my district," he says, "were very understanding. They knew that a Congressman must travel to learn his job."

In going about the world, RABAUT often was appalled by the length of time State Department officials lived abroad and how closely they identified themselves with foreign life.

Finally he ran across a consul in Scotland who hadn't been back to the United States in 19 years because his wife (Scotch) didn't like America.

"Pack your bag, brother," said RABAUT indignantly, "and get ready to travel."

RABAUT hustled back to the Secretary of State, the late Cordell Hull. Between them they drafted a rule that every State Department employee must revisit this country each 2 or 3 years.

It also was RABAUT's duty to supervise the Department of Justice budget. He worked closely with Attorneys General Homer Cummings, Frank Murphy, Francis Biddle, Robert Jackson, and Tom Clark.

RABAUT looks with pride on his service on the Commission which rebuilt the White House. His name is among those engraved on a marble memorial in the reconstructed building.

The latest accomplishment which pleases him is his part in revising the pledge of allegiance to the Flag. Congress inserted the words, "under God," so that it now reads, "one Nation under God." He also has induced the Postmaster General to place the words In God We Trust on stamps carrying letters abroad.

One year RABAUT entered wholeheartedly into a campaign to persuade Italians to vote against the Communist Party in Italy.

Afterward he was horrified to discover that many Italians holding United States citizenship had gone to the polls.

Their impulsive actions had cost them their United States standing. RABAUT spent several sessions lobbying through Congress a bill excusing these too-enthusiastic voters and restoring them to United States citizenship.

Not all of his causes succeed. When he wanted to protest against lifting meat price controls too soon after World War II, RABAUT wrote a song, "The Old Gray Mare," he sang to a delighted House, "will be a blue-plate special soon."

It was no use. Democrats laughed about the "horsemeat Congress," but the price controls came off anyway.

For several years RABAUT lobbied in vain for a bill to stop the galloping papas. What RABAUT had in mind was a measure permitting local welfare authorities to pursue deserting fathers across State boundaries.

"Uncle Sam helps support abandoned children," he says. "The bill is a big one. I thought runaway fathers ought to be caught and made to pay."

Like Speaker SAM RAYBURN and many other Democrats who brought the New Deal to town, RABAUT strongly resents current Republican talk about 20 years of treason. He considers that President Eisenhower's so-called security regulations may be used unfairly against individuals.

RABAUT's way of protesting was typically dramatic. He got up in the House on Lincoln's birthday, a year ago, and interrupted a Republican flood of oratory on the subject of liberty and freedom.

DEMANDS OUSTER OF GOP CHAIRMAN

RABAUT abruptly called on President Eisenhower to fire Leonard Hall, chairman of the GOP National Committee. He said that Hall is masterminding a plot to brand millions of Americans as traitors.

Coming to Congress in 1935 was an afterthought for RABAUT. He might have gone on the stage and become a singing star. As a boy he sang in the famed choir of Saints Peter and Paul Catholic Church in Detroit.

Gregory Freitag, the choirmaster, coached his solo parts, which he performed before more than 5,000 worshippers some Sundays. The Shubert brothers, big time theatrical producers, offered him a professional career.

"But father was against that," RABAUT recalls. "I could sing half a note above high C, and used several of Caruso's endings. But father wanted me to be a speaker, not a singer."

So young Louis stayed in the family wholesale business and went to Detroit College and later the Detroit College of Law. He won five gold medals for speaking. When he began practicing law, real estate was booming in Detroit and RABAUT became a landowner and home builder. He was well-to-do until the depression.

The Rabaut family are old Detroit merchants. Charles C. Rabaut and his wife, Madame Rabaut, came from Belgium to Detroit in the middle of the 1800's. Madame Rabaut opened a store on Woodward, where the J. L. Hudson Co. Downtown now stands. She and her husband sold French and Belgian laces. The shop was well-known in its day because the Rabauts kept a skilled lacemaker working in the store.

Later Madame Rabaut sold the retail lace business to J. L. Hudson, and with her son, Louis, moved the wholesale business to 208 E. Jefferson Avenue, opposite the present City-County Building. There it gradually became a wholesale notion supply house, with fireworks as a side line.

This was the business in which Choir Boy Rabaut grew up. Today, at 19565 Mack, Grosse Pointe Woods, Vincent Rabaut, a great-grandson of Madame Rabaut, is making a success of Rabaut's Fabric Mart, specializing in home draperies. A great-granddaughter, Mrs. August Amato, also makes draperies.

specializing in home draperies. A great-granddaughter, Mrs. August Amato, also makes draperies.

"We Rabauts always have a flair for color and decoration," the Congressman says, proudly.

RABAUT says there are more than 50 Rabauts in Detroit, descendants of the original lace merchants. He has 9 children and 19 grandchildren. His father had a family of 11.

Religious devotion has been a Rabaut family trait. RABAUT has a sister who is a nun. Another sister, who was also a nun, is now dead.

The Congressman has three daughters in church orders.

Sister Mary Palmyre, IHM, is a librarian at Marygrove College, Detroit; Sister Stella Maris, IHM, teaches in the Girls Academy at Monroe, Mich., and Sister Martha Marie, IHM, teaches at the Holy Rosary School, Detroit.

His oldest son, Father Francis Dermott Rabaut, S. J., serves on the faculty of Loyola University in Chicago.

Another son, Louis, is a Detroit lawyer. Three of his daughters have married. They are Mrs. Amato, Mrs. Jules DePore, and Mrs. John Barrett, all of Detroit.

DAUGHTERS WORK IN DAD'S OFFICE

Several of the girls worked in father's office in Washington at times. It's an old congressional custom to put relative on the office payroll. Many of them just draw pay. But with the Rabauts it was different. These girls worked, and made the office hum. Louis bragged about how much he paid them, and swore the family couldn't get along without their money.

Unlike other Detroit Democrats in Congress, RABAUT has had strong Republican opposition to meet in his district. He has met, through the years, Carl Weideman, now a judge; Fred M. Alger, later Secretary of State and now Ambassador to Belgium; O. Z. Ide, now a judge; Miles Culehan, now a judge; Joseph Moynihan, Jr., son of the Detroit judge; Harold Youngblood, and Richard Durant.

He lost to Weideman in 1932, and to Youngblood in 1946. "But I beat them both later," he says.

Request From Other Nations

EXTENSION OF REMARKS

OF

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. MADDEN. Mr. Speaker, the committee investigating Communist aggression, in the 83d Congress, has been receiving a great number of requests from nations all over the world for reports on its findings and recorded testimony.

I am herewith submitting a typical letter which was received from Rev. Lloyd I. Glass, M. M., a former prisoner of the Chinese Communists:

CUYAHOGA FALLS, OHIO, March 4, 1955.
SPECIAL PROJECT ON COMMUNISM,
GEORGETOWN UNIVERSITY,

Washington, D. C.

GENTLEMEN: I wish to express my deepest admiration for the public service you have done in making available the reports on Communist aggression.

If possible I should like to procure five additional copies of the "summary report of

the Select Committee on Communist Aggression," and also if it is available a copy of the report on "Communist Aggression in China." I was a prisoner of the Chinese Reds for 19 months and I find your reports the most authentic and valuable of any in print in America.

Sincerely and gratefully,

REV. LLOYD I. GLASS, M. M.

Labor-Management Relations at Morrison-Knudson Co., Inc., Boise, Idaho

EXTENSION OF REMARKS

OF

HON. HERMAN WELKER

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Thursday, March 10, 1955

Mr. WELKER. Mr. President, the State of Idaho, which I have the honor in part, to represent is indeed proud of the world's largest construction engineering firm, namely, the Morrison-Knudson Co., Inc., and its subsidiary corporations, which have done great work not only in the United States but also, I dare say, in almost every country on the face of the globe.

In these days, when we hear so much criticism of those who have made free enterprise work, when we hear them called materialists and industrialists and haters of labor, when we hear it said that management cannot get along with labor, I am moved by an article which I read in the March 1955, issue of The EM-Kayan, official publication of Morrison-Knudson Co. This company, incidentally, has the finest labor-management relationship that it has been my privilege ever to have observed. If more persons would pay attention to the profound remarks made by the president of the Morrison-Knudson Co., Mr. Harry W. Morrison, I feel certain there would be less bickering between labor and management.

It was my privilege as a young boy to have seen the beginning of what is now a giant corporation. I saw it grow from humble beginnings to be the largest company of its kind in the world.

Listen now, Mr. President, to the words of the president of Morrison-Knudson Co., when he speaks not only to the laboring man, but also to supervisors and other persons.

I read from his statement in the March issue of the company's magazine:

The company's continuing investment in accident insurance, safety supervision, and safety equipment is substantial; but no amount of mere money can be measured against the life of a man carelessly lost—as any widow will testify. Time lost in a hospital bed is never recovered by the employee or the company.

Mr. Morrison closes with this exhortation:

Keep alert to keep alive. Safety is no accident.

I have never heard more profound or finer words addressed to labor or management.

I ask unanimous consent that the entire message of President Harry W. Morrison, of the Morrison-Knudson Co., Inc., be printed in the Appendix of the RECORD.

There being no objection, the message was ordered to be printed in the RECORD, as follows:

PRESIDENT'S MEMO—SUBJECT: PASTE THESE SLOGANS IN YOUR HARD HAT

No more important advice that I know of can be constantly urged upon the construction men of M-K than is expressed in the blunt but realistic catch phrase: "Keep alert to keep alive."

Through the years, each month's back cover of this magazine (except our annual New Year's covers) has illustrated an actual situation on an M-K job, portrayed by our own cartoonist as an example of unsafe performance that has caused a serious accident. Please read and absorb these messages, gentlemen, and remember especially the ones that apply to your own work or the work of men under your supervision.

The management is proud of the fact that for several years our safety records have progressively improved and are generally better than the the national averages for comparable operations. We are delighted with frequent reports printed in the *En-Kayan* safety column of awards made by Government engineers to M-K jobs for outstanding safety performance. These Government agencies and, likewise, private owners for whom we work are increasingly conscious of the good or bad safety reputations of the construction jobs they authorize.

The company's continuing investment in accident insurance, safety supervision, and safety equipment is substantial; but no amount of mere money can be measured against the life of a man carelessly lost—as any widow will testify. Time lost in a hospital bed is never recovered by the employee or the company.

Our earnest appeal to every thinking man of M-K—and I trust we have no others—is to memorize these two easy slogans and keep them in mind until you are ready for retirement at a ripe old age: "Keep alert to keep alive," and "Safety is no accident."

H. W. MORRISON.

Westinghouse Annual Science Talent Search

EXTENSION OF REMARKS OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, March 10, 1955

Mr. WILEY. Mr. President, recently there was held in the Nation's Capital the award dinner of the Annual Science Talent Search conducted by Science Service throughout the Nation as a means of encouraging the interest of young people in a scientific career.

Naturally, I was particularly pleased to note that a fine young lady from my own State, Miss Kathleen Hable, aged 18, of Loyal, Wis., was awarded the second highest honor.

But, irrespective of that, I pay tribute to the great job which is being done by the Science Clubs of America, an activity of Science Service, whose noted director is Mr. Watson Davis.

Officers of Science Service are: Dr. Leonard Carmichael, president, secretary of Smithsonian Institute; Mr. Charles Scripps, vice president, chairman of board of E. W. Scripps Co.; Mr. O. W. Riegel, treasurer, director, Washington and Lee School of Journalism.

Science Service itself is a nonprofit corporation with trustees nominated by the National Academy of Sciences, the National Research Council, the American Association for the Advancement of Science, the E. W. Scripps estate, and the journalistic profession.

By means of the science clubs, which it sponsors—15,000 clubs in the United States and abroad, including more than one-third of a million boys and girls—we are getting our youngsters to start in high school on the adventuresome paths of physics, chemistry, astronomy, biology, geology, and all the innumerable other phases of modern science.

Also, by means in particular of the science fairs, 70 of which are affiliated, including the one in my own science-minded State, Americans can participate at the grassroots.

On April 15, 16, and 17, there will occur at Brooks Memorial Union, Marquette University, the Southeast Wisconsin Science Fair, sponsored by Marquette and the Milwaukee Journal. Director of the fair is Father L. W. Friedrich, and working with him is an outstanding group of civic, industrial, educational, labor, engineering, and other leaders who are going to make this fair a grand success, I am sure. The National Science Fair winners will be selected at the nationwide competition taking place in Cleveland on May 12 to 14.

I am sure, too, that next year there will be still more science fairs affiliated in the national competition, and I am wishing every success for the continued flourishing of this grand concept.

Increasingly, our Nation is aware of the dangerous shortage of scientists and of the necessity of expanding their ranks. The Westinghouse talent search is one vital means of achieving this fine objective.

In the March 1, 1955, issue of the *New York Times* magazine there appeared an article describing the meeting by the young science talent winners with the President, and referring to the fine address which was delivered at the award dinner by Assistant Secretary of Defense, Donald A. Quarles. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

The PRESIDENT pro tempore. Is there objection to the request of the Senator from Wisconsin?

Mr. LANGER. Mr. President, reserving the right to object—and I shall not object—I should like to ask a question. Is it not true that a North Dakota girl received the first prize?

Mr. WILEY. I think the Senator is correct. I am glad the Senator is on his toes today, and recognizes that while the folks in North Dakota may not obtain ambassadorships, occasionally they win first prize.

The PRESIDENT pro tempore. Is there objection to the request of the Senator from Wisconsin?

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ALLENTOWN BOY IS SCIENCE VICTOR—CHOSEN FROM FINAL LIST OF 40 FOR \$2,800 SCHOLARSHIP IN WESTINGHOUSE CONTEST

WASHINGTON, February 23.—A 17-year-old physicist-mathematician-chemist, Frederick P. Greenleaf, of Allentown, Pa., received tonight the \$2,800 Westinghouse grand science scholarship.

He was chosen from a field of 40 high-school seniors for his method of separating metals by distillation. The method is regarded as widely useful in such processes as refining and atomic fuel production.

Second honor, a \$2,000 Westinghouse science scholarship, was won by Kathleen A. Hable, 18, of Loyal, Wis., who submitted "an exacting study in heredity." She traced a widow's peak in a Wisconsin family for 4 generations which included 65 individuals. She found frequency of more than 50 percent in the fourth generation.

Next was Vaughan A. Aandahl, 17, of Denver, a biologist, who brought here a collection of butterflies and moths. He was 1 of 8 contestants who won \$400 scholarships.

OTHER \$400 WINNERS

The others were Thomas S. Briggs, 16, of San Francisco; Charles Jetter Eichman, 17, of Audubon, N. J.; Roald Hoffman, 17, of Woodside, Queens, N. Y.; W. Stanley Marshall, 18, of Nashville, Tenn.; David K. Hergaard, 18, of Princeton, N. J.; James E. Potter, 17, of Rockford, Ill.; and Daniel H. Wilson, 17, of Kansas City, Kans.

The 40 contestants, 32 boys and 8 girls, visited President Eisenhower at the White House during the day.

Instead of making a speech to them he asked them questions about their projects. In his informal chat he said that he thought there should be more junior colleges in the country.

Tonight's awards in the Westinghouse Annual Science Talent Search were made at a banquet. Donald A. Quarles, Assistant Secretary of Defense, said in an address that the talent search touches on the security of all of us.

"Like it or not," he declared, "we are in a race for technological supremacy with Communist world and this science talent search has a direct bearing on the outcome of this race."

INCENTIVES IN UNITED STATES STRESSED

He asserted that the Soviet Union was now "graduating well-trained scientists and engineers at more than twice the rate we are in this country." But, he added, because of our freedom and incentives "their pool would have to be considerably larger before it equalled the effectiveness of our own."

"Nevertheless, these statistics must give us pause," he continued. "We certainly can no longer take our superiority and military technology for granted."

He noted that the President had sent to Congress a plan to modify and expand the Selective Service Act and to revamp the National Reserve System. He declared that the training and use of scientists and engineers was an important part of the President's plan and that it included research grants and special scholarships.

He told the young scientists that work like theirs stimulated the interest of young people in professional careers in the physical sciences and engineering.

He closed by asserting that success against communism would depend on moral fiber as well as scientific skills.

Intrigue in the Arab World

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1955

Mr. MULTER. Mr. Speaker, the following article written by J. Benari, appeared in the February 1955 issue of Jewish World.

Is this the way we will stop Communist aggression in the Middle East?

INTRIGUE IN THE ARAB WORLD

(By J. Benari)

Two very important conferences have just taken place in the Middle East: The meeting in Damascus of United States envoys to the Arab countries and Israel, and the Cairo session of the Arab League, attended by the foreign ministers of the league countries and by the personal representative of the King of Saudi Arabia.

The Cairo meeting was arranged with the view of forging the future policy of the Arab world, whereas the purpose of the Damascus gathering was to give Mr. George Allen, newly appointed Assistant Secretary of State in Washington, an opportunity to explore the political scene in the Middle East.

The Cairo Conference had a touch of unreality. The foreign ministers or at least some of the Arab countries realized that they represented unstable regimes, regimes to which the people concerned not only failed to give their support but even registered their violent opposition. The meeting only demonstrated the chimera of a united Arab world.

The conference reached an agreement in principle—defense of the Arab countries through the League Security Pact. Each Arab country would, however, have the right to decide independently on the acceptance of financial or military aid from a foreign power.

ROOTS OF DISSENSION

It is known that Saudi Arabia and Egypt violently opposed Iraq's decision to the agreement with the United States regarding the delivery of arms to that country. The decision of the league typifies the defeat of both Saudi Arabia and Egypt and leads itself to one interpretation only: the league was unable to reach a decision on this vital issue. The schism in the Arab League is now greater than ever since the creation of the league by Great Britain. The Damascus conference of the American ambassadors attempted a realistic evaluation of the Arab scene, and was faced with a gloomy picture of instability, brutal oppression, dissension, and potential danger prevailing in the Arab world.

General elections were held recently in Iraq, Syria, and Jordan. In Iraq and Jordan the Parliaments were dissolved; new elections were held with the specific purpose of impressing the State Department and Whitehall with "stable" governments and thus facilitating negotiations for agreements on military aid. The Syrian elections were held in order to give the country a representative government and lead Syria into the Fertile Crescent Federation. How the elections in Iraq and Jordan were conducted and how "stable" governments were established is told by the Arab press itself.

The independent Lebanese daily Al Hayat, an old and faithful friend of Iraq, published the following account of the elections in Iraq:

"Nuri es-Said's policy, his contempt for his country's government and his fallacies, have brought discontent in Iraq to a new

peak. The last elections were a farce which made not only Iraq but the whole world laugh at this travesty. Nuri es-Said assembled a Parliament composed of his relatives and of servants to his policy. For the first time in history a premier appoints all his relatives to sit in the chamber of deputies. He has not one single relative left outside the chamber unless it be one whom he appointed to the Senate. The people of Iraq boycotted the elections. The withdrawal of the two Istiqlal deputies from the chamber makes this boycott complete. It cannot be said that Iraq has a Parliament since 80 percent of its deputies have been thrust on the constituencies by a government order and without due elections."

And the Lebanese daily concluded:

"We fail to see how the Premier proposes to set about such important matters as talks with Britain with that type of Parliament. For if Nuri ignores the people and the remains of its representatives in the chamber of deputies, the people will, as a result, disassociate themselves from Nuri's decisions."

No wonder that a prominent Baghdad diplomat commented in London:

"Only one heartbeat of the aging Nuri stands between Iraq and grave disorder."

The government has already, anticipating some public manifestations, banned all political parties and has dissolved all religious affiliations, measures which dealt the severest blow to the national and religious minorities.

ELECTIONS IN JORDAN

The elections in Jordan did not exactly follow the pattern set by Nuri in Baghdad. There were violent and bloody incidents. We will again quote an Arab source. Nasser ed-Din Nashashibi, one time master ceremonies to the King, and Jordan's Director General of Broadcasting, describes the elections in the Cairo weekly Ashker Saa as follows:

"I watched the electoral battle in Amman and had a hearty laugh. I laughed at the government officials, who issued bulletins every hour, claiming that the country was calm, whilst the legion's and the demonstrators' machine guns rattled in almost every town and village. I laughed at the candidates who shouted themselves hoarse speechmaking and who wasted their money on an election, since they knew full well that the result was a foregone conclusion."

Nashashibi, a shrewd political observer endowed with a sense of humor, continues:

"The theory of political science has it that democracy calls for the free interplay of political parties. The Jordanian elections, however, like the elections in Iraq, Lebanon, and Yemen, were conducted in an atmosphere hostile to parties. Parties appointed by the Government were unable to convince the voters, whereas non-Government parties were unable to convince the Government of their integrity. Thus, the sole arbiter of the contest was—the candidate's relationship to the Government. If he was its friend—he won. If he was its enemy—well, there was always the army and the army's bloc vote to stand in his way. I say that 27,000 of the electors' vote remained a secret known only to Allah and General Glub Pasha. The people voiced openly," concludes Nashashibi, "that the elections were fraudulent. Opposition supporters went into the streets. The legion went after them with guns and armor. The people rose in Amman and the victims fell. After Amman the turn came for Es-Salt, Nablus, Ramallah, Irbid and Jenin. Arrests began. Censorship was clamped down and the farcical elections were over."

Palestinian Arabs in Jordan outnumber Jordanians by 3 to 1, but in politics, in administration, in the Government, in Parliament, commerce, and business the Palestinian Arabs are not trusted. The country

is governed by martial law and by Glub Pasha's bayonets.

Syria emerged after the elections more divided than ever, with an unstable Government supported by an "independent" plurality of 67 out of 142 deputies. The Shaab Party, champion of a federation with Iraq, has lost its majority and received only 27 seats in spite of the open and generous support it received from the Iraqi Government. Never before was the position in Syria so unstable as after the elections, and the separation between the Government and the nation, especially the national and religious minorities, is complete. Everybody agrees that the situation is tense and may lead at any time to a violent explosion.

From Libya and Yemen, the American Ambassadors can only bring reports of disorder, political assassinations and dark conspiracies of underground movements. Ibrahim al-Shalhi, the power behind the throne in of underground movements. Ibrahim al-Shalhi, the power behind the throne in Libya, was assassinated by a member of the Royal Senoussi family. The popular underground movements in Cyrenaica and Tripoli work independently. The People's Party there is supported by the majority of young officers of the army and police and by Government officials, and has a political program which openly proclaims political assassination as its cardinal principle.

Libya is on the verge of revolution and anarchy. The King refuses to live in his capital and prefers to live in Tobruk, not far from the Egyptian border.

TROUBLE IN YEMEN

Not less disquieting are the reports which reach the free world from closely guarded Yemen. The Imam of Yemen—Yahya, established his rule over the country after the assassination of his father in 1948, and then only at the price of handing over his capital, Sana'a, to the hungry and savage tribes of the desert who supported him. The tribesmen looted the capital, captured the womenfolk and the Imam did not dare to set foot in his capital until 1954. As in Libya, the ruler is subservient to pressure from members of the royal family, from vested commercial interests, and from tribal families. A strong opposition is, however, making itself felt in the ranks of the younger generation, many of whom have been educated in Egypt. A revolutionary movement is now being organized by Yemenite students and military cadets in Cairo under the title "Young Yemenite Party." The party expects to receive a loan from Egypt, and has proclaimed its intention to depose the present Imam, having already agreed on his successor, who, it appears, has accepted the principle of a parliamentary monarchy. Among their adherents the party claims the majority of the Imam's brothers as well as the 300 Egyptian-trained army officers. They realize, of course, that they will encounter armed opposition on the part of the tribes, but believe that the army will gain the upper hand.

The Egyptian political scene is well known to American diplomats. Everyone concerned in Egypt, as well as in Washington, seeks an answer to the classical question: "The rebels are all conquered, but are they all exterminated?" The gallows may be an effective measure for an oriental government—but even in the Levant they are not a substitute for a policy.

Iraq and Syria, Libya and Yemen, Egypt and Jordan, are breeding disorder and anarchy. American arms may save the present regimes in those countries for a certain period of time. No one can, however, guarantee that the arms will not eventually pass into the hands of the conspirators and potential rebels of tomorrow, as was the case in China with the American arms supplied to Chiang Kai-shek.

A Bill To Authorize Issuance of a Stamp To Honor Amelia Earhart

EXTENSION OF REMARKS OF

HON. TORBERT H. MACDONALD

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. MACDONALD. Mr. Speaker, as the Congressman from the Eighth Congressional District of Massachusetts, I today introduced a bill in Congress which authorizes the issuance of a commemorative stamp in honor of, and bearing the likeness of, Medford's own Amelia Earhart.

While it may be truthfully said that Amelia Earhart was not born in Medford but rather in Kansas on July 24, 1898, still we citizens of Massachusetts and particularly those proud citizens of Medford have as great a claim to Miss Earhart not only because she made her home here for many years but, as a matter of fact, we are further proud of the fact that her mother and her sister still reside in our district in the city of Medford.

Amelia Earhart is recognized as the most outstanding of all aviatrix. From the time of her first flight in 1920 until the cruel Pacific wave tops reached for her gallant spirit on July 7, 1937, there was never for her any music quite like the cadence of the skies with its unbounded mysteries to be discovered. Miss Earhart was the first woman to fly the great expanses of both the Atlantic and the Pacific Oceans. She was the first woman to reach the height of 14,000 feet, and one of the first American fliers of either sex to experiment with air-cooled engines, which later proved so valuable in our Nation's hour of need. In fact, Amelia Earhart is rightfully acknowledged as the supersaleswoman of our great aviation industry. She slogged out distance records, pioneered the autogiro, tested experimental planes and engines, gave hundreds of young enthusiasts their air instruction, boosted air travel with learned articles and thousands of lectures.

All men admired her for her femininity and good sportsmanship. All women warmed to her modesty, her championship of careers for their daughters. She was showered with honors and decorations, was feted by royalty, mobbed whenever and wherever she appeared in public. She was the best known woman of her day, and with it all her head remained unturned and she was the sweet epitome of gentle womanhood that we all look up to and admire.

Few women have been able to contribute so much to their country in such a short time as Amelia Earhart. Every day we see more clearly the outstanding contributions that she made to the happiness, the progress, and the welfare of the American people and to the strength and security of our Nation. Men and women everywhere cling in their sorrow to her unconquerable courage and selfless devotion in building American aviation. There is now no question that

she, too, gave her life in our Nation's and humanity's war for freedom of all people. It is to be hoped that the commemorative stamp will be issued as it will pay tribute to Amelia Earhart, a truly remarkable woman and a real American, and keep immemorial the services she so unselfishly gave our country, thereby encouraging thousands of American young women in their efforts to make this country even a greater place in which to live.

A Major Mistake

EXTENSION OF REMARKS

OF

HON. WINT SMITH

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. SMITH of Kansas. Mr. Speaker, I submit herewith an editorial written by one of the foremost editors of Kansas.

The gentleman writing this is Mr. Rollo Clymer, of El Dorado, Kans. He is "listened to" by the people of Kansas. His editorial speaks for itself:

A MAJOR MISTAKE

Congress gets blamed for a lot of matters—some justly, some unfairly.

But Congress will have none but itself to blame if the salary grab it has engineered for itself sets off another hectic round of wage-raising in this country, together with a myriad of labor-management disputes and a new kink in the inflationary spiral.

Something of the sort seems bound to happen as the result of Congress' deep dip into the Treasury for the benefit of its own Members. Congress may well set a model or pattern in this respect for those who want more money for their services—and thus Congress bears a heavy responsibility for its actions to date.

This newspaper is not in sympathy with the view expressed in some quarters that the pay for Congressmen is too low and should be raised on a 50- or 100-percent basis. If Congress had cut itself a 10-percent slice of cake, it might have been viewed as within the limits of reason, and passed over without serious objection. But for Congress to move into the guarded precincts of the Treasury and help itself to a lion's hunk of the wherewithal there amassed does not seem to be justified by the circumstances.

After all Congressmen are paid well, judging by the circumstances of most of the humpbacked taxpayers the Nation over. And while the market in Wall Street may be soaring to giddy heights and silver-tongued economists predict that the present business boom will roll along indefinitely, lots of businesses and lots of citizens out here in the hinterlands have a difficult time in making both ends meet. If another wave in the inflationary spiral is touched off, many of them simply don't know how they will manage—people with little homes they are trying to pay for, with children to educate, and with ungodly taxes of all sorts to pay.

The rank-and-file folk of this country ought to be able to look to Congress with some confidence that this body will help to hold material affairs in line until we all can adjust ourselves to the changes of a rapidly developing peacetime economy. But when Congress acts the hog regarding its own personal emolument, then such guidance is distressingly absent.

If Congressmen don't like their present pay, they should get out and go to work at some private occupation like the rest of us. Nobody asked them to run for office in the first place. Nobody certainly had in mind that they would demand top-flight pay for what—on many occasions—is only second-class performance and matter.

(NOTE.—This editorial will not be republished in the CONGRESSIONAL RECORD.)

North Dakota Legislature Asks President's Commission To Reject Transfer of Certain Soil Conservation Services

EXTENSION OF REMARKS

OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. BURDICK. Mr. Speaker, under leave to extend my remarks in the Record, I submit this resolution by the North Dakota Legislature detailing objections to proposals of the Committee on Federal Aid to Agriculture which would transfer the function of soil conservation technical assistance to the various States. The resolution follows:

House Concurrent Resolution 1

Concurrent resolution memorializing the President of the United States and his Commission on Intergovernmental Relations not to approve the reported recommendations of the Committee on Federal Aid to Agriculture relative to transfer of the function of soil-conservation technical assistance to the various States

Whereas the Committee on Federal Aid to Agriculture, a subcommittee of the President's Commission on Intergovernmental Relations, has reportedly recommended to the Commission the transfer of the function of soil-conservation technical assistance to the various States; and

Whereas the National Association of Soil Conservation Districts, representing more than 2,600 soil-conservation districts in the United States, and the North Dakota Association of Soil Conservation Districts, representing 79 soil-conservation districts in this State, along with other individuals, groups, and organizations who are vitally interested in the program, are opposed to the reported recommendation; and

Whereas if the reported recommendation is approved it would place an inordinately heavy financial burden upon the State of North Dakota, since the contemplated State appropriation each biennium could amount to a sum in excess of \$1 million if assistance to local soil-conservation districts is to be maintained at current levels; and

Whereas such program would greatly retard, if not eventually destroy, the national program of soil and water conservation now being carried on, and since the problem is national in scope, it should be dealt with accordingly: Now, therefore, be it

Resolved by the House of Representatives of the State of North Dakota (the Senate concurring therein), That the President of the United States and the President's Commission on Intergovernmental Relations are hereby respectfully memorialized and urged not to approve the reported recommendations of the Committee on Federal Aid to Agriculture, relative to gradual transfer of soil-conservation technical assistance functions from the national authority to the various States; be it further

Resolved, That copies of this resolution be forwarded forthwith to the President of the United States, to the Chairman of the President's Commission on Intergovernmental Relations, and to the Senators and Representatives of the State of North Dakota in the Nation's Capital.

K. WELCH,
Speaker of the House.
KENNETH L. MORGAN,
Chief Clerk of the House.
C. R. DAHL,
President of the Senate.
EDWARD LENS,
Secretary of the Senate.

North Dakota Legislature Condemns Proposal To Close State's Two Veterans' Hospitals

EXTENSION OF REMARKS OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 23, 1955

Mr. BURDICK. Mr. Speaker, under leave to extend my remarks, I submit the following resolution of the North Dakota Legislature pertaining to recommendations by the Hoover Commission task force.

The resolution follows:

Senate Concurrent Resolution 1

Concurrent resolution relating to the recommendations of the Hoover Commission for the closing of the Minot and Fargo veterans' hospitals

Whereas a recent report of the Hoover Commission after a study of the Veterans' Administration has recommended that the veterans' hospitals at Fargo and Minot be closed; and

Whereas adoption of the report of the Hoover Commission would mean that veterans of the State of North Dakota would have to travel for medical treatment between 250 and 650 miles to Minneapolis where the nearest veterans hospital would be located; and

Whereas such action would result in unfair discrimination and hardship to the veterans of the State of North Dakota who are in need of medical treatment: Now, therefore, be it

Resolved by the Senate of the State of North Dakota (the House of Representatives concurring therein), That the President and Congress of the United States are hereby urged and requested to allow the veterans' hospitals in the cities of Fargo and Minot in the State of North Dakota to remain open in order to provide adequate and accessible medical treatment to the veterans of this State; be it further

Resolved, That copies of this resolution be forwarded by the secretary of the senate to the President of the United States, the chairmen of the House and Senate Military Affairs Committees of the United States Congress, the Commissioner of Veterans' Affairs, and to all Members of the North Dakota congressional delegation.

C. P. DAHL,
President of the Senate.
EDWARD LENO,
Secretary of the Senate.
K. A. FITCH,
Speaker of the House.
KENNETH L. MORGAN,
Chief Clerk of the House.

Address of Department Commander Charles N. Collatos, Department of Massachusetts, the American Legion

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Department Commander Charles N. Collatos, Department of Massachusetts, the American Legion, at the recent testimonial extended to him. Over 11,000 Legionnaires attended his testimonial and I greatly enjoyed his address. I hope many others may have an opportunity to read it:

American opinion is far from clear upon the tangled problems of fact, law, policy, and morality which Communist-inspired situations involve.

There are people of intelligence, standing, patriotism, and high courage who, now and later, will differ from the prevailing opinion touching the proper method for dealing with international bandits and murderers.

The foreign policy of our Nation, until recently, has been distinguished by strong leading traits, patience, good judgment, and a forbearance scarcely paralleled in our history.

The spirit manifested toward other nations has been frank, conciliatory and consistent. The policy, of necessity, has been defensive for we are, basically, a peace-loving people.

We have negotiated important agreements and made substantial material contributions as we constantly pursue our chief objective of warding off international mischief and eventual chaos.

Persuasion, earnest and constant, has been employed, to no avail, to make Russia and her satellites respect the law of nations.

It is no new thing for governments to ally, confederate, or even consolidate in the common cause of justice.

Nor is disagreement between nations anything new or novel either.

But the recollection of the Korean war, its exchange of war prisoners, and the recent disclosure from Peiping with reference to Americans now held by the Chinese Reds on trumped-up charges, rankles in the American mind as disbelief, dismay, and indignation quickly succeed each other.

The argument most violently advanced today, Collatos declared, is that no clear avenue exists by which we can escape the consequences of a showdown save the dishonorable and humiliating one of leaving our fellow Americans to their fate at the hands of these international butchers.

Subscription to such an alternative is cowardly, useless, foolhardy, and a shameful retreat from the principles that have bound Americans from Valley Forge to Iwo Jima.

The spirit of 1776 still dominates the loyal American mind.

Public opinion moves onward relentlessly. This majority conscience is convinced that, if our way of life is to endure; if we are to preserve our heritage as free men, we must recognize the fatal antagonism, born of the murderous red heart, that now exists between us and the bandit governments bent on world enslavement, declared Collatos who is a labor relations commissioner for Massachusetts.

To consider this intolerable situation in any other light manifests a narrowness of vision which marked the early division of other peoples and the ultimate domination of their lands by those whose sole resources are force and cruelty.

The Communist grows more insufferably insolent with each passing day.

Too long have they been pampered by civilized nations as they continue to extort, again and again, an ignoble ransom of concession for each new outrage.

In sheer ugliness of despotism; in wholesale systematic barbarism; in irredeemable corruption and clumsy circumvention, the Chinese Communist out does even his Kremlin masters in their defiance of international law and contempt for the legitimate.

The farther we recede from the truth; the farther we recede from the rock of manliness and honor, the sooner will the curtain drop upon this lurid prisoner drama which must, of necessity, sicken every American heart.

Despondency, like the black clouds above, must be made to disappear before the sunshine of justice.

We are Americans. That means much to me.

It means much to you.

It means so very much to our fellow-Americans now in Communist hands.

We must face the facts.

Our forefathers resented the pretense of ruling them from across the seas—and Britain lost her most precious territorial possession.

The Barbary Pirates demanded tribute for American freedom of the seas and received an abundance of shellfire in response which committed their Corsair fleet to the bottom of Tripoli's waters.

Our English brothers of 1812 sought to impress American sailors into their naval service and our infant Navy soon dispelled their illusion of unassailable supremacy of the waves.

Spain learned that excuses could not raise the battleship *Maine* nor return our heroic dead.

Kaiser Wilhelm, Mussolini, Hitler, and Tojo, each of them, had the lesson driven home that the flag of these United States, though soft in texture, represents the combined strength, power, and fury of the just under God.

Reprisal instead of ransom and concession must be the rule against those who recognize no law of man or God.

Our enemies know that peace is our interest—and peace we always seek. But, if we are forced from our position, reason and passion, will, as in the past, prompt a firmness on our part that no power can long ignore.

This our Government knows—this our Government should never forget.

America is still the land of the free and the home of the brave.

Correct an Injustice of the Social Security Act

EXTENSION OF REMARKS

OF

HON. JACK WESTLAND

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. WESTLAND. Mr. Speaker, today I have introduced a bill to amend the Social Security Act. This bill provides that a widow who loses her widow's benefits by remarriage may again be-

come entitled to such benefit if her husband dies within 1 year after such remarriage.

Recently my attention was called to a situation in my home of Everett, Wash., which pointed up very sharply the need for the legislation I have proposed. A widow became entitled to widow's benefits under the Social Security Act. Shortly thereafter she married a second time. Within 9 months her second husband died. Upon her remarriage the widow's benefits from her first husband were, of course, terminated. Under the present wording of the Social Security Act, the widow received no benefits from the second husband following his death as the statute stipulates that the parties must have been married for a full year. So, at the age of 67, this woman finds herself twice widowed and unable to receive any widow's benefits.

Mr. Speaker, I do not believe that such a situation was ever intended and my amendment to the Social Security Act would correct it. While the requirement of 1 full year of marriage is perhaps, under ordinary circumstances, a justifiable standard to prevent fraud, such a standard has no application in these special conditions. Furthermore, under my bill the benefits to which the widow will be entitled upon the death of her second husband are those of her former husband. Thus, there is no chance that a remarriage would be arranged on the chance of receiving higher benefits from the death of a second husband of less than 1 year.

The situation which my bill seeks to correct is unjust. I believe it is incumbent upon Congress to make sure that social security benefits are not kept from the deserving by unnecessary technicalities of the law.

Bricker's Hope a Must—There Is Great Need for This Constitutional Amendment

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1955

Mr. SMITH of Wisconsin. Mr. Speaker, there is a growing demand throughout the country that the 84th Congress adopt a constitutional amendment as proposed by Senator JOHN BRICKER. Treaties and executive agreements that can override domestic law and constitutional rights are a dangerous threat to our liberties.

The Milwaukee Sentinel on March 9 has a timely editorial on this subject and I offer it at this point in the RECORD:

BRICKER'S HOPE

Commenting on the chances that the present Congress will approve his constitutional amendment calling for control of the Executive treaty-making power, Senator BRICKER, of Ohio, says he hopes President Eisenhower will no longer oppose it.

Last year, the measure failed to pass the Senate by just one vote short of the required

two-thirds majority. It was reintroduced January 6 this year.

"I hope that the President is for it," said BRICKER, "and I am confident he wants to protect the rights of the American people."

We share that confidence and hope.

We also believe that the amendment should pass without regard to any one President's desire, intention or determination to protect the rights of the American people.

Mr. Eisenhower has shown he can be depended on not to conclude treaties or agreements with other nations without the approval of Congress.

But there is no guaranty whatever, as the Constitution is now worded, against a future President committing the Nation to unwise foreign treaties.

A glance at the immediate past provides dire warnings against giving our Executive a blank check in international relations.

The Bricker amendment is designed to curb a power that Mr. Eisenhower obviously and properly does not care to exercise.

Nevertheless it is a power clearly abused by predecessors and open to abuse by successors.

According to the Constitution today, treaties are the supreme law of the land, anything in the Constitution or laws of any State to the contrary notwithstanding.

Treaties or executive agreements, in short, can override the laws Americans make for themselves.

The Bricker amendment provides that no foreign pact shall become effective, nor become domestic law, without valid legislation. That's all it calls for.

But it's more than enough to make its passage a vital need.

In Favor of Bill H. R. 4720 To Provide Incentives for Members of Armed Services by Increasing Certain Pay and Allowances

EXTENSION OF REMARKS

OF

HON. CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. WOLVERTON. Mr. Speaker, I am greatly pleased that the House Committee on Armed Services has reported favorably H. R. 4720, a bill to provide incentives for members of the Armed Forces by increasing certain pays and allowances.

The purpose of the bill is to encourage continued service so as to avoid the tremendous turnover of personnel that now prevails in the armed services.

The President, in a message to Congress on January 13, 1955, set forth with convincing and cogent reasons the necessity and advisability of passing legislation that would encourage officers and enlisted men to continue in the service on a career basis in order to obtain maximum usefulness from the skills and leadership which are achieved after long and costly training.

When the type of service that is now required of our men, whether they serve on land, sea, or in the air, is considered it becomes readily apparent that increasing mechanization and complexity of defense forces as stated by the President in his message make technical skills

and a wide background of experiences vastly more important than ever before.

All of this is sufficient in itself to justify the passage of the bill now before us. But in addition thereto is the fact that during 1954 the armed services experienced one of the lowest reenlistment rates in the history of the Nation. This applies to every branch of our services.

The situation with regard to officers is equally alarming. The report submitted by the Armed Services Committee of the House in support of this legislation has given the detailed figures. It confirms the general statement that I have made that the situation is alarming.

Not only does the lack of reenlistments in sufficient numbers justify the passage of legislation of this character as a means, we hope, of correcting that situation, but the cost involved in training service personnel reaches such proportions as to make it necessary to adopt some means of making the services appealing enough to incline men to remain in service and thereby diminish the cost of training programs for additional men. It is known, as the report sets forth, that each man who enters the armed services and undergoes basic training and up to the time of assignment to his first unit, involves approximately 6 months, costs the Government \$3,200 in pay, allowances, subsistence, clothing, and overhead directly chargeable to the trainee together with the costs chargeable to the trainers. Thus, if the reenlistment rate could be increased by only 100,000 individuals in the year 1955, the savings cost alone for replacements would be tremendous and most worthwhile.

To increase the number of reenlistments the present legislation limits the pay increases to officers with 3 years and over of service, and enlisted personnel with 2 years and over of service. Thus it can be seen that the objective is solely and entirely to encourage officers and men to continue in the service. However, I am personally of the opinion that it would have been proper under existing circumstances to allow some increase for enlisted men and their dependents. We are all familiar with the financial hardships that are created when a father, or a son supporting his aged parents, is called into service. While I would have liked to see the bill grant some help to these whom I have just mentioned, yet I am aware of the necessity of the bill as presented and, accordingly, it has my approval and support.

Interest Grows in Copyright Factfinding Commission

EXTENSION OF REMARKS

OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. THOMPSON of New Jersey. Mr. Speaker, I introduced on January 20 a bill, H. R. 2677, creating a Federal commission to study the copyright laws

and to make recommendations for their revision," and set forth the background of this proposal in the CONGRESSIONAL RECORD of that date. On March 2, the distinguished Senator from North Dakota, WILLIAM LANGER, introduced a companion measure, S. 1254, in the Senate.

There has been a growing interest in this proposal for a study commission, and I am pleased to be able to include here the following items as evidence of that interest:

[From Billboard magazine of March 12, 1955]

FACTFINDING HEATS UP

Although the habits of Congress are a bit difficult to understand—as when a Senator and Congressman introduce one another's conflicting bills—the pattern of events during the past 2 weeks indicates factfinding is gaining strength.

The original advantage enjoyed by the licensing agencies, an advantage derived from the almost unprecedented organized strength behind the Kilgore bill, is slowly being dissipated. The gap is narrowing not so much because of defensive measures on the part of the jukebox industry, but because the legislators are becoming more aware of the tremendous complications involved. They are learning that a lot of missing facts must be amassed before conclusions can be drawn.

That such an awareness should crystallize is inevitable. It develops as more and more people become cognizant of the opinions of unbiased copyright experts, such as Prof. Walter J. Derenberg, professor of law at New York University and a member of Attorney General Herbert Brownell's antitrust committee, and Prof. Benjamin Kaplan, of the Harvard University School of Law.

There is no black or white, right or wrong to the copyright problem. It is not as simple as that. Congress, for over 30 years, has unsuccessfully tried to come up with the answer. The Kilgore bill is exactly the same as those which stymied previous legislatures.

Let's be done with the time-consuming, misguided effort. Let's get into the basic economics of the problem, the basic economics of the music business. Let factfinding go beyond the licensing agencies, beyond the Music Operators of America, to the people who are directly involved—the operators, writers, and publishers.

NEW YORK UNIVERSITY,
SCHOOL OF LAW,
New York, N. Y., February 23, 1955.
The Honorable FRANK J. THOMPSON, Jr.,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN THOMPSON: As you may know, our law school has done some pioneer work in the field of copyright and we are currently conducting a seminar in advanced problems on literary and artistic property which is attended by some 40 graduate students. Your bill, H. R. 2677, proposing a Federal fact-finding commission to study revision of the copyright law, has stimulated a great deal of discussion here and I am taking the liberty of suggesting to you some thoughts that have occurred to me in this connection.

I have been a member of the Attorney General's National Committee to Study the Antitrust Laws, which is about to submit its report to the Attorney General within the next 2 or 3 weeks. This committee consists of some 60 experts in antitrust law representing both private and public points of view, who were appointed by the Attorney General upon recommendations made by the co-chairmen of the committee, the Honorable

Stanley N. Barnes, Assistant Attorney General and head of the Antitrust Division of the Department of Justice, and Prof. S. Chesterfield Oppenheim, of the University of Michigan Law School. No congressional action preceded the appointment of the committee and its work was financed by the appropriation available to the Department of Justice. The committee came into existence simply upon a suggestion by the Attorney General to President Eisenhower.

Some of us believe that a similarly constituted committee to revise our copyright law might best serve to bring about a much needed revision of our entire statute. In view of the many technical aspects of this field of the law, it may be more advantageous to have a committee appointed under the auspices of the Librarian of Congress which would not consist primarily of Congressmen or Senators but of copyright experts on both our domestic and international copyright law. Such a national committee might well lay the necessary groundwork for subsequent congressional action.

Similar committees of experts have handled similar assignments in Great Britain and Canada with outstanding success as evidenced by the Report of the Copyright Committee (Board of Trade), London (October 1952). Since I have gained the impression from reading some articles in the trade papers, Billboard, etc., that you are interested in getting reactions to the bill which you have proposed, I am taking the liberty of offering these thoughts to you.

Very sincerely yours,

WALTER J. DERENBERG,
Professor of Law.

P. S.: I am enclosing, as a matter of possible interest and information, a notice of the current seminar and an outline of the cases and materials used in my course on copyright at New York University School of Law.

MARCH 8, 1955.

Prof. WALTER J. DERENBERG,
School of Law, New York
University, New York, N. Y.

DEAR PROFESSOR DERENBERG: Thank you very much for your very kind letter regarding the bill I have introduced to establish a commission to study the copyright law. You were quite correct in assuming that I would like to have comments on the bill from interested and qualified persons such as yourself.

I have been giving your suggestion that we set up the Commission under the Librarian of Congress considerable thought. It would seem to me that the bill as it stands at present would accomplish the ends you state in your letter. This bill would empower the President to appoint 7 of the 13 members of the Commission. He would thus be able to appoint men with outstanding reputations in the field of copyright law either from the Copyright Office and other branches of the Government and/or eminent members of the bar. In addition, the Commission would be composed of 3 Senators and 3 Representatives. These members would be taken from the membership of the respective Judiciary Committees of the two Houses. Since any revision of the copyright law would necessarily have to be passed by the Congress, it seems desirable to have some Members represented on the Commission.

This, at any rate, is the way the matter appears to me at the present time. If you have any further thoughts on the matter, I would greatly appreciate hearing from you. In any case thank you again for your interest.

Cordially,

FRANK THOMPSON, Jr.,
Member of Congress.

[From Billboard magazine of March 12, 1955]
GETS IN COPYRIGHT ACT—NYU PROFESSOR
SUGGESTS FACT-FINDING GROUP SIMILAR TO
ANTITRUST ORG

(By Ben Atlas)

WASHINGTON, March 5.—A new wrinkle in the copyright fact-finding issue on Capitol Hill was added this week when Walter J. Derenberg, professor of law at New York University and a member of Attorney General Herbert Brownell, Jr.'s, antitrust committee, in a letter to Representative FRANK J. THOMPSON (Democrat of New Jersey) suggested that possibly a fact-finding group similar to the Attorney General's antitrust committee might perform the task specified by THOMPSON in his bill for a Federal Commission to study revision of the copyright law.

Professor Derenberg informed THOMPSON that proposed legislation for creation of a Federal factfinding commission "has stimulated a great deal of discussion at New York University's Law School which," Professor Derenberg said, "has done some pioneer work in the field of copyright" and is currently holding a seminar on advanced problems on literary and artistic property.

DERENBERG'S LETTER

Derenberg's letter went on to state:

"I have been a member of the Attorney General's national committee to study the antitrust laws, which is about to submit its report to the Attorney General within the next two or three weeks. This committee consists of some 60 experts in antitrust law, representing both private and public points of view, who were appointed by the Attorney General on recommendations made by the cochairman of the committee, the Honorable Stanley M. Barnes, Assistant Attorney General and head of the Antitrust Division of the Department of Justice, and Prof. S. Chesterfield Oppenheim, of the University of Michigan Law School. No congressional action preceded the appointment of the committee and its work was financed by the appropriation available to the Department of Justice. The committee came into existence simply upon a suggestion by the Attorney General to President Eisenhower.

"Some of us believe that a similarly constituted committee to revise our copyright law might best serve to bring about a much-needed revision of our entire statute. In view of the many technical aspects of this field of the law, it may be more advantageous to have a committee appointed under the auspices of the Librarian of Congress which would not consist primarily of Congressmen or Senators but of copyright experts on both our domestic and international copyright law. Such a national committee might well lay the necessary groundwork for subsequent congressional action.

"Similar committees of experts have handled similar assignments in Great Britain and Canada with outstanding success, as evidenced by the report of the Copyright Committee (Board of Trade), London, October 1952. Since I have gained the impression from reading some articles in . . . Billboard, etc., that you are interested in getting reactions to the bill which you have proposed, I am taking the liberty of offering these thoughts to you."

CONSIDERATION UNLIKELY

It appears unlikely at this time that Professor Derenberg's suggestion for a Library of Congress committee on copyright will get serious consideration in Washington. Nevertheless, the suggestion was indicative of the awakening of interest, particularly on law campuses, in the fact-finding proposal. Previously, Prof. Benjamin Kaplan, of the Harvard University Law School, in a communication to Representative THOMPSON, voiced interest and indicated that the subject would

be taken up by the Harvard Law School faculty (the Billboard, February 26).

Professor Derenberg enclosed with his letter a schedule of New York University Law School's copyright seminar. The seminar course is directed by Professor Derenberg "with the cooperation," he explained, "of outstanding experts in various specialized branches of copyright law." These experts include the following, several of whom are familiar figures on Capitol Hill as supporters of legislation in previous Congresses to end the copyright law's exemption of jukebox royalty payments.

The seminar roster of experts includes:

Arthur Fisher, registrar of copyrights, Library of Congress; Herman Finkelstein, general attorney, American Society of Composers, Authors, and Publishers; John Schulman, general counsel, Authors' League of America; Edward E. Colton, negotiator for the Dramatists' Guild; Edward A. Sargoy, former chairman, copyright committee, American Bar Association; Morris Ebenstein, legal department, Warner Bros. Pictures, Inc.; Samuel W. Tannenbaum, of Johnson & Tannenbaum; Robert J. Burton, vice president and resident counsel, Broadcast Music, Inc.; Charles B. Seton, of the New York Bar; Philip Wittenberg, author of the Marketing of Literary Property; Prof. Harry G. Henn, of Cornell University Law School; Joseph A. McDonald, treasurer, National Broadcasting Co., and former general attorney, American Broadcasting Co.; and John P. Allison, formerly editor, Tax Barometer.

Community Action: A Key to Rural Progress

EXTENSION OF REMARKS OF

HON. J. PERCY PRIEST

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. PRIEST. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Hon. HAROLD D. COOLEY, of North Carolina, chairman of the House Committee on Agriculture:

A great and latent force is being remobilized in America.

It was present at the birth of civilization. It brought mankind out of roving in wildernesses. It was the strength of mutual effort in the American Colonies and in the founding and formative years of our great Nation.

This force is the community spirit.

But somehow in many places this spirit seemed to have receded in our new age of invention, of bigger and glittering cities, of fast travel, of movies, radio, television, gadgets, in the myriad of other devices for entertainment and diversion—and in a kind of snobbery for many simple virtues.

The results have become plain to all of us, in the shapes of an alarming growth in juvenile delinquency, of crime, of rotting little towns, of neglect of community loyalties and pride, and a lack of the full satisfactions of a free trade in friendship and common purpose that community effort nourishes.

But now I believe one of the best signs of our time is that more people feel a need to reexamine the old virtues of neighborliness, of mutual concern, and of community action.

We can tell as we travel across our own great State where the community spirit has been revived or was never lost. We see it in the beautiful farms, well-kept church and school buildings, in evidences of work and pride all around. We can tell, too, where the spirit has withered.

The story of the Rabbit and Cat Creeks community in western North Carolina should be an inspiration to all of us. In 1936 a survey showed that the land there was eroded, crop yields small, homes were poor, the standard of living was low, and the church and school needed attention. The people decided to do something about this. And today that community is a symbol of the progress that comes of community action. There are other models in our State for us to work by.

I believe a great new ground swell in community action awaits only upon leadership and organization.

Someone has said that a community is the image of the people who live in it and I think a good start can be made by each citizen asking himself or herself a few questions: Am I proud of my community?

Do I boast about it to other people?

What are the good points of my community? Also, what are its needs, and how can those needs be met?

Could better living result if more of my neighbors and I worked together in a community program?

What can we do to start such a program or to move it forward?

I was impressed recently by a news story from Butler, Mo., that started off by saying, "You'd be surprised to see what they are doing here in Bates County to those old, abandoned rural schoolhouses." The story then told how the people there were putting pretty drapes at the windows and bright linoleum on the floors—making them into cheerful clubhouses where they meet to discuss community affairs, eat home-cooked food and have loads of fun.

That a revival of community action is about to take hold in a big way is demonstrated in a motion picture I recently saw. It was produced by one of the big automobile manufacturing companies and bore the title "The Town That Came Back." The theme of the picture is that it always takes people to make anything happen. It is the true story of a group of people who breathed new life into the almost-dead community spirit of a small Midwestern town.

Neighbors in this town hardly knew each other any more and there was not much left to hold young people in the community.

Then somebody got the idea of reactivating a 4-H Club, and things began to happen. Where there was disinterest and defeat, a new community now thrives.

It is a story that could be repeated a thousand times over across this broad and good land of ours.

One of our great Presidents, Woodrow Wilson, always stressed the importance of the community, and he once had this to say:

"When I look back on the processes of history, when I survey the genesis of America, I see this written on every page, that the nations are renewed from the bottom, and not from the top; that the genius which springs up from the ranks of unknown men is the genius which renews the growth and energy of the people."

I am impressed, too, by a statement that comes from the Committee for Economic Development, an organization of the Nation's top business leaders, as follows:

"America came to greatness from her grass-roots, and it is from life in small communities that strength must continue to flow and nourish our country toward greater accomplishment which can be shared by all. The hope of America is not that our huge cities shall become more vast—it is rather that the small communities shall consolidate their opportunities to grow and become better, more interesting places for our people to live in and prosper. In the final analysis, our Nation is just one community added to another until the splendid total makes us what we are."

What needs to be done is clear. How to do it provides the problem—and the challenge.

"If," said the shrewd Portia, "to do were as easy as to know what were good to do, chapels had been churches and poor men's cottages princes' palaces."

First, in considering community action, it must be remembered that to get anywhere, it is necessary to start from where you are, and that nothing will run itself except when it is going downhill.

A few public-spirited citizens can start a community-betterment program. I believe that all that's needed is a sincere interest in the community and a willingness to assume initial leadership in arousing general interest and enthusiasm in community self-improvement.

The University of Illinois, after considerable study, has published a bulletin on how a betterment program can work in the community. This suggests steps in organization, as follows:

1. A public mass meeting at which everyone could speak his mind, where experiences of other communities with improvement programs can be discussed, and where specific needs of the community can be reviewed.

2. A community council should be organized at the public mass meeting. This council would serve as the overall planning and directing force of the betterment program. The council should be a broadly representative group, its members coming from the various occupations and interests of the community, including youth organizations. It would formulate general policies as guides in developing action programs.

3. An executive committee, drawn from the members of the community council, should be named as the first step in setting up action machinery to transform general policies into definite projects.

4. Action subcommittees should function to follow through on specific action programs.

While the program will not change a community overnight, the payoff in a more satisfying community life can be expected within a short time after it is started. Better streets, better recreational programs, community beautification, new business and industries—these may be some of the first signs that the program is beginning to work.

Then it will be known that the spirit of neighborliness and mutual concerns and efforts that sustained our forefathers in conquering the wildernesses has returned. This will be a happy day.

The community spirit simply is friendship in action.

Praise for Our Secretary of State

EXTENSION OF REMARKS OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, February 18, 1955

Mr. DONOHUE. Mr. Speaker, I am pleased to enclose the letter of thanks forwarded to the Honorable John Foster Dulles on behalf of the Worcester Zionist district, the Worcester Lodge B'nai B'rith and the Hadassah groups, by Judge Joseph Goldberg, of Worcester, Mass.

The letter follows:

FEBRUARY 4, 1955.

HON. JOHN FOSTER DULLES,
United States Department of State,
Washington, D. C.

HON. JOHN FOSTER DULLES: I know that very often you receive letters of criticism and it must be nice to receive a letter of appreciation.

On behalf of 1,000 members of the Worcester Zionist district and thousands of

members of the Worcester Lodge B'nai B'rith and the Hadassah groups, I wish to express to you the gratefulness of all of us, for your intercession and the intercession of our Government, on behalf of two Jews that were hung by the Egyptian Government. Certainly, there was no such urgency, as to require this speedy execution.

The whole trial was shocking and the hanging was both brutal and unjustified.

I just want you to know that your act of friendship in this tragedy, is characteristic of the humane attitude of our Government in all such instances.

Most respectfully yours,

Judge JOSEPH GOLDBERG.

Thomas Masaryk

EXTENSION OF REMARKS OF

HON. JOHN C. KLUCZYNSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. KLUCZYNSKI. Mr. Speaker, today all freedom-loving people throughout the world are observing the 105th anniversary of the birth of the founder and liberator of the Czechoslovak Republic. Speaking of Thomas Masaryk, as one of the greatest statesmen, politicians, philosophers, and above all a real democrat of the 19th and 20th centuries, one cannot forget how deeply rooted were the principles of true Americanism that were embodied in this great man. Emil Ludwig, considered to be a great German biographer, once put this question to Bernard Shaw: "Who could be President of the United States of Europe?" to which the distinguished British playwright answered: "I know of only one man—he is Masaryk."

And it was Masaryk who believed so strongly in the idea of uniting all Europe, despite the fact that first he began by uniting his own beloved country. He knew, however, that "federation without freedom is impossible" and if any of our statesmen of the past had followed the political line of thinking that Masaryk had laid down and preached many years ago, they never would have made the mistakes for which millions of human beings have had to pay so dearly. The man who had founded one of the greatest democracies existing between the two world wars had this to say on democracy:

Democracy is a fight for humanly free and unfolding world order with no dictatorial and repressive prerogatives for any.

Can these words be quoted today by those who rule that unfortunate country? It therefore is no surprise to us that the Communists do not claim him. What is more, his works have been criticized by them. His simple room, which even the brutal Nazis respected during the occupation, has been entirely changed by Gottwald, the man who calls himself President of the Czechoslovak Republic. Thomas Masaryk's modesty and simplicity were not only expressed by his teachings, but also through his actions. It followed him throughout his entire life. His humility and modesty

were born with him and did not leave him until he died.

Thomas Masaryk was born on this day in 1850, 2 years after the manifesto of socialism was announced in Germany. His father was an ordinary coachman and his mother a former household servant. Yet he received the best education one could get in those days. He spoke German, French, and English very fluently, and was well versed in Latin and Greek. In his early years he had a passion for the theater, and throughout his life he adored poetry. In fact, Preston Warren, Masaryk's biographer recalls that Masaryk, speaking for Paderewski against those who believed the latter should keep to his music rather than to get mixed up in politics said:

The bearing of poetry upon politics, and to reveal the artist Paderewski as a true political awakener of his people. Poetry educates imagination, a vision of the future, a penetration into the souls of others.

For us Americans, it is important to recall one major aspect of Masaryk's life, which was that he was devoted to the same principles laid down by the Fathers of our Country. I refer here to the wife of Thomas Masaryk, Charlotte Garriague, a young American who had been a pupil of Liszt. She was his whole inspiration, both in his domestic and political life. The love for the American principles, which he imbedded in his own country can only be explained through the wonderful relationship between Thomas Masaryk and his wife.

When Thomas Masaryk died in 1937, it was Eduard Benes, his greatest friend and follower, who spoke these words at the great Czech's grave:

How can we be other than calm, clear, and firm when we look upon the clear and straight path which that life shows us? How beautiful and how exalting it is to see that this great warrior, who never shirked a fight, leaves us in harmony with himself, with his faith in Divine Providence, in harmony with his environment, with his faith in man, faith in the ultimate triumph of man, in the triumph of justice and truth, in the triumph of humanity here against us, in Europe, and throughout the world.

This was Thomas Masaryk who had gone already into history with the greatest men mankind has known.

Mental Health Study Prepared for Hoover Commission by Dr. Francis J. Braceland

EXTENSION OF REMARKS OF

HON. J. PERCY PRIEST

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. PRIEST. Mr. Speaker, the Subcommittee on Health and Science of the House Committee on Interstate and Foreign Commerce has been holding hearings for the last 3 days on legislation pending before the committee designed to strengthen the program of the Federal Government in the field of mental

health and to assist the States and voluntary groups in their efforts in this field. It has been called to the committee's attention that a study has been prepared by Dr. Francis J. Braceland, chief psychiatrist of the Institute of Living, at Hartford, Conn., for the Hoover Commission Task Force on Federal Medical Services. A summary of Dr. Braceland's findings has been released by the Hoover Commission. The information contained in this release is of great interest to the Members of the House and to the American people in general. The release reads as follows:

COMMISSION ON ORGANIZATION OF THE EXECUTIVE BRANCH OF THE GOVERNMENT

WASHINGTON, March 7.—With more than half of the hospital beds in this country devoted to care of the mentally ill, about 250,000 new patients will have their first admission to such hospitals this year, according to figures made public today by the Commission on Organization of the Executive Branch of the Government.

At the present rate of illness, 1 in every 12 children born in this country will spend some time in a mental institution and the number of prolonged-care patients is steadily increasing at the rate of 10,000 a year.

These figures are contained in a special report on mental illness prepared under the direction of Dr. Francis J. Braceland, of Hartford, Conn., a member of the Commission's Task Force on Medical Services. Dr. Braceland is psychiatrist in chief of the Institute of Living at Hartford, clinical professor of psychiatry at Yale University, and former president of the American Board of Psychiatry and Neurology.

The report was the basis of the recommendation for additional attention to this phase of health care made to the Congress last week by the Commission through its chairman, former President Herbert Hoover, as part of its recommendations for more efficient medical services in Government.

In line with Dr. Braceland's findings, the Commission urged that the Advisory Council of Health, which it proposed, study means of establishing cooperative planning among Federal agencies providing psychiatric care, and that the military services and the Veterans' Administration give greater emphasis to preventive psychiatric services. It also recommended that the Federal Government, through the Public Health Service, encourage wider research and training of psychiatrists and workers in allied fields.

The growing needs in this field are cited in the special study, and are reported to be largely the result of population growth and the larger proportion of older people rather than any upsurge in the rate of ailments of the mind. The survey stresses the need of recruitment and training of psychiatric specialists to cope with a problem which already is costing the taxpayers \$1 billion a year, without counting the incalculable losses in manpower.

It points out that most of the 650,000 prolonged-care psychiatric patients are being treated in State and Federal tax-supported mental institutions. It calls mental illness the greatest single problem in the Nation's health picture.

Although the study explains that exact figures cannot be compiled, it says that medical health surveys suggest that as many as 9 million persons, almost 6 percent of the population, suffer from some form of mental disorder. About 10 percent of these, or slightly less than 900,000, are considered in need of hospital care.

The most serious bottleneck in the way of proper care for all these cases, according to Dr. Braceland and his aides, is the lack of trained personnel—physicians, nurses, and

other properly equipped professional and auxiliary workers.

The study cites a statistical survey by the National Institute of Mental Health which shows that in 1950 the need for full-time physicians in State mental institutions of the country was only "about half met," with one State having no psychiatrists at all. These State institutions, it says, also had fewer than 24 percent of the needed number of graduate nurses, 23 percent of the desired number of psychiatric social workers, and fewer than 74 percent of the required number of attendants.

Although the medical health personnel situation has improved somewhat in recent years, it adds, shortages in this field continue "not only to hamper efforts to improve general conditions, but also to restrict efforts to discover new methods of treatment and even to prevent the wide application of known therapeutic procedures."

It is only within the past quarter of a century that an appreciable number of psychiatrists has entered private practice, the survey says. More than 4,000 now are active in this work privately. The chief need for private practitioners in this specialized field today exists in cities of fewer than 100,000 population.

State care accounts for about 85 percent of the patient load in mental hospitals, and about 70 percent of expenditures nationally. Second largest share of the burden is being carried by the Veterans' Administration, which at the end of the fiscal year 1953 had 35 predominantly psychiatric hospitals with 51,000 operating beds and 5,600 additional beds for psychiatric patients in its general and surgical hospitals.

Dr. Braceland indicates the main reasons for the personnel shortage. Lengthy and expensive training is one of the causes. A physician now must serve 2 years in the armed services, and the addition of 5 years of training and experience for psychiatric practice to his already long general medical preparation delays his advent into practice until he is in his middle thirties. Because of overcrowding in the hospitals, the workload is unusually heavy, he says, the pay often is inadequate, and job location frequently is in an isolated area, and the whole picture is overwhelming.

"Although it is evident that the personnel situation is bad now," his report comments, "it has been kept from becoming even more serious by reason of the farsighted training program of the Veterans' Administration and the training stipends made possible under the National Mental Health Act."

The report notes that gratifying progress has been made, largely through basic and clinical research, in the handling of certain types of mental disease. Paresis, an organic disease of the brain due to syphilis, is being conquered. Formerly, 10 percent of all persons with syphilis became victims of paresis; today, as a result of new therapeutic methods, fewer than 3 percent of patients who are adequately treated develop this illness, and the investigators make the happy prediction that it is not unlikely that this disease can be wiped out in this generation.

Research also has conquered pellagra, with its attendant mental ills. At one time it was estimated that 10 percent of patients in mental hospitals in the southern part of the country were there as a result of pellagra. With the discovery that this was a vitamin-deficiency disease caused by lack of nicotinic acid in the diet, it became responsive to treatment and is now readily preventable, the report points out.

Medical gains also are noted in other directions. The agitated depressions of middle life have responded dramatically to electric shock therapy, as have depressive illnesses in general. As late as the 1930's, schizophrenia had a "spontaneous recovery" rate of only

15 to 20 percent; today, 40 to 60 percent of such patients can be helped by modern treatment.

New methods also are bringing epilepsy under control. That illness a few decades ago contributed a number of patients to mental institutions.

The studies give recognition to the fact that senility often is accompanied by mental infirmities and disorders.

"There is an urgent need for research in the prevention and treatment of the mental diseases of elderly persons," the report explains. "It avails us little if the miracles of modern medicine spare the population for a longer life span if we are to end ingloriously with senile psychoses."

"It is becoming increasingly evident that the psychoses of the older-age groups have psychological and social components which may be of as much or even more importance than the physiological and pathological factors."

"Loss of status and position, economic and emotional dependence, lack of useful occupation, and a feeling of being no longer worth while, all take their toll in persons who are dependent in later years."

"Research directed at these various components of the illness, and treatment aimed at the alleviation of distressing conditions will not only bear fruit from a humanitarian standpoint but will salvage a number of people who otherwise would become wards of the Government."

A survey covering resident mental patients in 6 States showed that while in 1939 only 14 percent were 65 years of age, or older, by 1950 the number in this upper-age bracket had risen to 25 percent.

Dr. Braceland's report shows that although there is little difference regionally in the incidence of mental disease, the ratio of mental hospital patients to population varies widely in the States, from about 2 per 1,000 in New Mexico to 6 per 1,000 in New York. Although marked strides have been made, it says, in the rate at which patients are discharged, this gain has been more than offset by the higher number of admissions and the fact that mental cases now have longer life spans.

The rolls of the mental hospitals, the study found, give only a partial picture of the problem. The figures do not include the large number of persons suffering from mental disorders and kept at home or in sanatoria, nursing homes and general hospitals whose patients are not included in the psychiatric hospital statistics.

Research also has brought progress in the field of psychosomatic medicine and has inspired a new recognition of the importance of emotional factors in many diseases formerly considered to be of obscure origin.

Asthma, colitis, gastric and duodenal ulcers, hypertension and other ailments, some of which have become associated with the pace of life today, Dr. Braceland asserts, now are clearly recognized as having emotional components which must be recognized and treated if the illness itself is to be overcome.

The importance of this factor is emphasized by the report, which cites estimates that between 50 and 70 percent of the patients coming to physicians' offices today have sicknesses with emotional angles.

"It is only by means of continued research," Dr. Braceland concludes, "that any one of these serious psychiatric problems will be met, and research requires trained personnel and sufficient funds with which to accomplish it."

Community health services have been found to have a vital responsibility for recognition of mental illness at its inception and by "scientific vigilance" to get or give treatment for the patient "before commitment is necessary or before tragedy occurs."

Hawaiian-Alaskan Statehood?

EXTENSION OF REMARKS OF

HON. JOHN R. PILLION

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. PILLION. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include my statement before the House Interior and Insular Affairs Committee on February 14 in relation to Hawaiian-Alaskan statehood.

The statement follows:

HAWAIIAN-ALASKAN STATEHOOD?

INTRODUCTION

Mr. Chairman, the controversial problem of statehood for the Territories of Hawaii and Alaska continues to challenge the wisdom of this Congress. My remarks shall pertain to bill H. R. 2535, which proposes to grant statehood to both Territories and is now under consideration by this committee.

THE IMPORTANCE AND THE FINALITY OF STATEHOOD

This momentous issue of statehood compels us to give our most serious attention to its consequences. We are confronted with a measure that has vast implications relating to the internal affairs of this Union. We must also concern ourselves with the finality of whatever decision we may make.

No other problem will, as vitally, affect and shape our future as statehood. The seriousness of this subject is transcended only by our struggle to survive the Communist holocaust.

The various domestic and foreign problems of this Congress which relate to finance, defense, health, and foreign aid, are of extreme importance. Yet, if we find ourselves in error, our mistakes can readily be rectified by congressional action or by the flexibility of executive power. With one exception, even our Constitution and its amendments may be amended to conform with changing conditions or attitudes. The most recent example of this change is the repeal of the 18th amendment.

The one exception to the right to change our Constitution applies to the present proposal. Article V of our Constitution provides that no amendment may be made to this clause "and that no State, without its consent, shall be deprived of its equal suffrage in the Senate."

The principle that no State can secede from this Union is established. The corollary principle that this Nation cannot divorce any State from this Union or restore it to the status of a Territory is equally accepted. Thus, the grant of statehood becomes an irrevocable act.

The finality of our decision as to statehood gives us cause to approach this matter, not with a lighthearted generosity, but rather with a somber realization and precaution that any mistake will burden us for the life of this Republic.

THE EMOTIONAL, IRRELEVANT, AND MINOR ISSUES

There have been so many issues injected into this debate that it has become difficult to see the forest for the trees. Almost every conceivable argument has been presented pro and con to a degree that has confused and confounded rather than enlightened those who may be interested.

It appears a suitable time to attempt to clarify and place the arguments into their true political perspective. The leading arguments in favor of statehood which are

grouped together here as being either emotional, irrelevant, or of minor consequence are:

- (a) Americanism and military service.
- (b) The psychological impact of statehood upon the Asiatic peoples.
- (c) The references to precedent in favor of statehood.
- (d) Partisan political considerations.

THE EMOTIONAL APPEAL OF AMERICANISM AND MILITARY SERVICE

Every informed person will acknowledge the courage and the sacrifices of the Hawaiian veterans in both World War II and the Korean conflict. This Nation is eternally indebted to them and in an equal degree to all other American veterans who fought so gloriously in those wars.

The proponents of statehood have cited individual cases of heroism on the part of Hawaiian soldiers. They have made comparisons of the Hawaiian casualties and the numbers in military service as against the casualties and the number of servicemen from the United States as a whole.

The Alaska Statehood Committee has published this claim:

"In two world wars and in Korea they have fought—in number exceeding the national per capita average—and by so doing have written a war record second to none in the Nation."

The Library of Congress has furnished the following table of inductees for World War II:

State	Population, 1945	Draftees in World War II
New Hampshire.....	450,000	32,430
Montana.....	477,000	38,453
Idaho.....	507,000	38,612
Hawaii.....	460,000	28,008
Alaska.....	79,000	3,452

(Hawaii had 8,769 additional enlistees. No figures are available for other States.)

These figures do not substantiate claims of superiority in the number of citizens from Hawaii and Alaska who served in World War II.

The statements regarding casualties and bravery cannot support the inference that these soldiers were more loyal and more brave than the veterans from the other areas of this country. I defend all segments of this country from the innuendo that any group or area of our people have a monopoly upon patriotism or bravery. There is no scientific thermometer that can measure the warmth of devotion for this great country.

The sacrifices on the battlefield do not constitute legitimate political, economic, or social premises for the admission of these territories to statehood. These highly emotional appeals could have been, most properly, left out of this debate.

THE IRRELEVANCE OF FOREIGN PSYCHOLOGICAL IMPLICATIONS

The proponents of statehood claim that statehood would create good will for the United States in the Pacific area and would avoid for us the stigma of colonialism.

The question of statehood is solely and wholly a domestic problem of our internal affairs. It is a strange theory that would permit foreign opinion to influence or decide the conduct of our domestic affairs. The Communist line of charging us with colonialism cannot be increased in volume nor will it be softened by any act of compliance.

We should not fear to disappoint those enemies. Our foreign friends need no explanations.

The psychological impact of statehood upon foreign peoples is irrelevant and deserves no consideration here.

The height of irrelevancy was attained by a former governor of one of the Territories.

He advanced as an argument in favor of statehood, "the delectation of visitors, the sweetness of Hawaiian music, and the rhythm of its dance." Certainly, the muscular gyrations of the Hula dance is far afield from the crux of the statehood problem. This sentimentality borders upon the frivolous.

THE PRECEDENTS FOR STATEHOOD

The proponents of statehood rely extensively upon the use of precedent to lend validity to their claims.

The Northwest Ordinance was adopted under the Articles of Confederation in 1787. This Act, providing for the admission of that Territory to statehood, is cited as precedent and as the source of the inherent right of every Territory to become a State. This precedent is invalid for the following reasons:

1. The Articles of Confederation has been superseded completely by the Constitutional provisions relating to the admission of new States.
2. The Northwest Ordinance was limited in its application to the Northwest Territory.
3. The framework of the Confederacy, the division of powers and the scheme of representation was totally different from our present constitutional Government.

References by the Supreme Court to incorporate Territories as "inchoate" and "embryo" States are mere dicta and an attempted intrusion into the field of Congressional legislative authority and responsibility.

The admission of other States is referred to as precedent for the admission of Hawaii and Alaska upon the basis of equal representation in the United States Senate. The last State to be admitted was Arizona on February 14, 1912.

Following the admission of this 48th State, the 17th Amendment was adopted by final ratification on April 8, 1913. The mode of selection of Senators was altered from that of choice by the State legislatures to that of election by popular suffrage. This change of election of Senators has resulted in representation by the Senators of the people of the States as individuals in substitution for representation by the Senators of their respective States collectively and in their corporate capacities.

The 17th Amendment created a new concept of Senatorial representation. No State has been admitted under these fundamentally altered conditions.

Thus, the admission of other States furnishes no valid precedent for the admission, today, of Territories upon the same basis of representation in the United States Senate.

PARTISAN POLITICAL IMPLICATIONS

The Democratic National Party platform contains a plank favoring immediate statehood for both Hawaii and Alaska. The Republican National Party platform favors immediate statehood for Hawaii and statehood for Alaska under an equitable enabling act. However, no responsible Republican Party spokesman has, as yet, given us an adequate detail explanation of the meaning of the term "equitable enabling act."

In the 1952 elections, the Republican Party retained control of the Hawaiian Territorial Legislature by the election of 8 Republican Senators to 7 Democrats. In the House there were 19 Republicans elected to 11 Democrats.

In the same year, Alaskan Republicans won the Alaskan Senate by seating 11 Republicans and 5 Democrats. In the House, there were 20 Republicans elected to 4 Democrats.

Based upon these returns, it was predicted that in the event of statehood, Hawaii would elect 2 Republican Senators and that Alaska would possibly elect 1 or 2 Republican Senators.

Two years ago the Republican administration attempted to pass the bill giving statehood to Hawaii and kill the Alaskan statehood bill. This writer opposed the immediate admission of these States either sev-

erally or jointly. The Republican Party subjected itself to the charge of attempting to gain partisan political advantage in its attempt to support the Hawaiian statehood bill alone.

In 1954 the political picture reversed itself. The Hawaiian Legislature was won by the Democratic Party for the first time in the history of that Territory. The Democratic Party swept both Houses overwhelmingly. The Democrats won a 9 to 6 majority in the Senate and a 22 to 8 majority in the House.

A similar sweep was gained by the Democrats in the Alaskan Territorial Legislature. There, the Democrats gained control of the Senate by winning 12 seats to 4, and in the House 21 seats to 3.

Another political factor is the successive drop in the plurality of the Republican Delegate from Hawaii. The Republican pluralities for that office are as follows:

Year:	Republican plurality
1948.....	53,000
1950.....	31,000
1952.....	9,000
1954.....	890

¹ Approximate.

² Official.

Based on the 1954 election returns, it appears that, in the event of statehood, Alaska would surely elect 2 Democrat Senators and Hawaii would be likely to elect 2 Democrat Senators.

It is most obvious that the passage of the joint Hawaiian-Alaskan statehood bill by the Congress would place the Republican Party in a difficult position. The President would be placed in a political dilemma. By approving statehood for both Territories, he would risk the probability that these two Territories would return 4 Democrat Senators. If he vetoes statehood, he assumes the political onus of defeating a measure of popular favor.

Partisan politics is a transitory consideration. This issue ought to be decided upon American principles having a true political validity. The solution should pass the test of what will be permanently just for the peoples of both majority and minority parties of the whole Nation.

GOVERNORS' CONFERENCE REJECTS STATEHOOD

At the hearing before this committee on February 4, 1955, the impression was left that the Governor's Conference endorses statehood for both Hawaii and Alaska. This is not so.

Resolutions were adopted by the Governors' Conferences, for 6 years from 1947 to 1952, favoring statehood for Hawaii and Alaska.

On March 2, 1953, the writer addressed communications to each of the 48 governors indicating the prospective loss of voting power for the people of each State in the senatorial and presidential elections upon the grant of statehood to Hawaii and Alaska. No claim is made that the subsequent failure to endorse statehood is due to these communications.

At the 1953 governors' conference, a resolution favoring Hawaiian statehood was presented. This resolution failed to receive a favorable report. No resolution for either Hawaiian or Alaskan statehood was presented at the 1954 conference. The governors, perhaps, perceived the prospective loss of representation to the peoples of their respective States. Failure to approve statehood resolutions, under these circumstances can be fairly construed to constitute rejection.

COMMUNISM, A MAJOR CONSIDERATION IN HAWAIIAN STATEHOOD

The extensive communistic influences in Hawaii continue to present an alarming condition for both Hawaii and the United States. A careful study of the facts does not give

hope that communistic power is on the wane. Communism remains a potent force permeating the economic, political, and social structures of this Territory.

The New York Herald Tribune of June 23, 1953, reported a labor strike by the ILWU on June 22, 1953, in Hawaii. The facts, as reported there, are as follows:

Twenty-four thousand employees on the island went on strike in a mass protest against the conviction of Jack Hall and six other conspirators convicted of plotting to teach and advocate the violent overthrow of the United States Government.

Two thousand of these employees are stevedores, members of the International Longshoremen's and Warehousemen's Union (ILWU), who refused to load military cargo for Korea. Eighteen thousand out of 19,000 ILWU union workers on the sugar plantations joined in this strike. One thousand of these men refused to strike. Four thousand out of 5,000 pineapple workers also joined the strike. One thousand of these men refused to strike.

Now, these men went on strike, not because of any legitimate labor dispute, but in protest against the conviction of these Communists for the advocacy of treason and revolution.

The fact that 1,000 men in the sugar industry and 1,000 men in the pineapple industry refused to join this strike is proof that it was possible to refuse to join in this dastardly demonstration of Communist close-order drill.

Those who refused, a pitiful minority of 2,000, demonstrated their courage and Americanism. The same cannot be said for the other 24,000. The refusal to load military cargo for Korea borders upon sabotage.

If these men went on strike because of threats or pressures, then a condition exists in Hawaii so dangerous that Hawaii should not be granted statehood at this time. If they went on strike willingly because of their sympathy for the Communist convicts and the Communist movement, then this type of citizen does not deserve statehood. This country can do well without their voice and their vote in Congress.

This same union, ILWU, called another strike as recently as last December 1954, while members of this Territorial subcommittee were attending hearings in Hawaii.

The International Longshoremen's and Warehousemen's Union (ILWU) has a membership of 25,000 and dominates unionism in that territory. Its president is Harry Bridges, who is 1 of the top 3 Communist leaders in this country. Jack Hall is the Hawaiian spokesman for Harry Bridges and the leader of that union there.

The unions in Hawaii controlled or infiltrated by Communists have a membership of about 30,000. The names of the Communists and those persons closely related to the Communist Party who occupy positions of power in the unions, union locals and the top organization of the ILWU are contained in the hearings of the House Un-American Activities Committee for the year 1950.

These hearings regarding Communist activities in Hawaii are contained in three volumes and contain a startling revelation of the infiltration of communism into both the ranks of unionized labor and in the political parties. These volumes are proof that the Communist Party controls the ILWU, lock, stock, and barrel.

By means of union devices such as closed shops, union stewards, and grievance committees, it is possible for the Communists to control the employment, lay-offs, firings, and hiring of labor. This control, and the use of cadres of union officials and Communist stooges to propagandize, persuade, and coerce, gives the Communists a tight control over the ideology and political action of its members. The individual laborer doesn't have a chance to earn a living or to keep

from being maimed by a premeditated "industrial accident" unless he complies.

It is a political axiom that each employee can be counted upon to deliver three votes in a political election. If the ILWU can order 24,000 men to go out on a Communist sympathy strike sabotaging United States military transport, can there be any doubt that they can deliver 50,000 votes to their political choice?

The political objectives of the Communist Party are reported in these hearings. They are:

1. Communists support statehood (p. 1559, pt. 2 of the hearings).

2. Development of a following in the Democratic Party to back Communist causes (p. 1570, pt. 2 of the hearings).

3. Establish legislative caucus to act as pressure group on Democratic Party for Communist objectives (p. 1570, pt. 2 of the hearings).

The fact that statehood for Hawaii is supported by the Communist Party and the ILWU does not per se make this cause wrong or undesirable. However, one can be sure that their support for statehood is not actuated by the same motives for good government as those who sincerely believe that statehood is a just cause. The support of the Communists is based upon their self-interest in advancing the Communist cause and that cause alone.

Can there be any doubt that the Communist Party and the ILWU would not make an all-powerful drive to elect 2 United States Senators in the event of statehood? And it makes no difference to them whether they bear the Republican or Democratic label. By statehood, we not only open the door for 2 Communist-influenced United States Senators, but we actually invite 2 Soviet agents to take seats in the United States Senate.

On June 19, 1953, Jack Hall, ILWU regional director and Communist Party leader was convicted of violation of the Smith Act along with 6 other defendants. A 1954 publication of the Hawaii Statehood Commission cited these convictions as proof of "unalterable and aggressive opposition" of the people of Hawaii to communism. The record of the 1954 election completely refutes this statement.

In the race for the office of mayor of the city of Honolulu, Frank F. Fasi, the Democratic candidate was opposed by Neal Blaisdell, the Republican candidate. During the campaign Frank Fasi charged that Blaisdell was courting ILWU support.

On October 15, 1954, the leading newspapers carried the charge by Frank Fasi, the Democratic candidate, that "The big issue of this campaign is whether a candidate for mayor can be elected without the support of the Communist leaders in Hawaii."

The Honolulu Star-Bulletin, which is an outstanding newspaper of the highest standards, reported on November 1, 1954:

"He (Fasi) has struck out at Governor King and the ILWU leadership."

On November 3, this same newspaper carried the following front page headline:

"ILWU sample ballot supports Blaisdell."

During this campaign, the Republican candidate did not once deny these charges or repudiate and reject ILWU support. The following legal maxim certainly applies to this situation, "When one owes a duty to speak, silence implies consent."

The electorate of Hawaii answered Mr. Fasi's issue by proving that a mayor cannot be elected without the support of Communist leaders. Perhaps, the ILWU support was unsolicited. However, there can be no question that the ILWU support was given with Mayor Blaisdell's knowledge and was accepted without repudiation by him of the ILWU leaders or the Communist principles.

The Honolulu Star-Bulletin made a survey of the Hawaiian election of November

1954 and reported its findings as follows:

"The ILWU endorsed 71 candidates. Of these, 58 won, a batting average of 81 percent."

"In the Senate, 5 ILWU candidates won out of 6 candidates endorsed in contests for 7 seats. There are a total of 15 seats in the Senate."

"In the House, 22 ILWU supported candidates won out of 28 endorsed. There are 30 seats in the House."

"In the county, 32 ILWU supported candidates won out of 38 contests which includes Neal Blaisdell, Republican mayor of Honolulu."

The 1954 election was a complete victory for the ILWU and the Communist Party. They can now exercise either control or a considerable influence over both Houses of the Legislature and the Mayor of Honolulu. This victory is made more impressive by the fact that the ILWU political influence can be exerted in both Republican and Democratic parties.

Mr. Jack Hall not only directed the ILWU political activities but also claimed full credit for the victories of the Republican Mayor of Honolulu and the Democratic victory in both Houses of the Hawaii Legislature. Mr. Hall even offered his advice for the full use of the political power gained by that election.

The secretary of the former mayor made a practice of greeting Harry Bridges at the Honolulu airport when that distinguished Communist arrived there. He sent the Honolulu municipal band to money-raising affairs held to defray the legal defense of the Communists.

The Hawaii Statehood Commission claims that statehood would enable Hawaii to deal more effectively with Communism and the ILWU. On the contrary, statehood would free the Communists and the ILWU from United States control and jurisdiction. They now have the power and could immediately proceed without Federal interference to Socialize and Communize that State.

The atmosphere in Hawaii is one of tolerance, appeasement and encouragement for communism. The burden of proof that it can eradicate communism properly rests with the people of Hawaii. The proof has not been presented. If there is a reasonable doubt as to an extensive communistic economic and political control in Hawaii, then the party to suffer thereby is the United States. The people of the 48 States are entitled to the benefit of possible doubt. Statehood should be rejected now and deferred for an appropriate time when Communism no longer threatens the well-being of either Hawaii or the United States.

The 1954 election issues, the political maneuverings and the election results serve as a "Stop, Look, and Listen" warning to us.

THE POLITICAL POWERS OF STATEHOOD

Man's struggle for liberty never stops. That goal is gained in the degree of acceptance of the proposition that all sovereign power rests with the people. Constitutional government is an instrumentality for carrying out this concept of freedom.

Under our system of constitutional representative government, sovereign power can be placed into three broad categories. First, the power inherent to the people. This power can be generally described as all sovereign power that remains after constitutionally conferring such political powers to the States and the Nation as are needed for the attainment of their purposes. Second, the power granted to the Federal Government. In a broad sense, this power is limited to the enumerated political powers granted to the Federal Government under our United States Constitution. The third category is the power reserved to the States. This consists of all the residual political power constitutionally conferred by the people and not granted to the Nation.

In the present discussion, we are concerned with the second and third categories of political power. An analysis of statehood reveals a dual concept.

First: Statehood would grant to the territories the same sovereign and political powers as possessed by other States to conduct the affairs of these areas without Federal supervision or control.

Second: Statehood would grant to the proposed States the power of representation in the Federal Government.

THE POLITICAL POWER TO CONDUCT THE AFFAIRS OF THE STATE

Statehood is not essential for the grant of power to the Territories to enact laws relating to its property, affairs, and government. Congress has entire dominion, national and local, over Territories. It may transfer full legislative powers with respect to local affairs to legislatures elected by the Territories.

Both Alaska and Hawaii now possess general legislative power for these purposes. The major exception in Alaska is the power to legislate over public lands, fisheries, and subsurface resources. Although Congress has reserved the right to disapprove territorial legislation, no law passed by either territory has ever been disapproved by Congress.

The executive power could very well be transferred to the Territories. There could be no serious objection to any necessary extension of judicial powers for these Territories.

However, neither of these Territories appears to seriously want these powers. No reasonable proposal or request has been made to Congress for the reorganization or an extension of the jurisdiction of the Territorial courts.

There appears to be no sincere desire upon the part of the Territories to elect their own governors and to assume executive power.

While this committee has, over the course of years, considered many bills relating to the control of fisheries, minerals, and public lands, it has not yet approved any overall proposal to grant such power to Alaska. On the other hand, neither Territory has ever presented to Congress a comprehensive bill of particulars for an extension of legislative power to enable it to govern its own affairs.

The complaints made by these Territories of a lack of power to administer Territorial matters can be interpreted in either of two ways. Either this committee has failed to give adequate consideration to their needs for additional power or the Territories have failed to present and press for a comprehensive program designed to obtain for them the necessary power to govern. This writer believes that the latter alternative prevails.

It would appear that the concern of the proponents of statehood lies not in their desire or need for additional power to conduct the affairs of the Territories but rather in their drive for representation in Congress and in the election of a President.

THE POLITICAL POWER OF REPRESENTATION IN THE FEDERAL GOVERNMENT

The history of Government is, in essence, a recital of the distributions of power. We are concerned here with an equitable apportionment of legislative and executive power. Statehood would transfer a share of these powers to the proposed States. Their participation in the Federal Government would consist of:

(a) The right to be represented in the United States Senate by two Senators.

(b) The right to participate in the election of a United States President.

(c) The right to be represented in the United States House of Representatives.

ORIGINAL BASIS FOR SENATORIAL REPRESENTATION

The problem of equitable representation in the United States Senate continues to

plague this country since May 1787, when the Constitutional Convention convened.

The historical struggle has been between the smaller States desiring representation on a basis of equality for States (as corporate sovereign entities) and the larger States seeking representation in proportion to population. The plan of giving each State two Senators conform to the pattern of a federation of States while representation in proportion to population conforms to the framework of a national government.

We are concerned today with the question of the political justice and wisdom of equality of representation for newly admitted States in the United States Senate. The plan of equality of senatorial representation by States was adopted for the protection of the States from encroachment by the Federal Government. In furtherance of this purpose, the provision that the Members of the United States Senate be chosen by State legislatures was enacted.

I cite the following statement made in the Constitutional Convention by Delegate Wilson of Pennsylvania:

"The leading argument of those who contend for equality of votes among the States is that the States as such being equal, and being represented not as districts of individuals, but in their political and corporate capacities, are entitled to equal suffrage."

Alexander Hamilton, supporting the adoption of the Constitution, stated in the Federalist, Paper No. 62:

"It (referring to appointment of Senators by State legislatures) is recommended by the double advantage: of giving to the State governments such an agency in the formation of the Federal Government as must secure the authority of the former and may form a convenient link between the two systems."

It seems clear that the plan of representation in the United States Senate was implemented by the provision that the States in their corporate capacities as States and as an organic whole be secured in that right of equality by the grant to them as States to choose their Senators by vote of the State legislatures. The provision for election of Senators by the State legislatures was an integral part of the compromise by which two Senators were provided to the States. The convention would never have agreed upon this principle of Senate representation if that right had not been secured by this mode of selection, that of choice by legislatures.

The 17th amendment of our Constitution, ratified on April 8, 1913, destroyed the reason for the provision that each State shall be entitled to 2 seats in the United States Senate.

STATEHOOD BASICALLY SHIFTS SENATORIAL AND PRESIDENTIAL REPRESENTATION FROM THE 48 STATES TO HAWAII AND ALASKA

Reduced to fundamental terms, statehood for Hawaii and Alaska grants representation in the United States Senate and in the election of the President. In the Senate they would be represented by 4 Senators out of a prospective total of 100 Members. In the electoral college they would be represented by 7 votes out of a prospective total of 535 votes.

The representation proposed for these Territories will be taken from the present representation possessed by the people of the 48 States and shifted to the people of these 2 Territories. This transfer of sovereign power seriously and correspondingly reduces the right of suffrage of the peoples of the 48 States in the United States Senate and in the election of the President.

REDUCTION IN THE SENATORIAL REPRESENTATION OF THE 48 STATES

The admission of Hawaii and Alaska under the present constitutional provision will entitle their residents—628,437 combined—to

4 seats in the United States Senate. The average representation would be 1 Senator for each 157,000 inhabitants. The people of the 48 States, having a population of 152,572,000, represented by 96 Senators, today enjoy the average representation of 1 Senator for each 1,589,000 persons. Thus, Hawaii and Alaska would become entitled to representation in the United States Senate 10 times greater than the average representation of the people of the 48 States. Each voter will have approximately 33 times the power of the vote of the people of California in the United States Senate, 27 times the power of the vote of the people of Illinois, 32 times the power of the vote of the people of Pennsylvania, and 47 times the vote of the people of New York.

A comparison of the voting power of the voters of Hawaii and Alaska (combined) with that of the people of the 48 States in the election of United States Senators is contained in schedule A of the accompanying table:

Tables comparing the prospective voting power of the average Hawaiian-Alaskan voter in the election of United States Senators and a United States President with the voting power of the voters of the 48 States

METHOD OF COMPUTATION

Schedule (A): Population of Hawaii and Alaska (combined) is 628,437 with 4 Senators. 1 Senator for 157,000 residents. Population of Alabama is 3,061,000. 1 Senator for 1,537,500 residents. 1,537,500 divided by 157,000 equals 9.8 representing the average voting rights of the residents of Hawaii and Alaska as compared to 1 vote for voter in Alabama in the election of the United States Senate.

Schedule (B): Presidential electors for Hawaii and Alaska (combined) will be 7 or 1 for each 89,700 residents. Presidential electors for Alabama is 11 or 1 for each 278,000 residents. 278,000 divided by 89,700 equals 3.1 representing the average voting rights of residents of Hawaii and Alaska as compared to 1 vote for the voter of Alabama in the election of a United States President.

State and Territory	Population (1950 census)	Number of presidential electors	Voting power of average Hawaiian-Alaskan voter versus 1 vote for voters of other States for—	
			(A) United States Senate	(B) United States President
Alaska.....	128,643	3		
Alabama.....	3,061,743	11	9.8	3.1

Wisconsin.....	3,434,575	12	10.9	3.1
Wyoming.....	290,529	3	.9	1.1

The representation in the United States Senate for Hawaii and Alaska is acquired by a corresponding reduction of the present power of representation of the people of the 48 States in that body, today. The right of suffrage equal to that of 6,356,000 persons is taken from the 152,572,000 residents of the 48 States in varying percentage amounts and is transferred to the 628,437 residents of Hawaii and Alaska.

Statehood will give Hawaii and Alaska 4 votes in a Senate of 100 Members or one twenty-fifths of the membership. Although their combined population is only one two-hundred-and-forty-two-seconds of the population of the 48 States. This grant of one twenty-fifths of the membership in the United States Senate dilutes and diminishes by that fraction the representation in that body of the people of the 48 States.

POLITICAL POWER IN THE PRESIDENTIAL ELECTION, A MAJOR CONSIDERATION

The disproportionate advantage of Alaska and Hawaii would also apply in the presidential elections. Upon admission, these States would have a total of 7 electoral votes, an average of 1 electoral vote for each 89,776 inhabitants. The 152,572,000 people of the 48 States, with a total of 531 electoral votes, are entitled to 1 electoral vote each for an average population of 287,300. Thus, the voter in Hawaii and Alaska would have an average voting power in the election of a United States President 3.2 times greater than the average vote of the voter in the 48 States.

The comparison of the voting rights of the voters of Hawaii and Alaska—combined—with that of the people of the 48 States in presidential elections is contained in schedule B of the accompanying table, page 16a.

The electoral vote of 2,011,100—7 electoral x 287,300 average population for 1 electoral vote—persons will be taken from the 152,572,000 residents of the 48 States and transferred to the 628,437 residents of Hawaii and Alaska. The disfranchisement of the residents of the 48 States applies not only to the executive branch but also applies to the judicial branch of our Government because the appointing power to the judiciary lies with the President.

The total electoral vote will be temporarily increased to 538 by the 7 electoral votes of Hawaii and Alaska. After the 1960 census, the House of Representatives would be reapportioned to reduce the temporary membership of 438 to 435. With the Senate increased to 100 Members, the electoral

college would be permanently increased to 535 members.

Although the combined population is only one two-hundred-and-forty-seconds of the population of the 48 States, Hawaii and Alaska (combined) would enjoy one seventy-sixth (or seven five-hundred-thirty-fifths) of the total voting strength of the 48 States in the election of a President. The right of suffrage of the 48 States in this respect is diminished by that fraction.

THE DILEMMA OF STATEHOOD

Congress is confronted with the unpleasant alternatives of continuing to withhold statehood and Federal representation for the Territories of Alaska and Hawaii or to grant statehood under terms that would unduly reduce the Federal representation of the people of the 48 States. Under present provision of the Constitution, a difficult choice must be made between the following alternatives:

A. By the denial of statehood:

1. Shall 499,794 citizens of Hawaii and 128,643 citizens of Alaska continue to be denied representation in the United States Senate and be limited to representation in the United States House of Representatives by a nonvoting delegate? and

2. Shall these citizens continue to be denied representation in the executive and judicial branches of the Federal Government by the lack of suffrage in the election of a President? or

B. By the grant of statehood:

1. Shall the citizens of the 48 States be disfranchised to the extent of one twenty-fifth of their representation in the United States Senate and shall that share of representation (possessed on an average by 6,357,168 citizens of the 48 States) be transferred to the 628,437 citizens of Hawaii and Alaska? and

2. Shall the citizens of the 48 States be disfranchised to the extent of one seventy-sixth of their electoral college voting rights in the election of a President and his appointment of the judiciary and shall that share of representation (possessed on an average by 2,011,100 citizens of the 48 States) be transferred to the 628,437 citizens of Hawaii and Alaska?

It is my conviction that neither alternative can wisely and justly solve this subverting dilemma.

POSSIBLE SOLUTIONS IN PROPOSED CONSTITUTIONAL AMENDMENTS

There have been a number of joint resolutions introduced in the House of Representatives proposing constitutional amendments to deal with the problem of statehood.

One group proposes to empower Congress to determine whether the newly admitted State shall have either no representation in the United States Senate, or 1 Senator or 2 Senators. While the intent of this resolution is laudible, the political pressures upon Congress would probably prevent a non-partisan consideration of this determination.

The second group would provide for the admission of States by the same procedure that is required for an amendment to the United States Constitution. This proposal appears to be a procedural and not a substantive amendment. It would serve to erect an almost insurmountable barrier to statehood. The proposal has the advantage of placing the final decision of statehood in the State legislatures which represent the people affected more closely than either House of Congress. It offers no cure for the weakness of disproportionate representation.

The third, a resolution, House Joint Resolution 208, introduced by this writer, proposes a limitation upon representation in the United States Senate for newly admitted States. It would establish an inflexible standard of representation in the United States Senate on a basis proportionate to

population. By its provisions, any State hereafter admitted, upon attaining a population of one-half of the average population represented by each Senator (1950 Census: 794,646), would become entitled to 1 United States Senator. Upon attaining a population of $1\frac{1}{2}$ of the average population represented by each Senator (1950 Census: 2,383,938) it would become entitled to 2 United States Senators.

JUSTIFICATION FOR HOUSE JOINT RESOLUTION 208, PROPORTIONATE POPULATION REPRESENTATION IN UNITED STATES SENATE FOR NEWLY ADMITTED STATES

The Senate today, in terms of power derivations, accountability, and representation, constitutes another House of Representatives. Since the reason for equality of senatorial representation no longer exists, there is no further need for this constitutional provision. The only other tenable apportionment for the exercise of senatorial power is that of representation proportionate to population.

The proponents for statehood contend that Hawaii has a larger population than a number of States. They contend that it would be unfair to limit their senatorial representation as a condition to statehood. An adequate answer to this contention is that while article V of the Constitution prohibits depriving any State of its equal suffrage in the Senate, this protection does not apply to Hawaii and Alaska since they are not States and cannot be deprived of a power they do not now possess. It has been suggested that the present senatorial representation be rearranged. This is neither practicable nor constitutionally possible, since this protection of Senate suffrage is not amendable.

The farsighted statesmen who drew our Constitution were very careful to make this Constitution flexible enough to allow an amendment for the admission of States without the representation of two Senators.

The clause of article V of the Constitution, "that no State, without its consent, shall be deprived of its equal suffrage in the Senate," carries a double connotation.

First: The Constitution cannot be amended to deprive any State of equal suffrage in the Senate without its consent.

Second: The Constitution cannot be amended to deprive a State of its power to consent to be deprived of its equal suffrage in the Senate.

The farsighted vision of a possible gross inequality of representation in the Senate is confirmed by a study of the deliberations of the Constitutional Convention. In the considerations of the provisions of article IV, section 3, "new States may be admitted by the Congress into this Union;" the Convention deleted, by a 9-to-2 vote, a proposal to the effect that "new States be admitted on the same terms with the original States."

The Constitution affords ample authority to justify an amendment to equalize, per population, senatorial representation for States to be admitted.

STATEHOOD POSSIBILITIES FOR DISTRICT OF COLUMBIA, PUERTO RICO, GUAM, VIRGIN ISLANDS, SAMOA

No one can accurately foretell what lands and peoples may seek statehood in future decades. The holdings of the United States, in addition to the trusteeship of the trust islands in the Pacific, are the incorporated Territories of Hawaii and Alaska, the vague commonwealth status of Puerto Rico, the unincorporated but organized territories of the Virgin Islands and Guam, and the unincorporated and unorganized possession of American Samoa.

The residents of these Territories all enjoy United States citizenship excepting those in Samoa, who are classified as "nationals."

The people of each of these possessions, and the people of the District of Columbia

aspire for statehood. The Virgin Islands hints for a delegate to the House of Representatives. Delegates to both Houses of Congress have been proposed for the District of Columbia.

Each of these political entities are edging toward statehood. In the coming half century, Congress will be called upon to decide their fate without any principle to guide it in relation to representation in the Senate and the electoral college. Certainly, the determination should not rest upon the political expedients that may exist at that time.

House Joint Resolution 208 would provide Congress with an equitable basis for the consideration of statehood and remove the problem of representation from the strains of party politics. It would establish a just and inflexible standard of equal application to all States hereafter admitted. It would lessen the clamor for statehood where it is sought primarily for the political powers inherent in two seats in the United States Senate.

OTHER ASPECTS OF STATEHOOD: ECONOMIC DEVELOPMENT

The proponents of Alaskan statehood claim that statehood would advance the economic development of Alaska. This hope does not conform to historical fact.

Hawaii and Alaska have had territorial status for about the same length of time. Yet, Hawaii has progressed at a far more rapid pace, economically, than has Alaska. Hawaii's economy compares quite favorably with that of the States. It is not the political status that accounts for the differential in the rate of their economic growth. The growth of Hawaii can be principally ascribed to favorable physical characteristics, the temperate climate, and her arable lands.

THE VOTE IN ALASKA

The office of Delegate is the highest elective

office in Alaska. The total vote cast for that office in the 1954 election was 26,999. This compares with the latest estimated civilian population of 132,000. No attempt will be made to analyze the reason for the meager ratio of vote to that of population.

When compared to congressional districts which cast from 150,000 to 200,000 votes, the voting differential is startling. This vote sharply and clearly shows up the fantastically excessive disproportionment of allowing 2 Senators to be elected by the choice of 27,000 voters.

LOSS OF INDIVIDUAL LIBERTIES—THE GROWTH OF NATIONAL POLITICAL POWER—THE REDUCTION OF STATES RIGHTS

The past 25 years, can be noted for the vast and alarming growth and concentration of power in the National Government. A parallel concentration continues to take place in the executive branch of our Government. These increasing concentrations of power coincide with a reduction of powers of the States, the loss of sovereign rights and liberties of the people, and the deprivations of the legislative powers and responsibilities of Congress.

Statehood for these Territories would accentuate the inequalities of senatorial representation. It would tend to strengthen the national concept and weaken States rights. It would increase the pace of nationalization of local government services and concentrate power in the Federal Government and in the executive branch.

There is no standard of measurement of political power. There is however a standard for the measurement of the exercise of power. This standard is the percentage of the national product siphoned off by our Government. The following table illustrates the increase in the Federal absorption of our national production:

Government expenditures and gross national product

Calendar year	Gross national product	Government expenditures					
		Amount			As a percentage of gross national product		
		Total expenditures	Federal expenditures	State, local expenditures	Total expenditures	Federal expenditures	State, local expenditures
	Billion	Billion	Billion	Billion	Percent	Percent	Percent
1929.....	\$104.4	\$10.2	\$2.6	\$7.5	9.8	2.5	7.3
1930.....	91.1	11.02	2.7	8.2	12.1	3.0	9.1
1940.....	100.6	18.4	10.08	8.3	18.4	10.0	8.3
1950.....	285.06	61.2	40.9	20.2	21.5	14.4	7.1
1953.....	364.8	102.5	78.05	24.4	28.1	21.4	6.7

The above table indicates that Federal spending of our national production increased from 2.5 percent in 1929 to 21.4 percent in 1953. An increase of more than eightfold. In the same period, the spending by States decreased from 7.3 percent to 6.7 percent of our national production.

The founders of our Constitution envisioned a government of limited national power. The residuary power of the States was conceived to be far greater quantitatively than the powers granted to the Federal Government. The grant of two Senators to each State was based upon these assumptions. Appointment by legislatures was devised to safeguard this objective.

The above table proves that the exercise of Federal power, 21.4 percent of production, is more than 3 times the exercise of State power, 6.7 percent. This shift from State power to Federal power coincides with the alteration of our mode of selection of Senators from that of legislatures to that of popular suffrage.

The equitable measure of representation for a dominant national government is that of representation in proportion to popula-

tion. That is the only possible protection of the majority of the people against the preponderant power of a minority of the people.

Statehood, by increasing the power of the minority, will tend to break down our two party system. It leads to blocs and coalitions based on sectional and popular interests. The function of party organization to compromise between sectional and national interests is bypassed.

Instead of considering legislation in accordance with sound principle, excessive power encourages the consideration of legislation by political expediency and the pressures of the electorate. Theories are evolved afterward to accommodate acts of political expediency.

The senatorial powers to be assigned by H. R. 2535 will not lie dormant. The powers of senatorial representation granted to these two Territories invite their abuse by reason of the fact that these powers are not coupled with corresponding and balancing accountability and responsibility.

For example; Alaska, with 2 Senators, would possess one-fiftieth of the power to determine the expenditure of more than \$60

billion per year. That share of power to spend is \$1.2 billion. Yet Alaska's responsibility for the collection of the amount to be spent, \$60 billion, as represented by her Federal taxes, is only \$48 million, or more than 1,000 times less than the total national expenditure. Alaska's 2 Senators would be accountable to a population of 132,000 (27,000 votes) although her 2 Senators would enjoy the senatorial power possessed on the average by about 3 million people of the Nation.

REPRESENTATION IN THE UNITED STATES HOUSE OF REPRESENTATIVES

This problem poses a number of unpleasant alternatives. The present bill would increase the Members of the House by three seats allotted to the Territories. The membership of the House is increased from 435 to 438 Members. Although the membership of the House is to be increased, the increase is made not because of any advantages or need to increase the size. In fact, the present limitation of 435 Members was a careful decision as to the maximum desirable membership. The proposed increase by three seats is provided in this bill for the purpose of accommodating the proposed new Members. It is intended to anticipate the necessity for reducing the Representatives from other States if the membership is permanently limited to 435 Members.

Hawaii bases her claim to 2 Representatives upon the United States census population figure of 499,794. The latest estimate of her population would indicate that after 1960 her representation would probably be reduced to one Representative. Yet, the membership of the House is being permanently increased by 2 seats to accommodate Hawaii's proposed Representatives and 1 seat to accommodate Alaska's Representative. Although, as of today, Hawaii is only entitled to one Representative.

If H. R. 2535 is amended so that the increase of membership in the House is temporary and will be reduced to 435 after the 1960 census, then the additional representation from Hawaii and Alaska will be included at the expense of representation from some other State. That reduction will probably be at the expense of those States who have failed to increase their population in pace with the national rate. The States that have shown a loss of population between the 1950 census and the July 1, 1952, estimates are:

Loss in population

State:	
Maine.....	22,000
New Hampshire.....	1,000
Vermont.....	7,000
Iowa.....	13,000
North Dakota.....	17,000
West Virginia.....	36,000
Tennessee.....	32,000
Mississippi.....	15,000
Arkansas.....	65,000
Oklahoma.....	9,000

If the membership of the House is retained at 435 by an amendment in the House or Senate, then we commit ourselves to reducing the representation of other States by either 2 or 3 seats to be allotted to these Territories.

The Federalist, Paper No. 58, warns us against a multitudinous representative assembly. Excessive numbers lead not to democratic processes but, on the contrary, to government by the few.

The latest United States Census population estimates (1954) for these Territories are:

Alaska:	
Civilian.....	132,000
Military.....	50,000
Total.....	182,000

Hawaii:	
Civilian	467,000
Military	55,000
Total	522,000

Due to our military bases, the ratio of military personnel to the civilian population is far greater in these Territories than exists in the other States. The military personnel consists of citizens and inhabitants of the 48 States. Yet the census makes no differentiation but adds the military population to the civilian in computing their entitlement to representation. This method violates the intent of amendment 14, section 2, of our Constitution.

Article II, section 2 of the proposed Hawaiian constitution provides:

"No person shall be deemed to have gained or lost residence simply because of his presence or absence while employed in the service of the United States."

Thus we find that both Federal civilian and military personnel are excluded from the right of suffrage by this section. Yet, their numbers are added to establish a base for Hawaii's entitlement to representation in the United States House of Representatives.

This section would appear to constitute an abridgement and denial of the right to vote. If so, then amendment 14, section 2 provides that the basis of representation shall be reduced in proportion. This writer suggests the desirability of congressional action to conform the apportionment of representation in Hawaii and Alaska with the requirements of amendment 14, section 2 of the United States Constitution.

The Alaska Statehood Committee reports that Alaska is politically impotent in Washington because it has no voting representative in either House of Congress.

During this writer's short tenure here, both Hawaii and Alaska have had the benefit of the finest, most capable and diligent delegates. They would bring honor to any constituency. They have distinguished themselves by outstanding service to this Nation and to the territories they represent.

Most Representatives are limited to serving on one standing committee of the House. These committees vary considerably in the volume and importance of the legislation referred to them. The distinguished delegates from Hawaii and Alaska enjoy the unique advantage of membership on three major committees: Agriculture, Armed Services and Interior and Insular Affairs. The delegate from Alaska, in addition, serves on the Merchant Marine and Fisheries Committee.

Their service on these committees gives them the advantage of an association with fellow committee members which no other Representative enjoys. This opportunity enhances their influence and power.

The great mass of decisions made by Congress are made without a vote. The influence upon legislation in Congress can not be measured by the right to vote. It is not a pleasant task to vote in opposition to measures which have adverse political repercussions for a fellow member of the House. It is not conducive to political good-fellowship. This distinguished delegates are saved from this necessity. When balanced out, the disadvantages of the lack of a vote are far outweighed by the advantages accruing to the delegates.

CONCLUSIONS AND RECOMMENDATIONS

Mr. Chairman, the following conclusions and recommendations are respectfully submitted to this committee as an equitable disposition of this problem:

1. Statehood for Hawaii ought to be deferred until she has unquestionably eliminated communistic influences in her political, economic, and social structures.

2. Statehood for both Hawaii and Alaska should be deferred pending the adoption of an appropriate constitutional amendment to provide for representation in the United States Senate on a basis proportionate to population.

3. If statehood is to be granted upon the basis of equal representation in the Senate, then admission should be approved by three-fourths of the States pursuant to a constitutional amendment providing for the admission of States by the same procedure that is now required to amend our Constitution.

4. Congress should immediately grant to each Territory the autonomy of statehood with full power of self-government in such form as may be recommended by the Territories.

The autonomy would include:

(a) Complete executive power with the right of election of Governor.

(b) Full legislative power over all Territorial affairs, including public lands, fisheries, and subsurface resources.

(c) Exclusive judicial jurisdiction.

5. The enactment into Federal statute of such reasonable restrictions, comparable to limitations in their proposed constitutions, as may be recommended by the Territories to safeguard individual liberties and to insure a republican form of government.

6. The immediate and outright grant to Alaska of specifically described public lands to be selected by the Territory from vacant, unappropriated, and unreserved lands, not to exceed 20 million acres.

7. Grants of \$7 million each year for a period of 5 years to defray the cost of governmental services assumed from the Federal Government.

This solution would strengthen and unify this Nation in the years to come. It would help preserve the rights of the States and the liberties of our people. The cause of justice and freedom would be advanced.

JOHN R. PILLION,
Member, United States House of
Representatives.

FEBRUARY 14, 1955.

Sol Polk

EXTENSION OF REMARKS

OF

HON. RICHARD W. HOFFMAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1955

Mr. HOFFMAN of Illinois. Mr. Speaker, in many of the charitable programs conducted in Chicago in recent years, and in activities directed toward achieving better understanding and better feeling among peoples of different national and religious backgrounds, the name of Mr. Sol Polk has appeared. This young man, whose phenomenal success in the retail business has been accomplished by arduous, unrelenting labor, has never been too busy to participate in efforts to provide guidance and wholesome recreation for the children and young people of the Chicago area, to aid all groups working toward this end, the small community drives as well as the large, well-publicized efforts.

It is very pleasant and satisfies our sense of justice when one who is so willing to serve selflessly attains material success as well. On Sunday, March 13, 1955, the Chicago Stadium will be the scene of "the world's largest birthday

party," the celebration of the 20th anniversary of the opening of the first Polk Bros. store, complete with party favors, hats, refreshments, and so forth. The guests, employees, and friends of Polk Bros., will view the entire performance of the Ice Capades of 1955 and Ed Sullivan's Toast of the Town, which will originate in the Chicago Stadium in honor of the occasion.

A birthday celebration of this magnitude is typical of the way Sol Polk does business. In the past 20 years, he has made merchandising history in Chicago as a retail dealer in home appliances. So outstanding has his success been that his stores were the topic of an address delivered by S. R. Bernstein, editor of Advertising Age, at the 45th annual meeting of the Association of National Advertisers. The address was printed in full in the February 7, 1955, issue of Advertising Age, and I should like to reproduce at this point a portion of Mr. Bernstein's address:

I should like to show you an ad. It is a full page that appeared in the Chicago American.

I want to show it to you because, better than any single example I have run across lately, it demonstrates some of the problems we meet in that little drama entitled "Tumult in the Marketplace"—or "Who's on Which Side, and What the Hell Kind of a Game Are They Playing, Anyhow?"

Let me explain that this is the introductory ad for a new store—the third in the Polk Bros. chain. Unless you are in the appliance business, or happen to live in Chicago, you probably never heard of this amazingly successful discount house.

For that's what Polk Bros. is—a discount house. Or at least that's what it was a few months ago. In this era of turmoil in the marketplace, it is apparently already changing into something else. Anyhow, to everyone in Chicago, Polk Bros. is a "discount house." It is also far and away the most important retailer of nationally advertised radios, TV sets, and major appliances in the Chicago area.

Think for a minute of great Chicago stores like Marshall Field & Co. and Carson Pirie Scott & Co. Then ponder this startling fact:

Every time Marshall Field sells 1 appliance, Polk Bros. sells 10 appliances. Every time Carson's sells a single appliance, Polk Bros. sells 16. So, in cold, hard terms of moving merchandise, this discount house is worth 10 accounts like Marshall Field, and 16 like Carson's. That's the background for this ad.

What made Polk Bros. decide to open a new store on Chicago's South Side? Here's what the ad says:

"Two things. First there was you (the customer). You and your friends helped us decide. And then there were the people who make the things that we have to offer you. The national manufacturers . . . the people we Polk brothers look on as a family within our family."

And there's more. "After shopping a while you'd tell how you liked what we had for you—the big selection of famous national brands that manufacturers have spent millions developing, our common sensible prices, the way we made it fun to do family shopping. . . ."

And still more:

"What did we bring with us, when we moved in?"

"We brought the biggest selection of nationally advertised brands ever sold in one store. By anybody. For example, take television. We offer you not just 1 or 2 famous brands, but more than 15. Take washers,

over 66 different models * * * "You see, we believe that when you're spending your hard-earned money you have a right to choose from among the very best brands. Here at Polk Bros. you can compare them. All in one store."

And again:

"The most guaranteed merchandise in America * * * We stand behind it. The famous manufacturers stand behind it."

And finally there is, in the ad, a listing of 91 brands—most of them as well-known as the name of the President of the United States.

Now, let's try to imagine, for a moment that there is a merchandising man from Mars in the audience, with no preconceived notions about how marketing ought to be done on this earth of ours.

If we told this visitor from Mars that we were deeply concerned about the development and growth of discount houses like Polk Bros., I suspect he would think we were crazy.

"It seems to me," he would probably say, "that these discount houses you are talking about personify the ultimate in national advertising success stories. They literally exist on national brands—on brands which have, through the years, built a consumer franchise and done it well. These are the kinds of brands you fellows make. You built an active demand for these national brands of major appliances, and the discount house makes that demand effective by offering these wanted goods at prices that are—or seem to be—lower than they are elsewhere."

"Furthermore, I understand that these discount houses did this without getting any concessions from you manufacturers in the way of price, or terms, or advertising allowances, or anything else. In fact, when they started, many of you wouldn't even sell to them."

"In spite of this, they are apparently selling vast quantities of merchandise, delivering a service which the public seems to want, making money themselves, and saving money for the consumer. So here, I would say, we have the finest flowering of the advertising tree; first the development through advertising of consumer brand acceptance, and then the activation of that acceptance by a type of retailer who is riding the nationally advertised brand's coattails all the way. Why are you worried about them?"

And then you would probably explain that they have caused you a great deal of trouble, because they have "disturbed the retail price structure," and because they have upset your "normal distribution channels."

To which the man from Mars might say:

"In my opinion, your job is to move the goods you make, as quickly and as effectively as possible. It is not your job to maintain 'normal distribution channels.' It is not your job to protect lazy or inefficient retailers. And it is certainly not your job to see to it that the consumer pays a higher price for your goods, if he can get them at a lower price, and still have everybody in the distribution chain make a reasonable profit."

Well, I admit that I have oversimplified the situation greatly, and that there is plenty of room for several hours of discussion on this point. I do think it is important, however, to realize that turmoil in the market place is not necessarily and inevitably bad for the manufacturer of branded merchandise.

Mr. Speaker, I think that Sol Polk's story is one which illustrates well the qualities which have brought about the tremendous wealth of this Nation and its fine standard of living. I take pleasure in calling it to the attention of my colleagues.

Discriminatory Practices in Marine Transportation Insurance

EXTENSION OF REMARKS

OF

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1955

Mr. PELLY. Mr. Speaker, under leave to extend my remarks in the RECORD and include extraneous matter, I offer for the information of Members of this body explanatory material prepared by the world trade division of the Seattle Chamber of Commerce, together with a resolution adopted by its board of trustees March 1, 1955, both with regard to discriminatory practices in marine transportation insurance:

In recent years, many foreign governments have adopted discriminatory practices in the field of marine transportation insurance which adversely affect both the American exporter and the American insurance market.

Through the issuance of exchange regulations, restrictive laws and action by governmental purchasing agencies and quasi-governmental corporations, these governments have required marine insurance on their international trade shipments to be placed in their own market. As a result, American exporters and importers are denied the traditional right to secure the best coverage at the most favorable rate obtainable in the highly competitive world market. In many instances, our traders have found it difficult, if not impossible, to obtain adequate insurance necessary for their own protection, and at best, must rely upon the insurance judgment of the foreign purchaser or supplier.

Unfortunately, certain agencies of our own Government, such as the Foreign Operations Administration, which, among other things, is responsible for the foreign economic aid financed exports, has also adopted a policy which allows the recipient nations to dictate that marine insurance on such shipments be placed in their own markets. Condoning such discrimination against the American insurance market unquestionably encourages many countries to adopt similar practices on all their international transactions.

Numerous congressional committees have repeatedly stressed that a strong independent marine insurance institution is necessary for the development of this country's merchant marine and foreign commerce. In a free worldwide competitive insurance market, the American insurance market has been able to achieve this position. However, it must be recognized that when faced with the discriminatory practices of foreign countries as well as those of our own making, the security and further development of our insurance market is seriously periled.

Governmental restrictions in the field of marine transportation insurance has been recognized by the Economic and Social Council of the United Nations as a trade barrier hindering international commerce and is contrary to the Council's request that member governments adopt a policy of nondiscrimination in this field.

The Seattle Chamber of Commerce therefore urges our State Department to continue its efforts to include nondiscrimination clauses in all our treaties of commerce, navigation, and friendship, and to vigorously seek the elimination of those discriminatory regulations currently enforced by many foreign governments.

The Seattle Chamber of Commerce urges the United States Department of State to seek elimination of the discriminatory practices of many foreign governments requiring firms engaged in international trade to place marine transport insurance in companies of any particular nation.

Also opposed is the policy of the United States Government which allows foreign nations to dictate that marine transport insurance covering American exports financed by foreign economic aid funds, be placed in the insurance market of the recipient nation.

It is recommended further that the United States Government should continue to make every effort to include a clause in the treaties of commerce, navigation, and friendship, whereby neither nation shall impose any measure of a discriminatory nature which restricts the freedom of choice of the international trader of either country in the placement of marine transport insurance.

The Ohio River Flood

EXTENSION OF REMARKS

OF

HON. THOMAS A. JENKINS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. JENKINS. Mr. Speaker, the Ohio Valley has suffered, and is now suffering from the results of a terrific flood. The damage resulting from these widespread floods can hardly be estimated. Every house in some of the villages has been reached by the flood, and the people have been driven from their homes, leaving their furniture behind them. Likewise, many stores and business houses have been flooded, the water reaching to the ceiling and destroying valuable stocks of goods. Plants have been flooded and many thousands of persons have lost many days employment at their places of employment. I would say that the damage on the Ohio side of the river from Marietta to Cincinnati would amount to tens of millions of dollars.

While these Ohio River floods are terrifically disastrous to properties, it is a very consoling fact to know that very few lives are lost in any of these Ohio River floods. This is due to the fact that the river rises slowly and the people have a chance to get out of the way of the water and they generally have a chance to take with them their livestock and some of their other possessions.

As is generally known, the Federal Government has control over the navigable rivers of the country. This control is exercised through a very competent Government agency known as the Army engineers. In these flood seasons the Army engineers are always busy in their efforts to minimize the effects of the floods where they possibly can.

The Congress of the United States has taken an interest in the destructive floods which affect our country. This is especially true of the Ohio Valley. While it has not been expected that the Government would restore property destroyed in floods, the Government has, through the

Congress on a number of occasions, passed legislation that was greatly to the benefit of those who might suffer from the results of disastrous floods. The two most disastrous floods that afflicted the Ohio Valley occurred in 1913 and 1937. Of these two floods, the 1937 was the most disastrous.

Following the 1937 flood former Congressman William M. Whittington and I decided to attempt to secure the passage of legislation that would relieve against future floods, especially those of gigantic proportions. We were successful in our efforts because the Members of Congress appreciated the destructive effects of big floods. Our legislation provided, in effect, first that the Army engineers should find that the location was such that flood defenses would be practical. If it was found that the construction of a flood wall was feasible, then the community would be required to purchase the rights-of-way that would be necessary upon which to construct the proposed flood walls. If the Army engineers found that the construction of a flood wall would be feasible, then it would be necessary for the city to issue bonds or to find the funds in some other way to purchase the rights-of-way. The law further provided that if and when the rights-of-way had been purchased, the Government would have the power to provide the other funds necessary to construct the walls and would proceed to construct them. This construction would then be done under the direction of the Army engineers and to the full approval of the engineers and the officials of the city or village which was being protected.

Having been familiar with the provisions of the law I naturally proceeded immediately to secure the benefits of the law for my home city of Ironton, Ohio, and for her people. We had no doubt that the Army engineers would find that our beautiful city of about 35,000 population, with many fine dwellings and business houses, and many large factories and mills would qualify for the construction of protective flood walls.

The Army engineers did find Ironton, as a city, meeting the physical qualifications.

It was then up to our people to secure the rights-of-way. They did this, promptly, by voting a bond issue of \$750,000, which was used to purchase the rights-of-way. Because of our alertness and our desire to comply with the law and secure flood protection for our city and our people we soon had the Army engineers at work drawing the plans for adequate flood protection. Soon, thereafter, the Government arranged to contribute about \$4 million, which was the amount required to do the work and to meet the amount provided by the city of Ironton and her people.

With the financing and the plans all arranged bids were asked for and a contract was soon entered into and in due course our beautiful city of Ironton was secure behind large, adequate walls.

Our city of Ironton was the first city in the whole United States to get a flood wall under the law that Mr. Whittington and I were responsible for its passage.

Naturally, we are all proud of this, and still more proud because we are protected against any more destructive floods, that previously put 15 feet of water in the First National Bank Building, and all the downtown buildings in our fair city, and which also put most of our people out of their homes.

While we, the people of Ironton, were getting our flood wall, the people of Huntington, W. Va., which is a large city located about 15 miles up the river from Ironton, were working diligently to secure a flood wall—they were successful and since that time this large city, with a population of at least 100,000 people, is completely protected.

I was glad and proud that while we were all pushing the development of these flood walls, I was able to render some help to the city of Portsmouth, Ohio, which is located about 25 miles from Ironton, and has a population of about 50,000. It was largely through my efforts that we got a million and a half dollars with which the last of six units of the Portsmouth wall was built.

While Ironton, Huntington, and Portsmouth rest complacently behind flood walls which have cost them and the Government millions of dollars, still I am saddened with the thought that thousands of fine citizens on both sides of the majestic Ohio River living in villages and in the rural sections are still subjected to the scourage of these periodical floods. I surely hope that we can develop many water conservation projects similar to the big dam which bears my name, and which impounds a lake 10 miles long above Glouster, Athens County, Ohio; and which holds back a great quantity of water from rushing down to the Ohio to augment the raging floods already pouring down the Ohio. There are a number of conservation projects in the Muskingum River in Ohio which have held back great quantities of water and thereby have reduced the amount of water flowing into the Ohio. I hope we can construct many more of these in our country.

Mr. Speaker, floods are terrific, but ours is a great country and I think we can and will control the floods for the protection of all our people.

Rubber Plant Disposal

EXTENSION OF REMARKS OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the Record, I include the following statement made by me before the House Armed Services Committee, Thursday, March 10, 1955, in opposition to proposed disposal of Government-owned synthetic rubber facilities, in pursuance of Public Law 205 of the 83d Congress:

There are some antitrust and small-business facets in the rubber producing fa-

cilities disposal program which I should like to comment upon.

When we passed Public Law 205 in the 83d Congress, the development of a free competitive synthetic rubber industry was stressed by section 3 (c) which reads as follows:

SEC. 3 (c). From the time of its appointment and throughout the course of the performance of its duties, the Commission shall consult and advise with the Attorney General in order (1) to secure guidance as to the type of disposal program which would best foster the development of a free competitive synthetic rubber industry, and (2) to supply the Attorney General with such information as he may deem requisite to enable him to provide the advice contemplated by this section and sections 9 (a) (4) and 9 (f) of this act."

Section 17 of the act reads as follows: "SEC. 17. The following criteria, together with such other criteria as the Commission deems necessary or desirable to best effectuate the purposes of this act, shall be used by the Commission in arriving at its recommendations for disposal:

"(3) That the recommended sales shall provide for the development within the United States of a free, competitive, synthetic rubber industry, and do not permit any person to possess unreasonable control over the manufacture of synthetic rubber or its component materials."

Most of these plants are scheduled for transfer to companies and entities which, to say the least, have a very bad antitrust record. That augurs little if any expectation for free and open competition in the synthetic-rubber industry. The prospective plant purchasers include rubber and oil companies whose records raise serious doubt that their operations will make for a competitive synthetic-rubber industry. Each of the big four rubber companies, Goodyear, Goodrich, Firestone, United States Rubber, among the successful bidders, has lost 4 to 6 antitrust suits in this country and Canada since World War II. Several of the other rubber companies and chemical companies participating in the proposed purchase also have been branded as offenders in one or more antitrust suits in recent years. Significantly all but 1 of the oil companies involved in the purchase are even currently defendants in a Federal antitrust suit or a State of Texas antitrust suit or both, and several of the oil companies in addition have lost 1 or 2 other such suits in the past 20 years. In effect, the present disposal program would transfer almost the entire synthetic-rubber industry to corporations which in the past have taken active steps to limit competition, to fix prices, to establish quotas—all to the detriment of a free-enterprise system and to the detriment of small business and with a "consumer be damned" attitude.

One cannot easily swallow the Attorney General's opinion in approval of the disposal program that these companies will best foster the development of a free competitive synthetic-rubber industry.

Let me point out specifically some of the cases brought by our Government against these companies which indicate that they have actively combined and conspired to restrict competition and to fix prices in rubber products and petroleum products and chemicals, and in such minor items as storage batteries, brake lining and peach-pitting machinery. One of the parent companies of the lesser participants stands accused in a pending suit monopolizing air transportation.

Here are some of the cases:

1. In *United States v. Rubber Manufacturers Association et al.*, the Big Four, Firestone, Goodrich, Goodyear, and United States Rubber Co., plus Dayton, Seiberling, and others, were charged with combination and conspiracy in restraint of trade in tires and

tubes, from 1935 to 1947. They pleaded nolo contendere, and were fined \$5,000 each.

2. In *United States v. The Metropolitan Leather & Findings Association, Inc.*, in 1948, Goodyear and others were charged with price fixing in rubber heels and soles, and were fined.

3. In *United States v. United States Rubber Co. et al.*, United States Rubber and Dunlop Rubber Co., Ltd., were charged in 1948 with illegal cartel arrangements in latex; they took a consent decree in 1954.

4. In *United States v. Sears, Roebuck & Co. et al.*, filed in 1952, Sears and Goodrich were held to be in violation of the Clayton Act by having a common director; he later resigned from the Board of Sears.

5. In 2 1950 cases, 1 civil, 1 criminal, both known as *United States v. Association of American Battery Manufacturers*, Sears, Firestone, Goodrich, Goodyear, and others, were charged with price fixing and exercise of monopoly power to exclude competitors, among other things. They pleaded nolo contendere to one count in the criminal case, and took a consent decree in the civil case.

6. In *United States v. National City Lines, Inc. et al.*, also two cases filed in 1947, Firestone, Phillips, Standard Oil of California, and others, were charged with conspiracy, restraint, and monopolization of trade in the sale of buses, petroleum products, and tires and tubes. The charges went back to 1937. In the criminal case, the jury found them guilty on one count in 1949. The civil suit, involving injunctions against future violators, was still unsettled in 1954. Regulation of trade by law suit is sometimes a slow business.

7. Three Canadian antitrust cases are very enlightening. These are *Regina v. Goodyear Tire & Rubber Co. of Canada, Ltd. et al.* (mechanical goods); *Regina v. Firestone Tire & Rubber Co. of Canada, Ltd. et al.* (tires); and *Regina v. Dominion Rubber Co., Ltd. et al.* (rubber footwear).

In the first case, Goodyear, Goodrich, Dominion (the Canadian subsidiary of United States Rubber), Dunlop, and one other, pleaded guilty to conspiring to prevent or lessen competition from 1936 to 1952, and were fined \$10,000 each. In the tire case, Firestone, Goodrich, Goodyear, Dominion, Dunlop and others, pleaded guilty to charges covering the period 1937 to 1952. They were fined \$10,000, the then maximum fine, which the judge noted was wholly inadequate. The prosecutor estimated the companies had "illegally extracted" \$1,300,000 a year for the 15 years they admitted operating the tire combine. The companies are reported to have replied that they were forced to band together for mutual protection during the depression. Banding together for mutual protection could be much more profitable in the United States, particularly if they own the GR-S plants which they now seek.

Dominion and Goodrich, and others, pleaded guilty in the footwear case, and were fined \$10,000. The charges included identical product specifications and identical prices.

Canada has now removed the top limit on antitrust fines, permitting the court to assess such fines as the cases warrant. This should be a much greater deterrent than our \$5,000 maximum fine.

In the *Regina v. Firestone* case, the Canadian High Court said as follows:

"Between the 1st day of January 1937, and the 31st day of October 1952, within the jurisdiction of this Honourable Court, they" (the defendants) "did unlawfully conspire, combine, agree or arrange together and with one another to unduly prevent or lessen competition in the production, manufacture, purchase, barter, sale, transportation or supply in . . . the Province of Ontario, . . . and elsewhere in Canada . . . of . . . rubber tires (casings) and rubber tubes for

passenger vehicles, trucks and buses, agricultural and road implements and tractors and related products including tire and tube accessories, automotive accessories and tire repair and retread materials, and did thereby commit an indictable offence contrary to the provisions of the Criminal Code, section 498, subsection 1 (d)."

"Each of the accused corporations entered a plea of guilty and thereupon evidence was presented by the Crown to establish in a general way the nature and extent of the operations of these companies which resulted in this prosecution.

"In the view I entertain the maximum penalty of \$10,000 provided by the code is wholly inadequate to meet the ends of justice, even as a punishment to the least of these offenders. This law has been in force for over 50 years and its provisions are, or should be, well known to the businessmen of this country. Their actions were cold-blooded, calculated, and deliberate violations of the law of the land and call for as severe a penalty as can be imposed within legal limits, both to mark the court's condemnation of the enormity of the offense from the standpoint of punishment, and for its deterrent effect upon other potential offenders. It is the sentence of this court that each of the accused shall pay a fine of \$10,000 and that they be condemned to pay the costs incurred in and about the prosecution and conviction for the offenses of which they have been convicted, forthwith after taxation thereof."

In the case of *Regina v. Dominion Rubber Company, Ltd., et al.* the High Court of Ontario said:

"There were countless meetings and agreements among representatives of the accused and their coconspirators at which an elaborate system of classifying their commodities was arranged, identifying them by common number. . . . A casual study of the analysis of common prices which resulted from these agreements, filed as exhibit A-3, will reveal how well they succeeded in maintaining an identical price level."

Now, let us take some of the cases against the oil companies who were successful bidders.

Standard Oil Co. (New Jersey), which controls both Esso Standard Oil Co. and Humble, was charged in 1942 with conspiracy with I. G. Farbenindustrie in two cases involving synthetic rubber. They pleaded nolo contendere in one case and took a consent decree in the other.

Several oil companies involved in the bidding for the synthetic rubber plants were also involved in losing two cases filed in 1938. *United States v. Standard Oil Co. (Indiana)*, a price-fixing case, was appealed to the Supreme Court under the name of *United States v. Socony-Vacuum Oil Co. et al.*, and conviction was sustained as to Phillips, Continental, Shell Petroleum Corp., and Empire (the predecessor of Cities Service). Continental and Cities Service make up Petroleum Chemicals, Inc.

The other 1938 case, also called *United States v. Socony-Vacuum Oil Co., Inc.*, concerned fixing jobber margins. In 1941 nolo pleas were entered by Cities Service, and an officer each of Empire, Shell, and Continental.

Among the 38 defendants pleading nolo contendere in *United States v. General Petroleum Corp. of California et al.*, a 1939 case charging illegal price raising and price maintenance, were Shell Oil Co., Standard Oil Co. of California, and the Texas Co. Fines were \$4,000 for Texas, \$4,500 for the other two.

Still pending is a suit brought by the present Attorney General, *United States v. Standard Oil Co. (New Jersey) et al.* Standard, Gulf, the Texas Co., Standard of California, and one other, are charged with attempting to secure and exercise control

over foreign production and supplies of petroleum and petroleum products, to regulate imports in order to maintain a level of domestic and world prices agreed upon by the defendants, and to divide world foreign producing and marketing territories.

The State of Texas has an antitrust suit in the State courts against 10 major oil companies, including Cities Service, Continental, Gulf, the Texas Co., Humble, Phillips, and Standard Oil Co. of Texas (a subsidiary of Standard of California). This case was brought by PRICE DANIEL, then attorney general of Texas, now a Member of the Senate.

United States v. Food Machinery and Chemical Corp. et al., involving monopoly of peach-pitting machinery, was settled by a consent decree last August.

Several of the companies which make up American Synthetic Rubber Corp. appear among the antitrust case losers. American Cyanamid Co., the largest stockholder in American Synthetic and scheduled to be its exclusive selling agent, has been in three cases. *United States v. Allied Chemical & Dye Corp.*, filed in 1942, and ended by nolo pleas in 1946, charged price fixing at exorbitant levels in dyestuffs. Cyanamid and one of its officers were each fined. A subsidiary, American Cyanamid & Chemical Corp., was a party to some chemical antitrust cases filed in 1942, and settled in 1945, by nolo pleas. The cases all charged price fixing. Cyanamid & Chemical was fined \$7,500. In *United States v. Standard Ultramarine and Color Co. et al.*, American Cyanamid took a consent decree in October 1954, on charges of fixing and maintaining prices and allocating sales of ultramarine blue and laundry blue.

Anaconda Wire & Cable Co., a stockholder in American Synthetic, is a subsidiary of Anaconda Copper Mining Co. Two other Anaconda subsidiaries, Anaconda Sales Co. and Greene Cananea Copper Co., were named in *United States v. Climax Molybdenum Co., et al.*, in 1942, a price-fixing and competition-control case, which ended in a consent decree.

General Cable Co. and Phelps Dodge Copper Products Corp. are stockholders in American Synthetic, and have been together before; they took a consent decree in 1948 in *United States v. General Cable Corp., et al.*, a cartel, price-fixing, and development-suppression case.

Dewey & Almy Chemical Co. is a part of American Synthetic, and has recently been acquired by W. R. Grace & Co.; Grace, Pan American World Airways, Inc., and Pan American-Grace Airways, Inc., are defendants in a Sherman Act case filed in 1954, charging combination restricting competition and monopolizing air transportation between the United States and Latin American countries.

Raybestos-Manhattan, Inc., and Thermoid Co., both stockholders in American Synthetic, were also previously associated as nolo-pleaders in 1948 in *United States v. Brake Lining Manufacturers Ass'n, Inc.* They were fined \$5,000 each on price-fixing charges.

Dunlop Tire & Rubber Co. is in American Synthetic; it is controlled by the British Dunlop, which was involved in the latex cartel case with United States Rubber.

It is only fair to add that some of the stockholders in American Synthetic Rubber Corp. have not been involved in antitrust suits.

The only plant, however, that would be sold to a company with no antitrust history is the Koppers Co. alcohol butadiene plant at Kobuta, Pa. Koppers Co., Inc., apparently didn't want the whole plant, but took it just to get the powerplant and utilities.

The list of antitrust cases is long, and perhaps boring. It could be extended by referring to Federal Trade Commission cease-and-desist orders covering such rubber items as golf balls, rubber soles and heels, canvas and

rubber footwear, bicycle accessories, as well as tires and tubes.

The conclusion to be drawn is that competition in the future is no more likely than in the past. Banding together for mutual protection can be highly profitable in the case of synthetic rubber and its component raw materials.

The Attorney General, in his formal statement approving the pattern of disposal, completely ignored the antitrust history of the successful bidders. This is the more surprising, since he settled 3 and brought 2 of these suits in the past 2 years. With this record in his own files, it is extremely difficult to understand how he can make a positive finding that the proposed sales of the plants "will best foster the development of a free competitive synthetic rubber industry."

Indeed, throughout his statement, the Attorney General stressed the lack of competing bids for the several plants. For 10 out of 11 GR-S plants (GR-S is Government rubber styrene, mainly used for rubber in tires) for both the Butyl plants (rubber used for tubes) for 3 out of the 4 petroleum butadiene plants including the largest, and for the alcohol butadiene plant, only one bid was received. The Attorney General seems to consider this paucity of bids as conducive to future competition. To a Congressman such limited bidding might well suggest a lack of competition, that indeed, competition in the synthetic rubber industry is doomed from the start.

The cases that I have cited are mostly settled and thus legally dead. But for purposes of considering the disposal of these plants these cited cases are not dead, morally. Many of these successful bidders are self-confessed law violators or have been found guilty before a judicial tribunal. They thus come before this tribunal with unclean hands. They are malefactors and should be treated as such. This Congress should not reward them by turning over to them valuable plants, no matter how convenient it might be to the Government or to the members of the Rubber Producing Facilities Disposal Commission. These prospective purchasers have snapped their fingers at the laws we made. They have used inordinate power to ride roughshod over competitors. They even tried to cheat the Government by conspiring to present identical bids in their dealings with the Government. I refer to the case of United States against Cooper Corp., Civil Action No. 2-396, Southern District of New York, complaint filed February 20, 1939. The defendants in the case included the Dayton Rubber Manufacturing Co., the Dunlop Tire & Rubber Corp., the Firestone Tire & Rubber Co., the B. F. Goodrich Co., the Goodyear Tire & Rubber Co., the Seiberling Rubber Co., United States Rubber Products, Inc. This was a triple damage suit for conspiracy, brought by the Government, to fix the prices of tires on sales to the United States Government. The case was dismissed on technical grounds because the United States was not a "person" within the meaning of section 7 of the Sherman Act. The complaint, however, showed identical bids for tires submitted to the United States Government to three decimal points.

One would be naive, if not foolish, to believe that disposal of these plants to these companies would satisfy the sine qua non we laid down in section 3 (c) of the Disposal Act; namely, to secure a program that would best foster the development of a free competitive synthetic-rubber industry.

Have these companies reformed? I see no signs of regeneration. They have habitually repeated their sins not only in the United States but in Canada. A leopard does not change its spots. Suppose you were a businessman and your supplier attempted to cheat you. You caught him redhanded. You'd be rather foolish to deal with him

again. Frankly, you would boot him out. Well, these companies were guilty of wrongdoing against the United States. Shall the United States now reward them for their wrongdoing? The sales to any or all of these defendants in these antitrust suits should be canceled out. Otherwise we are guilty of double talk. We speak out of both sides of our mouths. If we at one and the same time say we want free, open, competition and at the same time we say turn over these plants to antitrust violators.

Section 17, subsection (1) reads as follows:

"That the disposal program be designed best to afford small-business enterprises and users, other than the purchaser of a facility, the opportunity to obtain a fair share of the end products of the facilities sold and at fair prices."

Does anyone in his right senses say that these companies, if possessed of these plants, will help small-business enterprises? Their record proves to the contrary. Take a look at the list of the successful bidders, on pages 8 and 9 of the report to Congress by the Rubber-Producing Facilities Disposal Commission. With rare exceptions they are all huge companies. They are also huge users of synthetic rubber. They are going to supply themselves. They are not unselfishly going to cater to small-business enterprises; that is, small rubber fabricators. If rubber gets scarce they are going to husband unto themselves all the rubber they can produce. They are going to feather their own nests. All manner and kinds of subterfuges will be used to deprive the small fellows of a fair share of rubber. The little fabricators and manufacturers will die on the vine.

As far as I can see, there is no implementation of the declaration contained in section 17, subdivision (1). It is simply a pontifical declaration, with no sanctions for violation. There is no method of enforcement; it is simply a moral obligation. Antitrust violators do not usually abide by moral declarations. Take another look at the list of prospective purchasers. You will see that KYS Corp. is the only purchaser that really contains small operators. All the others are large or monolithic operators. None of these conditions make for fair dealing with small business and small fabricators of rubber.

For these reasons I think this committee should ponder long and well before granting any approval to the sale of these plants to antitrust-law violators. Conversely, as the law requires, such sales should be balked. In this respect I hope that this committee will negate the action of the Rubber-Producing Facilities Disposal Commission.

Loyalty and Justice

EXTENSION OF REMARKS

OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mr. KLEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following editorial from the New York Times of March 7 that deals with a subject that is of gravest importance to our country if we are to maintain our tradition and reputation as a land concerned with justice:

LOYALTY AND JUSTICE

The deep and growing disquiet felt by many Americans about the operations of

the Federal Government's employee security program has finally impelled the Eisenhower administration to order some badly needed improvements. The latest changes represent a forward step which can be welcomed against the background of all too many public examples in which the security program has worked manifest injustices against loyal and competent Federal workers. This public record of injustices has tended to make Government employment unattractive to able people with alternative opportunities, with the result that at times our security has probably been reduced rather than enhanced.

How serious have been the defects in the security program until now may be realized by taking account of what the situation must have been before the new safeguards now introduced. Federal employees have been suspended without being told of the charges against them, and sometimes the charges have not been "specific enough to be meaningful to the employee." Meticulous care has not always been employed in suspending employees, and there has not always been "a personal interview with the employee prior to suspension. The top legal officers of departments concerned have not always been consulted nor their opinions "secured as to the sufficiency of the information justifying suspension." There has not always been a legal officer present at security hearings. Security board have not always been composed of "persons possessing the highest degree of integrity, ability, and good judgment." Heads of different agencies have not always consulted with each other when one agency proposed to make an adverse judgment on a person previously cleared by another.

The quotations given above are from Attorney General Brownell's statement on the substance of the latest changes. This is a late date, indeed, to introduce such elementary reforms and it is chilling to reflect on what the situation may have been in individual cases up to now.

Does the latest set of changes go far enough and protect both the national security and the rights of the individual Federal worker? The answer would seem to be rather clearly in the negative. Federal employees still may not confront and cross-examine all their accusers when security officials believe that the production of a particular witness may jeopardize the national security. But by what criteria are such determinations made? Are there other misinformers like Harvey Matusow being protected from exposure under the guise of serving national security? This question must inevitably arise against recent history as background. Is our Government not sufficiently ingenious to protect the identity of particular informants while subjecting their testimony to outside check? The problem is not easy, but it would not seem to be insoluble.

There are other serious problems too. What safeguards now exist to prevent such flagrant miscarriage of justice as was suffered by Prof. Val Lorwin? Professor Lorwin was indicted by an officer of the Eisenhower administration in December 1953 on the ground that he had lied in denying that he had ever been a Communist Party member and on two related matters. Six months later an Assistant Attorney General had to go into court and ask that the indictment be quashed because the Department of Justice attorney who secured the indictment had made two gross misstatements of fact to the grand jury. Such an outrage was possible, even though Professor Lorwin had earlier been suspended and cleared by the State Department.

The problem of fairness and justice in security procedures has long since become a major national question. Millions of Americans must have security clearances to

work for the Government directly, or on Government production orders, or on Government-subsidized projects. To be labeled a security risk today is perhaps the most terrible of brands on a person who has been convicted of no crime and tried in no court of law.

There are those who deserve such stigma and such punishment. But none of us can rest easy in our minds or hearts when we know that innocent men and women may be placed in this most terrible of Coventrys because of the spiteful words of a vengeful neighbor or to satisfy the ambition of an unscrupulous security officer or Government attorney. The soundness of the foundations of our national tradition of freedom and justice are at stake. And if these are not sound, we have no security and can have none.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

DISTRIBUTION OF THE CONGRESSIONAL RECORD

To the Vice President and each Senator 100 copies; to the Secretary and Sergeant at Arms of the Senate, each, 25 copies; to the Secretary, for official use, not to exceed 35 copies; to the Sergeant at Arms, for use on the floor of the Senate, not to exceed 50 copies; to each Representative, Delegate, and Resident Commissioner in Congress, 68 copies; to the Clerk, Sergeant at Arms, and Doorkeeper of the House of Representatives, each, 25 copies; to the Clerk, for official use, not to exceed 50 copies; and to the Doorkeeper, for use on the floor of the House of Representatives, not to exceed 75 copies; to the Vice President and each Senator, Representative, Delegate, and Resident Commissioner in Congress there shall also be furnished (and shall not be transferable), 3 copies of the daily Record, of which 1 shall be delivered at his residence, 1 at his office, and 1 at the Capitol.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the Record.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semi-monthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the official reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix, but this rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD Appendix the full report or print of any committee or subcommittee when said report or print has been previously printed.

10. *Official reporters.*—The official reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this restriction shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. The Public Printer or the official reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Illustrations.*—Pursuant to section 182b, title 44, United States Code (as shown above), requests for authority to insert an illustration in the RECORD should be submitted to the Joint Committee on Printing through the chairman of the Committee on Printing of the respective House in which the speech desired to be illustrated may be delivered. Illustrations shall not exceed in size a page of the RECORD and shall be linecuts only. Copy for illustrations must be furnished to the Public Printer not later than 12:30 o'clock p. m. of the day preceding publication.

13. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

Military Reserves

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, March 11, 1955

Mr. WILEY. Mr. President, each year since 1948 it has been my pleasure to cooperate with the Reserve Officers' Association of the United States in furtherance of National Defense Week, and, in particular, with the splendid ROA in my own State.

Through the courtesy of Maj. MacArthur H. Manchester, I have prepared annual articles published in the ROA magazine which he capably edits.

This year, my article appeared as usual, in the February issue. I am glad to say that on the front cover of that particular issue is a picture of the President of the United States talking things over with our distinguished colleague, the junior Senator from South Carolina [Mr. THURMOND], who is president of the ROA and a brigadier general of the United States Army Reserve. With him was Major Manchester.

I think it is appropriate that this article be reprinted, especially in view of yesterday's most welcome action by the House of Representatives in providing for an annual pay increase for members of the military and related services.

This is but the first step in strengthening the position of those who serve in the honored uniform of our country, and of those who have been so frequently recalled to the colors. Career soldier and citizen soldier, 30-year man and Reservist—all are entitled to fairness and justice.

I may say that our big job affecting the Reserve still lies ahead, however, in order to eliminate numerous unfortunate and almost chronic inequities which have arisen and in order to give our men the best possible training and equipment.

I ask unanimous consent that the text of my article in the ROA magazine entitled "America's Future: Great Opportunity, Great Peril," be printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

AMERICA'S FUTURE: GREAT OPPORTUNITY, GREAT PERIL

(By Senator ALEXANDER WILEY, Republican, Wisconsin, former chairman, Senate Foreign Relations Committee)

What does the future hold? Peace or war? A golden age of prosperity for mankind? A nuclear Armageddon—with civilization blasted into radioactive rubble and with mankind plunging back into the Dark Ages?

These are the great question marks of our time.

You, the reader, and your family and friends and associates, along with millions more like you hold, in part, the answer to this great riddle.

Upon you and me and upon our countrymen will depend basically the future course of mankind. Modern science will be our obedient servant or our impersonal destroyer. It is indeed strange irony that this great miracle force of science may jet-propel us into an age of unparalleled high standards of living, of wonderful conveniences and comforts—or it may explode us into an orgy of destruction more frightful than man has ever conceived.

I believe that science will provide man's greater fulfillments.

I believe that we today are but touching the "hem of the garment" of the mysteries of the new age. Man will unlock heretofore-undreamed-of secrets of the tiniest atom and of the vast reaches of starry outer space. I believe that our children and children's children will be a part of the most exciting, most rewarding eras of history. All this is possible. Peace is definitely possible—with honor, but only through vigorous, continuous preparedness. I believe that science will be man's continued servant.

And in this National Defense Week, we are given a precious opportunity to think, to plan, to rededicate ourselves to the goal of entering this golden age—the era of abundance for the common man.

But, to achieve this, we are now called upon to attain and maintain a level of preparedness more complete, more effective than we have ever found it necessary to reach in our history.

Why?

Because you, the sovereign people of the United States, and we, your elected and appointed officials, are living in an age of total peril. It is the age of aggressive, conspiratorial, international communism—a force contrary to its occasional peaceful co-existence lullabies, is aimed at our violent destruction.

Never before in our history have we faced such a terrible danger to our very survival—a danger so vast, so all-present, so hideous in its proven record, a danger so powerful.

THE MANYFOLD PERIL

The peril which it represents is a total peril for two reasons:

1. It is total in its possibility of total annihilation of its enemies through lightning-like nuclear attack. I emphasize "lightning-like;" we will not have months and years to recover from a Pearl Harbor like blow the next time—if we are hit unprepared and unalert.

Listen to the words of 4-star Gen. Edwin W. Rawlings, chief of our Air Materiel Command at Dayton:

"With . . . modern weapons, the next war could be decided in a matter of hours or days. We must never lose sight of this in all our thinking and planning.

"We cannot put a price tag on those hours or days because they are a precious natural resource beyond price."

2. Second, our peril is total in that communism assaults every segment of our society.

The Communist assault on the free world is always a combined operation; military, diplomatic, political, economic, social, and psychological.

As the attack is total, so our defense must be total.

RIGHT CITIZEN THINKING

Thus, never before has it been more important that the average citizen understand and contribute to the overall defense of our beloved country.

He must remember always that the most basic aspect of our defense is, of course, our military defense—by air, ground, and sea. But, it is by no means the only area of defense. Our society within must be strong and healthy. Every American community, every trade union, every factory, business, mine, home, must be a center of strength in American society; a center of reason and understanding, a center in which the peril to our society is recognized and combatted—logically, carefully.

So, the responsibility is great upon every citizen—for right thinking, right action. It is particularly great upon you, my readers, the dedicated men and women who comprise America's reserve officers. You are our minute men and women—ready at all times to spring to arms to lead us in any emergency.

STRONG RESERVE INDISPENSABLE

Your vital role must and could be appreciated by your fellow citizens. Every non-reservist must understand that it is upon our Reserve Forces that we indispensably depend in our eternal vigilance against future dangers. A strong Reserve with deep pride in its traditions, with firm confidence in its future, with undimmed faith in fair dealing by its Government, a Reserve with modern equipment, with streamlined training, with highest morale—these have become not luxuries but absolute necessities for the United States.

Reservists and nonreservists alike must understand that to be adequate against the total Communist peril, we must marshal and strengthen our forces—tangible and intangible—our own and our allies—internal and external—to defend ourselves and our way of life.

NEW PRINCIPLES IN THE AGE OF TOTAL PERIL

Ours is an era of change. From the new factors on the world scene stem new principles which will determine America's survival in the age of total peril.

First, is the vital principle that there must be correct and fearless policy formulation. Why? Because an error in policy may prove irreversible—uncorrectable—fatal. In the past, America's errors in defense, its delay in accepting automatic weapons over the muzzle-loader, mechanized cavalry over the horse, airplane over the dirigible, carrier task force over the battle fleet, resulted in unnecessary military losses but did not jeopardize completely our national survival.

Today, a single failure—for example, failure to accept the obligation for all-out development of an intercontinental guided rocket—a failure which could result in Soviet Russia's prior development of such a missile, might mean utter disaster for us.

Second, closely connected with the new importance of right policy is the principle of policy interdependence. Never before have foreign and domestic policies become so closely intertwined. Our price level, productivity, civil liberties, security practices, road system—these and a hundred other phases interact and vitally affect United States defense.

In the present age, we are conducting a continuous and complex cold war against the continuous and complex pressure of world communism. So, policy weakness or failure

in almost any area of national or international life—may lead to Communist misinterpretation and Communist aggression.

Thus, if America gives the impression of, or if in actuality it experiences, economic depression, domestic isolation, endless partisan discord, or worst of all, military weakness, then America stands to lose its allies. It thereby encourages piecemeal aggression and its own possible ultimate destruction by its Communist foe.

Hence, it becomes increasingly apparent that America can survive and maintain peace only through maintaining a healthy society and continuous and proven military superiority over world communism. This means adequate forces-in-being, capable of devastating, instantaneous retaliation. This in turn requires optimum weapons research development and appropriate production.

America's military superiority coupled with America's unwillingness to use this superiority, except in self-defense, must be made absolutely clear to the world at large and to the Communist leaders in particular. No short-sighted considerations here at home—penny-pinching or partisanship should be allowed to impair the applying of this fundamental principle of overall preparedness upon which hinges America's survival.

AMERICAN LEADERSHIP VITAL

Finally, in the age of total peril, America must accept the absolute necessity of membership and of leadership for the indefinite future in the global free world coalition.

This free world coalition—a coalition which must be hardened in fact and not merely in lofty words—remains the key to America's future. It is the key for broadening our base of manpower and our mineral resources base; for dispersal of our strategic air forces and increased capability of massive retaliation; for local land forces to halt local aggression and to flank Communist global aggression; for the maintenance of world economic prosperity and well-being. It is the key to American survival no less than to the preservation of the most cherished rights amongst free men of all races and creeds.

Likewise, America itself is an absolute necessity to the global coalition. Without our predominant power base, virtually no other free nation could prove adequate to withstand the continuous pressure of Communist aggression or subversion.

MILITARY STRENGTH OF RUSSIA

Against the background of these principles, it would be well to bear in mind certain facts with regard to the tremendous military capabilities of the Soviet Union. No sensible person reviewing even this brief list of 10 factors which I shall present could fail to appreciate the enormous significance of the Soviet threat.

I will not attempt to compare Soviet with United States and allied military assets. Obviously, a detailed comparison—division compared to division, fleet unit to unit, air wing to wing, atom stockpile to stockpile—is a highly technical, classified, and complex matter. And clearly it is within the province of our military leaders rather than of those of us who are concerned primarily with diplomatic policies.

But, here are a few of the ingredients of the Soviet menace, as reported in the public print.

1. First and most obvious are the massive Soviet and satellite armed forces in the West. They consist of a reported 175 Russian and 80 satellite divisions, considerably mechanized and highly standardized. An immense air umbrella of 20,000 operational aircraft could cover a Soviet offensive with 20,000 planes in reserve.

2. In the East there exists the most powerful military force in Asia—the battle-tested, fanatically indoctrinated Chinese Communist Army of 100 divisions comprising 3 mil-

lion trained men. It is backed by an additional 13 million homeguard of Chinese militia which could step into uniform overnight and also by a reported 7,000 Chinese Red military aircraft.

3. The Soviet sea arm now constitutes the second strongest naval power in the world. It includes a U-boat fleet seven times as large as the number with which Nazi Germany entered World War II. Among them are perhaps 100 oceangoing snorkel-equipped vessels with a radius of action of 20,000 miles. Some of these modern U-boats would be capable of raining a hail of atomic rockets on coastal areas of the United States.

4. Another Red asset is the reported massive Soviet preparation in the field of bacteriological warfare. This includes intensive efforts in the field of nerve gas—GB—an odorless, colorless, inexpensive weapon of mass destruction—regarded as constituting, under the right conditions, almost as great a threat to mass population as the A-bomb.

RED ATOMIC STOCKPILE

(5) Generally regarded as the grimmest threat of all is the mounting stockpile of A-bombs and Russia's intensive development of thermonuclear weapons—with all their terrible capacity of obliterating whole areas of an enemy nation.

A noted military observer wrote recently: "The quantitative tally of the world's atomic tests indicates that we have entered the age of atomic plenty and that stockpiles of operational, deliverable weapons are steadily increasing. These stockpiles probably are numbered in a very sizable 4 figures in the United States, in a sizable 3 figures in the Soviet Union, and in 2 figures in Britain."

"But the nuclear race is qualitative as well as quantitative. The meaning of the current Soviet tests is that the Soviet Union is acquiring a whole family of atomic weapons, comparable to (though not yet as varied as or as qualitatively equal to) the family of weapons possessed by the United States."

6. The Kremlin has the capacity to deliver these instruments of mass obliteration. Her modern long-range bombers include the TU-39, with the size and characteristics of America's B-52, but powered by 4 immense-thrust engines instead of our 8. The revelation of these new-type engines and planes was described by our Air Chief of Staff, Nathan Twining, as a more important milestone than the knowledge of the first Soviet atomic-bomb explosion.

7. Another factor is the all-out Soviet effort to develop an intercontinental guided missile—a weapon against which there is no known defense today.

8. Another consideration is that the Soviet Union is graduating three times as many engineers as the United States and is giving other evidences of intensive scientific effort in expansion of her weapons systems.

9. Meanwhile, the Soviet Union is constantly expanding its mighty industrial bases, obviously not for civilian production, but for production of the elements of war.

Already the Communist bloc produces around 60 percent as much coal as the rest of the world and around one-third as much pig iron and steel; 20 percent as much electric power, and 11 percent as much petroleum. But these resources are used for military purposes basically, rather than for civilian convertible cars, deep freezers, TV sets, or air conditioners.

MILITARY AND NONMILITARY WEAKNESSES

The basic fact of the matter is that there are enormous stresses and strains within the Soviet slave empire. The world of communism is a vicious jungle in which cannibal devours cannibal, in which leaders and underlings at home and abroad are purged ruthlessly. It is a world in which fear, suspicion is an ever-present factor.

From this side of the Iron Curtain it is hard to assess the degree to which the non-

military weaknesses of the Soviet Union impair her admitted military prowess. But the Soviet Union definitely does have grave nonmilitary weaknesses in addition to certain flaws in her military system of which competent military observers are aware.

Nevertheless, neither her nonmilitary nor her military limitations should becloud the fact that she possesses today and will possess increasingly in time to come the capabilities of total annihilation of her enemies.

OTHER RED NONMILITARY ASSETS

For the ledger to be more complete, certain additional nonmilitary Red assets should not be listed. Among them are the following:

1. Outstanding is the economic bait which she is offering in her renewed trade offensive throughout the world. To countries hungry for expanded foreign markets, from England in the West to Japan in the East, the Soviet Union offers the fake but alluring possibility of tremendous exchanging of goods with the Iron Curtain. With the trade emissaries will, of course, come the usual Red spies, propagandists, intriguers to undermine societies.

2. A second key advantage of the Soviet Union is the widespread repugnance among the underdeveloped peoples for the Western so-called imperialist powers. The fact that generally the United States is the ally of Great Britain, France, Belgium, and Holland, for example, has tended to cause the colonial and ex-colonial peoples in their thinking to lump us in with the present and former imperial powers. The colonial and ex-colonial areas forget that the United States itself was once a group of 13 weak colonies, and that no nation in the world has stronger tradition than we of friendship for peoples striving for sovereignty. We are, however, rightly wary lest nonself-governing peoples achieve independence sooner than they are in a position to exercise it soundly: We are wary lest such peoples become easy prey for the Soviets.

3. A third factor is the widespread anti-white feeling which is sweeping the non-white areas of the earth. Eurasian communism is eager to fan the flames of racialism as directed against the white American, Englishman, Frenchman, Belgian, or others. Everything which weakens the Western Powers is regarded as an asset to the Soviet cause.

4. A fourth factor is the worldwide hunger for peace. This is particularly true among the nations which were devastated during World War II, like France and Italy. It is true also of the ex-colonial areas which are confronted by so many domestic problems of widespread illiteracy, disease, malnutrition, that any thought of war or even of costly defense against war is often repugnant.

This hunger for peace blinds many people to the fact that only adequate preparedness will assure peace.

Thus, the Soviet propaganda theme of peaceful coexistence falls on eager ears—war-weary and economy-minded ears—throughout much of the globe.

Meanwhile, the Soviet Union has tried to smear us from one end of the world to the other as an alleged "warmongering power, recklessly experimenting with A-bomb and H-bomb explosions."

To some extent, we have counteracted this propaganda; nevertheless, widespread neutralism and pacifism are strings on which the Soviet Union continues effectively to play.

It is odd that the Kremlin, dripping with the blood of its own and its satellite victims and of the Korean and Indochinese people should pretend to be peaceful and should be able even partly to get away with it. It is odd that we who prize peace more than anyone should be vilified as warmongers. But, these are the facts and we must realistically combat these conditions by a

strengthened program of truth dissemination.

WHAT AMERICA MUST DO

We must act now. Time is of the essence. We must strengthen further the Voice of America and our overseas exchange program, our book, release, pamphlet, motion picture and television programs. Citizens must contribute further to Radio Free Europe and Radio Free Asia.

No one perceives more clearly that we are in this battle for men's minds than the great Chief Executive of our country, Dwight D. Eisenhower. Fortunately, we have in this distinguished statesman, too, a military leader of proven genius who is determined that we shall be adequate against whatever future military crises may hold.

President Eisenhower and his distinguished associates know that to counteract the Soviet military threat will take a strengthened program of United States preparedness. We do not want to bankrupt ourselves in the process, but neither do we want to pinch-pennies when the survival of our country is at stake.

Simultaneously, under our able Secretary of State John Foster Dulles, we must and will further strengthen the North Atlantic Treaty Organization. We will press for the carrying out of the Western European Union, including the setting up of the new West German Army. We will strengthen our bilateral alliances and such vital groupings as the Organization of American States. We will expand the Southeast Asia Treaty Organization, which at present has too few component powers and too little defensive firepower available to it.

We will implement the President's famous "atoms-for-peace" plan—one of the most dramatic and constructive international programs ever offered. We will widen our splendid program of technical point 4 assistance. We will encourage more private investment overseas and will seek a favorable climate for such investment.

And we will continue our efforts everywhere to combat the Communist termites who are at work night and day in subversion, sabotage, sedition, treason, undermining the foundation of our own and other countries.

THREE MORE MILITARY FACTORS

But, we return at last to the ultimate determinant of our fate—our military strength.

We must and will prepare for the war of the future, not the war of yesteryear. The war of the future may be another "brush-fire" war like Korea, a so-called limited war. We must be prepared against it.

But, it may be the big war—the intercontinental war—the war of intercontinental ballistic missile.

So, time is important in our development of an intercontinental guided missile. The race for the perfection of this weapon is probably one of the most critical in the world today.

Observers say that the prospect is by 1960, both the United States and the Soviet Union will have guided missiles that can carry hydrogen payloads at 10,000 miles per hour with a range of some 5,000 miles.

We of the United States have made great strides in the rocket field. Each of the three branches of the service has contributed important developments.

I am inclined to feel, however, that the needs of our country require that we far more closely approximate the type of more centralized wartime Manhattan district project, which produced the A-bomb on "a crash basis," than the present more leisurely, more scattered basis of our efforts toward an intercontinental guided missile. We all know that there have been strong criticisms of our rocket development—criticisms of division of authority, a certain conservatism in ap-

proach, of overly stringent fiscal considerations.

One writeup of the guided missile race recently read:

"For several years, the United States, complacent of its ability to stay ahead of Russia in all things technological, has been daintily fingering missile projects. Its smugness was roughly shattered last year by intelligence reports of a Soviet breakthrough: the development of a rocket engine with a thrust of at least 240,000 pounds which could be used as part of the power plant for a multistage intercontinental missile."

Hand in glove with this missile problem, is the challenge of possible development of a man-made satellite for the earth or even colonization of a nearby planet with a few key experts. These are possibilities opening almost unlimited fields for both civilian and military application.

A second military problem is our continued United States industrial and population overcentralization. I have warned in previous statements in the Reserve Officer that the United States cannot afford the continued overconcentration of prime industrial targets in a few major areas.

Right now, there are 10 areas in the United States, each 25 miles in radius, that account for 77 percent of our coke products; 82 percent of iron production; 73 percent of steel ingot capacity. Over half of America's foreign commerce is carried on in 6 port cities. Our 32 largest metropolitan areas cover only 55 square miles, out of our total 3 million square miles, and in these 55 square miles are jammed 32 million people. These and other statistics underline the importance of far-seeing steps to encourage dispersal and decentralization to the most feasible extent, particularly in view of our admitted vulnerability to enemy attack and the low killrate which we now expect against an attacking enemy force.

Lastly, we turn to our Armed Forces themselves—the men and women and their families. The fact is that the present low-renewal rate among specialists in our Armed Forces is a particularly deep cause for national concern. Each year, for example, our country's Air Defense Command suffers a personnel loss—a blow so heavy that it would cost an enemy dearly to inflict it. But, it is a blow which we, ourselves, cause in that we fail to provide conditions attractive enough to stimulate reenlistment by our highly trained officers and enlisted personnel.

In 1954, it was estimated that the Air Force lost a quarter of a million men. One survey showed that only 8½ percent of the eligible Defense Command airmen planned to reenlist when their 4-year period was up.

It is fantastic that we spend near-fortunes to train these men to peak skilled efficiency, and then look on relatively complacently while they resign in disgust and resume their civilian clothes.

The civilian and military chiefs of our Armed Forces are keenly aware of this problem, and fortunately steps are being taken to correct it. But remedial action must come promptly and thoroughly.

CONCLUSION

Let us end on a note of well-justified faith. The future lies, to a great extent, within our own hands for molding. While we are not the complete masters of our destiny, neither is the Soviet Union. Nor, for that matter, is any one power or group of powers.

The possibilities of peace are tremendous, and they are bright. A golden age of peaceful prosperity is attainable. A rough equilibrium—uneasy but continuing—between East and West is achievable.

But, it will never be achieved if we ignore the fact that the nature of communism is conquest. The Communist, by habit, by dogma, by discipline, is a creature geared to attack. He thrives upon assault. He lives

for assault. He may die in assault. But by our overwhelming power, military, and spiritual, we can deter him from starting a chain reaction which could lead to disaster for the world.

This must be the key to American thinking, the key to every Reservist's thinking.

World war III is not imminent. It is not probable. It is always possible—by accident or Red design. But, by exercising our God-given ingenuity and imagination, world war III will never come. America will fulfill the great peaceful opportunity which rests before it.

The Rural Electrification Administration

EXTENSION OF REMARKS OF

HON. MILTON R. YOUNG

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Friday, March 11, 1955

Mr. YOUNG. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an excellent address delivered by Congressman H. R. Gross, of Iowa, at the annual meeting of the National Rural Electric Cooperative Association in Atlantic City, N. J., on February 16, 1955. I hope that every Member of the Senate will take time to read this speech. Congressman GROSS is a real friend of the farmer, and knows farm programs.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, members of the National Rural Electric Cooperative Association, and guests, I am honored to be invited to speak to you who are assembled here today on the eastern seaboard from every nook and corner of our broad and good land. You have come from the South, the Far West, the Pacific Northwest, from New England, and from the heartland of America, of which my own State of Iowa is a part.

Let me say that we in Iowa are mighty proud of our rural electrification program and it is a real pleasure for me to have this opportunity to visit with delegates from the tall corn State, as well as other delegates.

I want to say a few words about Clyde Ellis and his staff in Washington. They have been cooperative at all times and may I say that they are on the job at all times, as you are on the job at this convention at all times. I have never seen harder working conventions than the conventions that you hold.

What brings about these tremendous annual meetings of farm people? The common purpose that brings you together is the advancement of the farmer's standard of living, a better way of life for you, your families; your neighbor and his family. Though your homes may be hundreds of miles apart, you are joined again by thousands upon thousands of miles of cooperative transmission lines that thread their way throughout the land.

And this great organization, the National Rural Electric Cooperative Association, is the spontaneous outgrowth of your need for unity and public expression on a nationwide level.

A quick look at the past clearly reveals why you have formed together to accomplish your purpose of bringing power to the farms of America, and unfortunately, that quick look reveals it has not been many years ago that you were unable to acquire this

powerful and silent servant of man—electricity.

Less than a quarter of a century ago, only about 1 farmer in 10 had central station service. This meant that most farmers, their wives and children were committed to long and ceaseless hours of toil in doing household and farm tasks that are now accomplished by the flick of a switch. This meant, among other things, that if the youth of rural America wanted a standard of living similar to that of their city cousins, they had to leave the farms.

Permit me to say at this point that Mrs. Gross and I were born and raised on Iowa farms in the days of coal oil lamps and lanterns. Life on the farm in those days was not without its good points, but kerosene lamps and lanterns were not two of them. And by coincidence, although we were raised on farms as distantly separated as the north and south borders of Iowa, we each lived within a stone's throw of a town and had the doubtful pleasure of studying our school lessons and doing our chores by the light of lamp and lantern while less than a mile away twinkled those wonderful electric lights. How we envied those youngsters in town.

And why didn't we on the farms, who needed it most, have this great blessing of electricity that was readily conceded to others? Because what then amounted to a monopoly decreed that our parents must pay an exorbitant price—a price they could not afford—for installation and service. The monopoly was interested only in skimming the cream of profit as represented by service in towns in the rural area.

Well do I remember working a pump handle in a sweltering August sun, when there wasn't enough breeze to turn a windmill, pumping the last 10 feet of water out of a 30-foot dug well for a herd of thirsty cattle—and begrudging them every gulp. That's why I still can't find it in my heart to quite forgive those who made it impossible for us to operate even one small electric motor, although the power transmission line ran along the road and past our front gate.

To overcome these difficulties, to bring electricity to the farms when the power companies said it was not good business to serve most farmers, you joined together and went into the utility business for yourselves—the cooperative way. How the skeptics laughed and gave you but a brief time to bankrupt yourselves. They predicted that in a short time the farms of America would again be dark from sunset to sunrise.

In the first place, the smart boys were wrong, because they failed to understand that the farmer for generations has had to be a practical man—a realist who, although endowed with extreme patience, can be driven, abused, and victimized only so far. Then invoking the law of self-preservation, he can become, individually and collectively, the most resolute and determined of our citizens.

Why is this true? Because he constantly faces the trials and perils of drought, flood, storm, wind, insects, and livestock diseases. He has faced prices so low he could scarcely afford to take his products to market. He has been confronted with discriminatory freight rates, monopoly, and speculation in the marketing of his crops, animals, and dairy products. He has planted with faith, cultivated with hope and sometimes reaped a harvest of charity.

He has been held up to ridicule and worse. Remember the Vice President of the United States who asserted from the public platform that farmers were "too damned dumb to understand"?

Out of the forge of these experiences, the steel of the farmer has been tempered. Not for capricious reasons will the farmers of America now surrender their much improved living conditions and those who may think otherwise will do well to remember that a

short quarter of a century ago, peaceful, industrious farmers, driven to despair by forces beyond their control took action that brought the attention of the Nation to their desperate plight. We pray this will never happen again, but let it ever stand as a warning to those who may have the notion that American farmers will accept the status of peasants.

Out of the mire of the depression, and in the face of what appeared to be insurmountable obstacles, the farmer went to work to bring electricity to his darkened farmland, and he succeeded.

The second thing the skeptics overlooked was that the farmer would be able to enlist the aid of his Government. But he did—and the REA program was the result. He did not ask for a handout. He asked for a helping hand in the form of loans which he has been repaying with interest and in many, many cases far ahead of schedule.

It is this second aspect, the helping hand of the Government, to which I want to direct some attention today.

The rural electrification program has succeeded because it is basically a partnership relation between you—the farmer-cooperative members—and your Federal Government.

At the outset of our consideration of this partnership I wish to make one thing very clear—this program must be kept above and beyond political considerations. We must especially beware of those elements in both major political parties who would like to make the rural electrification program a rudderless ship to be tossed about upon the stormy seas of political controversy, and eventually wrecked.

Rural electrification has had strong support from both political parties and let it be kept that way. At the same time, you who are in charge of this program must not be driven off course by those who would cry partisan politics simply to dissuade you from raising your voices in protest when you see the ship headed for the rocks.

You must beware of a siren song from either quarter—the one trying to make your every need a partisan issue; the other trying to accuse you of partisanship when speaking out for or against those matters vitally affecting your program.

History shows the power program of this nation has been the result of bipartisan support. President Theodore Roosevelt was one of the early and strong proponents of public resources development. And he made it plain he thought such development should be for the common good. Out of his resources philosophy grew the reclamation program that resulted in development of the West. Out of his philosophy of river development grew the tremendous public power projects of the Tennessee Valley and the Pacific Northwest.

His was a sound view of conservation and utilization of river resources for the common good and, speaking as a Republican, but one who refuses to have a ring in his nose, it would be well for the leaders of the Republican Party to read these pages from our history and consider resources development in the light of Theodore Roosevelt's philosophy.

It was left to such Republican leaders as Senators Norris and McNary, together with their counterparts in the Democrat Party, to bring about a practical working relationship between the Federal Government, public bodies and cooperatives.

The first and most important result of this bipartisan action was the REA program in which the Government became the banker-partner and you, in organizing your cooperatives, became the operating partner. This partnership has paid tremendous tangible and intangible dividends in raising rural standards of living, increasing production and opening new markets. For example, for every dollar that was loaned by the REA to

build lines to a farm, the farmer himself has spent some \$4 to \$5 in the market place for wiring, electrical tools, and appliances.

Another result of this partnership was to make hydroelectric power available on the wholesale level to cooperatives. This cheaper power made it possible and economical to serve widely scattered farms and, in addition, brought an element of competition to the power industry with the result that wholesale rates to cooperatives came down.

Another reason why this partnership paid big dividends was the preference clause. Here again, a page was taken from Theodore Roosevelt's reclamation philosophy and applied in the power field. Preference was written into the law in order that public bodies and nonprofit cooperative organizations would have first call upon Federal power. Without the preference clause, coupled with necessary transmission facilities, Federal power could and would have been put under long-term contracts by private utilities. Even with the preference clause, rural electric cooperatives were obtaining only about 6 percent of all Federal power generated compared to about 18 percent going to private utilities.

In this connection, it will be recalled that not too long ago Assistant Secretary of the Interior Aandahl attempted to change this marketing arrangement. Cooperatives in the Missouri Basin learned that a plan was afoot whereby it would be virtually impossible for them to recapture power flowing from Federal dams on the Missouri River to meet their growing loads once it was sold to the private power companies. We in Congress were amazed at this attempt to change, strictly by administrative procedure, the traditional concept of the preference clause for rural cooperatives. The House Interior Committee immediately investigated. It has always been my position that the preference clause means exactly what it says—that cooperatives shall have the first call upon available Federal power.

As you know, because of prompt committee action and by individual Members of Congress we were able to prevent the proposed knifing of the preference clause and as far as I am concerned, Congress will continue to safeguard this vital policy in the marketing of Federal power, regardless of who sits in the seat of authority in the Department of Interior or anywhere else in Government.

Now a report is current in Washington that a Hoover Commission task force may recommend that the interest rate on REA loans be raised to 4½ percent. Since this is only an unconfirmed report, I will not dwell on the implications of such a move except to say that it would represent the second of a two-pronged insidious attack on the industry of agriculture. With farm income already seriously impaired, and Secretary of Agriculture Benson apparently determined upon a policy of cheap food for consumers, an increased interest rate of 4½ percent would only increase the squeeze now being worked upon farmers.

Secretary Benson ought to know there is no such thing as cheap food unless it is literally taken out of the hides of the farmer producers. And the Hoover Commission task force ought to know that a doubling of interest rates to farmers could only mean dire consequences for the REA program as a whole.

I can assure you that any such move will get a hot reception in Congress.

I would like now to turn to a discussion of the struggle over atomic energy legislation in the last session of Congress. I shall try to be brief, for I am sure Senators GORE, who is from the area most directly affected and who has been in the forefront of the fight in opposition to the legislation that was enacted, will have much to say on this specific issue.

While this battle centers around TVA, it is of vital importance to everyone here and to every citizen of the land for all of us have a \$12-billion-plus investment in the development of this new source of energy and the legislation charts new policy in the field of production and use. Since the people—all of them—have paid the price, the benefits should be shared accordingly.

Under the Cole-Hickenlooper bill, as it passed the House of Representatives, this principle would have been scrapped for all practical purposes. It would have been possible for a few large companies, operating on the inside track, to have effectively gained a monopoly in the field of atomic power for commercial use because of the patent provisions. That was one of the important reasons why I voted against the House version of this legislation, one of the few Republicans to do so.

Fortunately, before final action on the part of the Senate and House, this provision for completely private patents was changed. The Atomic Energy Commission has the authority to declare these patents affected with a public interest, and it is my hope the act will be further amended to provide that rural electric cooperatives may have a fair opportunity in this field. Along with that, the AEC should provide for a power reactor program that is designed to fit the needs of rural cooperatives as well as the large power companies. This we must all work for.

Much of the fight in Congress on the atomic energy bill was precipitated by the now well-published Dixon-Yates amendment. This gave legislative sanction to what had been considered legally questionable up to that time for it legalized the AEC as a power broker—a function entirely beyond its major purpose, which is the production of nuclear military weapons essential to the defense of this Nation. Certainly nothing should be allowed to hinder or delay the AEC from that primary objective.

Its secondary function is to develop the peacetime uses of atomic energy, including power. But what is the result that has been brought about by the so-called Dixon-Yates-AEC agreement? We find the AEC diverted from its primary and secondary functions in order that two power combines in the South can take over TVA's market. In effect, we have here another governmental agency engaged in the field of policymaking—a field and a responsibility that properly belongs to those you elect to office—your Representatives and Senators.

Important as is the fact that the Dixon-Yates-AEC deal is some \$100 million more expensive in the life of the contract than if TVA supplied its own needs, it is of equal importance to understand that the Atomic Energy Commission is now cast in a role it is not equipped to carry out, and not intended by Congress.

If there be any doubt that the AEC has become embroiled in issues in which it has no business, the testimony of AEC Commissioner Murray before the Joint Committee on Atomic Energy should erase that doubt. Let me quote from Mr. Murray's statement made on January 31, 1955, to the joint committee: "There is one fact regarding industrial atomic power which I feel should be especially emphasized. Industrial atomic power will come quickly or slowly depending on the importance attached to the program, and on the men assigned responsibility for carrying it out. It also hinges on the teamwork between your committee and the Commission. . . . It is for this reason that I draw your attention to issues that have been giving me special concern."

"One issue, more than any other, in my opinion," continued Commissioner Murray, "has contributed to this unhappy situation. I refer, of course, to the Dixon-Yates controversy. . . . So damaging has been its

effect that something must be done to free the Commission from any connection with this cause for so much discord. . . . Unless the Commission is so freed, untold hours will continue to be devoted by the Commissioners and their key staff to a matter which will not contribute one iota to our program for improved weapons, for military and industrial reactors, or to any of the infinite number of tasks needing our attention."

"And, as I have so often said, anything that diverts the attention of the Commission and its staff from the development and production of weapons, along with the gigantic task of bringing into being peacetime applications of atomic energy, is not in the public interest. . . . To the exclusion of all other interests it (the Commission) must focus its attention solely—and in the public interest—on the development and exploitation of atomic energy for defense and for peace."

If for no other reasons than those so recently expressed by AEC Commissioner Murray, it is my opinion that the sooner the Dixon-Yates-AEC contract is given a quiet burial the better it will be for the public interest. And far be it for me to mourn its timely passing.

Another reason why some of us in the House of Representatives found this legislation highly unpalatable was the manner in which it was rammed down our throats. On July 23, 1954, with the Senate still debating the bill and with Congress still nearly a month from final adjournment, the House was called into session at 10 o'clock in the morning and remained in constant session until 3:13 o'clock on the morning of July 24—a total of more than 17 hours, with all action completed except the final vote.

In the first place, it is almost unprecedented that the House should take up legislation, still under debate in the Senate, unless it be of an extreme emergency nature. Not by the wildest flight of the imagination did an emergency exist in connection with this measure. There was nothing pressing in the legislative schedule before the House, and the leadership should have awaited final action by the Senate and then allotted at least 4 days to this complicated and far-reaching legislation. The answer is that the leadership was determined to use the House as a lever.

Interesting, too, is the fact that when debate opened on amendments in the House, sponsors of the bill made a point of order, which was quickly sustained, that opponents could not refer in any way to statements that had been and were being made in the Senate. Rules of the House prohibit the use of a Senator's name but never before, in the 6 years I have spent in the House, had there been strict enforcement of the rule that there could be no reference, even without attribution, to a statement made in the other body. I mention these sidelights to show the lengths to which advocates of the Atomic Energy Act carried their roughshod campaign in the House.

Let me say that there was much in connection with this legislation that had a very peculiar and unhealthy aroma—the kind that lingers in your nostrils.

Turning now to financial assistance for the REA, and speaking as both a Republican and one who has always supported an adequate rural electrification program, I was shocked by President Eisenhower's request last year for only \$55 million in new electrification loan funds. However, a Republican Congress recognized that this figure was dangerously low, overrode the President's budget, and made available \$135 million for this fiscal year.

Better treatment for the REA is accorded in the President's budget for the next fiscal year with a request for \$160 million, almost triple the amount he recommended last year.

This represents at least a temporary victory over those interests within the administration which have been attempting to put the rural power program on a starvation diet.

Strange, indeed, is the fact that these same interests in the administration endorsed legislation which victimizes American taxpayers for money to be thrown around all over the world. Approximately \$13 billion was made available for giveaway purposes to foreigners in this fiscal year, and it is always interesting to make comparisons in dealing with our own citizens.

For example, let's compare expenditures of American tax dollars for reclamation projects in foreign countries and in the United States. For some strange reason, it is difficult to obtain specific information from the Foreign Operations Administration concerning handouts abroad. Instead of the item-by-item breakdown employed in budgeting and spending for our own Federal reclamation program, FOA officials admitted they have no such information readily available; that to obtain it requires much time, much paperwork, and the circularizing of desks of officials of each of the so-called free countries which participate in the Foreign Operations Administration program.

From various sources, including the Library of Congress, is pieced together the information that for 5 fiscal years only, from July 1, 1948, to July 30, 1953, and for power facilities in Europe only, this country handed out a minimum of \$1,084,000,000. This compares with spending for our own public-power program of \$2,400,000,000 from 1902 to 1953. Included in this are such dams as Hoover, Shasta, Grand Coulee, and Hungry Horse as well as the Central Valley and Columbia Basin projects.

The Foreign Operations Administration admits that under the heading of "Water Resources and Power Assistance Rendered Foreign Countries, July 1, 1948, to June 30, 1953," there was expended \$1,729,123,000 in Europe and the Far East. During the same period, by comparison, Congress appropriated, under the reclamation law, for all Bureau of Reclamation construction in this country, \$1,200,000,000—a half billion less than was handed foreigners.

And it should be kept in mind that hundreds of millions of dollars advanced by the Government for power and other projects in this country will be repaid. Is anyone rash enough to predict that we will get back anything on the enormous gifts we have made to foreigners? In every showdown thus far we have been denied even moral support from most of the nations which have been the beneficiaries of our squandering.

It is estimated that since the end of World War II, the total bill for foreign aid is \$60 billion. It is estimated that taxpayers of the 17 principal reclamation States contributed \$13,300,000,000 of that amount—enough to build 109 Shasta dams, or 77 Hoover dams, or 93 Grand Coulee dams, or 27 each of Shasta, Grand Coulee, Hoover, and Hungry Horse dams.

During 5 years (1948-53) only, and for power and irrigation development in Italy alone, American taxpayers coughed up \$63,900,000. This compares with a grand total of \$52,700,000 in Federal reclamation funds spent in the 3 States of North Dakota, Kansas, and Oklahoma during the last 50 years—not just 5 years.

France and Greece got \$45,800,000 of our money during the same 5-year period for power and irrigation projects. Compare this with Oregon's \$49 million for reclamation in 50 years, Utah's \$45,100,000 in 50 years, and New Mexico's \$43,700,000 in 50 years. To this can be added air-conditioned apartment buildings in the Belgian Congo. And we also sent a cornshucker to Italy to show them how to do it. We sent a track coach to India to teach the Indians to run—when

their legs are the chief source of motor power in that country. We helped build a plush railroad station in Rome that would make Grand Central look like a tank-line facility on a branch line. So all you have to do is change the name of your cooperative to Italy or the Belgian Congo or some place else and you'll get your money.

Thus runs the fantastic story of American handouts to foreigners while our own citizens clamor for Federal assistance in the building of schools, roads, dams, and other necessary public improvements, bitterly protesting at the same time steadily mounting State and local taxes.

We can't continue to strew hundreds of millions and billions of dollars throughout the world each year unless we are prepared to accept further deficits, debt, inflation, and eventual bankruptcy. Foreign spending must be limited to whatever money is available within the limits of a balanced budget and after provision has been made for the economic, educational, and social needs of the people of the United States of America.

You are concerned—and rightly so—in your rural power program, but let me warn you that no issue is more important to you and every citizen of this Nation than what this Government does as a matter of foreign policy and commitment. This is true because the demand for military manpower and money to implement these commitments reach into and become a levy upon the lives and fortunes of those in every home in America.

Inherent in this program of attempting to police and finance the world upon which we are embarked today is increasing centralization of power in Washington. Our great and free institutions—political, economic, religious, social, and cultural—the foundation upon which this form of government and way of life rests, can only be perpetuated under a diffusion of power.

Through all the ages, concentration of governmental authority has eroded and then destroyed free men and free institutions.

Our first President, George Washington, the anniversary of whose birth we will observe next Tuesday, warned that this Nation must remain independent and steer a clear and sure course away from foreign intrigues and quarrels.

In his famous Farewell Address, in which he warned repeatedly of the pitfalls ahead, President Washington said:

"Against the insidious wiles of foreign influence a free people ought to be constantly awake since history and experience prove that foreign influence is one of the most baneful foes of a republican government."

The words of our revered first President are as rich in wisdom today as they were then.

We must readjust our foreign commitments to bring them within the ability of the American people to honor and support. We cannot go on indefinitely policing and financing the world, dissipating our resources, and piling up burdens of debt and taxation which the children of the tomorrows to come cannot possibly discharge or endure.

The hour is late but there is still time to make the light of freedom burn more brightly on our own shores and the shores of the Western Hemisphere.

We not only can but we must reaffirm the wisdom of our forefathers if we are to save this great constitutional Republic as we know it and as we cherish it.

I wish you well in your deliberations during this 13th annual convention of the National Rural Electric Cooperative Association. You will have my support in every reasonable undertaking.

Withholding Information From the President

EXTENSION OF REMARKS OF

HON. WILLIAM E. JENNER

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Friday, March 11, 1955

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Behind Ike's Back," published in the Indianapolis Star of March 5, 1955.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BEHIND IKE'S BACK

Responsibility for the suppression of an official report denying the need for Federal aid to education has been narrowed down by President Eisenhower's answer to a question by the Star's Washington correspondent, Ben Cole. The question cited a report from a subcommittee of the President's Commission on Intergovernmental Relations. It said, "We have been unable to find a State which cannot make more money available to its schools or which is economically unable to support an adequate school program." President Eisenhower was asked whether this report had been brought to his attention, and whether, if true, it would change his views on the Federal-aid question.

The President's reply was that he had not heard about the report. He said he doubted that it was true, in detail, in view of information coming to him from many different sources.

This direct statement clarifies a shocking state of affairs in the White House and the top level of the administration. Bear in mind that this report constituted an official finding by one of the President's own advisory groups. It had a direct and significant bearing on a question on which he was known to be preparing a special message to Congress; it contained information which might have caused him to look more searchingly at other information provided to him. But by his own words he had never seen it. Almost a week after the existence and nature of the suppressed report had been disclosed, he still had not heard about it. It still has not been officially released.

Far more than the question of Federal aid to education is involved. This incident has demonstrated that information reaching the President, to provide the basis for his planning and his decisions, is being carefully filtered by subordinates. They prevent him from seeing material which might cause him to veer from the direction in which they want him to go.

This process of filtration effectively prevents the President from actually making his own decisions, based on all available knowledge about a situation or problem. Instead his decisions are guided by a group of aides behind the scenes, by the simple process of censoring his lines of communication, and apparently he does not perceive that it is being done.

President Eisenhower's personal future is at stake, for the course of his administration is being steered by those who decide what he should and should not know. But that is not all. Also at stake is the future of the Republican Party, which could well hinge on the record of this first Republican administration in 20 years. What this ad-

ministration does may affect the course of the Nation, even of other nations, for a long time to come.

We fervently hope that President Eisenhower will now, for his own sake as well as for the good of the Nation, start asking why all the available report material matter of aid to education was not called to his attention. We hope he will start asking how much pertinent information in other matters has been withheld from him. And we hope he will do something to assure that in the future he gets the full and accurate story on matters of national concern.

A Policy for Skilled Manpower

EXTENSION OF REMARKS OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, March 11, 1955

Mr. WILEY. Mr. President, on numerous occasions I have commented on the floor of the Senate regarding the need for strengthened utilization of the specialized manpower of our country.

We have a civilian working population of 64 million. It consists of 8 or 9 million skilled workers and less than half a million technicians. This great labor force produces half the world's goods.

It is obvious that in the present life and death competitive struggle between the slave world and the free world, it is essential that we voluntarily coordinate our human resources so that free Americans, young and old, can individually and collectively make their fullest contribution to national defense prosperity and well-being.

I read with interest, therefore, a recent comprehensive report by the National Manpower Council entitled "A Policy for Skilled Manpower."

This broad-gaged report, which for the first time integrated many scattered viewpoints, was sent to me by one of America's distinguished citizens, Mr. James D. Zellerbach.

I believe the recommendations by the council will be of deep interest to my colleagues. I send to the desk, therefore, a summary of those recommendations, and ask unanimous consent that they be printed in the Appendix of the RECORD, to be preceded by a list of the noted Americans who serve on the National Manpower Council, and by the text of Mr. Zellerbach's letter to me.

There being no objection, the letter, list of names, and report were ordered to be printed in the RECORD, as follows:

NATIONAL MANPOWER COUNCIL,
GRADUATE SCHOOL OF BUSINESS,
COLUMBIA UNIVERSITY,
New York, N. Y.

The Honorable ALEXANDER WILEY,
The Senate of the United States,
Washington, D. C.

DEAR SENATOR WILEY: Because you have a special concern as a Member of the Congress with the Nation's most precious resources—its men, women, and youth—I am taking the liberty of enclosing a copy of the Statement and Recommendations of the National Man-

power Council reprinted from its latest study, *A Policy for Skilled Manpower*, published December 20, 1954.

This study provides the first full-scale evaluation of the vital role played in our economy by the Nation's skilled workers and technicians. It deals with a range of subjects of key importance to the Federal Government as well as to local and State governments, educational institutions, employers, trade unions, and the individual citizen. Among these subjects are general and vocational secondary education, vocational guidance, Armed Forces training, on-the-job training, apprenticeship, and the opportunities and incentives for and the barriers to the acquisition of skill.

The National Manpower Council was established in 1951 under a Ford Foundation grant by President Eisenhower, when he was president of Columbia University, to study significant manpower problems and to contribute to the improved development and utilization of our human resources. Its previous publications are *Student Deferment and National Manpower Policy* (1952), *A Policy for Scientific and Professional Manpower* (1953), and *Proceedings of a Conference on the Utilization of Scientific and Professional Manpower* (1954).

The members of the council look forward to your reactions to our recommendations in *A Policy for Skilled Manpower*.

Sincerely,

JAMES D. ZELLERBACH,

MEMBERSHIP OF THE NATIONAL MANPOWER COUNCIL

Chairman: James D. Zellerbach, president, Crown Zellerbach Corp., San Francisco, Calif.

Deputy Chairman: Courtney C. Brown, dean of the Graduate School of Business, Columbia University, New York, N. Y.

Hon. Robert B. Anderson, Deputy Secretary of Defense, Washington, D. C.

Dr. Leo Bartemeier, medical director, the Seton Institute, Baltimore, Md.

Erwin D. Canham, editor-in-chief, the Christian Science Monitor, Boston, Mass.

Lee A. DuBridge, president, California Institute of Technology, Pasadena, Calif.

William H. Harrison, president, International Telephone & Telegraph Corp., New York, N. Y.

A. J. Hayes, president, International Association of Machinists, Washington, D. C.

Charles S. Johnson, president, Fisk University, Nashville, Tenn.

Robert M. MacIver, Lieber professor emeritus of political philosophy and sociology, Columbia University, New York, N. Y.

Wilbur C. Munnecke, business manager, Chicago Sun-Times, Chicago, Ill.

Frank W. Pierce, former director, Standard Oil Co. of New Jersey, New York, N. Y.

Jacob S. Potofsky, president, Amalgamated Clothing Workers of America, New York, N. Y.

Roland R. Renne, president, Montana State College, Bozeman, Mont.

Sara E. Southall, personnel management consultant, Santa Fe, N. Mex.

Charles P. Taft, Headley, Sibbald & Taft, Cincinnati, Ohio.

Director of Research: Eli Ginzberg, Graduate School of Business, Columbia University.

Executive Secretary: Henry David, Graduate School of Business, Columbia University.

SUMMARY OF RECOMMENDATIONS BY THE NATIONAL MANPOWER COUNCIL

Our future progress and strength depend upon a conscious and deliberate concern with our manpower resources. Recognition that our most precious single resource consists of the skills, capacities, and creativeness of our people is not enough. For the

sake of contributing to the greater well-being of each individual and strengthening the Nation as a whole, it is also necessary for us to assure the further development of our manpower resources and their more effective utilization. To take such action we must view our human resources as a whole, and not only as they now are, but as they can be developed.

In the past we have acted as if each manpower problem exists in isolation—whether it be the waste of potential ability and talent, shortages of teachers and nurses, or the adequacy of a community's facilities for training technicians. Consequently, we are easily diverted from a search for sound solutions for complex and difficult problems and tend to rely upon simple and short-sighted answers.

Five major long-range objectives must be pursued if we are to strengthen the Nation's resources of skilled workers and technicians. These are:

To strengthen the contributions made by secondary education to the acquisition of skill.

To develop a more effective program for vocational guidance.

To provide more equal opportunities for all individuals to acquire skill.

SKILLED MANPOWER

To improve the facilities and methods used to train skilled and technical manpower.

To increase knowledge about our manpower resources.

These objectives can be achieved only through a continuing and many-sided effort sustained by an informed public opinion and requiring the cooperation of the schools, employers, labor organizations, voluntary groups, the armed services, and local, State, and Federal Government.

With respect to strengthening the contributions made by secondary education to the acquisition of skill, the National Manpower Council recommends that:

1. Local and State governments encourage men and women of ability to enter and remain in the teaching profession by establishing more desirable conditions of employment, including salaries commensurate with their training and responsibilities.

2. Boards of education and school officials concentrate on achieving the key purposes of secondary education—to prepare the individual for citizenship, for a worthwhile life and for work—by insuring that all students, excepting the small minority unable to profit from it, pursue a common program at least through the second year of high school which concentrates on teaching them to communicate effectively in writing and speech, to handle elementary mathematical operations, and to apply their knowledge to solving the problems they will encounter in life and work.

3. Boards of education and school officials insure that students are permitted to specialize intensively in vocational subjects only after they have completed 2 years of high school, and that able and interested vocational students also are provided with the opportunity to qualify for college entrance.

4. Local and State educational officials, in cooperation with special advisory committees comprising employer and labor representatives, critically reappraise existing vocational education programs in order to insure their effectiveness in the light of current changes in technology, employment standards, and on-the-job training practices; the growth of junior and community colleges and technical institutes; and the training programs of the armed services.

5. The Congress review existing Federal legislation providing grants-in-aid for vocational-education purposes in order to ascertain whether the objectives, scale, and methods of allocation of funds are enabling the Federal Government to make the most effective contribution to the development of

the Nation's resources of skilled manpower.

With respect to developing a more effective program for vocational guidance, the National Manpower Council recommends that:

1. State and local governments and boards of education recognize that the provision of essential educational and vocational guidance services is a major responsibility of secondary education by increasing substantially and rapidly the funds and staff available for guidance and counseling purposes.

2. School officials use their guidance and counseling staff primarily for vocational-guidance purposes and, when expanded resources of staff and funds permit, also for counseling students with personal adjustment problems.

3. School officials make vocational guidance available no later than the 9th year and have it continue throughout the high-school course, and that they assign to the classroom teacher major responsibility for helping the student to make sound educational and occupational decisions.

4. School officials take the lead in their communities to assure a vigorous cooperative effort, in which industry, business, labor, government, the armed services, and civic groups participate, to provide occupational information and other types of assistance essential for effective vocational guidance.

With respect to providing more equal opportunities for all individuals to acquire skill, the National Manpower Council recommends that:

1. All employers hire and promote employees and all unions admit individuals to membership without regard to their race, creed, color, national origin, or sex.

2. Employers and unions and the joint apprenticeship councils and committees eliminate the practice, wherever it exists, of barring individuals from admission to apprenticeship programs because of their race or national origin.

3. The President insure that the heads of Federal departments and agencies eliminate discrimination based on race, creed, color, national origin, or sex wherever it remains in Federal employment, and that the full authority of the Federal Government be used to prevent such discrimination in all work performed for it under contract.

With respect to improving the facilities and methods used to train skilled and technical manpower, the National Manpower Council recommends that:

1. Unions and employers and the joint apprenticeship councils and committees review regularly the content and length of training time of apprenticeship programs in order to insure their efficiency and effectiveness.

2. Employers seek to provide greater opportunities for their employees to acquire increased skills through a planned system of varied job assignments, broader training on and off the job, and increasing the training competence of their supervisory staffs.

3. State and city governments undertake comprehensive surveys to determine whether existing training facilities are adequate to meet the requirements for skilled and technical manpower.

4. The Congress, by adjusting pay and other service benefits, enable the Armed Forces to reduce excessive turnover and to encourage reenlistment so as to retain a larger core group of qualified technicians, specialists, and noncommissioned officers.

5. The Secretary of Defense direct the Secretaries of the Army, Navy, and Air Force to utilize, wherever appropriate, the facilities and personnel available in the civilian community in meeting the training requirements of the services.

With respect to increasing knowledge about our manpower resources, the National Manpower Council recommends that:

1. The universities and foundations encourage and support research to increase our

¹ Currently not participating in the work of the National Manpower Council because of government service.

knowledge about manpower resources with particular reference to the complex process of occupational choice; the types of information essential for effective vocational guidance; the role of skilled and technical manpower in economic development; the impact of governmental policies upon the supply of skilled manpower resources; and the relation between how people are trained and their subsequent work performance.

2. The Secretary of Defense direct the Secretaries of the Army, Navy, and Air Force to evaluate the varied experiences of the services with training and make their significant findings and their new methods available for civilian use.

3. The President direct the appropriate agencies of the Government to provide periodic and comprehensive appraisals of the country's available resources of skilled and technical workers and to seek improvements in the methods of estimating future manpower requirements.

Ike's Security Rules Changes Don't Go to Root of Trouble

EXTENSION OF REMARKS OF

HON. GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial from the Reading Times of March 8, 1955:

IKE'S SECURITY RULES CHANGES DON'T GO TO ROOT OF TROUBLE

Although President Eisenhower has approved Attorney General Herbert Brownell, Jr.'s seven suggestions for shoring up the Federal Government's internal security program among its own employees, it is highly improbable that Mr. Brownell's remedies will, in the end, be the ones that are applied; and perhaps, in view of the fact that they bear principally upon interdepartmental handling of security cases, it is well that these be not the final answer, for they are all procedural, not substantive, rejiggerings of the old system.

One of the changes Mr. Eisenhower has approved will require departmental heads to consult each other in cases where one department or agency refuses to clear a Federal employee who already has been cleared by another department or agency. This doesn't get to the root of anything at all except the kind of interdepartmental squabbling, with great embarrassment to the administration, that occurred in the case of Wolf Ladejinsky, who worked for the State Department for 20 years as an agriculture expert, was denied clearance when he was shifted to the Department of Agriculture, and finally was cleared—and hired—by the Foreign Operations Administration.

It would also seem to us that a basic flaw in the new regulations lies in the fact that there is no really effective procedure for appeal from the security findings of department and agency heads. The Eisenhower administration jettisoned the Loyalty Review Board which operated effectively under the Truman administration. In our opinion, that board should be revived for the reason that without such final check by nongovernmental people the tendency will be to resolve any doubt against an accused employee, just to play it safe.

There is still another fatal flaw, we believe. We all remember the numbers game that was

played for the first 2 years of the present administration. First it was 2,200, then the figure fluctuated back and forth many times. The 2,200—or whatever number you happen to prefer—were all under a cloud of disloyalty, inasmuch as the Federal Government was at no great pains to screen those who were screened—to say how many had subversive information against them and could therefore be classified as truly disloyal and how many were merely blabbermouths or loose-tongued in their cups and therefore might talk out of school. The revised security rules, so far as we have been able to interpret them, would do nothing to ban this little numbers game.

There are other flaws which we need not go into here. They will, however, undoubtedly be gone into in great detail when the Subcommittee on Organization, of the Government Operations Committee, opens hearings today on a resolution by Senators HUBERT H. HUMPHREY, of Minnesota, and JOHN C. STENNIS, of Mississippi, which would establish a bipartisan Committee on Government Security. This would be a sort of Hoover Commission with a specific, not a general slant, composed of 6 Republicans and 6 Democrats, 6 from the Government itself, 6 from outside the Government.

Two other groups will have a close look at the internal security picture. The Senate Post Office and Civil Service Committee will investigate and so will a nongovernmental group, the Bar Association of the City of New York, which has a \$100,000 grant from the Fund for the Republic to conduct an 18-month study of our security regulations—what they aren't and what they should be.

From these three studies should come valuable information which will enable the administration and the Congress to arrive at security rules which not only afford the most complete protection to the Government but which, at the same time, will give individuals involved in security checks the complete protection they are entitled to under the laws and the Constitution. That many Federal employees have not been getting such protection in recent years has been plain to every citizen who wanted to take the trouble to follow such cases as those of Wolf Ladejinsky, Val Lorwin, Dr. Robert Oppenheimer, and Dr. John P. Peters, the Yale professor of medicine who, as an occasional medical consultant to the Surgeon General, was discharged without having been informed of the charges against him and without the right to confront his accusers.

The Burley Tobacco Industry

EXTENSION OF REMARKS

OF

HON. EARLE C. CLEMENTS

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Friday, March 11, 1955

Mr. CLEMENTS. Mr. President, subcommittees of the Committees on Agriculture and Forestry of both Houses of Congress are presently engaged in holding joint hearings looking into the problems affecting the burley tobacco industry. In the issue of the Louisville Courier-Journal of Monday, March 7, there was an editorial bearing on this problem which I believe to be of interest and value to all Members of the Congress. Therefore I ask unanimous consent that the editorial be printed in the Appendix of the Record.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

Rx. FOR TOBACCO QUALITY, NOT QUANTITY

When burley tobacco is in trouble, Kentucky is in trouble. And at the moment burley tobacco is in trouble.

The supply of burley now on hand is equivalent to about a 3½ years' supply. That is not as bad as it may sound. Under the price-support crop-control program which has been in effect for most of the last 20 years, the Federal Government has been performing a storage function for the tobacco trade which ordinarily it would perform itself. But it is true that we do have now a surplus of burley equal to about 1 year's supply.

What is worse, we have on hand a lot of burley that is of low quality. It is high-nicotine tobacco that needs to be blended with much lower-nicotine leaf to make good smoking tobacco.

The situation, however, is not yet so serious that it cannot be improved. The solution to the problem will be costly to Kentuckiana growers and as a result to all of Kentuckiana, but it need not be as costly to the community as many think at the moment.

Because tobacco is held for several years before it is used, it will be possible to work off the surplus of lower-grade burley over the next few years if burley growers are willing to cooperate. What is needed in the next few years is the production of a series of high-quality burley crops. In fact, the need is for production of high-quality burley from now on out.

Burley growers obviously have made a mistake in translating acreage controls into a demand for greater production per acre. For once, at least the philosophy of growing two blades of grass where only one grew before has been proved wrong.

Lower production per acre with increasing attention to quality—low nicotine content and fine leaf—can be equated into higher incomes per acre than high yields from smaller allotments.

The solution to the burley problem lies in the hands of burley growers themselves. The burley control and price-support program grew out of the recognition on the part of burley growers for an orderly method of production and marketing.

The present situation is nowhere near as serious as the one that brought about the program. Surely the common sense that prevailed to provide that program will prevail again to save it.

Constitutionality of Executive Agreements

EXTENSION OF REMARKS

OF

HON. OLIN D. JOHNSTON

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Friday, March 11, 1955

Mr. JOHNSTON of South Carolina. Mr. President, there appeared in the New York Times of March 8, 1955, an article by Mr. Arthur Krock. It is most timely and accentuates our need to safeguard our constitutional liberties from any encroachment upon them by the provisions of any treaty or these so-called executive agreements. I congratulate Mr. Krock upon the timeliness of his article, and his clear exposition of the critical situation confronting the Senate whenever it considers the provisions of a treaty and what our courts may do in their con-

struction and the interpretation of them. I ask unanimous consent that this article be printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

IN THE NATION
(By Arthur Krock)

STILL ANOTHER COURT TEST OF EXECUTIVE AGREEMENTS

WASHINGTON, March 7.—Unless the Government retreats in the case involving the Army's use in 1945 of the Austrian property of Maria Jeritza Seery, the opera singer, the Supreme Court will be presented with another constitutional issue involving executive agreements. And it could appear in a form which would make it unusually difficult for the high Court to refuse review.

The Supreme Court has full and arbitrary power to ignore constitutional issues created by lower court findings and appeals from these findings. Recently it has twice followed this course. In the Capps potato case the Supreme Court left undecided Circuit Judge Parker's opinion that an involved executive agreement was unconstitutional, and confined itself to passing on a factual issue of breach of contract. In the case of Private First Class Keefe the Supreme Court, by declining to review a lower court decision that the GI's constitutional rights had not been violated by trial and sentence in a French court for a vicious criminal offense against a French citizen, refused directly to pass on the issue whether the treaty was constitutional under which the Army turned him over to the French authorities.

But, if a contention made by the Government in the case of Mme. Jeritza is carried to the Supreme Court on appeal from the court of claims, the high tribunal will squarely have before it an inner conflict between an executive agreement and the fifth amendment. This contention is that a 1947 agreement between an Army commander and the Federal Government of Austria precluded an American citizen—Mme. Jeritza—from suing or recovering from the United States damages for the loss and destruction of property she owned in Austria that was used by the Army for an officers' club.

Terms of the agreement

Under this agreement the United States paid Austria 308,382,509 schillings (valued at 5 cents apiece in 1947) in full settlement for all obligations incurred by our forces from April 9, 1945, to June 30, 1947, including damage to all property by whomsoever owned. In return the Austrian Government agreed to settle all such claims and protect the United States from any of them. One such claim was that of Mme. Jeritza. On visiting her Austrian property in 1948, she testified, she found the realty badly damaged and all her personal possessions—of great value—gone. Vainly she sought compensation from the Army under the guarantees of the fifth amendment that public use of private property must be paid for.

Justice Madden, for a unanimous Court of Claims, rejected the Government's denial of its jurisdiction, also motions for summary judgment made both by the Government and Mme. Jeritza, and ordered a court commissioner to make an inquiry into and report on the facts. After the court evaluates these the Government will have the choice of paying some amount in damages or appealing to the Supreme Court on the contention that the executive agreement with Austria absolves it from payment and sets aside the fifth amendment from the case.

Before, however, turning over the factual inquiry to a commissioner, Judge Madden disposed of the basic constitutional issue insofar as the Court of Claims is concerned. Among the Government's assertions was that,

though the executive agreement involved was not ratified by the Senate, it was nevertheless a treaty within the meaning of the Constitution and hence "the supreme law of the land."

The Madden finding

"Whatever may be the true doctrine as to formally ratified treaties which conflict with the Constitution [wrote Judge Madden], we think there can be no doubt that an executive agreement, not being a transaction which is even mentioned in the Constitution, cannot impair constitutional rights. Statements [made by this court hitherto] which point in the opposite direction are hereby overruled. * * * It is probably still the law that Congress could effectively destroy a citizen's constitutional right, such as, for example, * * * to just compensation upon the taking of his property by the Government, by a statute withdrawing the Government's consent to be sued. But Congress has given consent to be sued for such a taking and has conferred jurisdiction on this court to adjudicate such a suit. It would, indeed, be incongruous if the executive department alone, without even the limited participation of Congress which is present when a treaty is ratified, could not only nullify the act of Congress consenting to suit on constitutional claims, but, by nullifying * * * destroy the constitutional right of a citizen."

Should the Government contest this, the constitutional issue would be squarely presented to the Supreme Court. It could escape rendering judgment. But Louis B. Wehle, a New York lawyer, has commented that the "John Marshall formula for escape was evolved almost a century and a quarter ago in the days of the Court's political weakness. * * * Long since, in the days of its strength, the Court should discard the formula, as Chief Justice Hughes did in the Ashwander case involving the constitutionality of the TVA.

Termination of Foreign Aid

EXTENSION OF REMARKS
OF

HON. WILLIAM E. JENNER

OF INDIANA

IN THE SENATE OF THE UNITED STATES
Friday, March 11, 1955

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial entitled "Stassen Go Home" published in the Indianapolis Star of March 6, 1955.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

STASSEN GO HOME

The other day a reporter asked President Eisenhower if he planned any big economic aid program for Asia this year. The President answered, "There is evolving a plan soon to be crystallized that will be brought out to the Congress for approval."

So there we go again. The last Congress voted to end the life of the Foreign Operations Administration by next June 30. Now the administration is planning to resurrect it—as has been done before.

Americans who are interested in how their tax money has been spent abroad should get a copy of a book called Billions, Blunders, and Baloney, by Eugene Castle, if they want some help in supplying Congress with ideas for economy. You don't have to agree with all of Mr. Castle's conclusions to realize just

from the facts presented that FOA is not only worse than useless, it is harming American policy abroad.

The United States Information Agency, another target of Castle's, has 10,171 employees in Washington and overseas. What do they all do? They duplicate the private press services in supplying news overseas which is rarely used because it is considered propaganda. They make movies that they take out to show people how wonderful America is which often create the reverse impression and which are shown mostly to captive audiences. Yet the private United States film industry has daily audiences abroad of 290 million people. They live in nice homes with nice allowances in nice districts and put up nice exhibits in places where the average citizen rarely goes. They do not mingle with the people or adopt their customs or try to learn their cultural and psychological natures. As a result the USIA has, to date, done more to antagonize our foreign friends than to woo them. The results are obvious, of course. Never has the United States been held in less respect than today. Never have we had less support from our allies. Never have our enemies been able to sneer at us with such impunity. Until we began sending these journalistic gauleiters abroad to sell the United States we were not only respected and admired, we were liked.

We have sent \$112 billion abroad in foreign aid in less than 15 years. What good did it do us? Are we more secure than 10 years ago? Are we better liked than 10 years ago? Do we have more loyal allies than 10 years ago? Are our enemies weaker than 10 years ago? Do we have more friends in other countries than 10 years ago? Is our aim of supporting freedom further along than 10 years ago? It is not.

Think what schools and highways that \$112 billion could have built in the United States. Think of the military power we could have built with that \$112 billion. We could have paid off nearly half of our national debt with it. Which would have done us more good? Which will do us more good in the future?

Last year Congress allocated \$5,245,575,795 for FOA. Yet there was already a backlog of \$10 billion unspent and \$2 billion of this was not even allocated. But when Congressmen objected and tried to slash it, the administration put on the pressure and cried "wolf" once more and they buckled under. If Congress had eliminated FOA last year, as it had planned, we would have a balanced budget now with something left over for tax reduction.

But Mr. Stassen says, "We cannot, nor must we ever trim our aid to needy free nations just for the sake of cutting our own budget." So we owe everybody in the world a living, including those who oppose us, except ourselves.

We have tried to buy allies and we failed. We have tried to buy peace and got 3 wars. We have tried to buy friendship and bought only enmity. The most conspicuous example is India, to which we will have given \$378 million by next year. India not only refuses to join us in our peace and security efforts; India joins the other side against us. Yet we keep on. And Stassen's minions keep calling this success.

Mr. Castle cites a conversation with a Turkish newspaperman. "There are no 'Yank go home' signs in Turkey," he said. "Turks like Yanks; Yanks like Turks. The only Yanks the Turks don't like are your propagandists all over our country. If they would go home, it would be still better for Turkish-American relations."

If we want to buy propaganda in foreign countries, we should hire foreign press agents who know something about their own countries and how people think. We have

built huge monuments to our psychological stupidity in our lavish embassies and official residences abroad which excite envy, not admiration, sneers, not praise from local citizens. Our troops abroad are another source of irritation. If the next war is to be fought in the air with atomic weapons, why not bring them home and eliminate this ever-present source of irritation?

But America's chief failure in foreign policy, a failure that still persists stems from trying to do with dollars and propaganda what can only be done with sound policy. The Soviets make successful propaganda only because they have successful diplomatic and military policies. When they win a victory in the Tachen Islands it is worth 1,000 SEATO's. Every Geneva is worth a score of Marshall plans. Every victory in Indochina is worth billions spent on propaganda. Every diplomatic or military retreat by the United States is worth 1 million Harold Stassens. A successful and dynamic foreign policy will automatically bring successful propaganda, more solid alliances, more respect and admiration abroad. Retreats do not excite either confidence or respect.

So Congress should end all foreign aid this year and force the administration to concentrate on building sound policy. By balancing our budget we would be greatly strengthened at home. By bringing home our despised propagandists and resented troops we would be strengthened psychologically abroad. The slogan for this Congress should paraphrase the slogan that our stupidities and naivetes abroad have brought upon us, "Stassen go home"—and stay there.

New Virgin Island Governor Aims To Improve Economy

EXTENSION OF REMARKS
OF

HON. GEORGE A. SMATHERS

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Friday, March 11, 1955

Mr. SMATHERS. Mr. President, a great many of use here in the Senate, particularly those from the Southeastern States, have been acutely aware for some time of the problems relating to the United States Territories and island possessions which are close to us. We have sought to keep abreast of developments in the governments of Puerto Rico, for instance, where the people have been given self-government under a commonwealth status, and where great progress has been seen under Puerto Rican leaders.

Also of great interest and concern to us is that group of islands off the southern shores of Florida in the Caribbean Sea—the archipelago known as the Virgin Islands.

Recently, one of the Nation's outstanding newspaper correspondents, whom we all know for his sterling worth here in Washington, visited these islands, along with an official party from the Government, headed by Secretary of Interior McKay and Secretary of Agriculture Benson. This reporter made firsthand observations of conditions in the islands, and in his reports to his newspaper put his finger on some of the problems which the Virgin Islands face.

I recommend that all Senators give their attention to the article I am about

to present for the RECORD, not only because it is written in a very lucid, precise style, but also because it makes available authoritative, up-to-date information. The author is Mr. Radford Mobley, who is the Washington correspondent for the Knight newspapers, and this article appeared in the Miami Herald and other Knight newspapers on March 3, 1955.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEW VIRGIN ISLAND GOVERNOR AIMS TO IMPROVE ECONOMY (By Radford Mobley)

ST. THOMAS, V. I.—The English-speaking Virgin Islanders, situated between Puerto Rico and Latin America, have a new governor who is asking them to take a sharper look at realities if they want to improve their economy.

Self-made Gov. Archie A. Alexander, who was a millionaire contractor in Washington before he took his present job, was not a popular choice when he was appointed last year.

He was a nonresident Negro and the natives talk increasingly about electing their own resident governor.

Furthermore, he talked very candidly with the local population. He advised them to apply themselves more. This didn't sit too well with a part of the 26,000 population, many of whom have been content since the Roosevelt administration to depend on Washington to take care of these islands, partly wrecked by prohibition and the handout.

The local people hope the governor will lose some of his energy and eventually see things their easy-going way in this delightful tropical climate. But this seems unlikely. Governor Alexander is a determined man and would like to see the islands stand on their own feet.

The reward for such an accomplishment will be more local self-government. This goal is presently aimed at.

Secretary of the Interior Douglas McKay and other Federal officials made a recent survey of the islands, particularly to take a look at the Virgin Islands Corporation (VICORP), set up during the former Democratic administration to improve the islands' economy.

VICORP started out on a big scale. Former Secretary of the Interior Harold Ickes put it into the rum business, reviving the principal industry under Government sponsorship. It then went into the hotel business and finally into the sugar business.

Today the Corporation, which has dropped rum, hotels, and tourism, leaving power and sugar, is losing \$500,000 a year. There is little chance for doing better unless the Virgin Island sugar quota is raised, and local workers get interested in sugar field work now left mainly to imported labor.

Congress soon will consider what to do about VICORP. McKay has been advised to ask that Congress kill it, turning over its operations to the Virgin Islands government under Governor Alexander.

Last year the United States Government stopped direct grants to the Virgin Islands government to meet deficits, and has cut down on grants for welfare purposes.

Now the Treasury turns back to the Virgin Islands tax revenue collected on sale within the United States of Virgin Islands goods. This is mainly rum.

But it seems probable VICORP will be stuck with its sugar business for some time. Chances for a private sale, as was arranged for the rum and hotel businesses, seem slight in view of current losses.

Eventually the local government may be given control, but it is officially recommended this step be delayed until the government demonstrates its ability to manage its own affairs.

The VICORP board is taking steps to clean up what it found when it took over.

It found there was no adequate inventory of corporation equipment. Inventory accounts were adjusted to agree with storekeeper records without reason given for differences. An inventory is now underway.

During the past few years the corporation spent half a million dollars for tractors and other farm equipment. This was left in the fields and villages at the end of the grinding season. Vehicles were open for rains to flood them. Some equipment was almost invisible because of the overgrowth of weeds.

"In these lovely islands we did find a lovely mess," said Dr. K. A. Bartlett, president of the corporation. "We now have top technical aid to make things more efficient. But whether we can make money out of sugar, I can't say. Labor is the chief problem."

Younger Virgin Islanders leave for the States whenever they can. Six of 10 drafted for military service never return home.

Governor Alexander had long sessions with McKay and Secretary of Agriculture Ezra Taft Benson on needed water projects, more diversified agriculture, forestry development, and other pressing problems.

Some of the natives say they would like to go back to Navy control, where they were from 1917 to the 1930's. The reason: "Because the Navy was always building things."

Governor Alexander is a builder himself and should capture their confidence if he builds a few things, assuming he can find the labor.

Oil Price Regulation

EXTENSION OF REMARKS
OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Friday, March 11, 1955

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very interesting article entitled "U. N. and Economics: Global Group Asks Oil Price Regulation To Set Right Rate," published in the Wall Street Journal of February 24, 1955.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

U. N. AND ECONOMICS: GLOBAL GROUP ASKS OIL PRICE REGULATION TO SET RIGHT RATE—COST IN EUROPE TOO HIGH, TIED TO UNITED STATES LEVELS, SECRET REPORT ARGUES—DULL DOCUMENT PACKS A PUNCH

(By Henry Gemmill and Mitchell Gordon)

GENEVA.—Less than 2 weeks from now, on March 9, delegates to a United Nations committee—including representatives of Russia, Poland, and other Communist countries—will meet here to discuss what has suddenly become the most violently publicized economic issue on the continent.

This is a proposal by the secretariat of the U. N.'s Economic Commission for Europe that governmental machinery be set up to fix what it calls the right prices for crude oil produced in the Middle East—mostly by 5 American companies and 3 European ones—and for petroleum products refined and marketed in Western Europe. The right price

for Middle East crude, the secretariat argues, would be a lot lower than the going rate.

Officially, this proposal is still a secret and every effort has been made to confine circulation of a document in which it is contained, bearing the colorless title "The Price of Oil in Western Europe," to governments of participating countries, including the United States. But newspapers from Britain to Switzerland to Italy have learned much of its contents and are currently headlining it—rather misleadingly—as an assault on monopoly.

PACKS POTENTIAL WALLOP

An examination of the complete text of the document, obtained by the Wall Street Journal, shows it to be at first glance, a scholarly and rather dull dissertation. It contains 3 pages of algebraic equations and 14 pages of tables, charts, and maps in addition to 39 pages of analysis and suggestions. But whatever its merits as an economic study, it does pack a potential political wallop, so its arguments and proposals are perhaps worth attention.

This is not a trustbusting effort of the sort the big American oil companies have become accustomed to at home—though the ECE document does draw on facts and allegations contained in the 1952 report of the Federal Trade Commission entitled "The International Petroleum Cartel" and though it does make reference to "the current civil action against the five major United States oil companies operating abroad for alleged violation of the antitrust laws."

(The Justice Department's antitrust case against the so-called international oil cartel, filed in April of 1953, has come almost to a standstill. Government lawyers have been studying thousands of documents submitted by the five United States oil firms involved, and sometime after mid-March, Federal and company attorneys are expected to get together to discuss ways of getting the case off the district court inactive list.)

Instead, this United Nations staff group recognizes and appears to welcome the power of the five big companies and the governments backing them. But it proposes that this be countered by governmental power and action to be exercised by the consuming nations.

NO SOLID DETAILS

As to the details of what it wants, the Secretariat gives only a number of broad hints. It asserts that "the special circumstances of crude-oil production make it impossible to say, on purely economic grounds, where the right price lies," except within a very wide range. So the decision must be political—"one which represents a compromise generally felt to be fair between the interests of producers and consumers."

The United Nations planners recall with apparent nostalgia "the Anglo-American Oil Treaty of 1945 which explicitly recognized the interests of all governments, consuming as well as producing." This draft treaty "was never ratified and the particular approach which it envisaged may now be no longer appropriate," their report concedes, but adds that "the transition from conditions of scarcity to conditions of plenty in oil poses anew the problems which were already foreseen at that time."

What the Secretariat seeks is stability, through agreed-upon pricing. It denounces the price of Middle East crude as too high today, but it is equally fearful of a price collapse. Says the report: "The danger is that if governments in consuming countries remain so detached from these problems as heretofore they may persist unsolved until the further accumulation of strains produces a disorderly rupture in the present price structure."

MAY PARALLEL WHEAT PACT

At the moment only one major commodity—wheat—has its price controlled by in-

ternational governmental agreement. The United Nations group does not cite this as a model, though it would seem to fit the definitions of what is desired for oil.

Communist countries might have to be included in any oil price-fixing arrangement, the report indicates. It notes that so far, East Europe's crude-oil exports have been small; at last count in 1953 they came to roughly 1.5 million tons out of total consumption in Western Europe of roughly 70 million tons, and most sales by the Soviet Union and Rumania seem to have been made at prices little different from those charged by the major private companies.

But already East Europe has completely taken over the Icelandic and Finnish petroleum markets, the Secretariat declares, and if oil comes to figure still more prominently in the export efforts of Eastern Europe, the problem of opening up outlets for it without price cutting is likely to become more serious.

The United Nations officials do not hesitate to name the private companies which it would subject to price control, both for crude oil produced in the Middle East and for products refined and distributed in Europe. They are the Standard Oil Co. (New Jersey), the Texas Co., Socony-Vacuum, Standard Oil of California, and Gulf Oil Corp., all American, the Royal Dutch Shell group of companies and the British Petroleum Co., formerly called Anglo-Iranian Oil Co. In addition it cites one French Government-backed concern, Compagnie Française des Pétroles.

DOMINATE REGION'S OIL

Together these firms produce nearly all Middle East oil, largely through joint companies. For instance, in Saudi Arabia the joint enterprise is Arabian American Oil Co., representing the two Standard Oil concerns, Socony-Vacuum and the Texas Co. Iraq Petroleum is a joint venture of Socony-Vacuum, Jersey Standard, British Petroleum, Royal Dutch, Shell, and Compagnie Française.

The United Nations theorists seem to feel that the big private petroleum companies may embrace their plan for political price fixing. In this they are very likely wildly overconfident but their sentiment is explained thus:

"Alone and unaided the oil industry may find it impossible to evolve a more rational price structure or pricing mechanism. The development of any new formula by the industry itself, even though it produced a more defensible structure and a lower level of prices in Europe, would doubtless increase the difficulties experienced by the American companies with regard to the administration of United States antitrust laws. And without some agreement reached in advance on an alternative standard of pricing the industry is understandably reluctant to abandon the present one since, given the conditions of supply and the insensitivity of demand to price changes, it is difficult to see where prices will come to rest once they start to move."

INTRICATE ECONOMIC REASONING

The economic reasoning behind the United Nations proposals is intricate but boils down to this:

Oil prices in America are kept high by regulatory agencies of State governments, such as the Texas Railroad Commission, which aim to cover the expenses of the highest cost domestic producers and promote a high rate of oil exploration.

Europe, which before World War II got most of its oil from the Western Hemisphere in the form of refined products, now gets nearly all its imports from the new fields of the Middle East, and it takes it as crude oil because refineries have been built in Europe. About \$1 billion is paid annually now for

this crude and it is argued that this is far too much.

The Secretariat contends that the cost of production in the rich Middle East fields is amazingly low. It cites figures showing that while "in the United States average output per well in 1950 was only some 11.6 barrels a day, or 31 barrels if stripper (marginal producing) wells are excluded," in the Middle East the average was some 5,000 barrels. The report contends that in 1952 crude oil from Saudi Arabia that sold for \$1.75 a barrel returned a net profit in the neighborhood of \$1.40.

SAID TIED TO UNITED STATES

The price of Middle East crude is somewhat below the American price, it is conceded, but the United Nations group contends it is nevertheless arbitrarily "tied to that in the United States, with due allowance for freight charges." The planners conclude that "the wide divorce which persists between prices and production costs in the Middle East suggests that if this link were severed the price charged on sales to European countries by the Middle East could be significantly lowered without adverse effects on the further development of its crude oil production."

The present high profitability of Middle Eastern operations is depicted by the Secretariat as a standing invitation to the potentates of the area to increase their demands for a cut of it. "The present position in which royalties and taxes in most Middle East countries amount to about 50 percent of the net profits of crude oil production is the outcome of very recent advances over the last few years," the report says, and "there is no reason to think that the present position is one of permanent stability."

New price-fixing mechanisms must be applied not only to Middle East crude oil but to petroleum products refined in Europe, the economic commission contends. Its charts depict some big companies which dominate the Middle East production as controlling more than 70 percent of Western Europe's refining capacity although they control only a bit more than 40 percent of the refineries in the United States.

PRICE PEGGING CHARGED

It is charged that most of these big companies—and most independent ones, too—peg their prices upon prices of refined products in the Western Hemisphere through a technique known as import parity. In other words prices in Western Europe tend to be equal to the price at which products could be delivered from the Caribbean, except in the eastern Mediterranean which is closer to the Middle East, where the yardstick is delivered prices from the Persian Gulf.

The asserted result is that European refined prices dance to the tune of demand for various products in the United States and the pattern of prices imposed is bound to be inappropriate, especially because the demand for fuel oil relative to that of motor spirit is much higher in Western Europe. Another alleged effect is to make the profitability of refining in most parts of Western Europe vary in erratic fashion with changes in the level of freight rates.

Any new scheme for fixing refined product prices would need to be consistent with two objectives, according to the economic commission. One objective is to kick loose from the American price patterns and establish instead prices which will respond to demand in Western Europe. The second is to insure that the pricing practices adopted are such that efficient nonintegrated refiners, who cannot subsidize refining out of profits made in crude-oil production, transport or distribution, can compete on equal terms with the integrated companies.

SENSATIONAL PUBLICITY

The economic commission secretariat is headed by Gunnar Myrdal, Socialist from

Sweden. While he was still in domestic politics, Mr. Myrdal negotiated soon after the war a big Swedish deal with Russia. He explained to a Wall Street Journal reporter at the time in 1946 that this was not from fondness for the Communists but because the danger of an American depression was imminent and Sweden must diversify its trade interests.

Accounts of the economic commission's oil report have been sensationally publicized even by some newspapers whose economic and political views are conservative. For example, Lord Beaverbrook's London Express this week threw 8-column page 1 headlines on a story proclaiming: "Big Combines Accused of Keeping Up Prices in Britain."

An exception is the London Financial Times which rehearses what it terms the oil industry's answer to the criticism:

"Under the 50-50 profit-sharing arrangement which has been gradually extended throughout the Middle East any attempt to reduce the selling price of crude oil would be bitterly resisted by the governments of that area whose revenues would be reduced in consequence. It is idle to suggest that they would be able to sell much more oil at lower prices. The only big new market that they could hope to capture by offering their oil at prices below the United States gulf level is the United States itself, and there is no doubt about the promptness of the measures that would be taken if the threat of foreign oil 'dumping' of this kind ever materialized."

Stories about the United Nations oil critique have been given spirited play in Swiss newspapers, which have been critical of recent United States antitrust action against their country's watchmakers. The Italian news agency decided to file a story on the issue after worrying whether doing so would supply Italian Communists with political ammunition.

UNITED STATES FIRMS ASSAIL REPORT

Standard Oil Co. (New Jersey) assailed a United Nations agency's report on prices of crude oil produced in the Middle East as a "gross misstatement." Socony-Vacuum Oil Co., Inc., said it makes no specific recommendations and the Texas Co. noted the paper "has no official status."

A Jersey Standard spokesman said the paper apparently was based "on charges which have been made in the past about the oil industry . . . which have never been tried or proved. Such things can be and are used as propaganda by Communists and others to attack the West. . . . The net received by the oil companies from Middle East crudes have been overstated in the paper by exactly 100 percent."

Socony-Vacuum said in a statement, "Apparently the authors of the report make no specific recommendations. But they seem to suggest that the oil industry has in some way failed to price its products appropriately and that perhaps some form of international governmental control ought to be imposed. . . . We are confident that when the final report of the ECE is officially released such questions as it raises will be readily understandable in the light of accepted economic principles."

The Texas Co. declared, "This working paper, as far as we know, has not been approved and has no official status. The Texas Co. believes in the basic principles of free enterprise and competition. We also believe that these natural economic forces in the long run operate most favorably in the public interest."

How the Right-To-Work Fight Lines Up

EXTENSION OF REMARKS

OF

HON. GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks, I include the following article which appeared in the February 16, 1955, political memo of Labor's League for Political Education of the American Federation of Labor:

How THE RIGHT-TO-WORK FIGHT LINES UP

Passage of a so-called right-to-work law by the Utah Legislature brought into sharp focus the whole dark and bitter history of the corrupt big business fight against men and women who have joined unions to help gain higher wages, shorter hours, and better working conditions.

It also retold an old, old story. This one: There is not a union security contract in America that cannot be wiped off the books by legislative action.

The postscript to that tale is this: Trade unionists must be active politically in order to protect themselves. If they don't want each individual worker to be forced to plead with his employer for fair treatment, they must learn where candidates for the legislatures and Congress stand on labor issues. And then they must register and vote for those who will support the interests of working people, and the State and country as a whole, because what is good for the country is good for the worker.

THE POLITICAL PARTY LINEUP

In Utah, which, with Governor Lee's signature, became the 18th State to pass the law aimed at destroying trade unions by outlawing all union security agreements, every one of the 33 Republicans in the House and 13 of the 16 GOP Senators voted for the bill. On the other hand, all 27 Democrats in the House and all 7 Democrats in the Senate opposed it.

The Utah voting pattern was cut from the same cloth which has been woven in other right-to-work States. There, without exception, legislatures are controlled by greedy men who sit in the front offices of corporations and the board rooms of banks.

In the 11 Southern States which have passed the union-wrecking legislation, that has meant control by the Dixiecrat battalions commanded by such labor-hating warriors as Talmadge, of Georgia; Shivers, of Texas; and Byrnes, of South Carolina.

But outside the solid South, it has meant that in seven States the Republican regiments have wheeled their artillery into line and cannonaded the Democratic prolabor troops to death.

And yet the generals of the Grand Army of the Republican Party profess to wonder why Labor's League for Political Education so often supports liberal Democrats for legislative offices.

In the words of AFL President George Meany, labor is not wedded to the Democratic Party. Rather it is wedded to the idea that it is a mite smarter to vote for a man who will vote for us rather than for one who will vote to let organized labor be destroyed on the order of big business.

THE PRESSURE GROUP LINEUP

Utah witnessed an organization with a high-sounding and oh-so-respectable label fronting for the reactionary characters behind the scenes in their battle to strip working people of the right to organize. And the citizenry of other States watched phony fronts in their statehouses plot and execute legislative assaults on union members.

In Salt Lake City, it was called the Industrial Relations Council of Utah. That sounds nice. It even sounds fancy. Who in the world would have anything against an outfit that wants to promote better labor-management relations, as the council's name so slyly implies is its intent? Of course, one way to guarantee big-business men of having peaceful relations with unions is to have no unions.

As a matter of brutal fact, the Utah representative who introduced the right-to-work-unions measure is the council's attorney.

One of the earliest front groups to fight the union shop was the high-sounding DeMille Political Freedoms Foundation, run by the movie magnate, Cecil B. DeMille. The foundation deluged Wyoming legislators with propaganda mailed in an envelope carrying the return address of: Labor's Legislative Committee, Casper, Wyo. This gave the impression that the outfit had labor support—which it surely did not.

In North Carolina and Virginia, there were groups solemnly calling themselves right-to-work committees. In reality, they consisted of low-wage manufacturers and should have been known as right-to-work-for-what-we-want-to-pay-you-for-as-long-as-we-want-to-work-you committees.

In Louisiana, there was a ghost group tagged as the Citizens Committee. It paid for reams of newspaper advertisements and endless hours of radio propaganda. Its goal was plainly obvious inasmuch as it was teamed up with such hot-eyed groups as the New Orleans Association of Commerce, the Louisiana Manufacturers Association, and the Farm Bureau.

In other Dixie States, the Southern States Industrial Council played a leading anti-union role.

In Oklahoma, the false face for the reactionary boys who lurked stealthily behind the scenes was a thing known as Jobs, Inc. Fortunately, trade unionists and their friends in the legislature killed the proposed right-to-wreck bill in a bitter, uphill drive.

Then there is the spook group known as the National Economic Council, Inc., a blood brother of the notorious Committee for Constitutional Government. Among those who have contributed money to the NEC are such friends of the workingman as Gulf Oil, Monsanto Chemical, Vick Chemical, Lamont Du Pont, Irénée du Pont, Lone Star Cement, and the Texas Co.

The president of the National Economic Council, Inc., is one Merwin K. Hart, who in 1940 had this to say:

"I wonder sometimes if one of the causes of our trouble today arises from the fact that we have been overdrilled into believing we are a democracy."

It was Hart who told an amazed committee of the United States House of Representatives in 1950 that the Supreme Court should be abolished because it's dedicated to socialism.

Perhaps the most fraudulent label that has been pasted on such phantom forces is the one that trickily implies it is sponsored by church people. These include the Chris-

tian American Association and the Christian Front.

Their names give off an aroma of morality. You might mistakenly infer from them that they are benevolent organizations dedicated to good and prayerful endeavors. But their works give off the noxious odors of assassins of the trade-union movement.

It was the hippity-hoppy Christian American Association which fathered the right-to-wreck law in Texas; which claimed ownership of the law in Louisiana; which cosponsored it with chambers of commerce and manufacturers' associations in Georgia; which put over a labor peace act in Colorado (later torpedoed by the State supreme court); and which was so effective in pressuring members of the Tennessee Legislature that a right-to-wreck law sailed through that assembly despite the fact that not a single, solitary supporter of the bill testified before the senate labor committee.

THE REAL CHURCH LINEUP

Most of the leading spokesmen of Protestant, Catholic, and Jewish churches who have taken public positions about so-called right-to-work laws have upheld the moral, as well as legal, right of workers and employers to enter into contracts when they see fit.

Among these is the executive committee of the Federal Council of the Churches of Christ in America, which said in 1949: "We believe that compulsory union membership should be neither required nor forbidden by law."

The Most Reverend Francis Rummel, Catholic archbishop of New Orleans, told a Louisiana legislative committee in 1954: "Labor no less than management needs reform, but neither should be virtually outlawed."

Rabbi E. J. Lipman, director of the Commission on Social Action of the Union of American Hebrew Congregations, stated in 1954: "The right-to-work law is a fraud. . . . Against such attempts to impair the right of labor to organize, the adherents of religious faith—whether Judaism or Christianity—must speak out with candor and courage."

Just the other day, Senator HERBERT LEHMAN inserted into the CONGRESSIONAL RECORD the 1955 New Year's Day statement of the Association of Catholic Trade Unionists. One paragraph said:

"It is not the American worker who has been bleating so loudly about a man's right to work. The new exponents of the right-to-work are those who would have the worker stand alone before them in his request to exercise that right—where they can dictate the conditions of that work—conditions which in the past have brought untold misery and hardship to the workingman."

And that, of course, is absolutely true. How many workers, either union or non-union members, have pleaded for a right-to-work law? How many employees in a union shop have quit their job to work in a non-union shop because they don't like union security?

The questions answer themselves.

THE HYPOCRITICAL LINEUP

We should not forget one thing. A number of big-business men practice the deepest hypocrisy in their attempts to outlaw the union shop. The union shop—a result of the American principle of majority rule—is more than 150 years old. During that time it became entrenched firmly in many industries.

And some of the leaders in those industries have union agreements right today. But, nothing daunted, they continue to blather about how terrible unionism is.

The prime, 24-carat, gold-plated model of such a man with his feet planted firmly in the air is none other than the president of the National Association of Manufacturers, Henry Riter III. He says "State right-to-work laws are designed to restore to the

individual his basic rights to decide for himself whether to join or not to join a union."

It so happens that Mr. Riter is chairman of the board of the Copperweld Steel Co. which has a union-shop contract with the steelworkers.

WHAT ABOUT THE FUTURE LINEUP?

Forty-six legislatures meet this year and the jowls of the NAM and the chamber of commerce are quivering with anticipation of more legislative worlds to conquer. Thus it behooves all trade union leaders to generate a very active participation in affairs in their State capitals by organized labor.

Only by practical, hardheaded mobilization of union members will more right-to-work laws be defeated.

Only in that way can they stop antilabor forces who want to remove from the tomb the days of not-so-long-ago, days that have been described by a late Chief Justice of the United States in these words:

"A single employee was helpless in dealing with an employer. He was dependent upon his daily wage for the maintenance of himself and his family. If the employer refused to pay him the wages he thought fair, he was nevertheless unable to leave the employ and to resist arbitrary and unfair treatment."

And then the Chief Justice said: "Union was essential to give laborers opportunity to deal on equality with their employer."

The name of the Chief Justice was William Howard Taft, father of the father of the Taft-Hartley Act.

MR. DOOLEY EXPLAINS THE RIGHT TO WORK

The present right-to-work drive against the union shop recalls a famous piece by Mr. Dooley, a character created by Finley Peter Dunne, noted newspaper writer of years ago. Wage rates and working hours have changed since then, but the fundamental situation he discussed remains the same. Nobody has ever described it better than Dooley, in his Irish brogue, as follows:

"What is the open shop? Sure, 'tis where they kape the doors open to accommodate the constant stream of min comin in to take jobs cheaper than the min that has the jobs."

"'Tis like this, Hinnissey: Suppose wan of these freeborn citizens is workin in an open shop f'r the princely wages av wan large iron dollar a day av tin hours. Along comes anither son av gun and he sez to the boss, Oi think Oi could handle the job nicely f'r 90 cints."

"'Sure,' sez the boss, an the wan dollar man gets out into the crool wuruld t' exercise his inalienable rights as a freeborn American citizen and scab on some other poor devil."

"And so it goes on, Hinnissey. And who gits the benefit? True, it saves the boss money, but he don't care no more for money thin he does f'r his right eye. It's all a matter of principle with him. He hates to see min robbed av their independence."

"'But,' said Mr. Hennessey, 'these open-shop min ye menshun say they are f'r unions if properly conducted.'

"'Sure,' said Mr. Dooley, 'if proper conducted. An' there we are: How would they have thim properly conducted? No strikes, no rules, no contracts, no scales, hardly in wages, and dam few members.'"

Soil Conservation Districts in Minnesota

EXTENSION OF REMARKS

OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, March 11, 1955

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the

Appendix of the RECORD an editorial entitled "Soil Conservation Districts Expanding," published in the St. Paul Pioneer Press of March 9, 1955.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SOIL CONSERVATION DISTRICTS EXPANDING

More than three-fourths of Minnesota's good agricultural land lies within the 69 soil conservation districts already organized. Yet in all that area less than a fourth of the farmers are cooperators in the program, following basic soil conservation plans. As M. A. Thorfinnson, extension soil conservationist on the university's farm campus, put it in an article in the Conservation Volunteer, "We are three-fourths organized for the job and have more than three-fourths of the job still to do in the organized area."

The process of expanding the organization framework has been speeded by Mr. Thorfinnson in his position as executive secretary of the State soil conservation committee. Seventeen of sixty-nine districts were organized in the last 3 years and 9 of these in just the past year. Yet research must have continuing impetus, and direct participation in the plan will have to be expanded.

Urging legislative appropriations to carry the program forward, the Conservation Volunteer articles makes this sound statement as to the value of research: "It has been estimated that Minnesota is losing \$100 million worth of topsoil annually through soil erosion, in addition to a similar amount in fertility going into crops shipped out of the State. The latter can be largely replaced through use of commercial fertilizer; the former can never be replaced. A few hundred thousand invested annually can go a long way in preventing this loss."

Red Propaganda Against the United States

EXTENSION OF REMARKS

OF

HON. WILLIAM E. JENNER

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Friday, March 11, 1955

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "His Master's Voice," prepared by the Reverend Frederick Brown Harris, pastor of the Foundry Methodist Church and Chaplain of the United States Senate, which was published in Foundry Facts for Foundry Folks of February 24, 1955.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HIS MASTER'S VOICE

We have never yet known President Syngman Rhee to be wrong in his reactions and judgments regarding anything that has to do with communism. Few men in the world know better the blackness of the heart—if it has a heart—of this conspiracy of slavery.

It was his deliberate judgment last summer that no representatives of the subversive churches back of the Iron Curtain should be allowed to come to Evanston. It was also the best judgment of the State Department that they ought not to come. But, at last, a milder attitude prevailed, on the basis that, perhaps, they could do no harm, especially if carefully watched, and might

see and hear some things here that would affect their attitudes when they returned.

What these so-called church leaders have said and done since their return, for instance, to Hungary, shows how right Syngman Rhee was.

Dr. Eugene Gonda, a former European journalist, now living in Washington, has these comments, among many others, to make:

"The four Hungarian Protestant bishops took the lead recently in a new kind of Red propaganda aimed at the United States. The 4-2 Lutherans and 2 Calvinists—were members of a Hungarian delegation which attended the Assembly of the World Council of Churches in Evanston last August. The Lutherans were Dezery and Veto; the Calvinists were Bereczky and Peter.

"Bishop Bereczky has been giving well-publicized lectures since his return about his sad American experiences. Bishops Peter, Dezery, and Veto wrote articles about the horrors of American life and the successes of Iron Curtain churches at the Evanston Assembly."

In spite of all the courtesies that were extended them, the bishops agreed that they received "humiliating treatment reserved only for Communists." They didn't receive that sort of treatment; but even if they did they ought not to have been surprised, inasmuch as they represent a gangster government.

Speaking of American cafeterias—into which one need not go unless he wants to—one of these pseudo bishops told his countrymen: "One of the slanders by the western reactionary press about Communist countries is that there people wait in line for food in collective restaurants. The truth is that America is the country of waiting in line in cafeterias."

Another pronouncement by one of these ecclesiastical leaders is: "It is not possible to buy beer in bottles in America. Even this is delivered in canned form. Milk is sold in square paper boxes. American food is tasteless and is permeated with all kinds of unpleasant odors of fish, melted butter, and food oil."

Each one of these leaders described in his own way a cute magazine cover, which all unregimented Americans understand perfectly, as follows: "A father with two loaded guns terrorizing his young son in a sickbed and thus forcing him to take a bitter medicine." The writer succeeded in identifying the picture which so horrified these Hungarian bishops. It was on the cover of American Weekly, and it showed a smiling father kneeling at the bedside of his little boy, who was grimacing over a spoonful of castor oil. The father wore toy holsters and a toy sheriff's hat; and he was terrorizing the youngster with two cap pistols.

Fortunately, the State Department would not let some of these discredited and suspected church representatives go very far out of Evanston. But, even then, they pounced upon an Evanston war memorial. This man Peter (pronounced Pater) devoted an entire article, published in many Hungarian newspapers, to the Evanston memorial, and concluded that "the United States is suffering from war hysteria." Really, the shaft to which these Reds took exception was in memory of men who had fallen in all conflicts since the Civil War.

One of these men, unfortunately announced as representatives of ecumenical Christianity, told the Hungarian people when he got back: "Many people came to see us secretly and shook our hands warmly in the absolute privacy of hotel elevators."

An anonymous Protestant minister was quoted as saying: "President Eisenhower was elected on a program of peace and social progress. This has proved to be an empty illusion. Believe me, the American people have lost their faith in everybody. They are

only anxious for their future. While reading a newspaper, the average American can do nothing but turn the chewing gum in his mouth."

Well, we might comment that it would be better to have one's mouth filled with chewing gum than with the lies that these churchmen took back as part of their Red propaganda in Hungary. Their remarks which we have quoted here give just a little sample of the distortions which these men from Hungary (one of whom, instead of being called a bishop, is called a stooge and an informer by the Hungarian Government in exile) took back with them from this land of the free, as they returned to their totalitarian paradise—out of which they never would have been allowed to go had their masters not been sure of their loyalty. It is a case of his master's voice.

All who know really the ecumenical picture of world Christianity cannot help but deeply deplore that at Evanston the voice of this Hungarian Peter was heard, and the voices of such ecumenical Christians as Chiang Kai-shek and Syngman Rhee were not heard.

Again, let us say, Syngman Rhee was absolutely right.

Hoover Comes Back Strong

EXTENSION OF REMARKS OF

HON. GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks, I include the following article by Thomas L. Stokes, which appeared in the Washington Evening Star of March 10, 1955:

HOOVER COMES BACK STRONG—EX-PRESIDENT SEEN INSTRUMENTAL IN MOVE TO RETURN CONTROL OF CREDIT TO NATION'S BANKING INDUSTRY

It is doubtful if the American people understand or properly assess the powerful influence that Herbert Hoover exerts on the Eisenhower administration, which is, as we know, the first Republican administration since Mr. Hoover's own which had to devote itself chiefly to wrestling with the depression that broke only 6 months after it began.

Mr. Hoover had to wait a long time for a Republican administration after his own was repudiated so overwhelmingly at the polls in the 1932 election. But he has come back strong. He offers his advice in many fields to the Eisenhower regime, though his impact is directed through the Commission on Reorganization of the Government, of which he is chairman, and chairman in fact as well as name.

The former President was, as you recall, brought back into public service by ex-President Truman to head the commission. Then, however, the Commission was limited to recommending ways to make the Government more efficient and less wasteful by eliminating duplication of services and functions, overlapping, and such.

In the Eisenhower administration, however, the Hoover Commission was given authority to invade the field of policy in many areas of Government and this Mr. Hoover has set out religiously to accomplish. You can imagine he is directing this with some relish; for the policy chiefly affected is that body of laws and principles passed and established in the 20 and more years since Mr. Hoover left the White House—the New

Deal which he so vigorously assails from time to time.

This will become clear with the release shortly of the Hoover Commission report on Federal lending agencies, and some time hence in the report on water resources. If the recommendations of these should be approved by Congress, we would get a revision of the aims of many New Deal reforms, as well as some dating back beyond that, and even beyond Mr. Hoover's ill-starred administration. The forthcoming reports are worth careful public scrutiny; for nothing like the drastic policy revision urged was before the people in the candidacy of General Eisenhower in 1952.

If carried out, the recommendations in the Hoover report on Federal lending agencies would turn back credit control, with a nice profit, to the bankers. That would wipe out the victory, won at much cost and culminating in the Roosevelt administration, which gave the people through their Government control over money and credit. Or, as the late Franklin D. Roosevelt put it, "moved the money capital of the United States from Wall Street to Washington"; or, as he stated his aim more dramatically in his first inaugural, "to drive the money changers from the temple."

More and more this administration is taking on the colors and contours of a bankers' administration. The bankers and big finance have been moving into position, as is manifest in such operations as bonds-for-schools, bonds-for-roads, as well as in the Hoover proposals.

Under the latter, loans for farmers, for veterans, for homeowners, for small business, for rural electric cooperatives and the like, would be removed from Government agencies and institutions and, by one device and another, turned back to private bankers. The result would be higher interest rates and higher fees of all sorts.

It is hard to imagine that the many groups affected would take this lying down, especially farmers, small-business men and veterans. One of the greatest economic battles of our time, and it was bitter, was the struggle of the farmers to free themselves of banker control so they could get reasonable interest rates. It was this battle that William Jennings Bryan led around the turn of the century; that Woodrow Wilson joined in his time and which resulted during his administration in new credit facilities for farmers and small-business men; that flared up again in the Harding administration, with its brief postwar depression, to bring additional credit facilities for farmers, and which finally ended with basic banking and credit reforms in the Franklin D. Roosevelt administration.

It is possible that Herbert Hoover finally has handed the Democrats the issue for which they have been seeking.

They have made him an issue ever since 1932; but it had been wearing thin the last couple of elections.

Now he is asking for it.

Bad for Farmers

EXTENSION OF REMARKS OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. MULTER. Mr. Speaker, I direct the attention of our colleagues to the following portion of Drew Pearson's column which appeared in the Washing-

ton Post and Times Herald of March 9, 1955:

THE WASHINGTON MERRY-GO-ROUND
(By Drew Pearson)
BAD FOR FARMERS

It will be a blow to the little farmers, but the Hoover Commission will soon spring drastic, new recommendations to tighten farm credit. The main effect will be to transfer the benefits of farm price supports, in part, from the farmers to the bankers.

These to-heck-with-the-farmers recommendations aren't supposed to be made public for several weeks, but this column has received a copy of the forthcoming Hoover Commission's report on streamlining the farm financing agencies.

Most jolting to farmers will be a recommendation "that the Commodity Credit Corporation cease to make loans on commodities and that it confine itself to purchase agreements on commodities."

This would revolutionize the whole price-support program, since most farmers draw their price supports in advance in the form of commodity loans. At harvest time, the farmers repay the Government on as much of their crop as they can sell, then forfeit the rest as collateral.

The Hoover Commission's idea is to turn the juicy, \$3 billion annual crop-loan business over to private banks. Explains the forthcoming report: "A considerable saving of administrative expenditures could be made if the Corporation abandoned making loans to farmers on commodities and used the method of purchase agreements alone. The farmer could with such a Government contract finance himself by loans on his commodities from private institutions pending his determination as to when he would sell, and thus the private financial machinery could finance the crop at a considerable saving to the Government."

In other words, the farmers would be forced to go to their banks and pay commercial interest rates for their crop loans. The bankers wouldn't risk a nickel since the purchase agreements would be tantamount to a Government guaranty of the loans. What this would amount to is price supports for bankers.

TIGHTER CREDIT

Another Hoover recommendation that will knock the little farmers for a loop calls for tightening credit on farm-home loans. This will make it next to impossible for little farmers to buy their own homes. As it now stands, the Farmers' Home Administration will loan up to 90 percent on the appraised value of a farm. The Hoover Commission, however, wants the FHA to require adequate equities under all its loan programs except disaster and emergency crop and feed loans.

Though vague, this indicates the FHA should, in Hoover's opinion, toughen its loan policy in line with private banks. Yet the whole purpose of FHA is to provide loans to farmers who have been turned down by their local bankers.

The Hoover report further urges "that the Congress require such interest fees, premiums, or other charges as will cover administrative expenses, cost of money to the Treasury, and losses."

The effect of this will be to boost interest rates to the little farmers up to 12 or 13 percent. One of the biggest administrative expenses, for example, is to make sure these small-farm loans are sound. This has resulted in a 99 percent FHA repayment record.

The Hoover proposals would practically knock out the small-farm ownership program on the justification that "this Commission, except in disaster and emergency loans, cannot approve of indirect subsidies to a fraction of the people from the taxpayers at large."

Yet, in the same breath, the Commission proposes what amounts to indirect subsidies to the bankers who, mysteriously, seem to be the beneficiaries of so many Hoover recommendations.

If the Hoover proposals go through, the little farmers can look forward to a new kind of drought—a credit drought.

Through Being a "Paper Tiger"

EXTENSION OF REMARKS

OF

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. ZABLOCKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to commend to the attention of the membership of this body the following editorial from the Milwaukee Journal of March 9, entitled "Through Being a 'Paper Tiger.'"

The report of Secretary of State John Foster Dulles on his recent visit to southeast Asia should serve as a strong assurance to the free peoples of Asia and of the Pacific that the United States will work with them in every way possible to prevent their enslavement by the Communists.

I have found the Secretary's report very encouraging: In the first place, it has clarified some of the doubts about United States policy with regard to southeast Asia. Secondly, it demonstrated that the free nations of that area are taking unified and positive steps to defend themselves against Communist internal subversion or possible overt aggression.

The progress made to date in this field by the signatories of the Manila pact should hearten all the free peoples of the world who are determined to resist Communist expansion and domination. It proves once again that in unity of purpose and of action there is tremendous strength—strength adequate to preserve our freedoms and our liberty. This should encourage and inspire us in our efforts to further the attainment of just and lasting peace in the world.

THROUGH BEING A "PAPER TIGER"

The United States and the Communists are drawing close to a showdown in the Far East. This was the obvious meaning of Secretary Dulles' calm and measured report to the country Tuesday night.

It was a warning not only to the government of Red China, but to the American people.

We are through being pushed back, he said in effect. We are through yielding free territory to Red China through surrendering more free people to communism. We are through being represented as a "paper tiger."

The decision, of course, is up to the masters of Red China. If they try to carry out their boasts to conquer Formosa, they will be met by American force. If they abandon such plans, the United States stands ready to work for a cease fire in that area and for ultimate peace.

However, Secretary Dulles said, in grim tones:

"The Chinese Communists seem to be determined to try to conquer Formosa * * *

seem determined to challenge the deterrent power of the United States and our willingness to use that power in response to a military challenge."

Dulles is right in his diagnosis. The Chinese Reds have—both to their own people and to all Asia—represented Korea, Indochina, and the evacuation of the Tachens as great victories over the United States. They have boasted that the United States will always fall back when faced by brutal and uncompromising force. The Chinese Reds dishearten the free nations along the rim of China with the charge that American love of peace means peace at any price.

In view of this, Dulles said:

"We must, if occasion offers, make it clear that we are prepared to stand firm and, if necessary, meet hostile force with the greater force that we possess."

This was a frank speech, with grave warning.

Safety on the Pennsylvania Turnpike

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Friday, March 11, 1955

Mr. MARTIN of Pennsylvania. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "A Fine Safety Achievement," which appeared in the Pittsburgh Post-Gazette of March 10. I make this request at this time because the editorial relates to the safety work which has been done on the Pennsylvania Turnpike, and as there is now under consideration a road program, I thought this editorial would be of interest to my colleagues.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A FINE SAFETY ACHIEVEMENT

Despite increased use by passenger cars, the Pennsylvania Turnpike last year recorded the best safety record in its 14-year history. This fine achievement reflects a police and educational effort for which the turnpike commission deserves a great deal of credit.

The reduction in the number of fatalities is particularly impressive. In 1953, 91 persons lost their lives in turnpike accidents, for a fatality rate of 7.5 per hundred million vehicle miles. But last year there were only 51 fatalities, for a rate of only 4.2. Similarly, only 899 persons were injured in turnpike accidents last year, a decline of 17.5 percent from the 1,090 in 1953.

In obtaining this improvement, the turnpike commission has expended much money, thought and effort. Last year it spent a record \$726,207 on enforcement. That included the salaries of 115 State policemen assigned exclusively to turnpike duty, the greatest number ever employed by the commission. In 1953, only 66 policemen were employed and the enforcement effort cost only \$502,541.

While the amount spent on enforcement seems high, actually it constituted only 3½ percent of last year's turnpike revenues, which totaled \$23,093,393. It represented a sound investment in public safety.

When the turnpike was opened in 1940, it extended for only 160 miles. Fifty-nine State troopers were assigned to police it. But when the war came and highway use was sharply curtailed by fuel rationing, the num-

ber of police dropped by 1944 to a low of 12.

After the war, turnpike usage jumped tremendously, but there were only 24 officers policing it as recently as 1950. The number was increased to 50 in 1952, when the Philadelphia extension had been opened; to 66 in 1953, following the opening of the western extension, and to 115 last year when the Delaware River extension went into service. Today, 118 highly trained officers police the completed 360-mile turnpike.

While numbers in themselves are an important phase of effective policing, they do not tell the whole turnpike safety story. Methods mean as much as manpower. The officers assigned to this pioneer toll expressway combine education with policing. They don't just pinch offending motorists; they also instruct them. Last year, for example, the troopers issued 22,009 warning tickets while making only 16,965 arrests. They also banned from the road more than 4,400 defective vehicles.

The turnpike commission has enough money not only to retire bonds ahead of schedule but to provide effective policing. We are glad to see it do just that.

The Great Lakes Seaway

EXTENSION OF REMARKS

OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, March 11, 1955

Mr. THYE. Mr. President, there appeared on March 9, 1955, in the St. Paul Pioneer Press, an editorial entitled "Seaway No Longer Frightens the East." I ask unanimous consent that the editorial may be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SEAWAY NO LONGER FRIGHTENS THE EAST

Before Congress finally authorized the Great Lakes seaway, public officials in the East habitually used crying towels whenever discussing this project. It would just about ruin the big eastern seaports, was the story. Now the attitude has changed. The East has decided it is going to get along all right.

In a current magazine interview with Mayor Robert F. Wagner, of New York, on the problems and prospects of that metropolis are these questions and answers:

"Question. What about the St. Lawrence seaway? It is said that might take away business—

"Answer. Well, I'm peculiar in this, because most mayors have been opposed to the seaway. I've always been for it. I've tried to look at it as a little bigger than just New York City. I think it would be a great boon to the northern part of our State and be a boon to areas in the Midwest. I have never felt that it would hurt us to any degree, given the proper facilities and if we have peace here in our labor.

"Question. It has been testified that it might take away 19 percent of the port of New York's business.

"Answer. Yes. Well, I think you can find testimony on both sides on that. The more facilities we can have in this whole area, the more it will help. We've got to realize that we've had competition from Philadelphia, from Houston and from all of the other ports all along the line. We've got to fight our own problems here. We can't stand in the way of progress of any other ports."

The interview appears in a copyrighted article in U. S. News & World Report, a weekly news magazine published at Washington.

The United States Oil Industry and the United Nations

EXTENSION OF REMARKS

OF

HON. WILLIAM E. JENNER

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Friday, March 11, 1955

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The U. N. and the United States Oil Industry," written by Raymond Moley, and published in Newsweek magazine of March 14, 1955.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

U. N. AND THE UNITED STATES OIL INDUSTRY (By Raymond Moley)

The proposal of a commission of the United Nations for fixing the prices of oil produced in the Middle East is now under discussion in Geneva and is attracting wide interest in the European press. It may well provide a valuable lesson in international economics and politics for American oil companies and, in fact, for all of us.

This oil issue has been crystallized in a report of a commission operating under the vague auspices of the United Nations Economic and Social Council (ECOSOC). It is the Economic Commission for Europe (ECE). There is also a commission for Latin America (ECLA) and another for Asia and the Far East (ECAFE). Our representatives on these are very loosely responsible to our representative on the ECOSOC. Preston Hotchkiss, an Eisenhower appointee.

This ECE report has been top secret for a long time over here but it has been plentifully leaked to the European press. It is hailed there as a body blow to the monopolistic practices of the American oil companies. A copy was obtained by the Wall Street Journal 2 weeks ago in Geneva and another was used to prepare this article. It bears the title "The Price of Oil in Western Europe." It says that the oil companies are getting oil in the Middle East at a very low price and are selling it at an excessively high price. It is suggested that there should be price-fixing by international governmental machinery. This control is veiled by the innocent word stability. Pains were taken to include in the report details of actions by the United States Government against the American oil companies involved. There is also an attack upon the companies in a 1952 report of the Federal Trade Commission.

The ECE report is aimed at 5 American and 3 European companies. They are Standard of New Jersey, Standard of California, Socony-Vacuum, Texas, and Gulf. Also Royal Dutch-Shell, the British Petroleum, and Compagnie Française.

It is alleged that most of these companies tend to peg their European prices to the prices in the Western Hemisphere.

The allegations of fact in this ECE report are violently denied by the American companies. One of them says that the report overstates the net received by the various companies from Middle Eastern crude by 100 percent.

These regional commissions—the ECE, ECLA, and ECAFE—go it pretty much as they choose. The ECAFE, for example, organized studies of the marketing of hides in Pakistan, the relative advantages of electric or hydraulic transmission in diesel locomotives, and the planning of waiting rooms at Indian railway stations.

The oil proposal is not on a par with these trivia. It would provide an opportunity for the Soviet not only to use an international

commission to smear American companies but to get its paw into the Middle Eastern oil situation. For since the Soviet is on the ECE, it would in fact be playing an important part in regulating the industry there and in fixing the prices of American oil companies.

The United States is represented, too, but would be hopelessly outnumbered by Communist and Socialist countries.

This oil proposal is only the latest of many plans which have been made through the U. N. to fuse our economy with those of other nations. And in every case our tradition of freedom was imperiled by the presence among the collaborators of a heavy majority of nations in which communism or socialism is firmly established, or in which economic liberty has never existed or has become only a faded memory, or in which cartels and other restrictions on enterprise have been traditional. Moreover, the Foreign Service officers and professors who have represented us on the many groups for the most part have believed that our freedom and independence must be yielded for international friendship.

Most of this goes back to the commitment of the United States in article 55 of the U. N. Charter adopted in 1945 which somewhat vaguely pledged us to a large number of international experiments in social and economic affairs. To implement this, the ECOSOC busied itself early in 1946. It had as a guide a document of our State Department entitled "Proposals for Expansion of World Trade and Employment." There was created a preparatory committee to make plans. Then there ensued 4 years of naïveté when compromise with Marxism seemed not only inevitable but desirable.

The Habana Charter of 1948 would have committed us to international price fixing of basic commodities, tariffs, and trade controls, measures for full employment, and, strangely enough, trustbusting. President Truman sent the Habana Charter to Congress which refused to do anything more than to hold some hearings. But in 1949 we entered the International Wheat Agreement and through the State Department actively participated in many international economic committees and commissions. Prime Minister Attlee came here in December 1950 to plead for international control and allocation of raw materials so that his country could get the things it needed at the right price. Our State Department complied the next month and created what was known as the International Materials Conference. This had no legal standing but set out to allocate strategic materials and fix prices. This brought forth plans for agreements covering cotton, wool, copper, lead, zinc, sulfur, and other materials.

In 1952 the Paley Commission (President's Materials Policy Commission) made the statement that, regardless of the failure of Congress to act, the United States was bound under a resolution of the ECOSOC to "recognize chapter VI [of the Habana Charter] as a general guide." Despite violent protests in Congress, the collaboration went on in one form or another. In 1953 we entered the International Sugar Agreement and extended the International Wheat Agreement for 3 years.

Thus encouraged, the State Department proposed a tin agreement last year. It was given up by the administration after a hard fight between the State Department on one side and the Interior and Commerce Departments on the other. Meanwhile, the Randall Commission roundly condemned participation by the United States in international commodity agreements and Preston Hotchkiss, of ECOSOC, has vigorously opposed them. The ECE seems to assume that these objections can be avoided.

It is significant that the current oil report is the product of the secretariat of the ECE at the head of which is Gunnar Myrdal, a Swedish Socialist. He first appears in Amer-

ican annals as a beneficiary of a Rockefeller fellowship. Next he was employed by the Carnegie Corp. to make a \$250,000 survey of the Negro problem in our South. This report in 1944 had some strong things to say about the United States. Our Constitution was "impractical and unsuited to modern conditions" and its adoption was "nearly a plot against the common people." We had "a low degree of respect for law and order" although we "desire to regulate human behavior tyrannically." Our legal culture, moreover, was "anarchistic."

Myrdal in 1946 told a Wall Street Journal reporter that in behalf of Sweden he had made a big deal with Soviet Russia because he believed that the United States was going into a depression. In 1949, as executive secretary of the ECE, he received a grant from the Rockefeller Foundation for scholarships for European students. Last year Columbia University selected Myrdal as one of those to be highly honored at its bicentennial. He was given a degree of doctor of humane letters as one who had made "the world his classroom."

In any event, these many benefits and honors for Myrdal, coupled with the present attack upon the American oil companies, can prove to Americans not only that they are a very generous people but that when oil money is given for cultural purposes it has no strings. This at least can give our oil companies some melancholy comfort.

National Security

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. MULTER. Mr. Speaker, on February 12, 1955, I was privileged to participate with Mr. Quincy Howe, news analyst and author, in the panel session at the annual conference of the New York Civil Liberties Union at the Hotel Roosevelt.

I am pleased to set forth Mr. Howe's remarks as follows:

REMARKS OF QUINCY HOWE, NEWS ANALYST AND AUTHOR, AT THE PANEL SESSION OF THE ANNUAL LUNCHEON AND CONFERENCE OF THE NEW YORK CIVIL LIBERTIES UNION, SATURDAY, FEBRUARY 12, 1955, AT THE HOTEL ROOSEVELT

One of Bernard Shaw's epigrams illuminates the subject we are discussing this afternoon. If a people, said Shaw, do not take the trouble to get what they like, they will wind up liking what they get. Shaw spoke here of a popular taste in the popular arts. But his words apply to other fields and are a kind of variation on the theme that a people get the Government—or the security program—that they deserve. Of course politicians and pressure groups wield influence, too. But how can politicians or pressure groups lead the people unless they know where the people want to go? And where the people want to go is determined, among other things, by the trend of events, by the climate of the times. Today, for instance, fear of the hydrogen bomb, of communism, of war with Russia or China or both, give us the jitters. On the other hand, our prosperity encourages complacency and lethargy. From President Eisenhower, with his experience in military affairs plus his progressively moderate personality, the American people are getting the kind of leadership they seem to like. But unless they exert more

pressure on the White House, they may end up having to like the kind of leadership they are going to get.

If that leadership, in respect to national security, does not seem good enough, don't blame the man in the White House, or Senator McCarthy either. Blame yourself. I am not saying that the American people are wholly and solely to blame if our security program has proved more and more self-defeating. I am saying that it is unfair and untrue to lay all the blame for the failure of that program on politicians or pressure groups. More than 5 years ago, industry and the advertising agencies let themselves be pressured by a book called *Red Channels* into denying employment to actors and writers merely on the ground that they had become controversial. There was never enough popular clamor to persuade the moguls of Madison Avenue, who make it their business to give the public what it wants, to cause them to throw their copies of *Red Channels* in the ashcan. Instead, they hired their own security officers, and presently speakers were being dropped from controversial debate programs because—God save the mark—they were controversial. The Madison Avenue moguls knocked controversy out of their television debate programs for the same reason John Foster Dulles knocked John Paton Davies, Jr., out of the State Department. They lacked the guts to buck public opinion. Or, as they preferred to put it themselves, they heeded the ancient saying that the voice of the people is the voice of God.

Although the recent elections suggest that the market for hearing aids is not yet completely saturated, there is also every evidence that the sovereign people continued to like Ike in November as much as they did in May. Many of them respond to the noble aspirations he expresses with such manifest sincerity. Others like still better the inaction that usually follows. But can the American people live forever on a diet of wall mottoes? Do they want as their President a kind of glorified sandwich man? Is that the President's own conception of his function? Of course not. But human nature, inside the White House and out, is such that it requires constant needling to bring out its better side. And here we come to one of the root causes for some of our present discontents, including our discontent with our national security program. Not enough of us dare to take chances. The young college instructor, the journalist just beginning his career in radio or television cannot be expected to risk his future security for principle's sake. These young men have marked, learned, and inwardly digested the recent advice of a pamphlet issued by the Socony Vacuum Oil Co. informing them that, "Personal views can cause a lot of trouble. The 'isms' are out. Business, being what it is, it naturally looks with disfavor on the wild-eyed radical or even the moderate pink." But note this. Such is the force of public opinion that when some men of courage, like Ed Murrow in radio and television, like Senator Fulbright in politics, like Prof. Henry Steele Commager, of Columbia University, here today stand up on their hind legs and challenge this kind of talk, the voices of caution sing a new tune and Socony Vacuum has since issued a new version of its advice to young men, commending those who dare to uphold and proclaim their own views.

So it may be that the pendulum has begun to swing in the other direction and that a reaction against reaction has already set in. But it may also be that our basic trouble is not that our professors or our commentators, our businessmen, or our housewives lack the courage of their political convictions. The trouble may be that they lack the convictions in the first place. This applies especially to convictions relating to politics and economics. Perhaps the American people have accepted and applied so many new political and economic ideas during these

past 22 years of treason—treason, that is, to the spotless memory of President Harding—that it would be idle to expect any administration to sponsor further innovations. If this be true, then the most that can be expected of the Eisenhower administration is that it gain bipartisan acceptance for the welfare state at home and for a foreign policy based on solidarity with other democratic nations. In other words, this is no time for political and economic innovation. But is it not, for that very reason, the time to apply some tried and tested ideas and, if you will pardon the expression, ideals to the new situation in which we find ourselves? The first 10 amendments to the Constitution, usually known as the Bill of Rights, set forth most of these ideas and ideals. An older decalog from a higher authority sets forth others, notably the injunction not to bear false witness. And that man in the White House told the faculty and students of Dartmouth College, almost 2 years ago: "Don't join the book burners. Don't think you're going to conceal faults by concealing evidence that they ever existed." Another of President Eisenhower's favorite wall mottoes also has applicability under present conditions: "Nothing is lost by magnanimity." In responding to President Eisenhower's words, the American people have shown their hearts are in the right place. If they will now see to it that he carries these words into action, they will prove that they also know how to keep and use their heads.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the Record.

PRINTING DOCUMENTS AND REPORTS

Documents and reports of committees with the evidence and papers submitted therewith, or any part thereof ordered printed by Congress, may be reprinted by the Public Printer on order of any Member of Congress or Delegate, on prepayment of the cost thereof (U. S. Code, title 44, sec. 162, p. 1940).

Daily Digest

HIGHLIGHTS

Senate reached agreement limiting debate on tax extension bill.

See Congressional Program Ahead.

Senate

Chamber Action

Routine Proceedings, pages 2248-2261

Bills Introduced: 10 bills and 3 resolutions were introduced, as follows: S. 1404-1413; S. Con. Res. 16; and S. Res. 75 and 76. Pages 2252-2254

Bill Reported: Report was made as follows: S. 948, to provide transportation on Canadian vessels between Alaska and the U. S., with amendments (S. Rept. 59). Page 2251

Bill Referred: One House-passed bill was referred to appropriate committee. Page 2247

Taxation: Senate continued consideration of H. R. 4259, to provide a 1-year extension of the existing corporate normal-tax rate and of certain existing excise-tax rates, reaching unanimous-consent agreement that on Tuesday, March 15, after close of morning business, debate on any amendment or motion will be limited to 2 hours, equally divided between proponents and opponents; debate on each substitute will be limited to 4 hours, equally divided; debate on passage of bill will be limited to 2 hours, equally divided; and that no amendment that is not germane will be received, except for a series of amendments intended to be proposed by Senator Johnson of Texas, and others. Senate agreed earlier by unanimous consent that these Johnson amendments would be considered en bloc. Pages 2261-2262, 2270-2288

Confirmations: Two nominations to U. N. groups were confirmed. Page 2289

Nominations: 68 Foreign Service nominations were received, including that of Homer Ferguson, of Michigan, to be Ambassador to the Republic of the Philippines, along with 21 Army nominations. Pages 2288-2289

Lobbyists: The compilation by the Secretary of the Senate and the Clerk of the House of all registrations and quarterly reports for the fourth quarter of 1954, filed by persons engaged in lobbying activities, appears in this issue of the Congressional Record. Pages 2290-2319

Program for Monday: Senate recessed at 5:24 p. m. until noon Monday, March 14, when it will continue on H. R. 4259, tax extension bill.

Committee Meetings

(Committees not listed did not meet)

SURPLUS AGRICULTURAL COMMODITIES

Committee on Agriculture and Forestry: Subcommittee on Disposal of Agricultural Surpluses continued its hearings, with testimony today from the following witnesses: Herschel D. Newsom, master, National Grange; Gwynn Garnett, director of trade development, American Farm Bureau Federation; John A. Baker, assistant to president, National Farmers Union; and Paul C. French, executive secretary, and J. T. Sanders, agricultural consultant, both of CARE, New York City. Hearings continue Monday, March 14.

APPROPRIATIONS—INTERIOR

Committee on Appropriations: Continuing its hearings on 1956 budget estimates for the Department of Interior, subcommittee heard testimony today in behalf of funds for the Bureau of Land Management from the following departmental witnesses: Orme Lewis, Assistant Secretary for Public Land Management; and Edward Woozley, Director; William G. Guernsey, Associate Director; Depue Falck, executive officer; Earl J. Thomas, Assistant to Director; T. M. Tyrrell, area range and forestry officer, Portland, Oreg.; and James P. Beirne, budget and finance officer—all of the Bureau of Land Management. Hearings continue Monday, March 14.

CIVIL DEFENSE

Committee on Armed Services: Civil Defense Subcommittee continued its hearings, with testimony today from Governor Herter and Col. John J. Maginnis, Director of the Civil Defense Agency, both of Massachusetts, and Maj. Gen. Edgar C. Erickson, Chief of National Guard Bureau.
